There was some bungling in the forging of Siegfried's sword. The fire would not burn, the crucible did not glow, the toy hammer, in Siegfried's hands (W. Grüning, of Hamburg), would not ring on the anvil which had so well accompanied Mime's work, sparks would not fly, and finally the anvil split in two, while the sword was still high in the air. Minor details, of course, but the whole scene was tame in spite of Mime's excellent play, and though Siegfried looked the boy hero. The wonderful contrasts of the following scenes cannot be imagined in the concert hall, although the effects are essentially musical. Alberich pours out his wrath against Wotan; Fafner, a respectable monster with a remarkably lively tail, is sent into eternal rest; Alberich and Mime have their hideous quarrel, and Mime meets with his deserts—and all this mass of sordid passion, long nursed hatred, half-hearted grandeur, thoughtless murder and sweet dreaming is enveloped in the enchanting Waldweben, crowned by the fluting voice of the bird (Emilie Gleiss). If one could bid Richter halt and repeat! The enthusiastic duet between Siegfried and Brünnhilde reminded one more of the old traditional opera; both sang at the audience in the best old style, with outstretched arms and hands.

The two hours of the prelude and the immediately following first act of the "Götterdämmerung" proved almost too great a strain. It is the fourth day; the freshness with which we drank in Rheingold is gone; but we criticise not less severely. The Norns have spun the rope on Brünnhilde's rock, the rope is broken, the gods' doom declared: the rising sun, a scenic triumph for the eye, a revelation to the enchanted ear, has conquered Loge's fire glow in the depth; Siegfried takes leave of the Walküre, fervent passion once more follows dignified grandeur and perfect harmony. Why not rest? But without a moment's time for breathing we are taken to the hall of Gibichungen, and once more back to the rock, to witness Waltraute's (E. Schumann-Heink,

of Hamburg, great as Erda, and first Norn) touching appeal to Brünnhilde, and Brünnhilde's dismal defeat by Siegfried, transformed by the tarnhelm into Gunther. The inevitable necessity of the catastrophe is forced upon us; yet a short interval would not mar the effect, and we could better conceive that all remembrance of Brünnhilde had disappeared from Siegfried's mind. Guttrune (Luise Reuss-Belce, also a Walküre and a Norn) did the little she had to do well. Gunther (Rudolf von Milde, of Dessau) has been accused of stiffness. Weak, easily misled, he arouses little sympathy; that he did not indulge in an excess of gestures, which cannot be said of all the other artists, was not a fault. Hagen (Paul Greeff, of Frankfurt) sang a little flat occasionally, but he was a black Hagen. The end was majestic. Siegfried's voice showed the two days' strain when his restored memory carried him back to Fafner and to the bird's song; Brünnhilde seemed to have been able to husband her strength without having spared it. The scenic effect was glorious. The blaze of light seemed actually to devour the hall, in the next moment to be extinguished by the waves of the Rhine. One felt nervous for the Rhine daughters, who appeared to dive up from the very fire. The whole sky was in flames; Sutr's sons triumphed over Walhalla. And all this steam, light, a little colophony, and an imitation Brünnhilde figure on horseback! The staging was very fine altogether, and the light effects were especially beautiful. They were produced by many banks of electric lamps with white, red, blue, and also green globes. Three engines of seventy horse-power each, and three continuous current dynamos, supplied the light. Motor power is not employed on the stage. The side scenes, clouds, and screens are counterbalanced and manipulated by means of ropes. In the changing scenes in "Parsifal," the side scenes are unrolled from the poles on the one side on to the poles on the other side. The Rhine daughters, formerly suspended by a simple belt, are now placed in a sort of shield which supports all the lower part of the body, and which is held by several wires united to a fine cable. The cable is carried over pulleys and counterbalanced. Two men hold the two free ends and move the body in a horizontal or vertical, or both pulling together, in an inclined plane. The exertion is so great that four men have to attend on each lady.

Many things are peculiar at Bayreuth. The official programme, price one penny, merely names the actors and actresses; the conductor and other artists are not mentioned. The list of all participants and the whole staff can also be had for one penny; but many visitors are ignorant of this fact, and they inquire with astonishment about that chief person, the conductor. As twenty-one years ago, at the inauguration of the theatre, Hans Richter conducted the first cycle with all his unsurpassed knowledge and skill. Seidl and Mottl held the *bâton* at the first two "Parsifal" performances, and Siegfried Wagner conducted the second cycle. The invisible orchestra is seated in a deep cutting, separated from the audience by a curved screen which throws the sound in the direction of the huge stage. As in the hall, the seats are amphitheatrically arranged in arcs. The violins occupy the highest row, and are therefore most shielded by the screen. This may partly explain why, in the opinion of some, those masterpieces, the ride of the Walküren, and the March from the "Götterdämmerung," hardly attained that marvellously stirring nerve and august power which has electrified Richter's audiences in St. James's Hall. The orchestra consisted

"PARSIFAL." ACT III.

Do you recognise him?  
It is he who killed the swan.

*By permission of H. Henschmann, jun., art publisher, Bayreuth.]*

"PARSIFAL." ACT III.

Wonder of Supreme Bliss!  
Salvation of the Saviour.

of 127 men—33 violins, 26 celli, etc., 11 horns, 2 English horns, 8 harps, etc., mostly old Bayreuth *habitués* of distinction and experience; a good deal of new talent was, however, introduced last year. The theatre is of democratic plainness outside and inside. The 1,540 seats make a uniform amphitheatre; apart from position, central or lateral, all seats are exactly alike—a democratic simplicity everywhere. The last row, slightly raised above the others, is formed by the boxes of members of the Wagner family and of reigning houses. The ventilation is poor. With six exits on each side of the house, which is itself arranged in stage fashion with side-scene pillars, and the special exits of the boxes, the hall is generally cleared in about three minutes; yet a middle passage would be desirable, although in case of a panic selfish brutality and terror rule supreme, no matter how many ways there may be out.

During the play the house is quite dark; one has therefore carefully to study the book of words and music at home. Applause is not customary, and reserve the rule. The actors are not permitted to present themselves before the curtain, and all shouting for Richter or Riktlère is useless. Evening dress would be a breach of etiquette; brilliant toilettes can, of course, be admired during the long intervals, when everybody promenades up and down outside. There is a rather expensive restaurant to the left of the theatre, from the terrace of which one has a fine view over the low-lying town and the whole district, a modest one on the right, and an exceedingly primitive refreshment stall, intended for the attendants only, but much frequented because beer, sausages, and eggs are so astonishingly cheap there, at the back of the theatre.

A brilliant audience, comprising the King and Queen of Württemberg, the Infanta of Spain, and several princes and princesses, who were shamefully stared at although they observed the strictest *incognito*, witnessed the first "Parsifal" and the first cycle. The Princess of Wales witnessed the last—the hundredth—performance of "Parsifal," and the Prince, too, had come over for the "Ring." French was perhaps more heard than even English and American. The second "Parsifal" performance was listened to by an essentially German audience, most of whom came over for the afternoon and returned by the special trains after the play.

"Parsifal" is disappointing to people who know Wolfram von Eschenbach and have heard fragments of Wagner's music. From Wolfram Wagner has adopted little more than the leading features of the story and the jingling rhyme; his language is bombastic, frequently poor, and very occasionally of poetical merit. He calls his work very properly a *Bühnenweihfestspiele*, a devotional or consecration play. That it is, though there is no actual prayer in it, and the name of the Saviour is never mentioned. It centres about the Holy Grail and the sacred spear. One tires of the adoration of the spear. Klingsor, the sorcerer, has created a paradise of temptation near the Grail mountain. Armed with the spear, Amfortas, the Grail king, determines to slay the tempter,

but he succumbs to Kundry's charms and loses the spear, mortally wounded by it. Kundry is a fallen angel or a penitent Venus. Wagner puts her under Klingsor's power, and we may account for her double nature, messenger of the Grail and demon, as we choose. The wonders of the Grail and Amfortas' sufferings strike Parsifal, the pure, i.e. innocent fool, with muteness. Expelled from Montsalvat, he is surrounded by Klingsor's flower-girls and sorely tempted by Kundry herself, against her own will, but he triumphs, and the sacred spear which Klingsor hurls against him, rests suspended over him. After many years of wandering and error, of which we only hear, Parsifal returns with the spear, cures Amfortas, against whom the knights are almost in rebellion, since he refuses to uncover the strength-giving Grail in order to hasten his own end, and becomes King of the Grail. The chief parts, Amfortas (Carl Perron), Parsifal (Ernest van Dyck), Kundry (first time, Marie Brema, second, Anna von Mildenburg), were in good hands; Gurnemanz (Carl Grengg), was fair. The orchestra was not faultless. The *Charfreitagszauber* and the beautiful Grail scene are, of course, wonderfully impressive. But if it were not for the choruses from above, where the sound of the orchestra is not heard, and metronome and electric signal have to be resorted to for guidance, one might be contented with the concert hall. The mounting of "Parsifal" did not deserve any praise.

Will the pilgrimage to Bayreuth continue for a long time? Very probably for some years, possibly for many. This year the sale of tickets practically ceased in February, though many tickets have changed hands since, fortunately for the less privileged. The chief attraction is, no doubt, the Nibelungen cycle, but the other plays have drawn equally well in other years. The cycle and "Parsifal" involve a stay of about a week at Bayreuth, a town of thirty thousand inhabitants, tidy, once the residence of the Margraves of Brandenburg-Kulmbach and of decidedly residential aspect, but of little interest otherwise. The *Fränkische Schweiz* and the *Fichtel Gebirge* offer very pretty scenery within a few hours' drive or ride, however. High prices are charged for accommodation, and the food is neither good nor cheap. Express trains are run on play days; otherwise the railway connection is anything but convenient. For all these reasons it is more the foreign visitor who has already travelled far than the German who stays at Bayreuth. Everybody is still anxious to hear Wagner at his own theatre. But the very best artists are not always to be found there. Frivolous people calculated that a loving couple on the stage represented considerably over a hundred years. Other Wagner theatres are spoken of, and the administration may not be particularly anxious to persevere in an undertaking which is little profitable. The expenses are enormous; we have to remember, e.g., that the theatre is exclusively used for these performances, and could hardly be utilised in other ways, and that the members of the orchestra have to spend many weeks at Bayreuth.

H. B.

# LEARNING LANGUAGE BY LETTER-WRITING.

## OUR MONTHLY REPORT OF PROGRESS.

**L**ETTERS expressive of interest in the correspondence scheme, and gratitude for the benefits conferred by it, continue to be received, and are an encouragement to perseverance in spite of the difficulties encountered.

The following letters or extracts may interest some of our readers, and possibly induce others to try for themselves whether such a stimulus to improvement may not be as beneficial to themselves as it has been to others. Teachers especially are invited to make this trial for themselves and their pupils. As it is extremely difficult for us to reach individual head-masters and head-mistresses, any of our readers who wish to help us in promoting the twofold object of the scheme (that is, friendly intercourse among the nations and educational improvement), are asked to help us in the distribution of the circular prepared in March at the request of several schoolmasters.

If such willing helpers will send an *addressed* envelope, it shall be returned with several circulars enclosed. If only one hundred among our readers would each forward three or four circulars to educationalists of their acquaintance our task would be much lightened. It is perhaps advisable to remind our friends that, as the names of schoolboys and schoolgirls are *published* in France or Switzerland, absolutely no expense is entailed upon heads of schools, and no trouble beyond forwarding lists of scholars with the age and name of each. It is only those who wish for adult correspondents who are asked to send the shillingworth of stamps. The following interesting letter is from a French lady, who asks us to find her a correspondent, and gives as a reason for her request:—

I learnt English in that way, and I can attest the excellence of the method. It is certainly the best and most agreeable manner of learning a language. When I began studying English at school I found it a very dry and dull task indeed. I had a very good professor there, but his lessons alone would have failed in teaching me even the tenth part of what I now know of the language. I should have continued disliking the English lesson had not a fortunate circumstance, for which I can never be thankful enough, put me in correspondence with the first of our English masters in France. Among the books given me to study at school was one by Mr. Witcombe, a friend of one of our neighbours. This neighbour was pleased to find that I was studying one of his friend's books, and told him the fact in a letter. We corresponded for seven years, and how far he succeeded in teaching me a foreign language by letter-writing this letter will show. It is nearly three years since I lost my incomparable master, and I am afraid my knowledge of English will fade by degrees, and I should therefore be most grateful if you can find me another correspondent.

We complied with this lady's request at once, it is needless to say, for our difficulty is to find French, not English adults, and English, not French or German schoolboys and girls. I have quoted from the original letter, and can only say that, if my French were as faultless as this lady's English, I should be proud indeed.

The next extract is from an English head-mistress, who writes:—

Will you permit me to thank you for your efforts in organising such a scheme? It will be difficult to praise it too much, its advantages being so many-sided, both immediate and prospective. There is quite a stir in the school when a foreign letter arrives: a bit of romance seems imported in the prose of school-life and such an innovation is the more welcome there; for unless the teachers are especially resourceful, enterprising

and devoted to their work, a monotonous routine prevails which is not favourable to the development of intelligence in the pupils.

The next three extracts come from France and are given *verbatim*:—

Cher Monsieur,—J'entrerais bien volontiers en correspondance avec le monsieur dont vous me communiquez l'adresse: vous vous êtes montré, Monsieur, si obligeant en cette circonstance que je tiens à vous en exprimer personnellement ma reconnaissance.

Dear Sir,—We have received your letter by Mr. B——. It has given a great pleasure to us, and have the kindness to accept our better thanks. Like as you have said in your last letter, I write directly to you for having the names of other English to correspond together with us.

Dear M. Stead,—I thank you for your good will about me; you must have been much deranged to send me a correspondent. I have heard from him a few days ago, and I am very pleased. I think we will remain single-hearted friends for ever. I shall not forget what you have done for me.

But, alas! the letters I receive are not always expressive of thanks. I get badly scolded pretty often. Just now, for instance, French and Germans, like ourselves, arrange to take a holiday, if they can do so, and therefore I cannot find new foreign correspondents quite so quickly as desired. I have, on the other hand, been reprimanded for being too quick, an applicant having changed his mind, or his circumstances being different. Occasionally our foreign collaborators make mistakes, and a lady receives a letter from a German gentleman instead of from a lady, and I am accused of intentionally misbehaving myself. Will our friends pardon us, and believe that the mistakes arise from too much, and not too little, zeal?

Friends abroad are asked to mention the scheme to their foreign friends: ladies, business men, doctors, soldiers, civil servants, etc.

An English authoress wishes to correspond with a French lady or gentleman belonging to the literary profession on the subject of style and composition.

An English army captain in India would like to correspond with a Frenchman and a Russian on professional subjects and literature.

Three English ladies over forty desire French lady correspondents, and one would like to correspond with a Spanish lady.

A missionary on furlough would like to stay with his wife in a Protestant home in south of France for a little time.

A Danish gentleman would like an English correspondent.

Teachers are asked to notice that the scheme for scholars is now extended to Switzerland and Germany.

In the *Contemporary Review* for September, under the title "The Latest International," I briefly describe the results that have been achieved by M. Mielle's scheme. As these are already so familiar to our readers, I need not repeat them here. I only quote the introductory paragraph:—

The idea of covering Europe with a network of friendly correspondents, whose letters to each other would replace the dull grind of the regular exercise by the delightful novelty of making acquaintance, possibly friends, with an unknown correspondent in foreign parts, has grown so rapidly within the last six months as to justify the publication of some particulars of what has already been accomplished, some speculations as to what may yet be attained.

# LIST OF THE LEADING CONTENTS OF CURRENT PERIODICALS.

## ENGLISH AND AMERICAN.

**American Catholic Quarterly.**—Burns and Oates. 1 dollar. July.  
Catholic Secondary Education in the United States. Rev. John T. Murphy.  
The Episcopate of Bishop Baraga. Richard R. Elliott.  
Catholic Spain; Its Politics and Liberalism. Rev. Thomas Hughes.  
Some Reflections on Edmund Burke's Centenary. John J. O'Shea.  
Dr. F. H. Bradley's Appearance and Reality. St. George Mivart.  
St. Cyprian and the Holy See. Dr. Wm. Barry.

# A HINT AS TO THE AREA OF THE BRITISH EMPIRE.

MAP SHOWING THE COMPARATIVE SIZE OF EUROPE (MINUS RUSSIA AND SCANDINAVIA), AUSTRALIA AND CANADA.

# THE PROGRESS OF THE WORLD.

LONDON, *October 1st, 1897.*

Commonwealth  
Making  
at  
the Antipodes.

The work of empire-building goes on apace. The second session of the Federal Convention, which is charged with the federation of the Australian Colonies, opened at Sydney in the beginning of last month, and adjourned till January next year, when the third session will be held in Melbourne. The explanation and justification of this further delay is the somewhat tardy application of Queensland to be admitted to its deliberations. The Queensland assembly decided on the 16th ultimo, by a majority of 34 to 8, to send delegates to the Convention at Melbourne. They will be directly chosen by the electors for the purpose of framing the Act which will form the basis of the constitution of United Australia. A glance at our frontispiece is sufficient to demonstrate the immense significance of the conversion of all the Australian colonies into one Commonwealth.

The  
Decisions  
of the  
Convention.

The debates at Sydney at the second session of the Convention are full of interest to the political observer. It is rather a disappointment to find that all proposals for the adoption of a Referendum were rejected. There was a strong minority in favour of referring questions at issue between the two Chambers to a plebiscite of the electors, but the opponents of the Referendum were in the majority. The question of the deadlock was finally settled by a decision that both Houses should be simultaneously dissolved and the matter referred to the constituencies. If when they came back from the country the two Houses were still irreconcilably opposed, the matter in dispute was to be left to the decision of a three-fourths majority of both Houses sitting together. As it is very seldom that there will be a three-fourths majority on any question, the result of this mode of settling a deadlock is distinctly Conservative in the sense of preventing any reform that is not demanded by an immense majority of the electors. The right of each colony, no matter how small, to be represented by an equal number of members in the Senate—following in this the example of the constitution of the United States—was carried by a majority of forty-one to five. In case of new States entering the Federation the representation will not necessarily be equal. This of course

is reasonable enough, but it will be the occasion of much log-rolling and party conflict in the future. In electing senators, all the electors in each Colony will vote as if they formed one electorate. This will probably open the way for some system of proportional representation in days to come. The right of the Senate to amend money bills, which was affirmed at Adelaide, was thrown out at Sydney, the proposal that two Houses should have equal powers in dealing with money bills being rejected by 39 to 29. On the whole, the second session of the Convention has rather agreeably surprised even the well-wishers of the movement. If all goes well, we may expect that the Melbourne Convention in January will complete the making of the Australian Commonwealth.

While Australia is thus making this satisfactory progress towards Federation, affairs in South Africa seem to be settling down. The High Commissioner, Sir Alfred Milner, has been winning golden opinions from all parts of the Colony by the way in which he has been buckling to his work. He has visited, for instance, many districts which have never seen the presence of a High Commissioner before, and has succeeded in acquiring that degree of local authority which was all that he needed in order to enable him to take the management of South African affairs into his own hands. The first indication that he feels himself steady in the saddle has been afforded by a speech which he delivered at a public dinner at Prince Albert on September 23rd. With that spirit of cheerful optimism which is one of the secrets of his strength, Sir Alfred Milner declared that the political difficulties of the country were "mostly nonsense and humbug," based on misunderstanding and kept up by misrepresentation, and that such difficulties as there were, were factitious and artificial, which could be got over with comparatively little trouble if the people could understand each other. That is the kind of talk which we want in South Africa, talk inspired by cheery confidence, and a determination to prick all the wind-blown bogies with which the faint-hearted are scared. These are just the qualities needed in the man who stands for England at Cape Town. Sir Alfred Milner is the last man in the world to underestimate the amount of work which has really

got to be done before these phantoms, conjured up by faction out of prejudice, can be finally laid. But there is every reason to hope that we shall put things through all right. We certainly ought to, with Sir Alfred Milner as High Commissioner, Mr. Rhodes in charge of Rhodesia, and Mr. Garrett in the Watch Tower of the *Cape Times*.

**The Growth of South African Union.** Of course, there is no talk of federation in South Africa at present, nor shall we hear the word named for some time yet. But the railway is to be opened next month to Bulawayo, and the ceremony will attract to the capital of Rhodesia representatives of every part of South Africa. The occasion will indeed proclaim a kind of informal and industrial federation, which exists notwithstanding all obstacles placed in the way of union by the reactionary Boers. Things are not going well in the Transvaal, where the rumours are revived one day, and contradicted the next, as to the fatal malady—Bright's disease—which is said to have smitten President Kruger. The mining community is harassed with conflicting reports as to the fate of the recommendations made by the Industrial Commission, but nothing as yet is known definitely as to what is to be done. Of far more importance, if true, than any political talk, is the story that a rich diamond mine has been discovered in the neighbourhood of Pretoria. It would be difficult to estimate the extent to which the existing balance of forces in South Africa might be overturned if a big find of diamonds were to be made in a district out of the range of the De Beers monopoly.

**Slavery in the Name of Benevolence.** It was unfortunate, to say the least, that just when there seemed to be a rally in South Africa, difficulties should arise concerning the treatment of the natives which may rouse a very angry feeling both in this country and the Colony. The Cape Government has just suppressed a rebellion in Bechuanaland, and by way of jabbing the British public in the eye, it has announced that the natives who surrendered after the rebellion are to be distributed among the farmers of the Colony, on conditions which amount to virtual slavery for five years. These poor fellows were forced into the struggle by their chiefs, some of whom have been killed, while the others are to be tried, and it is certainly not in accordance with English ideas that the rank and file should be enslaved as a penalty of defeat. This partakes more of the methods of the Assyrians, who carried

the Children of Israel into captivity after they had defeated them in battle. Of course it is alleged that this enforced apprenticeship for five years at a wage of 10s. per month is prompted by pure benevolence. The unfortunate natives would otherwise die of starvation, and they ought to be extremely grateful that Sir Gordon Sprigg and his superintendent of native affairs are benevolently distributing them among farmers and others who want cheap labour. Our grandfathers used to say that if the benevolent slaver did not ply his trade, the poor natives on the Guinea Coast would have been offered up as human sacrifices. The slaver therefore was really the saviour of the doomed black. We have long since rid our mind of all that nonsense, and it is rather revolting to find it vamped up at the Cape. Sir Alfred Milner will need all his tact to arrange a compromise between the two most passionately antagonistic sentiments existing in the Empire: the determination of many Afrikaners to reduce the blacks to virtual slavery, and the determination of the English people not to allow that foul blot to mark with black any portion of the map which to-day is coloured British red.

**An Estrangement between Brothers.** In the Western continent the movement in favour of the reunion of the separated sections of our race seems to have come to a somewhat abrupt standstill. Recent alterations in the tariff at Washington and at Ottawa have not in the least conduced towards the establishment of a friendlier feeling between the Canadians and their brethren in the United States. The note of discord has been emphasised by various newspaper reports as to military inspection of the Canadian frontier, and preparations to mount cannon for the defence of Montreal against a possible attack from the south. Canada, of course, can only act on the defensive, and not even the most susceptible American can see in any preparations of this kind—supposing the newspaper stories to be true—an indication of aggressive designs cherished by five millions of people against a nation of seventy millions. But without going so far as the correspondent quoted in the *National Review* this month, who declares that the anti-American feeling in the Dominion has become "almost universal owing to a sense of injury inflicted and intended," the sentiment which once existed in many quarters in Canada in favour of annexation seems to have completely perished. That benefit, however, would be dearly purchased if its place were taken by a sense of estrangement.

**The Trouble  
about  
the Seals.**

The immediate difficulty ahead between the Dominion and the Republic has arisen over the fur seals. At the present moment British subjects—chiefly, if not exclusively, Canadians—have some fifty-six ships engaged in catching the fur seal on the high seas in accordance with the regulations laid down by the international tribunal at Paris, to which the seal question was referred for arbitration. The American Government, rightly or wrongly, has convinced itself that unless deep-sea sealing can be stopped there will soon be no seals left to catch, and the only surviving herd of fur seals will disappear from the planet. The Canadians reply that the Paris tribunal permitted deep-sea sealing under rules which they have observed and will continue to observe, and that they object to give up their vested right in the fur seal merely to humour the prejudices of the American Government. There is to be a conference held this month at Washington between the Americans and Canadians, with the British assisting, to consider whether or not the American Government is right in believing that the seal is in such imminent danger of destruction as to necessitate an alteration of the regulations laid down at Paris before the time specified for their revision. The Canadians are strongly in favour of standing on their vested rights, while the Americans are not less determined to secure the alteration of the system which, in their opinion, will lead to the extermination of the seal.

**The  
American  
Trump Card.**

I had an opportunity of discussing this matter during a brief visit which I paid to Washington last month, and from what I there learned, I am disposed to believe that the attitude of obstinate resistance to any modification of the regulations will have to be abandoned. The position of the American Government, so far as I understand it, is this. Rightly or wrongly, they believe that in half-a-dozen years at the outside the present system of killing seals on the high seas which is permitted by the Paris Regulations will lead to the extermination of the herd. They have, therefore, fully made up their minds to take a very extreme course, which would undoubtedly terminate all future difficulty about the seal, and permanently remove the question from the category of subjects troubling the peace of Cabinets. Every seal in Behring Sea resorts to the Pribyloff Islands every year for the purpose of breeding. When they are on the islands they are absolutely at the disposal of the United States Government; it is

only when they wander away into the high seas that other nations have a right to kill them. If these other nations do not consent, whether for money payment or otherwise, to waive their vested interest in pelagic sealing, the United States Government will order the entire destruction of the herd next season. They admit it is an odious task, but they maintain it is a choice between the lesser of two evils. If the *status quo* continues, the seals will all be dead in six years, and during those six years there will be friction and irritation and endless worry between Washington and London. If the seals are to die, they had better die quick, and save all future botheration. Of course this line can be taken by the American Government, and, what is more, I fear it will be taken unless something can be done, and that right quickly. There are many reasons why we should use our influence in order to induce the Canadians to come to an amicable settlement in this matter. The chief profit that is made out of fur seals is made by those who dress them, an industry which is almost exclusively carried on in London. If the seal is exterminated, we stand to lose much more than the Americans.

**Save  
the Seals!**

It is no answer to this argument to say that the American Government is mistaken as to the certainty of the extermination of the seal. Experts will battle over this question at this month's Conference, but the fact remains that nothing that we can say will convince the American Government that the seal-herd is not dwindling at a rate which forebodes its extinction at such an early date as to afford them moral justification for putting the seals to the knife next year. When a man or a nation is in a position to act upon his prejudices to your detriment, no matter how mistaken those prejudices may be, it is no use merely denouncing him. What you have to do is to humour him, if only to protect your own interests. The case is much stronger when you have not only your material interest at stake, but the further interest of harmonious relations with your neighbour. Certainly the tone of the dispatches published in the Blue Book, signed by Mr. Sherman on the one side, and on behalf of Mr. Chamberlain on the other, are not such as any friend of Anglo-American reunion can contemplate with complacency. The authors of the Sherman dispatch, and Mr. Chamberlain's, seem to have tried as to which could rub the other up the wrong way with the greatest dexterity and the most aggravating plausibility.

**Dollar Wheat  
and  
Prosperity  
in  
the States.**

In the United States at the present moment, notwithstanding the somewhat menacing speeches of Mr. Altgeld and others on Labour Day, and the unfortunate troubles in the coal regions of Pennsylvania, the prevailing note is not one of bitterness, but of content. The sudden rise in the price of wheat, which has raised the price of bread in every English home, has brought a sudden flush of prosperity to the agricultural West to which it has long been a stranger. The Republicans, who carried McKinley chiefly by dint of representing him as "the advance agent of prosperity," are simply overjoyed at the somewhat tardy and partial fulfilment of their glowing predictions. But the community at large is too delighted at the prospect of a renewed period of industrial activity to look the gift-horse very narrowly in the mouth. Mr. McKinley, of course, claimed the credit for what was really due to the shortage in the wheat crop throughout the world, and if prices remain up, there is little doubt that the sources of discontent which fed the tap-root of Bryanism will be largely dried up.

**Privation  
in  
Ireland.**

What is one man's meat is another man's poison, and the rise in the price of bread, which has brought new hope and confidence to the households of the Western farmers, has been regarded in a very different light in those homes where the price of the loaf is the chief factor in the balancing of the weekly budget. The very general failure of the potato crop in the West of Ireland has led the Irish party to demand an immediate meeting of Parliament with a view to devise measures of relief for the small farmers and labourers who are suffering not only from the failure of the potato crop, but also from the increased price of flour and Indian meal. Along the sea coast, from West Cork to North Donegal, the potatoes have suffered very severely, while the hay crop has been largely spoilt by the prevalence of the wet weather. There is a natural indisposition on the part of the British public to take seriously the very excited talk of the Irish Members. But although our Celtic brothers cannot resist the temptation to print their grievances in capitals, it is well to remember that the bishops, who are not agitators, but who are in close touch with the interests of their people, have expressed themselves very strongly about the prospects of privation this winter. Our fault as a rule is that of not paying sufficient attention to the representations of the Irish, rather than of paying too much.

John Bull has a habit of refusing to admit that his Irish nag's shoe pinches until the creature falls down and breaks its knees.

**The  
Frontier Trouble  
in  
India.**

It is satisfactory to know that when these warnings of approaching famine are sounded in our ears from the West Coast of Ireland, that the condition of the crops in India has so much improved that it is considered unnecessary any longer to keep open the Mansion House Relief Fund. This is the first bit of good news that has come from India for a long time. There has been an incessant drizzle of disagreeable telegrams from all along the North West Frontier. The fatuous folly of the Indian Government in establishing posts and making roads in regions which from time immemorial have been regarded as the demesne of tribes as savagely jealous of their independence as the Montenegrins, has brought about our ears, one after another, in rapid succession, almost all the fighting tribes of the Borderland. They have not made common cause with each other; each has fought for its own

*Photo by Maul and Fox.]*

GENERAL SIR WM. LOCKHART.

Commanding on the North-West Frontier.

hand, but the result of it has been that we have an army of 60,000 men in the field, and our men have been engaged in fighting all the month. In the Mohmand country General Jeffries' brigade were so hard pressed that they narrowly escaped losing their guns. In one action we lost 144 men, killed and wounded, in another more than 50. Telegrams report a continual series of attacks on British camps, but for the most part we were able to hold our own. The mountaineers succeeded, however, in capturing the Saragari post in the Somana Range. It was believed to be impregnable, but the natives captured it by storm, losing 180 men of their number in the operation. It is horribly unpleasant work this campaigning in the worst season in the year in territory which decreases in value to us every step we take

into the interior. Supposing that we could at one blow convert all these tribes into pacific Bengalees, we should only have gained a loss by destroying the most effective barrier between us and any possible invader. The strain on Indian finances is bad enough, but the sense of shame and humiliation inflicted on the British conscience is worse. These poor wretches, whose villages we are burning, would

THE ROYAL TRIBUTE.

[September 28, 1897.]

"The Conduct of the Troops is most admirable."—*Extract from the Queen's Message.*

have dwelt in peace and friendship but for the folly of the Forward School, which will never be content with what it has got, but always must be rushing even into a quagmire in order to get nearer the one enemy whose approach it professes to dread.

**Mr. Morley  
and the  
South African  
Report.**

At home, the long political silence of the Recess has been broken at last by a series of speeches by Mr. John Morley, who, in addressing his constituents, has reviewed mankind from China to Peru, and has discussed in the usual fashion the questions that have been raised during the last Session. His laboured attempt to vindicate his colleagues, Sir William Harcourt and Sir Henry Campbell Bannerman, for the fiasco of the South African Report, was so singularly inconclusive

that no one could for a moment believe that it satisfied Mr. Morley himself. All apologists for the finding of the Committee who base their defence on the ground that the Report damned Mr. Rhodes, find themselves hopelessly stultified by the fact that the last utterance of Mr. Chamberlain, whom they whitewashed, was to give Mr. Rhodes a certificate of character—the Report notwithstanding. This attempt to paint black white is unworthy of Mr. Morley, and is only another illustration of the mischief that is done when the principle of loyalty between friends is carried so far as to sacrifice the interests of the country. Mr. Rhodes was so loyal to Mr. Chamberlain that he would not produce the telegrams; Mr. Chamberlain was so loyal to Mr. Rhodes that he was bound to vindicate him in the House of Commons; Sir William Harcourt was so loyal to Mr. Chamberlain that he felt bound to hush up the evidence which would have convicted him of guilty knowledge of Mr. Rhodes's conspiracy; and now Mr. Morley, out of loyalty to Sir William Harcourt, feels bound to apologise for his shortcomings, and so add his own name to the list of those who are tarred with the South African brush. It is a welcome reality to turn from this sophistical special pleading to his vigorous exposure of the folly and crime of our Indian frontier policy.

**The Victory  
in  
East Denbigh.**

After long wandering in the Egyptian darkness of defeat and despair, the Liberal Party has at last had one gleam of light. The vacancy in East Denbigh occasioned a by-election, which after being vehemently contested on both sides, was terminated in the return of the Liberal candidate by a largely increased majority. The result was a surprise to no one so much as the Liberals themselves. The Liberal majority of 1895 was 1,784. This was larger than it had ever been since the County Reform Bill. Mr. Moss, the Liberal candidate, was returned last month by a majority of 2,327. Of course there are many explanations tendered to account for the unexpected severity of the Tory defeat, but for the most part they rest upon facts which are local to Wales. The Nonconformists rallied to a man in support of Mr. Moss, and if the same enthusiasm is developed elsewhere we shall see a speedy change in the political temperature.

**The Coming  
School Board  
Elections.**

We shall not have long to wait for an opportunity to gauge the state of Nonconformist opinion outside of Wales. The School Boards in all the large towns in England will be elected this winter.

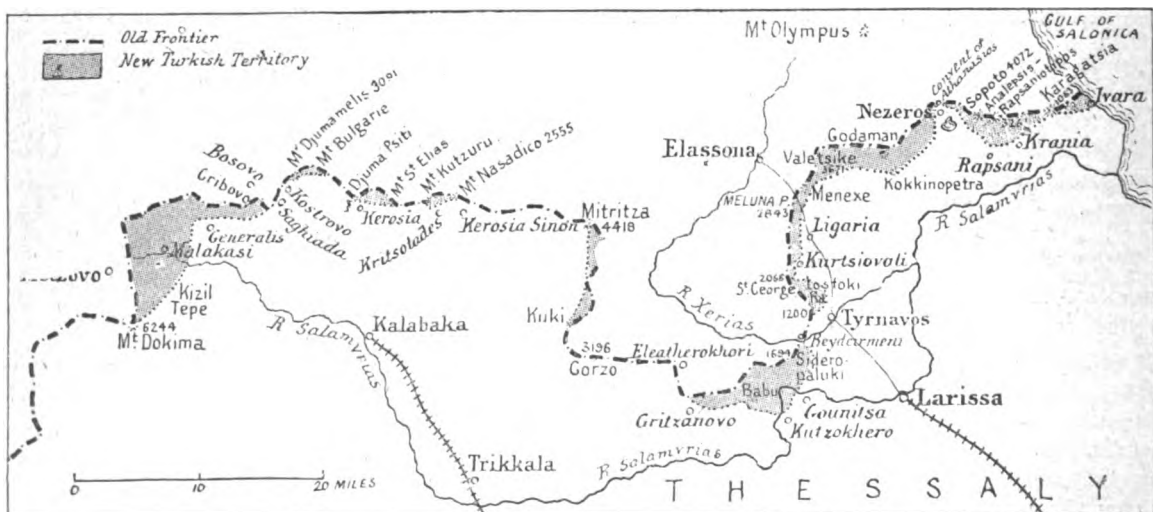

The London School Board election campaign opens formally on October 25th, and most of the elections will take place before Christmas. If it be true that the Education Act of the Government has roused Nonconformist antagonism without evoking any corresponding clerical enthusiasm, then we may expect to hear of Liberal victories all along the line. If, however, the result of the election in East Denbigh is to be attributed solely to local reasons, there is no reason to expect anything to shake the *status quo* in so far as the School Board elections are concerned. In London the School Board election promises better for the Progressives than three years ago. The Denominational and reactionary party is split, while the Progressives are holding very well together. A section of the Clerical party of the Board, instead of letting well alone, propose to add the Apostles' Creed to the syllabus of religious instruction. Against this many Churchmen are up in arms, and so the fight goes on. It is a thousand pities that when the whole future prosperity and civilisation of the country depend upon the excellence of the education given to our children in the public elementary schools, elections for the School Board should be decided in nine cases out of ten on sectarian grounds. The issue, which ought to be between good and bad education, is treated almost everywhere as a mere question as to whether Church or Chapel shall have the first pull on the teacher's leg.

#### The November Cabinets.

Before our next issue the November Cabinets will have begun, and Lord Salisbury will have had an opportunity at the Guildhall of giving the world some information as to how he regards the general situation as it stands now, and as it promises to develop in the future. Ireland will probably once more engross the attention of the Ministers of the Crown. There is the threatened famine in the first place, and, in the second place, the Irish Local Government Bill is to be framed; while, thirdly, they will have to decide what is to be done when they receive the Report of the Commission which has begun to take evidence in Ireland as to the working of the Land Act. The visit of the Duke and Duchess of York has been very successful, so far as it goes, but unfortunately such a visit can do little more than substitute oil for sand in the bearings of the political machinery. The Irish will be celebrating next year the centenary of '98. They have not forgotten how to commemorate historical anniversaries, and there is some talk of pilgrimages to Ireland from America for the purpose of commemorating the last serious armed struggle against English rule in Ireland.

#### The Treaty of Peace at Last.

The treaty of peace between Turkey and Greece has at last been definitely concluded. Turkey secures a rectification of the frontier, by which all the strategic points along the frontier are placed in her keeping. This, of course, is very objectionable, but it is much less evil than allowing the Turk to re-establish his authority over the Thessalian plain.

THE NEW GREEK FRONTIER.

The indemnity is fixed at four millions. In order to secure its payment, and, at the same time, to place Greek finances on a somewhat stable footing, Greece has to submit to the surveillance of a financial commission. The second article in the treaty provides that the collection and the employment of revenues, sufficient to pay the interest on the new and old loans, shall be subject to the absolute control of an international commission of the mediating Powers. This practically places Greece under a receivership appointed by the European Concert. It will be interesting to see whether the Concert is more effective as a tax-collector than it has been as an instrument for securing the reform of the Ottoman Empire. This, of course, is a very hard pill to swallow, but, like many bitter pills, it may be the saving of the Greeks. They have done Europe such a disservice by their madcap grab at Crete, that Europe, in saving them from the doom which would otherwise have overwhelmed them, has returned good for evil in a way which the Greeks will never adequately appreciate. On the whole, the Greeks may consider that they have got out of a horrible scrape much more cheaply than they had any right to expect.

**The  
Reductio  
ad Absurdum  
of  
the Duel.**

It is seldom that Austro-Hungary supplies much sensational matter to the public press. But this month it holds the first place as the country which has furnished the most striking incidents to the European record. The Austrian Prime Minister, Count Badeni, was the hero of one of those episodes. There was an angry debate in the Reichsrath, in which Herr Wolff violently denounced the Government, which he declared had been guilty of rascality if it had introduced policemen into the Chamber disguised as ushers. To the amazement of every one, the Prime Minister considered that the application of such a term to his conduct by a political opponent in Parliamentary debate imposed upon him the duty of challenging his assailant to a duel. The challenge was accepted, shots were exchanged, and the Austrian Prime Minister was shot through the arm. Honour was thus supposed to be satisfied, and Count Badeni is said to have gained immensely in popularity by his action. To the ordinary common-sense Englishman it would be difficult to have a more complete *reductio ad absurdum* of the folly of duelling. If Thersites calls you foul names, how can your honour be satisfied by allowing Thersites to shoot you through the arm, with a chance of shooting you through the heart?

COUNT BADENI.

Is it not putting a premium upon bad language? But the habits of thought among the duelling nations are past finding out

**The Kaiser  
and  
the Magyars.**

The other incident was the speech in which the German Emperor addressed the Hungarian people at a State banquet at Buda Pesth. The Emperor William has played many parts, and he will yet play many more if his life is spared, but he has seldom brought down the house more successfully than when he took occasion to pronounce an eloquent eulogium upon the memory of the Magyars' patriotic heroes. Whatever the Kaiser may be or may not be, he certainly has in him the making of a first-class demagogue. His speech in reply to the toast of his health, which had been proposed by the Emperor-King, was an admirable illustration of demagoguery in a good sense, for it is a mistake not to recognise the noble side of the demagogue. Eloquence, tact, and a dashing courage which enables you to plunge into the heart of a subject and sound a note which vibrates in every ear, all these qualities are displayed in that speech, with a result that the Hungarians for the first time are wild with admiration for their Imperial visitor, and the Hungarian side of the Triple Alliance has been undoubtedly strengthened. The Germans and the Slavs, however, who bear the Magyars little love, are watching with malicious amusement the way in which the German Liberals and Social Democrats are making use of the Emperor's eulogy of Hungarian Liberals in order to attack his own Administration at home.

Is it a  
Capitulation  
in  
Tunis?

Lord Salisbury has concluded an arrangement with France with regard to Tunis which some of his own party call a capitulation. France went into Tunis swearing that she would not annex it, and that she would not interfere with its international relations. No sooner did she get there than she began at once to convert Tunis into an integral part of the French Colonial Empire. By the agreement which has just been concluded, Lord Salisbury has consented to cancel the commercial treaty between this country and Tunis, so that one more obstacle has been removed which impeded a complete appropriation of Tunis by France. Some supporters of the Government wistfully express their belief that Lord Salisbury has obtained a *quid pro quo* in the shape of a freer hand in Egypt. It may be so, but the odds are heavily against it.

The Freeing  
of  
the Nile.

Meanwhile, our position in the Soudan has been materially improved by the brilliant success achieved by General Kitchener in his advance up the Nile. The fall of Abu Hamed seems to have convinced the Dervishes that Berber was no longer tenable. Its evacuation liberated the Nile as far south as Metemmeh, where at present the Dervishes seem disposed to make their stand. The deliverance of Berber renders it possible to reopen the Suakim and Berber route, and immensely facilitates the advance on Khartoum. It is believed, however, for the present, no such advance will take place. It could only be made safely if the Egyptian army were stiffened by four thousand British troops, and at the present moment Ministers prefer the policy of waiting, instead of facing the complication that would ensue from reinforcing the British garrison in Egypt. They have made terms with King Menelik, and will not attempt to rush Khartoum unless they hear news of a French advance up the Congo.

Moses  
and  
Nehemiah  
fin de siècle.

Many odd things happen in this world, but the recent Congress at Basle was surely one of the oddest. The Congress was summoned for the purpose of bringing about the resurrection of the kingdom of Israel, the restoration of the Jews to Palestine, and the re-establishment of the throne of David on Mount Zion. Delegates attended from all parts of the world, and the proceedings were characterised by an extraordinary unanimity of enthusiasm. All that is, of course, natural enough, but the strange, almost incredible, feature about the proceedings was

supplied by the men who summoned it—Dr. Herzl and Max Nordau, two Jews of Paris, sceptical, cynical men, of the world worldliest. It is these men who are playing the part of Moses or of Nehemiah. Never in the history of Israel were the chosen people led through the wilderness by such strange guides.

The Mayor  
of  
Greater  
New York.

No election that will take place before Christmas will attract so much attention as that which will take place in November in New York. The first Mayor of Greater New York, who will be elected next month, will be for at least six months the virtual dictator of the second city in the world. He will hold office for four years, but after the first six months his power will be limited, for he will no longer have absolute power of dismissing the officials whom he has appointed. As an experiment in modified Cæsarism, the New Charter of New York is one of the most interesting things in the evolution of self-government among English-speaking men. Mr. Seth Low has been nominated by the Citizens' Union as the Reform candidate on non-partisan lines. Tammany Hall nominates as its chief representative Judge Van Wyck, while the regular Republican machine politicians, who are believed to be backed more or less by Mr. McKinley, declare their intention to run a candidate of their own in the person of General Tracy. If they do, it is possible that Tammany may elect its nominee, unless Mr. Henry George, who stands on his own account, should romp in as independent Single-Tax Municipal Socialist. This possibility adds to the importance of the Character Sketch of Mr. Richard Croker which appears in another column.

The Tsar  
in  
Warsaw.

It is surprising that so little attention has been given in Western Europe to the significance of the visit paid by the Tsar to Warsaw. There are a number of open sores in the world. We have one in Ireland; Germany has another in Alsace; Russia has a third in Poland. There is no prospect of any one of those sores being removed by any process of surgery known to men. Hence, the most that we can hope for is that they may be healed by the lapse of time, which brings to oblivion all past wrongs, and the growth of kindlier feelings between the rulers and their subjects. The visit paid by the young Tsar to Warsaw, and the evident desire on the part of the Russian Government to conciliate the Poles, are good signs, which should be hailed with joy by all those who wish well

to their fellow-men. It is, of course, absurd to assume that because the Tsar visited the Polish capital, that therefore the Russian and the Pole are going to forget their age-long feud; but there is reason to believe that the Poles are beginning to see that the policy of irreconcilable animosity to the great Slavonic Power under whose protection they must henceforth live has been persisted in quite long enough, and that the next century must see a hearty fraternal union between the Roman Catholic and the Greek Orthodox branches of the Slavonic race.

Considerable sensation was created last month by the announcement that the Governor and Directors of the Bank of England had agreed to substitute silver for gold in the reserve which they are by law compelled to keep in their vaults. By the Bank Charter Acts they may keep one-fourth of their reserve in silver. At present it is entirely kept in gold. It was announced that as a result of the negotiations set on foot by the American Government, the Bank of England had agreed to hold one-fifth of its reserve in silver. For a moment the hopes of the bimetallicists rose high, but they were

immediately dashed by the further information that the consent of the Bank was strictly conditional, being guarded by two provisos:—(1) That France should reopen the Mint for the free coinage of silver, and (2) that the Directors were satisfied that they could buy silver with advantage. Even as thus qualified, the opinion of the City was unmistakably against any concession to the bimetallicists, and it is extremely doubtful whether any step will be taken in this direction. The subject of bimetallicism is one upon which the majority of Englishmen carefully refrain from forming any opinion. Currency is one of the most maddening of all subjects, and prudent men give it a wide berth. To the ordinary man in the street the proposal that the Bank of England should substitute silver for gold is in itself equivalent to a proposal to reduce its reserve by just so much as it is proposed to invest in silver. No doubt silver has a certain continually depreciating value, but that is no reason for replacing gold by the baser metal in a reserve that is provided for the purpose of ensuring every person five golden sovereigns for any five-pound note in circulation. If the price of wheat keeps up we shall not hear so much this winter of bimetallicism even in the United States.

## HOW WOMEN ARE EMPLOYED IN NEW YORK.

THE following is an illustration of the way in which statistical facts of the Census are set out in the *New York Journal*.

From the *New York Journal*.]

|                                |                          |                            |                                 |                              |                              |                              |

THIS SHOWS THE RELATIVE NUMERICAL STRENGTH OF THE WOMEN WORKERS AND OPERATIVES IN ALL KINDS OF INDUSTRIAL TRADES AND OCCUPATIONS IN NEW YORK CITY, COMPILED FROM NEW STATISTICS OF THE UNITED STATES CENSUS BUREAU.

# DIARY FOR SEPTEMBER.

## EVENTS OF THE MONTH.

- Sept. 1. Queen arrived at Balmoral.  
Three thousand weavers left work at Cithere.  
German Emperor at Coblenz.  
Old Catholic Congress opened at Vienna.  
British Medical Association met at Montreal.  
2. Alpine accident on Mount La Salle.  
3. Return of the Jackson-Harmsworth Polar Expedition.  
Postmen's Conference resumed at Nottingham.  
4. The Army Manœuvres concluded.  
6. Opening of Thirtieth Annual Trade Congress at Birmingham.  
Opening of the International Congress of Orientalists in Paris.  
7. News received of the occupation of Berber.  
8. The trial of Mr. Tilak, the editor of *Kesari*, for seditious, began in Bombay.  
The Duke and Duchess of York left Ireland.  
Queen of Denmark celebrated the completion of her eightieth year.  
9. Indian Government addressed a friendly letter to the Ameer.  
The Queen published a letter of thanks to Ireland.  
10. Railway accident in Colorado.  
The Cuban Insurgents took the town of Victoria de las Lunas.  
Twenty-one strikers shot down by order of the Sheriff of Luzerne, Pennsylvania.  
11. Klug of Slam arrived in Paris.  
12. The ceremony in commemoration of the landing of S. Augustine began at the Brompton Oratory.  
13. International Vegetarian Conference at Memorial Hall.  
Abyssinian Mission started for St. Petersburg.  
14. Mr. Tilak, editor of the *Kesari* newspaper, Bombay, sentenced to eighteen months' rigorous imprisonment.  
Letter published from Mr. Mather suggesting a possible settlement of the Engineering dispute.  
The pier at Westminster swept away by the tide.  
Hereford Musical Festival began.  
Sanitary Congress at Leeds opened.  
15. Rain fell over a wide area in India.  
The Samana forts relieved by General Briggs.  
Five men lynched at Varsailles, Indiana, U.S.A.

LOUISA, QUEEN OF DENMARK.

16. Louise Michel expelled from Brussels.  
Attempted assassination of President Diaz of Mexico.  
General Andrade elected President of the Venezuelan Republic.  
17. Meeting of the Federated Employers at Cannon Street Hotel.  
Severe battle at Mamund, on Indian frontier.  
18. Preliminaries of peace between Turkey and Greece signed at Constantinople.  
Colonel Dyer met Mr. Llewellyn Smith at the Office of the Board of Trade to discuss the Engineering dispute.  
Letter from the Queen-Emress to the Indian Army.  
An Agreement signed at Paris by M. Hanotaux and the British Ambassador, cancelling the perpetual Treaty of Commerce between Great Britain and Tunis.  
Silver Jubilee celebration of the reign of King Oscar of Sweden and Norway.  
20. German Emperor arrived at Budapest.  
International Co-operative Congress at Delft concluded.  
Interview between the United States Minister and the Duke of Tetuan regarding Cuba.  
21. Report published of Commissioners in Lunacy.  
General Sir William Lockhart arrived at Simla.  
Dutch Parliament opened.  
The Lord Mayor received a letter from Secretary of State for India on the subsidence of the Indian famine.  
22. Royal Commission to Inquire into the working of the Irish Land Acts begun at Dublin.  
German Torpedo-boat sunk.  
Collision between British steamer *Tyria* and Austrian steamer *Ika* off Flume.  
Cyclone off Brindisi.  
Hawaii Treaty of Annexation to the United States ratified.  
23. Lord Wolseley presented with the Freedom of the City of Glasgow.  
Colonel Dyer had an interview at the Board of Trade offices re the Engineering dispute.  
Duke of Cambridge received the Freedom of the City of York.  
24. Mr. Tilak's appeal refused.  
Defeat of Hadia Mullah and the Mohmanis by General Elles.

25. Miss I. E. Harrison, archaeologist, received a degree from Durham University, being the first lady to receive this honour.  
Duel between Count Badeni, Austrian Prime Minister, and Herr Wolf.  
Launch of an armoured cruiser at Kiel (first in the German Navy).  
27. Fifty-first Annual Conference of the Evangelical Alliance opened at Cambridge.  
Letter published from Bishop Tugwell on the disgrace to Europe of the African Liquor Traffic.  
The King and Queen of Roumania arrived at Budapest.  
Mr. Escombe at Durban, South Africa, returned at the head of the poll.  
Conference of "The Society for Social Politics" at Cologne concluded.  
International Congress on Labour Legislation opened at Brussels.  
Peace Preliminaries formally notified to the Greek Government by the Russian Minister at Athens.  
28. Meeting of the Federated Employers in London, at Cannon Street Hotel.  
Sir Evelyn Wood gazetted as Adjutant-General.  
29. Resignation of the Spanish Cabinet.  
Conference of the Evangelical Alliance at Cambridge concluded.  
Torpedo-boats *Thrasher* and *Lynx* ashore at Dodman.  
Lady-Chapel at Gloucester Cathedral opened after being closed over thirty years.  
30. The Greek Chamber met to consider Treaty of Peace with Turkey. Vote of Confidence in present Ministry defeated by 93 to 71.  
The General Secretary of the A.S.E. had an interview with the President of the Board of Trade.  
London School Board reassembled.

## BY-ELECTION.

Sept. 29. East Denbighshire:—

Owing to the death of Sir G. O. Morgan a by-election was held, with the following result:—

|                               |       |
|-------------------------------|-------|
| Mr. Samuel Moss (L.) ...      | 5,175 |
| Mr. George T. Keuyon (U.) ... | 2,848 |

Liberal Majority ... 2,327

The following are the figures of previous elections:—1885: Lib. Maj. 393; 1886: Lib. Maj. 26; 1892: Lib. Maj. 765; 1895: Lib. Maj. 1,784.

Photo by Bassano, Regent Street.]

THE LATE MR. E. J. MILLIKEN OF "PUNCH."

Died August 26, 1897.

THE HON. BAL GANGADHAR TILAK.

Editor of the *Kesari*.

GENERAL AZCARRAGA.

Interim Premier of Spain.

## TRADE UNION CONGRESS AT BIRMINGHAM.

(390 Delegates, representing 1,250,000 Trade Unionists.)

- Sept. 6 The Mayor welcomed the Congress to Birmingham. Councillor Stevens of Birmingham elected President.
7. Parliamentary Committee's Report adopted. The President spoke on the conditions of labour since last Congress at Birmingham. He expressed sympathy with the engineers in their fight for the eight-hours' day.
8. Resolution adopted declaring the conspiracy laws against workers to be indefinite, ambiguous, and generally unsatisfactory.
9. Resolution to abolish overtime by all possible means carried unanimously. Resolution against the employment of children under fifteen in factories carried by 595,000 votes to 274,000. The Factory and Workshops Acts discussed for amendment, a resolution carried deprecating the present system of married women having to work in order to assist in keeping the home.
10. The following questions discussed: Sweating in the refreshment department of the House of Commons; Government contracts re Trade Union rate of wages; Accidents to railway servants; The Stevedores' Labour Protection League. Standing Orders suspended for the discussion of a plan for the National Federation of Trades, a committee of thirteen to be appointed to consider the best plan of federation, and to report by January 1st, 1898, carried by a large majority. Discussion on the supervision of steam engines and boilers. A resolution carried demanding a higher standard of education for the nation's children than at present given in elementary and other schools. Voting for the Federation Committee; thirteen were elected. Decided that next year's Congress should be held at Bristol.
11. Resolution adopted instructing the Parliamentary Committee to arrange a deputation to the Postmaster-General and the Secretary for War as to the right of combination among the employees of their respective Departments. Congress expressed the opinion that the Labour Department of the Board of Trade ought to be extended.

11. Mr. S. Woods announced that the new Parliamentary Committee had held its first meeting, and had decided to issue an appeal on behalf of the engineers on strike. Mr. Wilkie appointed secretary, Mr. Inskip treasurer.

## THE CHURCH CONGRESS AT NOTTINGHAM.

- Sept. 28. Opening of the Congress. Presidential Address by Dr. Ridding, Bishop of Southwell. He called attention to the Lambeth Conference, and the Expansion of the Church. Discussion on the Organisation of the Anglican Communion. Discussion on Methods of Theology.
29. Discussions on the book of Common Prayer, Foreign Missions, India, the Church and Dissent, Art and Architecture, Movements in the Church during the Queen's Reign. Meeting for Teachers in the evening.
30. Discussions on Church Reform, including Methods of Preference and Patronage; National Education; Industrial Problems, including Poor Law Reform.

## SPEECHES.

- Sept. 1. German Emperor, at Coblenz, on Kingship by the Grace of God. Dr. John Osler, at Montreal, opened the British Medical Association with a speech on the History of Medicine in Great Britain. Mr. Cecil Rhodes, at Salisbury, South Africa, on the Future of Rhodesia.
4. The German Emperor, at Homburg, on the Triple Alliance. Sir A. Milner, at King William's Town, on the Future of South Africa.
5. Mr. Frederic Harrison, at Newton Hall, on Comte.
7. Lord Rosebery, at Dalmeny, on the non-result of the Royal Commission on Agriculture.
13. Lord Rosebery, at Stirling, on the Founding of Scottish National Independence by Wallace in 1297. Sir Alfred Milner, at Port Elizabeth, on Harmony between the different races in South Africa. Mr. A. F. Hills, at the Memorial Hall, on the Advantages of Vegetarianism. Cardinal Vaughan, at Ebbs Fleet, on the Mission of St. Augustine to the Anglo-Saxons, A.D. 597.
14. Dr. Farquharson, at Leeds, on How to Promote the Nation's Health.
15. Lord Rosebery, at Edinburgh, on the Beauty of that City.
16. Mr. John Burns, at Sheffield, on Mr. Mather's proposals for ending the Engineering Dispute. Mr. R. S. Marsden, at Leeds, on "Some Sanitary Aspects of Advertisements."
17. Dr. Eond, at Leeds, on the Report of the Royal Commission on Vaccination. Sir Wilfrid Laurier, at Ottawa, on Canadian Legislative and Commercial Independence.
23. Lord Wolseley, at Glasgow, on the Needs of the Army. Mr. Brodrick, at Bramley, on the Employment of Old Soldiers.
25. M. Turrel, at Blamont, on Prosperity of Republican France. President Kruger, at Krügersdorp, on the Reduction in Railway Rates and on Dynamite.
27. King of Sweden and Norway, at Christiania, on the Blessings of the Union of Norway and Sweden. Baron von Berlepsch, at Cologne, on the Justice of the Labourers' Struggle to Participate in the Intellectual and Moral Conquests of Humanity. ## OBITUARY.

- Sept. 1. Mrs. John Drew.
2. Professor Vallauri, at Turin, 93.
7. Mr. Justice Cave, 66.
8. Sir Everett Millais, 41. M. Francis Pulskey, at Budapest, 83.
9. Mr. David Lewis, C.C. Judge, 45.
10. Mr. R. H. Hutton, of the *Spectator*, 72. Rev. Dr. David Roberts, of Wrexham.
11. The Marquis of Northampton, 79.
13. Sir William Windleyer, 63.
14. Mr. Colin Rae-Brown, 76.
17. Frau Schepeler-Lette, 76.
19. Sir William Bradford-Griffith, late Governor Gold Coast, 73.
20. Hon. Barry Maxwell, 21.
21. Rev. J. F. Montgomery, Dean of Edinburgh, 79. Professor Wilhelm Wattenbach, at Frankfurt, 77. Mr. Edward Meacham, M.R.C.S., Manchester, 73.
22. General Bourbaki, 81. Duke Frederick William of Mecklenburg Schwerin.
25. Hon. R. R. Warren, at Dublin, 79. Mr. Benjamin Lucraft, 88.
27. Sir Henry Lushington, 95.
28. Rev. Canon Elwyn, Master of the Charterhouse.

## DEATHS ANNOUNCED.

The Deaths are also announced of Archdeacon Griffiths; Canon Brown; James Anderson (founder of the Orient line); Major R. H. MacCarthy; the Earl of Egmont; Colonel C. G. Slade; Canon E. W. Edwards; Rev. Samuel Lodge; Sir William Cayley Worsley; Major-General Tilly, C.B.; Canon Starr-Browne; General Thomas C. Lyons, C.B.; Commander B. R. T. Coward; Lieutenant-Colonel Pigott; Mr. John Bailey; Lord Huntingfield; Major-General G. T. Clough; Cardinal Guarino; Mr. Douglas D. Heath; Archdeacon Richardson; Colonel H. L. Searle; Rev. J. S. Thomas; Rev. Samuel Smith; Mr. Henry R. Williams; Abbé Louis Tosti; Major W. B. Graham; Lieutenant H. H. Harrington; Lieutenant Turner.

**IN HIS GARDEN AT WANTAGE.**

# CHARACTER SKETCH.

## MR. RICHARD CROKER AND GREATER NEW YORK.

"THE enemy is at the gates. The siege of Greater New York has begun. The greatest freebooter of political history has taken command of his mercenary forces. The prize on which he has set his eyes is not only the 30,000 offices and the \$80,000,000 annual appropriations of the new city—it is the distribution of these \$80,000,000 appropriations, plus a blackmail fund which was \$10,000,000 in the lesser New York under the former rule of this colossal plunderer, and which would be doubled easily. Richard Croker is a man notoriously devoid of moral character, whose name is a synonym the world over for forms of political corruption almost unknown before his administration of the Finance Committee of Tammany Hall, and, since known, almost unspeakable. We have been ruled by this man before. There are four volumes, or 5,766 closely printed pages of sworn testimony as to the way he ruled us. One of his subjects swore with tears in his eyes that the rule of Abdul Hamid (the assassin) was lighter on him and his fellow Greeks in Constantinople than was the rule of this man in New York"—*The New York Press*, September 8th, 1897.

### I.—A MAN WITH A GOOD CONSCIENCE.

"NO, sir," said Mr. Richard Croker, after a pause for reflection. "Not one."

We were sitting in his state cabin on the deck of the *New York*, which was swiftly bearing the Boss back to the city over which he had reigned so long, but from which he had been cast out like a king into exile by the explosion of popular indignation that elected Mayor Strong. After a long and interesting conversation upon the merits and demerits of the Tammany dynasty, I had ventured to sum up the whole matter in one searching question.

"Mr. Croker," I said, "for nearly thirty years you have been up to the neck in the rough-and-tumble of New York politics. For nearly twenty years you have been supreme Boss of Tammany. You are now out of politics, contemplating a serene old age in the rural delights of your Berkshire seat. You can therefore speak dispassionately upon the events of your career. Looking back over the whole of these thirty years, is there any single act or deed which, now in the light of your experience, you regret having done or that you now feel you wish you had left undone?"

The Boss paused. He removed from his lips his cigar of Broddingnag, and half closed his eyes for a moment.

Then with calm deliberate emphasis he replied—

"No, sir. Not one! I do not remember ever having done anything that I ought not to have done. For I have done only good all my life."

The steamer was littered with copies of Mr. Hall Caine's novel, with its vehement assertion of the impossibility of leading a Christian life in London in the nineteenth century. And here was the great Boss of Tammany Hall, after thirty years' experience of the sternest realities of the corruptest life of New York, calmly and placidly asserting that in the whole of his long and eventful career he had only done what was good, and was able to look back over all the incidents of his life with an approving conscience. And strange and incredible though it may seem to those who are familiar with the name and the fame of the great Boss, I have not a doubt that Mr. Richard Croker was really speaking what he firmly believed to be the truth.

The sense of sin which was cultivated so carefully by the pulpits of New England is not delicately nourished in the primaries of New York and Chicago. The ethical standard of political Bosses is not exactly that of Thomas à Kempis or of Jonathan Edwards. Rather is it conformable to Walt Whitman's enthusiastic outburst of admiration for the cattle of the field:

"They do not lie awake in the dark and weep for their sins:" neither do the leaders of Tammany or their counterparts in the Republican ranks. Hence results

not exactly Pharisaism, but a conscious self-righteousness which no Pharisee could excel.

There is a well-known citizen in Chicago whose name is not exactly a synonym for a high sense of honour, but rather for an excess of that smartness in monetary matters which in the eyes of more severe moralists than those of Chicago would be described by a harsher word. But so convinced is this worthy of his own exceeding virtue, that his righteous soul is positively distressed when any ill-luck befalls him, because of the reflection which such a misadventure casts upon the Ruler of the Universe. At such moments he will say plaintively to his intimates, in tones of sincere distress and perplexity—

"Now what has God gone and done that for? He has got nothing agin' me! I've never done Him no harm!"

So sore are the doubts which harass the mind of the citizen, who, after casting up his debtor and creditor accounts with the Infinite, finds a good balance on the right side!

In the Old Book there is a gruesome phrase about consciences seared as with a hot iron. In the later dialects of the New World those picturesque metaphors have somewhat gone out of fashion. But they have a substitute which, though homely, is not less expressive. For they say "it is pretty tough."

### II.—SATAN.

The modern Sathanas of New York—the man who is to every good Republican the most authentic incarnation of the principle of Evil, the veritable archfiend of the political world—is none other than this same Richard Croker, Boss of Tammany Hall, who tells me that never in all his life did he do anything that was wrong, whose *mens conscia recti* the greatest saint might envy, for all his life he has never done anything but what was good.

Well, let us at least try to give the devil his due. If so be that Richard Croker is the fiend incarnate, it may not be unprofitable to learn from him what is his theory of the Universe, and how it is that he can reconcile the universal conviction of his enemies with the imperturbable assurance of his own rectitude which he unquestionably enjoys. And in this gallery of Character Sketches, where I always attempt to portray a man as he seems to himself at his best moments rather than as he appears to his enemies at his worst, I will endeavour to portray Richard Croker as he portrayed himself.

### III.—THE MAN AS HE SEEMED TO ME.

The man, Richard Croker, has been a kind of veiled prophet, a modern Mokanna to those who have lived under his sway. Even among those who have headed revolts, and successful revolts, against his rule, there are many who would not recognise him if they met him in

HE (CROKER) ISN'T IN SIGHT, BUT HE'S THERE JUST THE SAME.

SHALL I USE ONE OF THESE, OR SHALL I RUN MYSELF?

CROKER AS HE IS REPRESENTED BY "THE PRESS," NEW YORK.

the street. Lord Salisbury carries to a great length the doctrine that it is not expedient for men of opposing parties to meet each other in private, and incidentally it came out that he had only once in all his life set eyes on Mr. Parnell. There are many in New York who have never set eyes upon Richard Croker. The chasm between parties, if not between classes, is far wider in New York than it is in London, and social contempt intensifies the estrangement which political bias has begun.

Mr. Croker is not a silk-stockings dude, but he is a gentleman in his bearing and in his conversation. I speak of him as I saw him. To all outward appearing there was no one on board ship who was less exposed to the accusation of vulgarity, forwardness, bad manners, or bad language. He behaved himself as seemly as anyone could desire. He vaunted not himself, he talked quietly and intelligently to those to whom he was introduced, and so far as in him lay he contributed as much as any one on board, and more than most, to the amenity of the voyage. Probably half of his fellow travellers felt that from his record they would need a very long spoon to sup with Richard Croker, but none of those who had the good fortune to meet with him in his endless constitutional up and down deck but liked him as a companion and parted with him with regret.

Afterwards I saw him in his state-room, and could better appreciate the force and grizzled strength of his face. The resemblance to the pictures of General Grant, which I had not noticed as he paced the deck, was very conspicuous, as, with the only cigar I had seen him smoke between his lips, he talked quietly about the problems of City Government. A silent, somewhat taciturn man, who has lived among men, studied men, governed men, he is as much a devotee of things as they are as Rudyard Kipling, and yet also, strange though it may appear to those to whom his name is as *anathema maranatha*, he is not incapable of a vision as much loftier than the usual horizon of a City Boss as Kipling's "Recessional" is superior to his "Barrack Room Ballads."

#### IV.—THE PHILOSOPHY OF THE BOSS.

Tammany Hall, the headquarters of the most effective Democratic organisation in the Old World or the New, has long been the byword and the reproach of the whole English-speaking world. For nearly a generation past municipal reformers in England have used Tammany as a scareword with which to terrify the inmates of their political nursery. "This way to Tammany Hall!" has been the crowning climax of denunciation directed against attempts to subordinate the consideration of the problems of a great city to the exigencies of a political party. Tammany has come to be regarded as a synonym for all that is most corrupt, most unscrupulous, most abominable in the administration of municipal affairs.

It is somewhat difficult to convey to English readers the full sense of the hatred and the awe which Tammany Hall has long inspired in the minds of its opponents. But if you can imagine the dread with which the Birmingham Caucus was regarded by the Tories in the first palmy days of Mr. Chamberlain's dictatorship, if you add to this the sentiment with which thoroughgoing Radicals regarded the City and its aldermen in the days of Mr. Peal, and then, as a third ingredient, multiply a hundred times the indignation occasioned by the exposure

of the shortcomings of the Metropolitan Board of Works, you may be able to form some far away conception of the holy terror with which Tammany Hall is regarded by its enemies.

I naturally welcomed the opportunity which our chance meeting on board the *New York* afforded me of hearing the other side of the case. My experience at Chicago had helped me to understand much of the good that lies behind things of evil, and I was delighted when Mr. Croker began to talk quite freely concerning the famous institution through which he has reigned so long as Lord of New York.

And here, before I write a word of it down, I cannot resist the temptation to say that, as I recall his suave conversation, it reminds one marvellously of "Reinecke der Fuchs." Every one has read that delightful mediæval satire—now one of the most popular of "The Books for the Bairns"—in which are set out in doleful detail the heinous misdoings and malpractices of the rascal Reynard. But when Reynard is cited before the King's Court, never was there any one so conscious of his own rectitude, so invulnerable in the panoply of his virtue, as the good Reynard—but, I now must add—excepting Richard Croker. But a truce to these embarrassing associations. This is what Mr. Croker said:—

"Tammany Hall," he began, "is much spoken against. But unjustly. You will never understand anything about New York politics if you believe all that they write in the papers. They are always abusing Tammany. But the real truth is just the opposite of what they say. Tammany's reputation has been sacrificed by newspaper men, whose sole desire is to increase their circulation, appealing to the itch for change and a malignant delight in the misfortunes of our fellows."

"Do you think the world is built in exactly that way, Mr. Croker?" I asked.

"No, sir," he replied with emphasis, "it is not built that way, but quite another way. These things I speak of are temporary; the permanent law of the world and humanity is quite different. You asked me how it was Tammany was overthrown three years ago, and I have told you. But the issue of an election is but an incident. The law that governs has exceptions. The exception proves the rule."

"And what is the rule?" I asked, somewhat curious to know the Boss's theory of the Universe. "What is the underlying fundamental law of the Universe?"

"Sir," said Mr. Croker, speaking with quiet gravity, "the law is that although wrong-doing may endure for a season, right must in the long run come to the top. Human nature is not built so that roguery can last. Honest men must come to their own, no matter what the odds against them. There is nothing surer than that. Lying, calumny, thieving may have their day, but they will pass. Nothing can last but truth."

"Really, Mr. Croker," I exclaimed, "what an optimist you are! I have not found so great faith, no not in Israel," I added, laughing.

"That's right," he replied. "If you put ten honest men into an assembly with ninety thieves, human nature is such that the ten honest men will boss the ninety thieves. They must do it. It is the law of the world. All evil, whether lying or thieving, by its nature cannot last. Honest John Kelly, who was Boss before me, when I first came into politics before he was Boss, always used to tell me that, 'Never mind the odds against you if you are in the right. Being in the right is more than odds. Keep on hammering away and you are sure to win.' And I have always found it so."

"And Tammany," I asked; "is it not down now?"

"No, sir," he replied. "In a moment of restlessness, the people put in what they called a Reform Administration, but after three years' experience they have had enough of it, and Tammany is coming out on top once more. It's bound to, for Tammany is honest and Tammany is true. And you have only to go on being honest and true to come out on top—not every time, for we have our reverses; but on the whole, Tammany has come out on top most of the time. And mark my words, you will see that the first election for Greater New York will be the most triumphant vindication of the law that slander may last for a time, but in the long run honest men come by their own."

I felt somewhat like Bret Harte's bewildered hero when he asked: "Do I sleep? Do I dream? Are these visions about?" And then I thought that the Boss was playing it rather low down upon the innocent and confiding stranger. But his countenance was imperturbable, and I do not believe that he was saying a word which in some way or other he had not first convinced himself was gospel truth.

Mr. Croker resumed: "They will tell you that Tammany has ruled New York nearly all the time. And they will tell you true. Do you think we could have done it if we had been the thieves and rogues they pretend we are? I have been in office in New York nearly all my life; do you think the citizens would have been such fools as to elect me and re-elect me if I had been or bad man that some people say I am? Things that are rotten do not last. They go to pieces. Thieves are not trusted by their fellow thieves, let alone by their fellow citizens. It is not by the bad in them that institutions and parties last, but by what is good. If Tammany has lasted and triumphed, that is the best proof that what its enemies say is false. And when it carries this next election, with all the newspapers against it, and all the mugwumps, then you will have our vindication."

"Nothing succeeds like success, I suppose," I replied; "but you have not won yet."

"But we shall," he said, "certain sure. Tammany is honest. Tammany is not corrupt. Tammany is the best, the only permanent hope of real reformed administration. Therefore Tammany will win."

And as Mr. Croker sauntered along, airing his political philosophy, I asked him if he had ever read Carlyle's *Lecture on Mahomet* in his book on "Hero Worship."

"No," said the Boss. "What did he say?"

"Something very much like what you have been saying now," I replied; and I quoted as best I could the familiar passage:—

One current hypothesis about Mahomet, that he was a scheming Impostor, a Falsehood incarnate, that his religion is a mere mass of quackery and fatuity, begins really to be now untenable to any one... These theories are the product of an Age of Scepticism—they indicate the saddest spiritual paralysis, and mere death-life of the souls of men. More godless theory, I think, was never promulgated in this Earth. A false man found a religion? Why a false man cannot build a brick house! If he do not know and follow *truly* the properties of bricks and mortar, burnt clay, and what else he works in, it is no house that he makes, but a rubbish heap. It will not stand for twelve centuries, to lodge a hundred and eighty millions, and will fall straightway. A man must conform himself to Nature's laws, be verily in communion with Nature and the truth of kings, or Nature will answer him, No, not at all!

"That's right," said Richard Croker, "and Tammany proves it."

## V.—THE ANALOGY OF THE CATHOLIC CHURCH.

Mr. Richard Croker, I soon discovered, believed in Tammany Hall as Cardinal Manning believed in the Roman Catholic Church. The analogy is closer than many would imagine. They both stand related in much the same way to the ideals which they endeavour to realise. The Papal Church to the devout Catholic is the divinely appointed machine for securing the salvation of the world. Tammany Hall to Richard Croker is the manifestly accredited instrument of the God of Things As They Are, whereby alone the good government of the City of New York can be secured. Both Cardinal and Croker accept as a fundamental axiom the necessity of the machine. You cannot do without an organisation, a strong organisation, a permanent organisation. You have no right to pit a mob against an army. Discipline, organisation, the machine, whether ecclesiastical or political, is essential to success.

Protestantism, with its thousand sects and ever-varying shibboleth, its sentimental idealism and its wholly fantastic idea that the human race can be made to keep step by any organisation that is not universal and authoritative, has its counterpart in the various mugwump and reform parties which from time to time come to the surface and then disappear. Sects may come and sects may go, but Rome goes on for ever. And what Rome is in its immutability and its authority that is Tammany Hall among its rivals. Mr. Croker is a kind of mundane Pope, with the executive committee as his College of Cardinals. To him the new era began with the overthrow of Boss Tweed in 1871. Cardinal Manning once said to me, "The Council of Trent, that was the real Reformation." So Mr. Croker always dates the beginning of the true Tammany in the overthrow of the Tweed Ring.

The analogy extends further than externals. The Catholic Church and Tammany Hall have much in common in their cynical practical philosophy, and in their firm grasp of certain great fundamental faiths. The Catholic, in defending the methods of his Church against the criticisms of the Protestant or the Freethinker, insensibly falls into very much the same line of argument as did Richard Croker in defending the processes of Tammany.

The Catholic doctrine of rewards and punishments is capable of being philosophically expounded and defended on principles of the loftiest idealistic altruism. But to the masses of the vulgar and unphilosophical human race it presents itself too often in a very prosaic and even revolting form of appeal to human selfishness. Religion itself is to millions to-day—and those millions by no means are confined to the Roman Church—little better than an ecclesiastically engineered and theologically constructed spoils system. Those who hold with the Boss share in the good things that are going in the next world. Those who don't are left out in the cold, or to speak more accurately are consigned to the everlasting burnings. The defence for this system is that the more subtle and refined motives, which might appeal to the philosopher in his closet, are powerless to curb the passions or secure the obedience of millions of semi-savage men. The fear of hell may be but as a hangman's whip; the human pack cannot be kept within bounds without the lash. The promise of the joys of Paradise to the faithful may savour of bribery and corruption, but without such tremendous inducement most founders of religion have felt themselves powerless to cope with the rude elemental forces of the fallen nature of man.

Just so did Richard Croker argue while setting forth for my acceptance the theory of the indispensability of the spoils system in American politics.

"Politics," he said, "are impossible without the spoils. It is all very well to argue that it ought not to be so. But we have to deal with men as they are and with things as they are. Consider the problem which every democratic system has to solve. Government, we say, of the people, by the people, and for the people. The aim is to interest as many of the citizens as possible in the work—which is not an easy work, and has many difficulties and disappointments—of governing the State or the city. Of course in an ideal world every citizen would be so dominated by patriotic or civic motives that from sheer unselfish love of his fellow men he would spend nights and days in labouring for their good. If you lived in such a world inhabited by such men I admit that there could be no question but that we could and would dispense with the spoils system. But where is that world to be found? Certainly not in the United States, and most certainly not in New York. Look at the facts plainly in the face. There are in our country and in New York a small number of citizens who might reasonably be expected to be responsive to the appeal of patriotic and civic motives. They are what you would call the cultured class, the people who have wealth, education, leisure, the men who have got sufficiently above the common level to be able to hear the appeals which the city or the State makes to the conscience and heart of men. They have received everything, enjoyed everything, learned everything. From them no doubt, and from all citizens on their level, you might think you could meet with such a response to your appeals as would enable you to run the State upon high principles, and dispense with spoils. But if you were to expect any such thing, you would be very much disappointed. What is the one fact which all you English notice first of anything in our country? Why, it is that that very crowd of which we are speaking, the minority of cultured leisured citizens, will not touch political work—no, not with their little finger. All your high principles will not induce a mugwump to take more than a fitful interest in an occasional election. The silk stocking cannot be got to take a serious hand continuously in political work. They admit it themselves. Every one knows it is so. Why, then, when mugwump principles won't even make mugwumps work, do you expect the same lofty motives to be sufficient to interest the masses in politics?"

"And so," I said, "you need to bribe them with spoils?"

"And so," he replied, "we need to bribe them with spoils. Call it so if you like. Spoils vary in different countries. Here they take the shape of offices. But you must have an incentive to interest men in the hard daily work of politics, and when you have our crowd you have got to do it one way, the only way that appeals to them. I admit it is not the best way. But it is for practical purposes the only way. Think what New York is and what the people of New York are. One half, more than one half, are of foreign birth. We have thousands upon thousands of men who are alien born, who have no ties connecting them with the city or the State. They do not speak our language, they do not know our laws, they are the raw material with which we have to build up the State. How are you to do it on mugwump methods? I tell you it cannot be done."

*Photo by Rockwood, New York.]*

THOMAS A. PLATT.

Chief of the Republican Party in New York.

#### VI.—TAMMANY'S SERVICE TO THE STATE.

We were silent for a time. Mr. Croker took a turn or two, and then resumed:—

"People abuse Tammany for this and for that. But they forget what they owe to Tammany. There is no denying the service which Tammany has rendered to the Republic. There is no such organisation for taking hold of the untrained friendless man and converting him into a citizen. Who else would do it if we did not? Think of the hundreds of thousands of foreigners dumped into our city. They are too old to go to school. There is not a mugwump in the city who would shake hands with them. They are alone, ignorant strangers, a prey to all manner of anarchical and wild notions. Except to their employer

they have no value to any one until they get a vote."

"And then they are of value to Tammany?" I said, laughing.

"Yes," said Mr. Croker, imperturbably; "and then they are of value to Tammany. And Tammany looks after them for the sake of their vote, grafts them upon the Republic, makes citizens of them in short; and although you may not like our motives or our methods, what other agency is there by which so long a row could have been hoed so quickly or so well? If we go down into the gutter it is because there are men in the gutter, and you have got to go down where they are if you are to do anything with them."

"And so," I said, "Tammany is a great digestive apparatus, fed with all manner of coarse, indigestible

food, that would give a finer stomach sudden death. But Tammany's stomach is strong; nothing is too rough for Tammany's gastric juice, and so you build up the body politic out of material—"

"That but for us would have remained undigested and indigestible—a menace to the State, a peril to society. You may carp at our motives and criticise our methods—we do not complain. All that we say is we have done the work, and we deserve more recognition for that than we have yet received."

I suppose it was because I felt the truth of what he said so forcibly during my investigations at Chicago that led Mr. Croker to declare, as he introduced me to some of his "leaders" on the landing-stage, that he was quite sure, if only I were a citizen of New York, I should soon be at Tammany Hall.

Said Mr. Croker, "It was never to Tammany's interest to put bad men in office, or dishonest men. While I am all for the spoils system, as you call it, I am as much opposed as you can be to putting bad men in office and keeping them there. No doubt under any system sometimes bad men get into office. What we claim is that with a strongly organised machine we can turn them down when they are shown to be bad. You assume that there is only one supremely good competent man, and that he ought to be appointed every time. We say that there are plenty of good competent men on both sides, and each does right to appoint its own friends. And why not? No power on earth would ever induce me to pass over my friend if he was as fit for office as any other man. Other things being equal, always give your friend the first chance, rather than the other fellow's friend."

"But," I objected, "do you mean that Tammany has always appointed the best men?"

"Tammany has appointed good men. For nearly thirty years Tammany has been a good and honest element in the government of the city. Tammany was there all the time. Tammany did not vote at an election and then go home and forget all about it. Tammany watched how its men behaved. If they behaved ill, Tammany turned them down. And that for the best reason. Tammany could not afford to be discredited by maintaining bad men in office. It needs a strong outside political organisation to enforce discipline. It is always to our interest to do so. Every leader has always a dozen men hungry for the post which he can vacate by turning out a bad man. A strong effective party machine is essential to the safe working of popular institutions."

#### VII.—THE BOSS AS CHAMPION OF POPULAR GOVERNMENT.

This brought Mr. Croker by a natural transition to insist upon the peculiar and distinctive virtue of Tammany Hall. If there be one virtue more than incorruptible honesty and an austere regard for the city's welfare, which distinguishes the famous institution which has Mr. Croker as its presiding genius, it is a profound regard for the principle of free popularly elected government. Herein, strange though it may appear to those to whom Tammany is but the embodiment of the principle of Despotism, Mr. Croker was on firmer ground.

"Tammany," said Mr. Croker, "is everywhere spoken against because it is said to be a foreign organisation. Tammany, on the contrary, is a distinctively American organisation founded on much more thoroughgoing American principles than those which find favour with

the framers of the Charter of Greater New York for instance. It makes me tired to hear their talk about foreigners. Where would America be to-day without foreigners?"

Mr. Croker's question this time admitted of an easy answer. It would have been in the hands of the Red Indians. From the *Mayflower* downwards the white people of the United States have all been foreigners at first.

Mr. Croker went on: "This discrimination against citizens because of the place of their birth seems to me un-American and unjust. Do not these men pay taxes, found homes, build up states, and do a great deal more in the government of the city than our assailants? They may have been born under another flag. But they forswear their own nationality, they swear allegiance to our flag; they filled the ranks of our armies in the great war; everywhere they fulfil the duties and accept all the burdens of the citizen, and yet we are told they are foreigners. Sir," said Mr. Croker, speaking with more earnestness than was usual with him, "in Tammany Hall there is no discrimination against citizens on account of race or religion. We meet on the common ground of one common citizenship. We know no difference of Catholic or Protestant, of Irishman, German or American. Every one is welcome amongst us who is true to the city and true to the party. To me the old sectarian quarrels are absolutely inconceivable. Priests have no voice in the management of Tammany Hall. It is of the people, created for the people, controlled by the people—the purest and strongest outcome of the working of democratic government under modern conditions."

I do not pretend to reproduce Mr. Croker's exact words. I had not time or opportunity to submit to him a proof before publication; but although he may take exception to a phrase, I do not think he will seriously impugn the substantial accuracy of my version of his talk.

"But," I objected, "an eminent Republican fellow-passenger assures me that Tammany differs from all other American political organisations in that it is absolutely under the despotism of the men in office. Other organisations cannot enforce discipline; Tammany rules with an iron hand."

"Now," said Mr. Croker in his most Reineckian vein, "how can that be? You talk of Tammany and those who are in office as if they had any authority whatever beyond the popular vote freely expressed. What is Tammany? I am the Boss, they say. But I hold no office. If I am Boss it is simply because what I may say or think goes with the Executive Committee. You or any man might be a Boss to-morrow if you could convince those who hear you that you are a sensible man who has a sincere regard for the party and the city. They cry Tammany Hall! Tammany Hall! But what is Tammany Hall? It is simply an Executive Committee of the Democratic party of New York, elected annually at primaries or open public meetings held subject to the law, which makes strict provisions against any fraud or wrongdoing. New York is divided into thirty-four assembly districts. Each of these districts holds a public meeting, to which every member of the party resident in that district is free to attend. At these primaries representatives are selected by the free vote of the citizens present. These representatives elect one of their number in whom they have confidence as their leader. This leader becomes their representative on the Executive Committee of Tammany Hall. He may be re-elected year after year. But he can be superseded in

twelve months if he cannot retain the confidence of the people in his own district."

"But do they ever get turned out?" I asked.

"Certainly," said Mr. Croker, "they are always changing. Their only authority depends upon their personal influence. You hear a great deal about my being the Boss, as if I were lord and master of Tammany Hall. I hold no office. I have no power, not an atom, except what I can exercise because of the confidence which the people have in me. They know that I am honest, that I am true, that I care for the party and the city, and that is all there is to it. Boss Tweed no doubt was a bad Boss. But we met him in the primaries, and we turned him down, and put honest John Kelly in his stead. When Kelly died there was some discussion as to his successor. I said, let us appoint no successor, or rather let us all be his successors. Instead of one Boss let us all thirty-four be Bosses, and it was agreed. But somehow when people found that what I said went, they got into the habit of saying I was Boss. But I could not help that."

Thus, by slow degrees and in the course of many conversations, I gradually began to perceive, as it were, some glorified image of Tammany Hall and its Boss as he evidently loved to dwell upon them in his dreams, and it was not far from the Kingdom of Heaven. For it was based upon the great principle of human brotherhood: it had as its foundation the doctrine that in Tammany there is neither Jew nor Gentile, Barbarian or Scythian, bond or free; and it had as its habitual rule of life the serving of the Brethren. Instead of being an excrescence upon the State, it was the great digestive apparatus of the Republic, upon whose rude strength and capacity for assimilation depended the health of the Commonwealth. And to-day, while Citizens' Unions and Character Committees, and all the great and learned and influential of the city are going astray from the true Democratic faith, and seeking to cast out municipal evils by having resort to elective Caesarism, Tammany stands forth fearless and undismayed, the very Abdiel, faithful among the faithless found, in its unswerving allegiance to the pure original principles of free popular elective self-government.

Between this glowing and beatific vision and the squalid, sordid, and criminal side of Tammany as revealed by the Lexow Commission there is indeed a great gulf fixed. But we shall better understand its power, and the permanence of its power, in New York, if we recognise that there may be something in Mr. Croker's imaginings. For, after all, there is a great truth underlying the Carlylean doctrine which Mr. Croker all unconsciously appears to have made his own.

#### VIII.—ON NEW YORK POLITICS.

One of the papers announced the day after I arrived that Mr. Croker had told their interviewer that I was the most interesting person on board the *New York*—I knew nothing about New York politics. I appreciated the compliment better after having a week's talk about New York politics than I did before I landed. The discussions, the endless banal discussions, about persons and places which make up the most of politics as they are talked by politicians, no doubt made my childlike innocence seem to Mr. Croker a grateful oasis in the midst of a controversial Sahara.

The issues before the citizens of Greater New York are, however, profoundly interesting. This November for the first time there comes into existence what is called the Greater New York. This has been formed by adding

Brooklyn to New York proper, much as Salford might be added to Manchester, and rounding out the conglomerate municipality by the annexation of various outlying urban and suburban districts, until there has been created a Greater New York 318 square miles in area, and with a population of 3,000,000, with 30,000 offices and £16,000,000 revenue.

Since the London County Council was created by Mr. Ritchie there has been nothing like so huge a piece of civic administration-making undertaken by mortal men. It is, strictly speaking, absurd to speak of Greater New York as a municipality in the English sense of the word. It is a great administrative district, which for the next four years is to be governed according to the sovereign will and good pleasure of the satraps of the Cæsar whom the electors will vote into office next November. The Mayor of Greater New York, elected by mass vote of all the citizens, becomes Grand Elector for the whole area, and he elects in the first six months of his term of office all the men who are to do the administrative work of the town. After six months, these gentlemen selected by the Grand Elector, who will be chosen by the citizens next month, will continue in office for three years and six months, unremovable by the Mayor, and uncontrolled by the phantom council that will masquerade as a Municipal Assembly, meeting to secure its more complete impotence in two houses! This may be good or it may be bad. It may be elective Caesarism or irresponsible Bureaucracy. The only thing quite certain is, that it is not popular democratic municipal government as we understand the term.

Hence the extraordinary interest with which the coming election is regarded. The first Mayor of Greater New York will have more absolute power for the first six

*Photo by Falk, New York.]*

JOHN C. SHEEHAN.  
Chief of Tammany Hall.

months of his tenure of office than any mayor ever had since the Mayors of the Palace in the declining years of the Merovingian dynasty. Into his hands, as to a dictator, will be delivered the second largest city in the whole world, and the men whom he will choose in that period will continue in office for four years. The twentieth century will see New York ruled for better or worse by the appointees of the Mayor chosen next month.

Who is he to be? Mr. Croker was of course the centre of universal interest. But he would not speak. To all inquiries he remained as dumb as an oyster. He was out of politics. Mr. Sheehan was Boss of Tammany. Tammany, no doubt, would elect its own candidate, and that candidate would win—by various majorities at one time put as high as a hundred thousand votes.

But to me Mr. Croker talked very simply and seriously.

I had been saying that I would rather be first Mayor of Greater New York than President of the United States for the next four years, when he broke in:—

"One thing is certain, any way. Whoever is Mayor of Greater New York will make a failure of it. He cannot help it. No one living can successfully govern three millions of people under such a charter. It will have to be amended again and again to give it even a chance of carrying on. For it is simply an impossible instrument of government. If the people could have voted upon it after it was finally settled as it now stands, they would have vetoed it by a large majority. But these men, who

distrust the people, refused to allow the people to pronounce upon their work. So we shall see a certain failure, whoever is Mayor."

"They are all saying on board the ship, Mr. Croker," I said, "that you are to be first Mayor of Greater New York."

Mr. Croker smiled. "Whether I shall be a candidate or not is a point upon which I have not made up my mind. I have not the facts upon which to form a judgment. I have been away from the city for months. I have been out of politics for three years. It would be absurd for me to say who will be the Tammany candidate, although I think it is quite safe to say that, whoever that candidate may be, he is safe to be the first Mayor of Greater New York."

"Well," I said, "it is a post which any man might be proud to hold, with greater potentialities of good in it than any other."

Mr. Croker paused thoughtfully for a time, and then he said:—"I do not mind telling you exactly what I feel at present about the matter. I may accept the nomination if it is offered me. At present my feeling is very strong against doing so, and for this reason: I have had enough of it. For twenty-five years I have toiled and worn myself out in the service of the city. I am no longer so strong as I used to be. I broke down rather badly with vertigo in my last term of office, and, although I am much better now, I am quite certain that if I were Mayor of Greater New York I should be in my grave before my term of office expired. If I thought I could make a success of it, I should perhaps not think so much of that, although I don't want to die just yet. But as I have told you, no mortal man—no, not an angel from heaven—could govern the city successfully under this charter, and I don't care to die for the chance of making a failure."

I said, quoting Macaulay:—

"To every man upon the earth  
Death cometh soon or late.  
And how can man die better  
Than facing dreadful odds  
For the ashes of his fathers  
And the temples of his Gods."

"That is all very well," Mr. Croker replied, "if I could do any good. But I don't see that I can, or that anybody can, under this charter. I have had a very rough, hard life, and I want to rest a few years after all the turmoil. I have got a little country place in Berkshire where I have a few horses—and I am very fond of horses. What I would like best of all would be to go back to Berkshire and spend the next few years quietly with my horses in the open air, and with my family at home, and let somebody else swing New York."

"Natural," I said, "but not the highest, is it?"

Mr. Croker replied with sudden energy: "I have not made up my mind. I cannot possibly make up my mind till I know how the situation stands in New York. That I am going to find out. When I know the facts, I shall make up my mind. And I would have you understand," he said, speaking in a tone very foreign to his usual quiet, unemphatic way, "that whatever way I decide it will be my own decision and nobody's else. I take no stock in the protestations of men who have been compelled against their wishes, etc., to accept office. Never. If I accept this or anything else it is because I wish to have it. If I did not wish for it, no power on earth could make me accept it. I never have been driven to accept anything against my wish, and I never will."

"Well, Mr. Croker, suppose you were to find the facts lie so as to lead you to wish to be Mayor of Greater New York?"

"Then," said he, with sudden change in manner, "if I were to choose death in four years in order to administer an impossible charter, I should at least have a worthy ideal. I have been much abroad of late, and wherever I have gone I have had my eyes open; and I have been much impressed—painfully impressed—how much better things are for the poor man in some of the cities of the Old World than they are in New York. Yes, sir, it seems strange to say it, but for the poor man in London there is more liberty—ten to one more liberty—than for the poor man in New York. In London the parks are for the poor men to use as they please—to speak in, to sleep in, to breathe in. In New York they are pretty places for the rich men to look at. If I were Mayor," said he, "I should try to change all that. Wherever, in whatever department, I could find anything in any city better than what we have in New York, there I would seek to bring New York up to the line."

"To go one better, in fact," I suggested.

"Just so," said he, "and so to make New York the ideal city of the whole world. It is the greatest in the New World; why not make it the best?"

That, at least, would be my ambition. It would be worth while risking something to realise that. But Tammany," he added, "will see to it. There is no other organisation in New York with the continuity and power to attain it."

#### IX.—THE GENESIS OF A BOSS.

Mr. Croker does not like the title of Boss. He regards it as the most offensive which has ever been devised by mortal men to describe their leader. In every age the

title of the Governor and Director has varied. Consul, dictator, emperor, king, duke, doge, general, president—any or all of these titles are universally recognised as more or less honourable. It has been reserved to Americans of these latter days to invent a term for their leader which excites anything but reverence, and is at once familiar, vulgar, and offensive. It is probably the one office in the world which is universally

coveted, whose title instead of adding to the dignity of the post, detracts from it. Nevertheless, popular or unpopular, Boss has acquired a permanent position in American nomenclature. Possibly, in time, to be styled a Boss may be held to be as honorific as to be called Consul or Duke, for of all posts and offices accepted in the American Republic, that of Boss is the most distinctively characteristic and unmistakably American. Possibly, a thousand years hence the children of our remote posterity will learn from their school books that at the end of the nineteenth century the United States of America, nominally preserving the shadow of Republican institutions, were really governed more or less despotically by Bosses, thereby reproducing in the Western World the familiar phenomena by which in ancient Rome the shade of the Republic lingered on the Seven Hills long after Augustus had concentrated all

power in the hands of the Cæsars. Presidents come and go like the phantom consuls in the Roman Empire, but the rule of the Boss remains. An unwritten law forbids the election of a President for the third term of office, but no law interferes with the indefinite prolongation of the rule of the Boss. Familiarity with the spectacle has concealed its significance from the eyes of most observers; but now and again a more or less picturesque incident forces its significance upon the minds of the most unthinking.

Photo by Rockwood, New York.]

SETH LOW.

Citizens' Union Candidate for the Mayoralty of Greater New York.

Take, for instance, the case of Mr. Richard Croker. In the eye of the law he is a simple citizen, not even of American birth. Like most of the modern rulers of American cities, he was born in Ireland; nevertheless, although born in a foreign land, and, therefore, precluded by law from ever aspiring to the presidential office, this man, after serving an apprenticeship as Vice-Boss or Lieutenant to Tweed's successor Kelly, has reigned with undisputed authority as Boss of Tammany Hall for nearly a quarter of a century. Three years ago, his nominee being defeated at the polls, and his health having given way under the wearing strain of power, the Boss, following the example of other kings in exile, departed to seek consolation in England, which ever extends a hospitable welcome to all dethroned potentates. Tammany Hall is ferociously anti-British in its sentiment, but its Boss without hesitation domiciles himself in a country gentleman's seat near Wantage, in Berkshire, almost within the shade of the towers of Windsor. There he follows the ordinary pursuits of a country gentleman of sporting tastes. He keeps a stud of racehorses, and is to be seen in company with sportsmen eminent and the reverse of eminent on English racecourses. He is caricatured by his enemies as hobnobbing with princes on the turf, and accused of the great and heinous crime of being a hanger-on to the skirts of the Prince of Wales.

Meanwhile the city which has cast him out is delivered over absolutely into the hands of his bitterest opponents; a mayor, elected in protest against his rule, has all the resources of the city at his disposal; while the police, which he had converted into a Praetorian guard, were disciplined and administered by men who regarded him much as Fairfax and Cromwell regarded Charles Stuart. The dethroned Boss lies low in the Old World. He proclaims he is out of politics. But one fine day, when the election for Greater New York is drawing near, it suddenly occurs to him that he will revisit the

scene of his former dominion. Then in a moment is manifested the difference between a Boss even in retirement, and say, for example, an ex-President. Benjamin Harrison, one of the ablest Presidents of recent years, might go and come across the Atlantic ferry a dozen times without attracting one quarter of the attention excited by the return of the Boss.

Richard Croker sailed from Southampton surrounded by an informal Court, of which the most conspicuous members were the representatives of New York papers commissioned to record everything that he did, everything that he said, and as much as possible of what he thought. The Vice-President of the line at once placed at his disposal the suite of state rooms on deck, and throughout the voyage, although General Tracy, ex-Secretary of the Navy, was on board, Mr. Croker was Boss of the ship. His arrival at New York was treated in all the newspapers as the greatest political event of the day. Even the most hostile devoted columns to chronicling his arrival and commenting upon its possible significance, while the more enterprising and energetic literally filled pages, day after day, with letter-press and illustrations, all, whether friendly or hostile, testifying in the most forcible fashion to the prominent hold of the Boss upon his former subjects. As one of his bitterest opponents of the press angrily declare:—

No American born political leader could live so much abroad, could display so much fondness for English life and English society, without seriously imperilling his power. Mr. Croker appears to suffer little by it. He comes back now to take charge of the Tammany canvass, with complete control over the Tammany purse, and is received as the dictator of the organisation, the man whose word is absolute as to candidates and policy. It is a very remarkable display of personal power.—*Evening Post*.

It is not too much to say that no European newspaper would have given as much space to chronicling the movements of any crowned head as was accorded to Richard Croker as a matter of course by friends and foes alike when he returned to New York. Perhaps more significant even than the attention paid in the newspapers was the homage done him, not merely by the chiefs of Tammany Hall, but even by the rank and file in the street. It was noted by one of the most vehement Republican anti-Tammany newspapers that as, on the day of his arrival, he was passing down a street, the pavement of which was under repair, the paviers no sooner recognised him than by an instinctive movement they all uncovered, and stood as if they had been Europeans suddenly confronted with the presence of their king. King he was, dethroned perhaps for a moment, but possibly on the eve of expelling the usurper from his throne.

We come therefore to the very intensely interesting subject of inquiry as to the way in which a mere mortal, without title, post, distinction, or hereditary position, is able to acquire and to keep, despite all the vicissitudes of fortune, the homage of the jealous democracy of an American city. Some student who will combine the patient scientific method of Darwin with the philosophic appreciation of De Tocqueville may some day give us a monograph on the Evolution of a Boss, a creature who is at least as worthy of study and observation as the earth-worms and the ants, to whom our scientists have devoted years of patient labour. By way of attempting to contribute some fragment to the materials from which these future scientific philosophers will construct the classic work on the Genesis of a Boss, I thought it well to ask Mr. Croker

From the *New York Journal*.]

CROKER ARRIVES IN NEW YORK.

how it was he came to be Boss. Are Bosses, like poets, born, and not made or was he at an early age inspired by the high ambition of becoming Boss, as Roman soldiers aspired to the Imperial purple? or was he a natural product of the elemental forces of his time, as unconscious of the process of his making as Topsy was of her creation? I found, as might be expected, that Mr. Croker was very much of Topsy's opinion. He 'spects he grow'd, and found his place in the providential economy of the universe by no conscious act of volition on his part.

#### X.—THE STORY OF HIS LIFE.

The story of his life, as he told it to me, was very plain and simple, although full of interest as an illustration of the ease and rapidity with which an unknown Irishman, with no education to speak of, without friends or funds, could spring with a bound to the very forefront, and acquire wealth and power at an age when most men in the older world are just beginning to earn their first professional fee. Mr. Croker, as I have said, was born in Ireland, in the county of Cork, and was one of the youngest—if not the youngest—of a very numerous family. He was not two years old when his parents left the Old Country, carrying with them their numerous progeny, whom they found it no longer possible to feed in famine-smitten Ireland. His father, he said, was a man of good education, and some of his elder brothers went to college. Richard, however, being the youngest, received no other education than that provided by the public schools of New York, to which he was sent in due course, but where he was not permitted to remain after he had reached the age of thirteen. At thirteen he was taken from school and set to work at earning his living. After a time he was sent to learn the business of an engineer or fitter in a machine shop, and there he remained for several years. He served his apprenticeship, as we would say, to the business, and became a competent workman, thoroughly conversant with the art and mystery of building a modern locomotive, and after accomplishing the building, was fully competent of mounting the footplate for a trial spin along the metalled way.

Up to this point there was nothing to distinguish young Croker's career from that of any number of skilled workmen who were employed in the fitters' shop on the Atlantic coast. At the time of the great convulsion which left so profound an impression upon the American nation, when its youth and manhood went down into the bloody winepress of war, he was a mere boy, too young to shoulder a musket. He was, however, profoundly stirred by the patriotic impulse of that great and stirring time, and it is one of the memories upon which he dwells with pride that Tammany in those dark days raised a regiment for the Union which bore itself second to none in the long death struggle with the slave power of the South.

Croker read few books, but many newspapers, and was a close and keen observer of men. It is interesting to note that contrary to the almost universal opinion, eloquence or readiness of speech on the platform is by no means an indispensable ingredient in the elements which go to make up a great Boss. "I have never made a public speech on a platform to a large audience in my life," said Richard Croker. "I could not do it. I cannot talk in that way. In committee, in council, I can talk in a homely fashion; discuss, and put arguments before men; but to make an eloquent speech—no, I cannot do it. I never can, and I never did. In all my life I have

*Photo by Gutekunst, Philadelphia.]*

M. L. GODKIN.

Editor of the *Evening Post*, New York.

never made what you would call a set speech." From this Mr. Croker went on to discourse upon the comparative value of the speech that is silvery and the silence that is golden, in a fashion which would have delighted the heart of Thomas Carlyle. Of mob orators, for those whose eloquent words are able to wield at will the fierce democracy, Mr. Croker takes but little stock. They have their uses, no doubt. They are necessary. They receive their instructions, and being told what to say, are expected to say it, or the Boss would know the reason why; but it was evident he ranked them as standing very low in the scale of political importance. "Men," he said, "who run to tongue have often very little else than tongue to show. There is So-and-So, and So-and-So," he went on, naming in succession many of the most eloquent stump-orators and sprad-eagles of the day; "they talk, but what else can they do? Nothing. For judgment, for wisdom and counsel, for horse-sense, who would go to any of these men? Have you not found it so in your country?" he asked. "No," I said, "I could not say we had. Gladstone, Bright, Chamberlain, who were among the most effective of our public speakers, were all of them quite as shrewd and weighty in council as they were eloquent on the platform." But Mr. Croker was not convinced. He did not despise the golden-mouthed orator, but he regarded him as a kind of copper currency, useful and necessary in his place, but of a mere token value. They were things to be used, but on no account whatever to be permitted to indulge in the fond

delusion that because they are eloquent in talk they are to be regarded as having weight in council.

When Richard Croker was approaching manhood, New York was under the dominion of Boss Tweed, who as lord of Tammany Hall was hurrying with rapid steps down the way which leadeth to destruction. The scale of plunder practised by Boss Tweed and his satellites was colossal. During the last two years of his reign Boss Tweed added £8,000,000 to the debt of the city of New York, a large fraction of which he kept for himself, but the rest was lavished in donatives to his Prætorians. It was the unbridled insolence, the scandalous extravagance, the unblushing capacity of this brigand Boss which first brought Richard Croker into politics. The great Boss of our day who, according to his political opponents, reigned as emperor in New York, levying a revenue of blackmail amounting to £2,000,000 per annum from the vassal city, owed the beginning of his career to the virtuous horror with which he regarded the excesses of Boss Tweed.

Richard Croker, barely turned one-and-twenty, took council with one John Kelly, known as Honest John Kelly, who became Boss of Tammany between the reigns of Tweed and Croker, and decided that, come what might, they would throw themselves heart and soul into the task of raising a revolt against the dominion of Tweed and his myrmidons.

Robespierre, it may be remembered, first figured in history as the humanitarian opponent of the infliction of capital punishment.

Mr. Croker's account of Boss Tweed was interesting. His estimate was severe but sympathetic. "Tweed," he said, "was a very able man, who for years had not done badly. He had indeed done much good for the city. But towards the end of his sway he fell before temptation. He became rotten, and as soon as he began to steal all those under him followed his example. Being corrupt himself he could not reprove dishonesty in others, and so the whole set then in power became rotten."

"Then you admit," I said, "that Tammany, notwithstanding all its virtues, could, and as a matter of fact did, become a sink of corruption?"

"Yes," said he, speaking with the same engaging frankness that Cardinal Manning would refer to the crimes of the Borgias; "under Tweed Tammany became very bad. Tweed and all the men in with him stole millions. It was not Tweed alone—it never is any one alone. To steal public money there must be many thieves all working together, each screening the other, no one daring to denounce any other because he is in it himself. It was a shocking state of things. It was to stop all that that I went into politics. And the case of Tweed is the strongest illustration of what I told you about the power of the few, poor friendless men who have right on their side against the strongest confederacy of thieves and robbers. In 1869 and 1870 Tweed was at the height of his glory. All New York obeyed him. Every official was at his orders. All the police and everybody else were his servants. He was many times a millionaire. But he was wrong, and it could not last—dishonesty never can. Only right comes always out on top."

"But how was he overthrown?"

"Simply by the power of truth and honesty. Who were we to go out against such a Boss? A few poor young fellows whom nobody knew. But we were in the right, and that was enough. Honest John Kelly, he said to me, 'Croker, we have just to go right on, fighting

them all the time. Never mind the odds; we're bound to win.' And we did. It was a great fight. We young men formed an Independent Young Men's Democratic Organisation. We worked, we talked, we made a good stand everywhere against Tweed and Tammany."

"What!" I said; "you were an anti-Tammany man in those days?"

"Certainly," said Mr. Croker. "My first political act was to go on the war-path against Tammany, in order to 'down' Tweed. But we 'downed' him. I was one of the majority elected on the Board of Aldermen to oppose Tweed. He could not secure his re-appointment against the veto of the majority of the Board of Aldermen, and then we elected the majority."

"You 'downed' him then?" I asked.

"Oh dear, no! Tweed had still another move. He owned the majority of the Legislature of the New York State. Part of it was Tammany, pure and simple, but he had no difficulty with his millions in buying outright the votes of as many Republicans as he wanted. Then the Boss with a majority at Albany ran an Act through the Legislature turning us out of office, by the device of creating a new Charter for the City of New York. Thus I was legislated out of my office as Alderman before I had held it six months. But although Tweed controlled the Legislature, we had the people behind us, and although I did not stand again for Alderman, even under the new Charter we elected a majority sufficient to prevent Tweed's re-appointment. So we 'downed' him at last, and in the end he died in prison. It was a great victory against enormous odds. But," added Mr. Croker, "you never need fear appealing to the people if you are in the right. I have always had faith in the people."

"After Tweed was 'downed' did you become Boss?"

"No, sir. The next Boss was Honest John Kelly. I was appointed City Marshal, charged with the collection of arrears of taxes on personal property. I was paid a commission on collection. I had previously drawn salary as Alderman for five months. But I should have told you that when Tweed fell, we anti-Tammany men—the Reformers and Independent Democrats who had 'downed' Tweed—then took over Tammany. Since that date Tammany has been the Reform Organisation of New York City."

"You took possession of Tammany, I suppose, as you would a vessel after she had struck her flag: manned her with a new crew, and used her guns against her late consorts?"

"Certainly. We, the anti-Tammany reform party, took possession of Tammany, and made the old sink of corruption the headquarters of Reform. And so it has continued," said he seriously, "down to this day."

"And Mayor Strong?" I queried.

"We have far more right to the title than Mayor Strong. We claim that we are the genuine article. He is only a counterfeit. Reformed Administration, indeed!" he said with scorn. "If you only could see the creatures who are carrying it on! The men who have been cast out of Tammany as too bad for our organisation have labelled themselves reformers and are now running the city. Of course the mugwumps don't know what they are after. They only interest themselves in politics on election days. But these bad fellows, the off-scourings of the city, who are too corrupt and altogether too bad to be employed by either of the regular organisations, they are the men to whom your Reformed Administration leaves the practical work of governing. Reform, indeed! You should just see them at their tricks."

"But to return, Mr. Croker. What was your next public office?"

Then Mr. Croker patiently and methodically went through the list of his public offices, from which it appeared that he had been in the salaried service of the City of New York almost continuously from 1870 to 1895. Nor must it be supposed that the salaries were small. He served two terms as City Coroner in the palmy days when City Coroners were paid in fees. I think every case brought in £4 to the Coroner, and Mr. Croker told me that he drew during his double term of service no less a sum than from £4,000 to £5,000 per annum! It seemed almost incredible to me. But Mr. Croker stuck to it, and he had no motive for exaggeration. It is now a salaried post, but when he held it the fees brought in from 20,000 to 25,000 dollars a year. Here, indeed, were "spoils!" Richard Croker, a young Irish mechanic, who had left the fitting-shop at twenty-one to go into politics, finds himself before he is six-and-twenty installed in office enabling him to draw the salary of a Cabinet Minister for six years on end. Who can wonder at the rush into politics when the premium upon success is so enormous? In no other profession could Richard Croker have secured so large an income at so early an age. I need not go into the details of his municipal career. He was elected Alderman, but never took his seat on the board. He was made Fire Commissioner, and then he became Comptroller, a coveted post which he held for several years. Here also the salary is that of a Cabinet Minister. Altogether, as I cyphered it up, Mr. Croker must have drawn in fees and salaries attached to the various offices which he held between 1870 and 1895 a sum of not much less than £70,000, or three hundred and fifty thousand dollars—excluding all illegitimate perquisites. That is to say, in twenty-five years of municipal service Mr. Richard Croker received on an average nearly £3,000 a year. Is there any public man in the political service of either England or the United States who can show a better record?

During all the time that Mr. Croker was in the salaried service of the city he was the ruling genius of Tammany Hall. After Tweed's downfall, although Honest John Kelly was titular Boss, Richard Croker was the power behind the throne. When Kelly disappeared, although the nomination was made,

and every one of the thirty-four leaders was to be his own boss, no one for a moment was under any misapprehension where the real power lay. There was in Mr. Croker's mind no antagonism between the interests of the city, whose offices he held, and those of Tammany, whose political work he was doing all the time. The party machine was indispensable to enable him to rule the city. So always he talks of Tammany and the city, as Cardinal Wolsey might have spoken of Church and State.

#### XI.—THE SECRET OF HIS SUCCESS.

I asked Mr. Croker wherein lay, in his opinion, the secret of his strength.

He replied that he had always trusted the people, and the people trusted him. He had never been crooked, nor would he ever tolerate crooked men in office. If a man became corrupt he was fired out. This was even more necessary in the interests of the party than of the city. The people knew him, and they felt he spoke straight and acted honestly in their interest, and so forth.

But, I said, apart from these general considerations, what did he consider differentiated him as Boss from his predecessors?

He considered a while, and then replied, "Two things. They were both very simple, but they contributed the most to the maintenance and to the strength of my position. The first was the divesting myself of all the patronage which previous Bosses possessed. As soon as I became Boss I terminated at one stroke the system which every previous Boss had acted upon—of keeping all the city appointments in his own hands. The result of that system was the Boss had no time to do anything but fill up offices. I changed all that. I d centralised the whole

thing. All the appointments in each assembly district were made over to the leader for that district. Instead of one Boss distributing all the offices, each of the thirty-four leaders on our Executive Council had absolute control over all the patronage in his district. This made them more powerful, and at the same time relieved me of infinite worry and left me free to attend to other business. That was the first change I made. The other was quite as important. No small part of my hold on Tammany, and through Tammany on the city, came from the fact that from the first I always made a point of pushing young men to the front. I had myself come out when young. I favoured young men on

*Photo by Savary, New York.*

Reform Mayor of New York City.

principle on a calculation which worked right every time. If you get the young men you get their fathers and their elder relations. That is invariable. It is quite otherwise with the old. If you get the father you probably won't get the son, whereas if you get the son you always get the father. There is no motive," said Mr. Croker emphatically, "which operates more constantly in American life than the desire of every father to secure for his children a better education than he has had himself. That motive, far more than any greed for the dollar, takes most men into politics. They want to see their boys better educated." (Mr. Croker evidently used the term in the wider sense as meaning the educating of the faculties by the training of life rather than a mere college education.) "And when they see their boy taken hold of and put into place early, they are true to the party that pushes their boy. Another reason why it is good policy is because if you get a reputation for picking out young fellows and giving them a show six or ten years sooner than anybody else, all the smartest lads will crowd round you, and naturally. You are giving them the chance they want to-day, while the other fellows only promise it next week. Nothing gave Tammany such hold as these two things—the decentralisation of the patronage and the encouragement of young men."

If Mr. Croker be not belied, his love for excitement has at times led him into strange adventures. As for instance, when he battled through raging surf off the coast of Florida in order to fish for sharks. Shark-fishing is just the kind of inspiring amusement strong enough to suit a man who had been Boss of Tammany Hall.

## XII.—THE ORDEAL OF GAOL.

Mr. Croker is physically fearless, a handy man with his fists, therein resembling our John Burns, who relies more upon his "ten commandments" than any bowie or revolver. And this brings me by a natural transition to the final chapter in this sketch, the story of how Richard Croker was arrested, imprisoned, and tried for the wilful murder of a political opponent.

Mr. Croker sat talking in his state-room one afternoon concerning his career and its lessons.

"I think it only right," he began after a pause, "to tell you that I once spent thirty days in prison."

"Really!" I exclaimed, "and so you also have actually been in gaol. How did you get there? And how did you get out? And how did you like it? And how is it you come out on top?"

"It was many years ago," he replied. "I was held on a charge of murder."

I looked at the Boss. I had heard much against him, but I had never heard him accused of having been a murderer.

"Yes," he went on, speaking with some suppressed feeling, "for murder—for killing a man. And the man was killed sure enough. Only I did not do it. I will tell you all about it."

"Please do!" I exclaimed.

"It was one of the cruellest things that I ever experienced, one of the cruellest things. It seemed so unjust, so utterly unjust. I could not understand it. But it came out all right," he said cheerily; "it always does. Well," he continued, "it was this way. It was before I was Boss—when John Kelly was Boss, and I was still a very young man serving my first term as coroner, and working for Tammany behind Kelly. There was an election on. Hewitt wanted to be Mayor again. We had elected him once, but we did not want

him a second time. It was a stiff fight, and we all went in to do our best. There was a noisy fellow then in politics of the name of O'Brien, who was quite outrageous in his support of Hewitt. It was before we had reformed the law of elections, and any violent lawless man could do what he liked on election days in knocking citizens about, stuffing ballot-boxes, and playing all kinds of tricks. O'Brien stuck at nothing. He got together a gang of all the criminals and roughs in the whole town, and gave them their instructions. They were to go from district to district, seize the ballot-boxes, stuff them with Hewitt votes, and bulldoze all their opponents. It was monstrous. But some men stuck at nothing in those days. And O'Brien was quite a desperate character. Well, on the election day, I said to John Kelly, 'What shall we do? O'Brien is out with his gang playing his tricks. His gang are the most violent criminals and ruffians in all New York. They are smashing ballot-boxes, and terrorising the citizens. It will be a hard day.'

"'Never you mind,' said Kelly. 'What we have got to do is simply to go right on. We are right, and all these outrageous things that O'Brien and his gang are doing must just be met as best we can. You go straight down to the worst district, where he is carrying on, and expostulate with him.'

"So," said Mr. Croker, "although it was not a pleasant task, I made my way down to the polling station, where O'Brien was at that moment carrying on no end. He had taken complete charge of the ballot-boxes, and no man on the other side was allowed to vote, while for Hewitt the 'repeaters' were being voted all the time. You never saw such a scene of violence and disorder. I went straight up to O'Brien with a few of my men behind me, and began to expostulate with him. 'O'Brien,' I said, 'you ought to be ashamed of yourself. This kind of a thing is a disgrace to the city.' He was very excited, and very violent, and the more I expostulated with him, the more outrageous he became. But I was not afraid of him or his ruffians, and I went on pointing out earnestly the outrage he was committing upon the law, when suddenly I heard a shot fired behind me. I looked round, and there was one of O'Brien's men on the ground with a shot through him, dead or dying. There was immediately a great hubbub, and instantly, as I was the foremost representative of the other side, they declared that it was I who had killed the man. O'Brien and his gang accused me of shooting him, and when the police came I was handed over to them under arrest on a charge of murder. I was as innocent as a babe unborn. At the very moment the shot was fired, I was pleading for the majesty of the law, and expostulating in the name of order and good government against the abominable violence to which O'Brien and his criminals were subjecting the citizens. As for shooting the man, he was shot behind my back, nor was I aware of his existence until I saw him lying on the ground with a shot in him. But the opportunity was too good to be lost. They thought they had me. I had been in the lead against O'Brien, and the chance was too good to be lost."

"Had you a weapon?" I asked.

"No, sir," said he. "I never carried a weapon in my life other than my two hands."

"Then who was it that killed him?"

"A man," said he; "a friend of mine who had followed me into the polling place. As I was being led to the station he followed me in the crowd. I said, 'Who shot the man?' He replied, 'I did. He was a ruffian. One

of O'Brien's gang was shouting and making a fuss behind you when you were expostulating with O'Brien. As he got more excited he picked up a rock, and was just going to brain my brother, with whom he was having an argument. When I saw his hand lifted with the stone in it, I whipped out my gun and shot him to save my brother's life. If I had not fired, my brother might have been dead by now."

"Well," I asked, "did the man give himself up?"

"No," said Mr. Croker, "and, of course, I did not give him away, not if I had been convicted for what I had never done, for the man told it me as a friend, and you must never give away your friends. Besides, he meant no harm. It was in self-defence, and I would not have got him into trouble for anything."

"But you yourself," I said, "you were in severe trouble?"

"Yes, it was a bad time. They brought me before the district attorney, who was a bitter opponent, and swore that they saw me shoot the man. He sent me for trial, and I lay for thirty days in gaol before the case could be heard. It was a grim time," said he. "I could not understand it. It seemed so utterly unjust. Here was I trying to keep the law, pleading with the criminal who was breaking it, and then as a reward I was suddenly clapped into gaol as a common murderer. Many hours I spent on my knees in the cell, wrestling with the question, almost in despair about it all, but there was always something told me that it would come all right. I had great faith in the people, and that sustained me in these dark times. It was very bad, and very bitter, and what made it worse, my first child was born while I was under arrest on that charge. I felt it very much, and so did my poor wife."

"Well," I said, "how did it end?"

"The case came on for trial before a judge who was very prejudiced against me at the time. They swore all they could against me, and he charged the jury for a conviction. I do not want to say anything about him now, for he has long since seen what a cruel mistake he made, and has done all he could, publicly and privately, to make atonement for it. He is still a judge of the Supreme Court, and many times he tells me that the only object he has left in life is to make atonement for the injury he did me at that trial. The jury, however, were not unanimous; they hopelessly disagreed, and had to be discharged. I was released on bail, being held in bonds to come up at any time for a new trial. But notwithstanding the malice of my enemies, and the charge of the judge, the people saw that I was innocent, and instead of being crushed, I became an object of popular sympathy. I continued in my office as coroner, and no effort was made to bring me again to trial. John Kelly, however, insisted that it was due to me to compel them to send the case before another

jury, and take steps to force on another trial. Then the district attorney entered a *nolle pros*, and admitted that he had no case, and so the matter dropped so far as the courts are concerned. I was shortly afterwards re-elected to the office of coroner as a mark of public confidence; but notwithstanding all that, my enemies have kept on flinging the charge of murder in my teeth, and even to this day you may hear echoes of the cruel charge at election times in New York. After my office for coroner expired, there was a question of appointing me to another city office, and at once the cry was raised that I was a murderer, and unfit to be appointed. The Mayor said, 'Croker, I think you are innocent, and there is nothing against you, but before I can appoint you to office, you must have a conclusive vindication as to the judgment of the people. Go down to the assembly district, where the killing took place, stand for Alderman, appeal for the votes of the citizens, the friends and neighbours of the man who was killed. If you are elected there, despite all that they can say against you, it will be your vindication. Then I shall appoint you.' So I went down," continued Mr. Croker, "into the assembly district, and we had a tremendous fight—one of the stiffest fights I ever had; but the truth was known to the citizens, and my confidence in the people which had sustained me in the darkest hours in gaol was justified. I came out on top. My vindication was complete. The Mayor then appointed me Fire Commissioner. I resigned my position as Alderman, and from that day to this the charge is only revived as a kind of dead cat to throw at me at election times by my refined and gentlemanly opponents. It was bad to bear at the time," said he; "cruel and bitter and black were those thirty days. I sometimes almost lost faith; but I was sure it would come right in the long run, and so it is, and so it always will be right. Act straight, and the worst your enemies do against you the better it is for you in the long run."

With this cheerful expression of unwavering faith in the Supreme Justice which governs all things, let us leave Mr. Richard Croker. From whatever point of view he may be regarded, such an utterance from such a man is noteworthy indeed. It is not for me to judge, much less to condemn. In this Character Sketch I have endeavoured to represent to a public which has heard enough of what his enemies think of Mr. Croker, what Mr. Croker thinks of himself. The most cursory American reader will see that I have inevitably translated Mr. Croker's vigorous vernacular into the political equivalents which are more familiar to an English writer; but although I may not have caught the trick of his phrases, I can affirm without any hesitation that the statements made in this article accurately embody the spirit and substance of what Mr. Croker said to me in our long and intimate conversations on the steamer *New York*.

# THE TOPIC OF THE MONTH.

## THE FIRST STEP TO END INDUSTRIAL STRIFE.

**T**HE strike and lock-out in the British engineering trade has now lasted for a quarter of a year.

It is only a month since the protracted dispute between Lord Penrhyn and his quarrymen was brought to a close by a settlement which, so far as outsiders can see, might as easily have been arrived at at the beginning of the strike as at the end of it. We are now threatened with a gigantic strike in the Lancashire cotton trade. In the United States a protracted coal strike has dragged its way along for many months, and its closing scenes have been marked by bloodshed on a scale of which we happily know nothing in the older world. These periodical strikes and lock-outs correspond only too closely to the wars which in an earlier age used to be of chronic occurrence among the nations which now have settled down in a kind of armed but pacific European commonwealth, which has already received the name of the United States of Europe.

### WHAT CAN BE DONE?

It is easy to exhaust the vocabulary of denunciation in condemning such an unfortunate state of affairs. At a time when all the wealth producers of the nation should be harmoniously employed in harvesting the produce of what may be a brief and fleeting moment of prosperity—the organised forces of Labour and Capital are flying at each other's throats, and fighting pitched battles over questions which, if reason and common-sense had any voice in the direction of the affairs of men, would be settled without the cessation of a day's work. Vituperation, however, is useless. The question is whether it is possible for any one to show the disputants a more excellent way than the process of argument by starvation on the one side, and bankruptcy on the other. It may be a presumptuous thing to say, but I do not think there is any reason whatever to question the fact that there is a more excellent way, and that it could be adopted to-morrow, if one fundamental fallacy could be effectually knocked on the head beyond all hope of resurrection.

### THE FORMULA OF SALVATION.

At a time when the Venezuelan dispute with the United States was threatening the peace of the world, I published a pamphlet entitled "Always Arbitrate Before You Fight," in which I ventured to lay down what seems to me the essential truth of all controversies concerning arbitration. I pointed out that as long as nations considered that if they assented to arbitration they were bound to accept without question whatever the award of the arbitrator might be, so long it was quite clear that none of the more important disputes which threatened the peace of the world would be brought before an arbitral tribunal. What is true concerning international disputes is equally true of those which agitate the world of labour. It is no doubt a very excellent ideal, and one which should never be lost sight of, that the award of an arbitrator should be regarded as the end of all disputes, and accepted implicitly as a kind of "Thus saith the Lord," by both parties. But such an ideal state of things is not to be attained at a single stride. If men refuse to put their feet on the first rung of the ladder because their minds are so steadily fixed upon the top, they will never reach

the roof. And so it is in relation to the question of arbitration.

### THE FIRST STEP TOWARDS PEACE.

The first step to be taken in all disputes is to secure both parties a full and fair hearing before an impartial tribunal. Whether after this hearing they accept or reject the decision of that tribunal is another matter, very important no doubt; but that is the second stage, not the first. The first indispensable step towards any pacific solution of these disputes, especially in matters in which there are legitimate grounds for difference as to the facts on which the whole controversy turns, is that without any breach of the peace or cessation of work both parties should have ample opportunity of stating their whole case in the hearing of each other before some impartial judicial court. Were such an opportunity afforded prospective disputants or belligerents, in very many cases, even if the Court pronounced no award, the mere effect of the free public discussion before war has broken out, or a strike has been ordered, would be extremely beneficial. But if the facts were sufficiently clear in the opinion of the Court to justify the making of an award, that again would tend to reduce still further the chances of warfare. The adverse decision of the arbitral tribunal would weigh heavily against any reckless appeal to the *ultima ratio* of kings or of Trade Unions. There would remain, no doubt, a balance of cases in which, despite all the advantages of a public hearing and a judicial finding, the disputants would go to extremities any how, and this fact is held by many to be sufficient to justify a refusal to go to arbitration at all unless such a contingency can be guarded against in advance. But this contingency can only be guarded against in advance by practically banishing arbitration altogether in relation to nine out of ten, or ninety-nine out of every hundred, of the disputes which create trouble.

### A DRAWBACK NOT TO BE ESCAPED.

What we have got to recognise, whether we deal with disputes between Governments or between federations of capitalists and Trade Unions, is that if we want to have arbitration introduced as a recognised method of averting war, international or industrial, we must be prepared distinctly to face and accept the evil consequences which would ensue from a strike or a war against the award of an arbitrator. Until we are prepared to do that we shall make no progress. What I am contending for is that the added disadvantage of the increased bitterness that would result from a strike or a war entered upon after an arbitral tribunal had given its award, is a comparatively small set-off to the enormous advantage of securing a reference of all disputes in the first instance, to some such Court. Hence the first step in the substitution of peace for war is the substitution of the formula "Always arbitrate before you fight," for the accepted formula, "Arbitrate instead of fighting."

### A COMPULSORY COURT OF FIRST INSTANCE.

Under the new formula, "Always arbitrate before you fight," the arbitral tribunal would become a Court of First Instance, from which an appeal could always be made to the existing tribunal, which is one of brute

force. No doubt it would be much better if we could abolish the second tribunal altogether; but in those matters we must proceed a step at a time. The immediate gain of interposing a Court of First Instance, in which full and fair hearing would be afforded to both parties in the dispute—in a court the whole spirit of which would be one of conciliation and peace rather than of irritation and surprise—would be incalculable. These may be briefly summarised as follows:—

#### ITS ADVANTAGES.

First, we should gain time. Secondly, all the merits of the case would be fully set forth before there had been a breach of the peace, instead of as at present being brought to light slowly after hostilities had begun. Thirdly, in case the disputants could not agree, the decision of the arbitrator would afford either of them a perfectly honourable means of escape out of a situation from which they could not otherwise have extricated themselves without loss of credit. Fourthly, the weight of public opinion and the sympathies of the civilised world would be cast so heavily against the disputants who refused to abide by the decision of the arbitral tribunal, as to secure in most cases an acquiescence, although a reluctant acquiescence, in its award. If, after all, either party forced on a war or strike or lock-out, they would do so with their eyes open and with the knowledge that judgment had been ordered against them in the one court where they had full and fair opportunity to make the best case they possibly could for themselves. The inestimable privilege of fighting would not be impaired, it would be preserved in full, but it could only be exercised under the severe handicap of an adverse judgment which would weigh heavily against all those who might wantonly wish to disturb public peace.

#### ARBITRATING THE ISLE OF WIGHT.

Take for instance the crucial case of a dispute between Germany and England as to the ownership of the Isle of Wight. Under the formula "Always arbitrate before you fight," a German claim to annex the island in order to make Cowes the yachting headquarters of the Kaiser would as a matter of course be referred to arbitration. It would equally as a matter of course, unless we could imagine by some strange fatuity that the arbitrators were corrupt or lunatic, be promptly and decisively decided in our favour, and then we should hear no more of it. The odds against any other decision are about a million to one. But admit the odd millionth as cast against us, and the arbitral tribunal makes over the Isle of Wight to the German Emperor. In that case Britain would not have the slightest hesitation in going to war against the award of the tribunal as being manifestly in opposition to law and justice, and fatal to the safety and existence of the British Empire. We should have to face, of course, the odium of drawing the sword against the decision of the tribunal, but in such a case we should not calculate chances or odds; it would be a matter of life and death, and we should fight for it. But for the sake of the 999,999 chances in our favour, we should do well to take the risk of being badly handicapped on the millionth chance. Of course the whole hypothesis is ridiculous, but it serves as well as any other to illustrate the point I am driving at.

#### THE PENRHYN STRIKE.

Now let us apply this to the disputes which are raging, or which are threatening, in the industrial world. It is hardly necessary to remark that had such a tribunal existed, the Penrhyn strike would never have taken place. No one is proposing that in every case of individual dispute between employer and employed

there should be a right of appeal to an arbitral tribunal; but in cases where the dispute involves so large a number of men that a cessation of industry would materially affect the welfare of the community, the community has a right to insist that before work is stopped the case should be argued out in court. But instead of going back to the Penrhyn question, let us take the strike of the engineers, which has now been going on for more than thirteen weeks, entailing an expenditure of the funds of the strikers amounting to £30,000 a week, and entailing a far greater loss in the wages sacrificed during the enforced idleness, and the profits not earned by works which are closed.

#### THE ENGINEERS' STRIKE.

The strike began in a demand made by the engineers in the London district for a reduction of the hours of labour to eight per day. 230 employers, out of 270, employing four-fifths of the men, conceded the demand. The remaining 40 stood out, and appealed to the Employers' Federation. This body widened the area of dispute by locking out engineers in other districts until the dispute spread over the whole country. At the present time there are 59,000 men out of work owing to the strike or lock-out. The strike pay distributed weekly reaches £36,000. The 59,000 thus laid idle are composed of 24,500 engineers, 15,000 allied workers, 8,500 non-unionists, and 11,000 labourers. The dispute as to the hours is obscured by various other differences. The employers complain that the unions forbid the introduction of piecework except where it already exists, that they limit the number of apprentices, and that they arbitrarily refuse to permit one man to work more than one machine and sometimes only one tool on each machine. But over and above all these grievances Colonel Dyer declares the great question is that of preventing official trades union interference with the conduct of the shops. Mr. Burns admits that there has been unnecessary harassing of employers in trivial matters, and that some unions have permitted their district officials to raise senseless and silly disputes. Mr. Barnes is not prepared to deny that there has been undue and irritating interference by some official persons. The intervention of the Board of Trade has been tendered with the view of bringing about a conference. It has been accepted by the men, and will, it is hoped, lead to a settlement.

#### A QUESTION FIT FOR ARBITRATION.

Now, let us ask how things would have gone if both the engineers and their employers had been compelled to bring this question before a Court of Arbitration, where the matter might have been discussed between them down to the ground before a single lathe had stopped, or a single workman had been discharged. The question at issue, it will be contended by some, is not one upon which the decision of an arbitrator could be of any value. But that is to beg the question. The moment you take up any one of the proposals which have been made on one side or the other for the settlement of the dispute, you see at once that while the question appears to be very simple, and incapable of anything but a "Yes" or "No" answer, it is in reality very complex, and the solution will ultimately depend upon the adjustment of a variety of questions which are eminently suitable for discussion before a court.

#### HOW IT MIGHT HAVE BEEN SETTLED.

After the original nine hours' day strike at Newcastle, which was fought out in 1870, it was discovered, after months of privation and loss, that the whole matter was

capable of an easy adjustment by the simple expedient of beginning the payment of overtime at the end of a nine hours' day. The question of overtime and the payment of overtime really lie at the root of the whole question. The nine hours' strike of 1870 need never have taken place if it had been made clear—as it would have been if the disputants had come together amicably in the first instance—that there was no objection to overtime on the part of the men, and no objection to paying for overtime on the part of the employers. In the course of the present dispute, Mr. William Mather, member of the firm of engineers which has already conceded the eight hours' day, made a suggestion last month which was at once accepted on behalf of the workmen by Mr. Burns and other representatives. His idea was that they should follow very much the lines of the settlement of 1870, only stipulating that overtime should begin at the end of forty-eight hours instead of fifty-four, but that there should be a mutual agreement arrived at as to shifts, overtime, and the employment of machine tools. Mr. Burns accepted this so far as it related to the shifts and overtime, but wished to reserve the question of machine tools to a conference between the two parties most concerned. The employers, however, ridiculed the idea of accepting Mr. Mather's suggestion, and the proposal fell to the ground. I am not bringing this forward in order to adopt it as my own, but merely to illustrate the fact that the settlement, whenever it is arrived at, will in all probability be one turning on a mass of detail question which could only be satisfactorily adjusted between the two parties in the presence of an impartial and judicial authority. Lord James, for instance, acted as arbitrator between the North Eastern Railway and their employés, and succeeded in arriving at a mutual arrangement upon a whole mass of complicated questions which were quite as difficult of solution as those between the engineers and their masters.

#### THE ROOT QUESTION TO BE DECIDED.

What is the root question which lies at the bottom of the whole controversy between the eight hours' men and their employers? Both parties are equally interested in increasing to the uttermost the efficiency of the British engineering shops. They are as Siamese twins, indissolubly linked together in a race in which they are entered against the engineers of the world. There is not an advocate of the eight hours' day who is not ready to admit that if it could be proved that the concession of the eight hours' day would lead to any serious diminution of the capacity of British engineers to hold their own in the markets of the world, he would prefer to give up the eight hours rather than adversely handicap his trade, and for good reasons. If we cannot keep our trade, if Germans and Americans, Belgians and Frenchmen, are able to carry off orders that would otherwise have come to British fitting shops, our skilled engineers, instead of clamouring for an eight hours' day, will be left starving with a twenty-four hours' day on their hands, and nothing to do in it. On the other hand, there is not an employer who would not agree that if he could increase the efficiency of his works, or improve its quality, by conceding the eight hours' day, he would concede it at once.

#### THE UTILITY OF A COURT.

This being the case, it surely would not have been beyond the power of such a court of first instance as that for which I am pleading, to have gone exhaustively into the whole question as to whether or not the eight hours in practice did or did not produce the results

which are claimed for it, or are alleged against it on one side or the other. It may be argued there is no sufficient body of evidence to justify any one coming to a definite conclusion on that point. That is a matter the tribunal itself would have to decide. If, however, such a tribunal came to the conclusion that there was not sufficient body of evidence to justify an authoritative verdict either way, what would have been more easy or more natural than for such a court to have recommended, and for the federated and associated bodies to appear before it, to have carried out a recommendation to the effect, that a certain selected number of works should as an experiment be run at the eight hours' day, their owners being indemnified from the funds of the federation from any loss resulting from such an experiment?

#### THE DESIRABILITY OF A TEST.

At the end of three months or six months, as the case might be, the results of this experiment would then come up for review, and the court would then be in a position to decide whether or not such a change in the hours of labour would or would not operate in the direction of increasing or diminishing the efficiency of our engineers. All the while the experiment was pending work would continue without a break, and when the matter finally came up for discussion, even if it were then decided to repudiate the award of the tribunal and to go out on strike after all, time would have been gained, and some part at least of the harvest of the present year of prosperity would have been reaped. The public would be in a better position to understand much more as to the fundamental facts of the case than they are at present, and, in short, everybody would be in a much better position for a rational settlement than we are to-day.

#### THE ALLEGED RESULT OF EXPERIENCE.

At present there are several firms which have conceded the eight hours' day, and have been working on that system during the whole of the lock-out. But it is claimed by the employers that several of these firms have found the result of the eight hours' system so detrimental to their business that they are now dismissing their men and joining the federation. Notably this is alleged concerning Messrs. Richmond, whose letter has been published to the effect that during the experimental period the work has cost far and away more than the difference in wages paid between a forty-eight and a fifty-four hour week.

It is obvious that this evidence is gravely suspect. This is not an experiment undertaken in all good faith between masters and men with no cessation of industry, and an experiment moreover conducted under the supervision of a national tribunal. It is merely the testimony of a firm of employers, the members of which would be more than human if they were not influenced more or less by the feelings of their class and the passions which have been excited by the present unhappy dispute.

#### THE LANCASHIRE COTTON TRADE DISPUTE.

The dispute in the engineering trade has been fought out, and will before long draw to a close; it is therefore no use crying over spilt milk, but the threatened dispute in the Lancashire cotton trade has not yet come to a head. The cotton-spinners and the allied employers of Lancashire representing a capital of sixty million pounds have formed a federation for the purpose of enforcing a ten per cent. reduction of wages upon their five hundred thousand operatives. The Lancashire cotton industry is severely depressed. Low prices, heavy protective tariffs, the competition of the yellow man with the white money are telling heavily on the white man with the yellow

money, and this month the employers intend to throw a portion at least of their losses upon their workpeople. The workers are organised and resolute, and everything seems to portend a cessation of industry that will paralyse the North of England.

#### THE PRESS AS A COURT OF FIRST INSTANCE.

Is it too much to hope that the masters and men in Lancashire may be induced to accept the altered formula and agree to arbitrate before they fight? It may be, the odds indeed are heavy that it will be, that if they do so they will not need to fight at all. But in any case neither side has any reason to shrink from allowing its case to be heard before a Court of First Instance. At the present moment, indeed, it may be argued that the disputants are making themselves heard only too vigorously in the columns of the press; but however highly we may esteem the newspaper press, it can hardly be alleged that it is an efficient substitute for such a Tribunal of Peace and Conciliation as that for which I am pleading. All statements made in the press are necessarily more or less *ex parte*. They are not subject to cross-examination, they are lacking the advantage of a statement face to face by the persons primarily concerned, and it is not saying too much to allege that the conductors of the newspapers are often animated by nothing of a judicial spirit. The *Times* backs the masters, and the *Chronicle* backs the men. Each acts as counsel for its own side, but in the court of public opinion the seat of the judge is empty.

#### COMPULSORY ARBITRATION IN NEW ZEALAND.

When Mr. Seddon, the Prime Minister of New Zealand, was in London he expressed himself very strongly as to the exceedingly good results that had followed the establishment of a system of compulsory arbitration in his own Colony. The way in which that system of arbitration came into existence fills me with hope that possibly out of the present pitiful and tragic disputes we may snatch the permanent advantage of some approximation to compulsory arbitration in this country. There had been a long strike in New Zealand, and it was when both sides were pretty well beaten out that Mr. Seddon seized the opportunity of forcing on them the Compulsory

Arbitration Bill, which was accepted more in the acquiescence of exhaustion than enthusiastic devotion to the principle. But when it once got to work the results were such as to command the support of all classes. However that may be in relation to a statutory law of Compulsory Arbitration, there is no doubt as to what should be the verdict of public opinion in the matter. Mr. Barnes declares himself strongly in favour of "compulsory powers in industrial disputes," as an important step "in the direction of the assertion of the will of the community as a whole. Sectionalism," he proceeds, "must go under. The sooner the better. This trouble will hasten it; but, oh, at what a cost!"

#### WHAT PUBLIC OPINION MIGHT DO.

Every thoughtful man and woman in the community should take this matter into grave consideration, and if they do, I have little doubt but that they will come to the definite conclusion that whatever may be the rights or the wrongs of any trade dispute, one principle is absolutely clear, and that is, that whichever disputant refuses to submit its case to a full and fair hearing before a tribunal of arbitration, from which the right of appeal to the ultimate brutal arbitrament of strikes and lock-outs is distinctly recognised, is undeserving of any sympathy or support. In other words, what we have to work for is the creation of such a public opinion as would practically put any association of employers or of workmen out of the pale of public sympathy, converting them into outlaws if they refused to submit their case to an arbitral Court of First Instance. But it will be impossible to get public opinion educated up to this point unless we definitely dispose of the

notion that when men appeal to a court of arbitration, they sacrifice the ultimate right of appeal to the older methods which at present hold the field.

#### THE COAL STRIKE IN AMERICA.

To this end all lovers of peace and concord, and all advocates of progress and the amelioration of the conditions of labour, should devote their energies. It is true that we are not so far advanced in this country as in New Zealand, but we may at least take courage from the fact that we are in these matters far in advance of our kinsmen in the United States.

On September 11th, a convention representing the bituminous coal miners of Illinois, Indiana, Ohio, Penn-

GEORGE N. BARNES.

SECRETARY AMALGAMATED SOCIETY OF ENGINEERS.

sylvania, and West Virginia, who had been on strike since the first week of July, agreed to resume work at sixty-five cents per ton, this plan having been recommended by the executive committee of their national organisation. The miners had demanded uniform wages of sixty-nine cents. The price now agreed upon, sixty-five cents, had been conceded as a compromise by nearly all the mine-owners in the Pittsburgh district, and it meant a very material advance for the strikers over the wages they were receiving at the time they left the mines. The 1897 rates were fifty-one cents per ton, with the offer of a reduction to forty-five cents per ton, occasioned by the low prices in Western Pennsylvania. Nevertheless, the victory was won at enormous sacrifice, and it would have been vastly better for both sides to have arbitrated everything in dispute at the outset. The worst grievance from which the miners suffer is the non-enforcement of the Truck Act. They are plundered wholesale by the stores.

#### CIVIL WAR IN PENNSYLVANIA.

An American journalist who had been commissioned to make a report upon our engineers' strike to a great New York paper, told his editor, in my hearing, that nothing had ever impressed him so much in his experience of industrial disputes as to note the perfect order and excellent spirit which prevailed in the ranks of the strikers. He had attended meetings held at the gates of works where blacklegs were employed, but, with the exception of a few pickets, he had seen no evidence of industrial war. He evidently could not understand it. It seemed so different from the scenes to which he had been accustomed in his own country, where, as he said, such works would have been garrisoned by armed men as if they were a besieged fortress. Almost at the same time as he was describing his admiration of the way in which our British strike was conducted, the terrible tragedy of Lattimer and Hazleton created a momentary sensation even on the somewhat *biase* conductors of the American papers. A few miners at a colliery village in Pennsylvania had a dispute as to the hours of the drivers of the mule teams used in the mines. They were ordered to work an hour extra morning and night. They asked for extra pay, and being denied it, they struck. Other men were engaged, and for about three weeks the mine was carried on by the aid of blacklegs. The strikers began to organise demonstrations for the purpose of overawing the blacklegs and driving them out of the mines. The employers appealed to the Sheriff, who swore-in Deputies, recruited chiefly from clerks, engineers, and other salaried employes of the company. On Friday, September 10th, some 250 miners, chiefly Hungarians, who had been imported and employed because their labour was cheaper than that of native Americans, marched through the strike district with the view of driving the blacklegs out of the mines, or, according to their account, to induce them to join their ranks. It was admitted they were not armed, but their numbers grew as they marched, and the men who were turned out of the mines joined their ranks. In West Hazleton they found some blacklegs still in the mines, and at once set about driving them out. The mine was in the possession of the Deputies of the Sheriff, who fought a hand-to-hand battle with the strikers, but only one shot was fired, and, as the mine was cleared of blacklegs, the Deputies were left in charge, while the strikers marched off, now three hundred strong, across the mountain to Lattimer. Eighty Deputies were clapped on board a trolley car and hurried down to the threatened mine to head them off.

#### SHOT DOWN BY SCORES.

According to the Sheriff their numbers had increased to five hundred, but this seems to be very exaggerated. Sheriff Martin, with eighty or ninety Deputies, blocked the road, ordered the marching men to return home, and warned them that it was his duty to suppress all violence or disorderly conduct. The men were very excited and did not understand what the Sheriff was saying. Amid a hubbub of voices they began to jostle the Sheriff, and according to his own story threw him down and trampled on him. Accounts differ as to whether any order was given, but there is no doubt that the Deputies, believing their Sheriff to be in danger, poured volley after volley into the crowd of strikers. When the firing ceased, fourteen men lay stone dead where they had fallen, while over three score others were lying more or less seriously wounded. Of these a dozen subsequently died, bringing the total of men killed outright, as an incident of industrial war, to twenty-four, while the recovery of many others is still doubtful.

#### A VISIT TO MR. BELLAMY.

I happened to be calling upon Edward Bellamy, the author of "Looking Backward" and "Equality," at his home in Chicopee Falls in Massachusetts on the day on which the news of this tragedy appeared in the papers. Mr. Bellamy accepted it calmly as an inevitable incident in the evolution of the present capitalist system. "These men," he said, "have not died in vain; the blood of the martyrs is ever the seed of the Church." One universal shriek of execration against the Sheriff ran through the ranks of labour in the United States. In Chicago the labour leaders declared their desire to hang at least two newspaper editors who had expressed approval of the Sheriff's conduct. The Sheriff is held for trial, but the law appears to be clear. According to the charge of the grand jury at Pittsburgh in 1892, when Chief Justice Paxim of the Supreme Court tried the famous Homestead case, the offence of the strike miners who endeavoured to drive blacklegs out of the mines was treason against the State of Pennsylvania. The men who were shot down were technically levying war against the State, and although the Sheriff may have lost his head, there is little doubt but that the propertied class in the United States will follow the lead of the great majority of the newspapers in strongly upholding him for teaching the strikers so stern a lesson. "Do not hesitate to shoot" is not a telegram which any American Arthur Balfour need ever send to the authorities in the United States.

#### THE DIFFICULTIES OF THE AMERICANS.

We have in this country fortunately long ago emerged from a state of things in which an industrial dispute entails the bloodshed of a civil war. But considering the materials with which the Americans have to deal in the shape of hordes of foreign workmen, ignorant of the language, laws, and traditions of an industrial commonwealth, it is not for us to exalt our horn on high at their expense. What we have rather to do is to ask ourselves whether in such a social state as our own, where we are practically Britons dealing with Britons, neighbours dealing with neighbours, it is not almost as discreditable for us to have a thirteen weeks' strike concerning the precise moment when payment of overtime shall begin, as it is for a sheriff in Hazleton County to shoot down one hundred wild Hungarians who were on the warpath against blacklegs. The immediate consequences of the shooting at Hazleton was that 4,000 of the State Militia, armed to the teeth, and well equipped with Gatlings,

ball cartridge, and supported by cavalry, were ordered to Lattimer, which presents all the appearance of a district in a state of war. A state of war it is, war made manifest and visible by rifle and bayonet, with hospitals full of wounded men, and graveyards furrowed with the graves of the dead who had fallen in the strife.

#### FORBID STRIKES TILL AFTER ARBITRATION.

But our strikes and lock-outs, although not illustrated with such gory object-lessons of the consequences of the beginning of strife which is the letting out of water, are nevertheless breaches of industrial peace, a cessation of mutual helpfulness, and the establishment of a state of hostility in place of mutual co-operation. Out of this evil condition the first step is to recognise the principle, "Always arbitrate before you fight," which, once being established, would speedily lead to the enforcement of a social law, "You shall never fight until you have arbitrated."

#### A DANISH STRIKE AND ITS SEQUEL.

A correspondent in Copenhagen sent me, just as I was going to press, a very interesting report of the progress that has recently been made towards the establishment of industrial peace in Denmark. Both employers and employed have their unions and their federation of unions. He says:—

This spring the engineers went on strike in one of the Jutland towns, and the masters' association proclaimed a lock-out. Peace was soon restored by arbitration, but in an unsatisfactory way, as several of the points in dispute were not definitely settled—for instance, the arbitration rules and the settled workshop rules. These latter include, besides rules for entering and leaving the factory, rules for maintenance of order, etc., a lot of rules which greatly influence the men's pay, viz., rules for overtime and piecework, which rules had given rise to ever so much trouble. It did not last long before there were strikes in machine factories in other towns. The masters' associations said these strikes were unlawful as arbitration had to be tried first, the general manager of the engineers' union said that the arbitration rules were as yet not definitely agreed upon, and as the strikes were supported by the men's central organisation the two masters' associations proclaimed a lock-out for the engineers all over the country, and the men in the foundries were locked out very soon afterwards. A little later the associations of master locksmiths and master blacksmiths, which are closely allied to the associations of machine-factory owners, locked out their men too. It was almost a national disaster to have so much business stopped at the best time of the year, and the longer it lasted the more widely spread the disaster would be, as the stoppage of all iron-work would be keenly felt in all building trades and in many other sorts of business. And it could last long. The excellent organisation of the socialistic trades' unions shows to its best on such occasions. The locked-out engineers and foundry-men are supported first from their own unions' funds, but next by subscriptions levied on all the members of the non-locked-out trades' unions, who must pay every week according to their earnings, lastly subsidies have been sent from unions in the iron trades in Sweden and Germany.

The lock-out had now been going on for three months and might be kept going for a couple of months more for all that could be ascertained. Several attempts had been made both

at reconciliation and arbitration, but with no effect, the rancour and bitterness on both sides was too great, and when the opposed organisation-leaders met in committee it was found impossible to agree.

Meanwhile the committee of the employers' association was busy. The inadequate by-laws were revised, it was proposed that no lock-out could be proclaimed by any of the affiliated associations without the sanction of the general assembly of the employers' association, clearly defined rules for conciliation and arbitration were proposed, as well as the institution of a labour court of justice composed of members elected by the masters' associations as well as by the trades' unions, and with a member of the supreme court of justice as president, which court should decide whether it was justifiable not to submit a question in dispute to arbitration, or whether in connection with a dispute any by-laws or agreements may have been violated—and these revised by-laws were sanctioned by the general assemblies in all the affiliated associations.

Then at last an outsider prevailed on Mr. Andersen, the president of the employers' association, and Mr. Jensen, the president of the co-operating trades' unions, to meet and try to find a solution of the hitherto insoluble question, and after protracted negotiations their endeavours have been successful and peace is now restored. The document of reconciliation is signed by the committee of the employers' association as well as by the committee of the co-operating trades' unions, and after its having been sanctioned by the general assemblies in all the contending associations and unions, their respective committees have also put their signatures to it. The most important points agreed to are:—

That no strike, blockading or lock-out must be effected before the committees of the employers' and the workers' organisations have tried to solve the dispute.

That the debateable paragraphs in the workshop-rules are amended, and

That the employers' organisations as well as the trades' unions will co-operate in instituting a labour court of justice, the decisions of which both parties bind themselves to submit to.

This document and the negotiations previous to its formulation will probably come to be a salient point in the history of Danish labour conditions, as it is the first time that the managing committees of the employers' and the workers' central organisations have met to conciliate a dispute. Even if the paragraphs in this treaty of peace do not do away with all possibilities for trouble in the trades now concerned—which of course they do not—and even if new disputes should soon arise in these trades or others, a foundation has been laid on which new buildings of peace may be erected. For a tribunal has been found whose members are, though not impartial as they are closely connected with the contending parties, yet at so great a distance from the actual strife that they can act as conciliators. And then, one thing more, on account of the great importance attached to this lock-out, public opinion has been very strongly interested in it, the papers have closely followed the different attempts at conciliation, and both masters and men have no doubt found out, that their disputes are not their business alone, and that their fellow citizens think that it concerns them too. And if the Labour Court comes into existence, and in case of future disputes gives its opinion as to whether any of the contending parties have violated their obligations, such an opinion might greatly influence the public opinion and may ultimately prove repressive against frivolous disturbances. It is therefore to be hoped that this peace-making may be a first stepping-stone to a peaceful development of the labour question in Denmark.

# LEADING ARTICLES IN THE REVIEWS.

## THE NEMESIS OF FOLLY IN INDIA.

(1) BY SIR LEPEL GRIFFIN.

SIR LEPEL GRIFFIN has the first place in the *Nineteenth Century*, for October, with an article in which he sets forth very clearly the breakdown of the forward frontier policy which has involved us in the present war in the North-West of India. Sir Lepel Griffin has, as he takes occasion to remind us in a footnote, been a student of the North-West frontier policy since the year 1865. The 1st of his offices shows that there is probably no other Anglo-Indian now alive who has more right to speak with authority on this particular subject than himself. His verdict is very emphatic, and given without the slightest hesitation. Our troubles on the North-West frontier are in his opinion the direct result of the infatuated policy which has been adopted by the Indian Government, and adopted, I may once more, remind the reader, in direct opposition to the unanimous opinion of Lord Rosebery's Cabinet, which unfortunately went out of office too soon to give effect to its decision. Sir Lepel Griffin roundly condemns the whole policy of thrusting outposts into the borderlands as due to the same lack of imagination which led English statesmen so long to neglect and ignore the Colonies, and which has paralysed every effort which we have made to conciliate the Irish race.

### THE INSANITY OF THE FORWARD POLICY.

He says:—

In the armed independence of the frontier tribes is one of the surest defences of India. We do not require military roads through independent territory to facilitate the march of an invading army, nor a cowed and disarmed population which could do nothing to resist its advance. Even our relations with Afghanistan are facilitated by the existence of the independent region between it and India. Is there any soldier of light and leading, not irretrievably committed to the Forward Policy, who will declare himself in favour of placing isolated outposts in the heart of a difficult and hostile country? It has not commended itself to men of experience and patriotism like General Sir Neville Chamberlain, Sir James Lyall, and Sir Auckland Colvin, and it is mostly the refuge of those who are responsible for a policy which they are well aware has broken down.

### WHY THE AFRIDIS REVOLTED.

The most noteworthy event in the uprising of the Frontier is the conduct of the Afridis, who from 1881 down to the present outbreak have lived in peace, and have done good service in keeping open the Khyber Pass. That they have now revolted is directly due to the alarm created by the defence of Chitral and the making of the military road through that country:—

The explanation is given by them plainly, so that he who runs may read it, if he will only open his eyes, in their demand, insolent or not—that we should withdraw our troops from the districts which border their country to the north or south. The Afridis are savages, but it does not follow that they are fools: and they see clearly that the policy of driving military roads through independent territory, even though this may lie beyond their immediate borders, must result in isolating them and seriously threatening their independence.

## THE OLD POLICY.

Sir Lepel Griffin then explains the old Frontier Policy, which was carried out by a special frontier force:—

The whole line of the frontier from Hazára to Dera Gházi Khan consists of a continuous line of difficult and rugged mountains, and for the defence of the plain country against the incursions of hill robbers there is a line of posts, military and militia, held by the regiments of the Frontier Force and local levies. The modes of punishing refractory tribes were by fine, blockade and military expeditions, which were only resorted to in exceptional circumstances, and when every other means of coercing a hostile tribe had failed. The policy of the Punjab Government towards the tribes was neither ambitious, brilliant, nor thorough. This may be admitted. But it was, on the whole, successful, and it was cheap. With the exception of the Umbeylah expedition, which was a *jihad* campaign, stimulated by the Wahabi fanatics and refugee mutineers of Sittana, all our frontier expeditions probably cost less than the occupation and relief of Chitral. The Forward Policy which is now in favour is not a cheap one. It is, on the contrary, extremely costly, so costly, indeed, that unless it be speedily reversed it will lead India to bankruptcy.

### THE FATAL FALSE STEP.

The beginning of all the mischief was the breach of faith committed by the Indian Government when it decided to permanently occupy Chitral and construct a military road through independent territory:—

It is superfluous to say that the best expert testimony was strongly opposed to that policy, and has consistently predicted from its adoption the very complications which have now been its direct result. In June, 1895, in an article on "Chitral and Frontier Policy," in this Review, I endeavoured to show that, as a strategical position against Russian attack, Chitral was valueless, and that even did it possess the advantages claimed for it, the cost, in the present financial state of India, was prohibitive, while the construction of the military road would turn the independent tribes, then indifferent, into declared enemies. I claim neither credit nor prescience for this prediction. Every one who had an intimate knowledge of the frontier said as much.

### OUR ALLY, THE AMEER.

Sir Lepel Griffin does not think that the Ameer has had any hand in the trouble. He says:—

There is every presumption in favour of the Ameer's good faith, and no public evidence whatever against him; it is somewhat indelicate for officials whose names carry weight in England and India to calumniate him. My own belief is that, in the splendid isolation in which it seems to delight English statesmen to reside, His Highness the Ameer of Kabul is about the most trustworthy ally that we possess in Europe or Asia.

### WHAT SHOULD BE DONE.

Discussing what should be done in the future, Sir Lepel Griffin deplors the fact that it is impossible to re-establish the old frontier force, but he thinks it is most urgent that we should change the present system which puts a direct premium upon the militarism and the forward policy by putting the control of the frontier into the hands of the Commander-in-Chief. He says that the first thing to be done is that

of removing the frontier districts from the charge of the Lieutenant-Governor and placing them under a Chief Commissioner. To nominate a General Officer as Lord Warden of the Marches would be to intensify the evils of the existing system. What is needed is a strong civil administrator whose professional instinct would be in favour of peace and not of war.

*Photograph by Bourke, Jelalabad.]*

**ABDUL RAHMAN, AMEER OF AFGHANISTAN.**

## (2) BY LIEUT.-GENERAL SIR ROBERT LOW.

If an illustration were wanted of the possibility of completely mystifying the public by giving them information, and plenty of information, none better could be found than is afforded by the innumerable columns of telegrams that appeared in the English papers last month on the subject of the military operations on the Indian Frontier. To the ordinary man, the long dispatches which have cost thousands of pounds to telegraph from India to London, are absolutely meaningless.

## THE AREA OF DISTURBANCE.

It is, therefore, with a sense of relief that we turn to Sir Robert Low's paper in the *National Review* in which he describes what has actually taken place. He says:—

The latest maps are confusing to the general reader, because the line of demarcation between Afghanistan and British India is alone given. The line given in the map is the boundary of influence, and not the boundary we hold. The disturbed area on the true frontier, namely, the one which we guard and protect, commences with the mountains on the right bank of the Indus, near Dirbundi, where the river emerges from the hills into the plains. From this point the frontier line follows the line of mountains; it takes a long sweep to the north, and then bends round to the west and south, enclosing the Peshawur Valley, and it completes a rough semicircle at Kohat. From Kohat our frontier goes west to Thull and then north-west up to the head of the Kuram Valley. The tribes which immediately face us on this frontier line, commencing at the top of the semicircle at Dirbundi, on the Indus, are, taking them in their order, the Bunerwals, the Swats, the Utman Keyis, and the Mohmands; then comes the Khyber Pass and the Afridis, and lastly, on the northern flank of the road from Kohat to Thull, the Orakzais. The actual outbreaks and their dates were as follows:—The attack on the Malakand and Chukdara positions on the 27th July; the attack on Shubkudhr on the 9th August; the threatening attitude of the Afridis and Orakzais on the 18th August, and the attack on the Khyber Pass on the 23rd August.

## THE AMEER INNOCENT.

Sir Robert Low examines the case against the Ameer of Afghanistan, and it is satisfactory to know, comes to the conclusion that he is not guilty of having brought all this trouble upon our hands:—

Judging after the event—which it may be admitted is easy, but is still useful—we must come to the conclusion that the outbreak has been a movement outside our relations with the Ameer, and without his knowledge, but connived at and encouraged by some of his officers, and led and directed by the fanatical Mullahs.

## WHY THE TRIBES ROSE.

Sir Robert Low equally rejects the theory which Sir Lepel Griffin holds, that we have brought about this mischief by our insensate forward policy:—

The theory that our forward movements are the chief cause of the present risings of the tribes is opposed to our knowledge of the tribes and our experience of their habits of thought for the last forty years; the Afridis, for instance, would care nothing about our occupation of the Malakand

Pass, but the fanatical Mullahs would no doubt make the most of it as a means of exciting fear of similar movements in Afridi Land; but they would have preached in vain, if they had only to sustain their arguments with this one reason. It is undoubtedly the fact that the tribes, one and all, excepting those suffering from unbearable oppression, dislike our appearance in their midst, and have always fought, and will fight again, on our entering their territory; but combination amongst them in the sense of rising to repair the wrongs of another tribe at a distance is not in accordance with their practice or traditions.

But this last admission of his neutralises his previous assertion, for if the tribes have always fought, and will always fight, against our entering their territory, the fact that we have entered their territory and established weak posts in regions which we had hitherto left reverely

NORTH-WEST FRONTIER OF INDIA.

alone, goes far to justify the contention that we should have had none of this worry if only we had remained behind our own good old frontier.

## WHY NOT RETURN TO THE OLD POLICY.

Sir Robert Low asserts that Lord Lawrence's policy could not have been maintained, but why, he does not explain beyond asserting that—

the circumstances of the day necessitate that all the routes through the tribal territory to Afghanistan must be open to us, not at the option of the tribes, but at our option, and at any time that the necessity for using such routes may arise.

But this is surely not so. We don't want to be in a position to invade Afghanistan. On the contrary, the more absolutely sealed up against the passage of armies one way or another are these routes, which Sir Robert wishes to keep open, the better it will be for us.

## THE NEMESIS OF RUSSOPHOBIA.

The fact is, the Anglo-Indian soldier is dominated by Russophobia. When he sleeps, the Cossack rides him like a nightmare, and the one frenzy, a kind of *delirium tremens* which possesses him, is that of rushing into Afghanistan in order to meet the imaginary invader. He has already made the experiment with sufficient frequency to convince us at home that this way madness lies, and if ever an English army is marched through the passes into Afghanistan after the experience of the previous campaigns, it will serve us very well right if the whole force should be swallowed up alive among the Afghan hills. This, however, by the way.

## WHAT

SIR ROBERT LOW  
RECOMMENDS.

The policy which Sir Robert Low advocates is that a few strong posts in commanding positions should be adequately garrisoned. Hitherto we have tried to hold this No-man's-land by a number of weak stations, garrisoned chiefly by tribesmen:—

It is not such a series of small posts that is needed in the future, but large military positions, garrisoned by soldiers in sufficient strength to take the offensive on all ordinary occasions, while, if attacked by overwhelming numbers, the strength would be sufficient not only to repel the attack, but to inflict enormous losses on the enemy with the smallest possible loss to the garrison.

Such positions on the south of the Khyber Pass, as for instance, in Tirah, dominating the Afridis, and on the north dominating the Mohmands, would effect the object in view, and keep the Khyber Pass open at all times. Taking up such positions promises to be the best means of getting what we want short of annexation.

Unfortunately the difference between taking all these

strong positions and annexation outright, is not exactly visible to the naked eye of the tribesmen.

## (3) THAT FATAL CHITRAL!

The writer of the *Chronique* in the *National Review*, quoting an anonymous writer in the *St. James's Gazette*, ridicules the idea that Chitral had anything to do with the frontier war:—

Five years have never passed without a punitive march of British troops. Chitral has in no wise affected the situation. It is normal, not new; chronic, not exceptional. He reminds us also that the decision to remain in Chitral was based upon the unanimous opinion of two successive Viceroys of India; of two successive Commanders-in-Chief, and of a possible third one in Sir W. Lockhart; of the whole of the present Viceroy's Council in India; of three, if not four, successive residents of Kashmir, the suzerain power of Chitral; and of every authority, civil or military, that has ever visited Chitral.

But all the same every Anglo-Indian authority at home excepting Lord Roberts was against it, and the result has justified their opposition.

(4) WHEAT DR.  
LEITNER SAYS.

Dr. G. W. Leitner writes on this subject in the *Asiatic Quarterly Review*.

## WHY THE AFRIDIS HAVE RISEN.

First he speaks of the Durand Treaty:—

Wherever the Durand Treaty has been applied, twice in Kafiristan, twice in Swat, now in the demarcation of the Mohmand country (though both its Afghan and British portions still acknowledge the Khan of Lalpura), it is leading to complications. Wherever even its indirect influence is exerted, as on the Afghan-Baluchistan border, it naturally rouses the suspicion of the Ameer. Wherever the "Forward Policy" constructs or contemplates a military road, which is a breaking

Aslam Khan.

Colonel Warburton.

THE GUARDIANS OF THE KHYBER.

down of physical and tribal bulwarks for the sole possible benefit of a conjectural invader of India, there are risings and rumours of risings. This is why the hitherto friendly Afridis have turned against us, for, seeing that we stayed in Swat after our solemn pledge to evacuate it, in order to construct and maintain a military road to Chitral, their confidence in our good faith is destroyed, and they feel that their turn will come next. Indeed, rumours had already reached them of our intention to construct a military road through the Khyber, in which they were to work rather as labourers than as its trusted guardians in alliance with the powerful English. Hence the *émence*.

#### THE AMER AND ABDUL HAMID.

It is in India itself (Dr. Leitner asserts) that the propaganda in favour of the Sultan of Turkey, so far as it departs from a reasonable and commendable sympathy

From the *Hindī Punch*.]

BOUND HAND AND FOOT.

with co-religionists, who ought to be our natural allies, may, under circumstances, be inconvenient to British rule:—

As a long resident in Turkey, I am aware that the spiritual pretensions of the "Khalifa" have largely grown since the accession of the present Sultan, and that in many Indian mosques where prayers used to be, most legitimately, offered to "the ruler for the time being, and may God render him favourable to Mohammedans," the Khutba or preacher's address is now pronounced in the name of Sultan Hamid as Khalifa of the Faithful. Although not "a perfect Khalifa" because not of Koreish descent and for other reasons, which it is unnecessary to mention, I consider him to fall into the next category of "an imperfect Khalifa" or "Khalifa naqis," because he has an army which enables him to enforce his secular decrees. He is a "Defender" of his faith, as her Majesty the Queen is of ours, without being, thereby, a really spiritual head, for he has no power to alter a single rite, much less a dogma, of his, the Sunni, form of Islām. Still, in

proportion as his claims receive the "consensus fidelium" in India, they are of a like secular and spiritual weight, and have to be considered, although it should not be forgotten that the mutiny of 1857 followed closely on the support which the "Ingiliz dinsiz" or the "irreligious English" had given to Turkey in 1854-56 against Russia. The relations of the Sultan with the Ameer, if any exist, I take to be purely formal, and such as befit the *de facto* Khalifa of all Sunnis and a ruler of that denomination who teaches Islām and has added to its domain. The fact that the Shahzada did not visit Constantinople is significant.

Dr. Leitner concludes: "The panic of an imaginary invader which has driven us into sending 42,000 troops against a few swarms of tribal flies has, it is stated, already cost £60,000,000 since the initiation of the Forward Policy. Less than a tenth of the amount would, under the Punjab Government, have kept the frontier quiet for that period, and it is to that Government and to local knowledge that the frontier should be restored. To sum up, the present disturbances are mainly, if not solely, caused by our obtruding military roads and posts in tribal territories hitherto recognised as independent."

The dissatisfaction with which we regard the whole miserable business is intensified by the fact that our Government is sitting on the safety-valve, and punishing expression of dissatisfaction in the native press as if it was a criminal offence.

#### The Largest Reformatory in the World.

Those who are interested in reformatory work will read with interest the excellent paper in the *Australasian Review of Reviews* on the Australian reformatory ship *Sobraon*, which once was the most popular sailing-ship that ever traded in Australia, and now is fitted up as a reformatory in Sydney Harbour. The ship is 315 feet long, has five decks, and is said to be the largest and best reformatory in the world. Boys submitted to the *Sobraon* must be received, no matter what their condition or health or physique. The scum of the city, the worst boys in the Colony, are all material with which the Superintendent has to deal. The largest reformatory in England is at Redhill, which contains 300 boys. The *Sobraon* accommodates 400. In addition to this another 400 are apprenticed under the Superintendent's control. The total cost is £7,412 per annum.

#### The Boys' Brigade.

The question of the organisation of the Boys' Brigade upon a national basis is still under consideration. The latest proposal is that steps should be taken to organise such Brigades in connection with all public, elementary, and other schools. An appeal would be made to the Government for a certain grant per head when any such Brigade can show that it has enrolled a specified number of efficient. The thirteenth annual meeting of the Boys' Brigade was held on the 24th of last month in London. From the statistics presented at this meeting, it would appear that the total number of boys enrolled in the Brigade of the United Kingdom is over 33,000, the officers number 2,800. In the United States the Brigade is almost as strong as in the Mother Country, for the American Brigade has enrolled 26,500; 5,000 boys are enrolled in the Canadian companies. There are other branches in all parts of the Empire. The total strength of the Boys' Brigade up to the present moment is 15,030 companies, 5,205 officers, and 66,500 boys. The Summer Camps, to give the boys a week at the seaside or in the country, provided a holiday for nearly 5,000 boys in the United Kingdom this year.

## OUR REAL PERIL IN INDIA.

## PLAIN WORDS TO LORD GEORGE HAMILTON.

THE real peril in India does not lie in the Afghan p.s-es. The danger which threatens the stability of our rule in our Indian Empire is far more serious than any menace of border tribes, even if the Ameer were at their back. It is necessary to speak very plainly on this subject, because India is a long way off, and the Anglo-Indian official is very apt to be deaf to all remonstrances that are couched in a minor key. Lord George Hamilton, however, is not in India, but at the India Office, and he at least has ears to hear, and, let us hope, a heart to understand.

## IS THE INDIAN GOVERNMENT LOYAL?

The peril which menaces us is the conviction, which at present is little more than an angry suspicion, that the Indian Government has got out of hand—that, in short, instead of British India being governed in accordance with the wishes and express commands of the responsible Ministers of the Queen, it is being “run,” on one very important matter, with an absolute disregard of the explicit commands addressed by the India Office to the authorities in India. I refer, of course, to the action which has been taken in India for the ostensible purpose of coping with contagious diseases in the army. Lord George Hamilton's dispatch, directing the Indian authorities to take measures to deal with these diseases on the same lines as ordinary infectious maladies, appears to have been interpreted, notwithstanding his explicit and peremptory command, as authorising a return to the old system of regulation, examination, and the whole devildom of official licensed and State-patronised prostitution. This is a very serious matter, far more serious than any question of hospital percentages, for it strikes at the root of our Empire.

## A NEW INDIAN MUTINY.

I had occasion to put this very plainly when Lord Roberts first returned from India, and had the satisfaction of receiving from him the most explicit assurances as to his determination to execute the orders of the Home Government, and to punish such of his underlings as set those orders at defiance. Unless those most interested in the subject have been misinformed, the time will speedily arrive—if indeed it has not already come—for addressing a very straight appeal to Lord George Hamilton, whether or not he intends his orders to be set at defiance by his underlings in India. If he does, he had better leave the India Office and make way for some one who recognises the responsibilities of Empire, and who will not tolerate a mutiny in his own camp. Of course it is possible that current reports may be exaggerated, and the Indian authorities may not be doing all that they are credited with. But it must be admitted there is ample justification for the readiness to believe that the Indian authorities are not misrepresented in this matter; for every advocate and apologist for their action attacks their assailants upon grounds which are totally inconsistent with Lord George Hamilton's dispatch. Of this a striking illustration is afforded in the articles appearing in the Service papers. Notably, one written by Colonel Turner in the *United Service Magazine*, entitled “The Apotheosis of Hypocrisy,” to which the Rev. J. Kirk Maconachie publishes a very dignified and effective rejoinder in the current number.

I do not, however, wish to assume that the gations so freely made on the one side, and tacitly admitted on the other, are really correct.

## THE RESPONSIBILITY OF LORD GEORGE HAMILTON.

I only take this opportunity of warning Lord George Hamilton that a great body of those who disapprove of the official recognition and patronage of prostitution accepted the declaration in his dispatch in good faith. We abstained from taking any active part in any agitation, desiring to give him a fair opportunity of making his words good. But it is necessary to say that, if he does not make his words good, and if, under cover of a dispatch forbidding the evils complained of, those abuses are reintroduced by the officials under his orders, there will be far more serious trouble ahead for him and his Administration than any which has been inflicted upon the Indian Empire by all the Afridis and Mohmands on the frontier. It is not asking too much that the Minister of the Queen, responsible to Parliament for the administration of India, shall keep faith with the nation both in the letter and in the spirit. Otherwise he will find that, when the moment comes when an appeal is to be made to the English people for further sacrifices for the maintenance of the Indian Empire, the response will be very different from what it has been hitherto. This is the real Imperial peril which threatens us in the East. Let Lord George Hamilton look to it betimes!

## UNDERMINING THE EMPIRE.

In the *United Service Magazine* for October, Mr. Maconachie alludes to one consequence of the persistent assurances made by the advocates of State patronised prostitution, that the conditions of soldiers' lives in India are such as to make prostitution a necessity. Mr. Maconachie says:—

Not even for the safety of our Indian Empire can it be right to send out young men into a life in which good morals are so nearly impossible as we are told they are in India, what with climate, idleness, enforced celibacy and profuse temptation. I see from this morning's paper (August 16th) that the officials at the War Office are getting into yet deeper straits about recruiting, which not even the Jubilee has been able to stimulate. I could tell them one of the reasons why. It is that the country is becoming shocked and alarmed at the immorality which has come to its knowledge, and however much they honour military life in the abstract, common folk dare not advise their sons and brothers to enlist in a service which needs repugnant and exceptional precautions to guard them from a ruin of the body which is but the token of a worse ruin of the mind.

## A MENACE THAT WILL BE FELT.

What Mr. Maconachie says, a good many other people are feeling without saying. Certainly if the Indian army is to be run by such unscrupulous rogues as those army doctors who are responsible for the cooked statistics with which they have defiled the name of the country, and such mutinous officials as those who have set Lord George Hamilton's directions at naught, there would be good reason for setting on foot an agitation against enlistment which would only need a little encouragement to paralyse the War Office. The Service is not too popular to-day, but if we are to be taught that it is only an antechamber to the brothel and the lock-hospital, the difficulty of recruiting will speedily be increased to a degree which would give Lord Wolseley the nightmare. If we have a few more dissertations like Colonel Turner's, Lord Lister's, and other men of that kind, it may very soon become a duty to convince the masses of the people

that the army in India is no fit place for any decent woman's son.

#### THE RESULT OF REPEAL.

Of course I shall be told at once that I am indifferent to the sufferings of the soldiers, and that if we have not this system, we shall see the army eaten up with disease. To which assurance I have simply to make one straight answer. Namely, that those who make it lie in their throats, and if they had an elementary knowledge of the facts, they would know that they lied. The increase of disease in the Indian army went speedily up under the regulation system, rising, as Mr. Maconachie reminds us, from 212 admissions per 1,000 men in 1865, to 480 per 1,000 in 1889. It has again increased since then, but that was a natural and necessary result of the system which prevailed down to 1889. As for the horrors of secondary syphilis which were witnessed at Netley Hospital, the cases described were due to disease communicated to the victims at a time when India was under the regulation system, and which has been gradually and steadily developing ever since. As for the assertion so constantly made with so little lack of foundation, that the C. D. Acts lessen disease, it is idle to waste ink on controversialists who either never take the trouble to read up their facts, or incontinently forget them. Mr. Maconachie in his paper reminds Colonel Turner and others that in the thirteen years preceding 1886, when the C. D. Acts were repealed in England, cases of disease had increased steadily at the rate of nine per thousand per annum. In the ten years that have elapsed since the Acts were repealed, disease has decreased at an average rate of nearly ten per thousand per annum.

#### THE DELUSION AS TO "PROTECTION."

Beaten at every point as to our own statistics, there is always the reference to the experience of the Continent, which is never more confidently made than by those who know nothing at all about what Continental experience is. Colonel Turner, for instance, has the effrontery to assert that "on the Continent youth is generally and efficiently protected by State legislation." This indeed is, as our own Army Sanitary Commission remarks, one of the popular errors which need correction. Mr. Maconachie says:—

The French hospital returns show that between 60 and 70 per cent. of venereal disease is contracted from "protected" women. What of the Russian conference, reported in the *Lancet* of February 20th, 1897, where the assembled doctors thought it necessary to propose the examination of all working men in factories and mines, and the establishment in villages of *crèches* for the treatment of this hereditary disease spread by returned soldiers or from camps in the vicinity? What of Austria, where the compulsory examination of "the working classes" has been seriously suggested, and in one town of which, Reichenberg, only 26 per 1000 of the recruits summoned were considered fit for service?

In this article I am not attempting to state the case against the regulationists. I simply desire to put on record a solemn protest and warning of which I hope Lord George Hamilton and the India Office will take good heed.

**The Strength of Primitive Methodism.**—By some curious mistake the number of ministers and of local preachers in connection with the Primitive Methodist body was misquoted in the statistics from the *Contemporary Review* in our last issue. Instead of this denomination having 965 pastors and 399 local preachers, it has 1025 pastors and 11,198 local preachers.

#### AMERICAN AND NORWEGIAN GIRLS: HOW FAR ARE THEY FREE?

MRS. GERTRUDE ATHERTON, writing in the October *Woman at Home* on English and American girls, does her best to uproot the common impression that the women of the United States generally enjoy the pleasures of fairly complete emancipation. She insists that they are in the main still thralls of Mrs. Grundy. "The great European misconception" on this matter she attributes "to the hordes of noisy and third-rate young of the American species who invade England and the Continent year after year." These she dismisses as the flotsam and jetsam of a new country, and proceeds to describe "the average well-brought-up girl." True—

Her education is as liberal as a boy's, she chooses her own husband, or knows the reason why, her allowance is almost as generous as her brother's, her dowry far more so, and she frequently rules her weary parents with a rod of iron, which, however, has several weak spots.

Nevertheless:—

In regard to certain conventions the young girl of the United States is fairly muzzled. No dispirited puppy in the Metropolitan district when out for a run is more firmly wired in than the American maiden with a position to uphold or cement. In many cases she is not allowed in the street nor to shop alone; to drive with a man unchaperoned would mean social ostracism; to walk with him alone in an unfashionable part of the city is a delirious lark; and a party of young people at a concert or theatre is flanked by an elderly and martyred dodo. Does she so far forget herself as to receive presents from a man not engaged to her she is bitterly criticised; and at any one of the great summer hotels she finds it painfully easy to get herself talked about.

The writer confesses that her own life was made a burden to her for six months, because in the absence of her husband and unescorted she took a party of boys and girls (under seventeen years) to see a Fair in San Francisco, and brought them back by a midnight train.

The greatest difference between the two types is that the American girl is encouraged, as the English girl is not, to form and express her own opinions.

From the account given by Anna Hvoslef in the October *Humanitarian*, it is to the women of Scandinavia we must turn to find womanhood liberated:—

The perfect freedom of Norwegian women often causes foreigners to misunderstand their bearing and conduct, and the hasty observer, unacquainted with the language and habits of the people, goes away with an entirely false impression of them. The young girl walks the streets alone, and goes to concerts or to the theatres by herself if she likes. When at parties there is no necessity for any servant to fetch her, and it is not at all rare to meet her alone in the streets at night, returning from some friend's house. The great crowd of bread-winners find it necessary to take care of themselves, and those who are not under the same obligation follow their example. Ladies without any male companion dine at the restaurants, or sip their coffee at the cafés, and if you should see a young man pleasantly talking with a light-haired fair one while enjoying the same cheering beverage, seated at one of the little marble-topped tables, you had better not jump to the conclusion that she is his *fiancée*; just as likely they may be merely friends. Opinions differ, however, with regard to this kind of recreation for young girls.

Of course, the result of so much freedom is to make the most up-to-date women rather regardless of etiquette and less refined in manners than the daughters of more strictly brought up nations; but with their free-and-easy ways they have generally a sound heart at bottom, a great regard and much common sense, besides an eager thirst for knowledge and for seeing the world.

## THE RHODESIANS AND THEIR NATIVE WOMEN.

## A DAMNING ACCUSATION—IF TRUE.

MR. J. Y. F. BLAKE contributes to the *National Review* for October an article entitled "Native Rhodesia." If it is not a compost of the most atrocious lies ever invented by the brotherhood of Ananias it would be a distinct relief to the feelings of every decent man and woman in the kingdom if the whole white population in Rhodesia were to be wiped out of existence as completely as were the inhabitants of the Cities of the Plain. That may be objected to as an over-statement. On the contrary, I maintain that no other expression so adequately fits the situation. For Mr. Blake brings against the white settlers in Rhodesia the accusation which of all others is most bitter to be borne by those who believe in the civilising mission of our race. I pass by his account of the system of enforced labour—which, if it be as he describes it, is much worse than honest straightforward slavery—in order to rivet attention upon that part of his impeachment which is infinitely more serious than any question of enforced labour.

## MR. BLAKE'S IMPEACHMENT.

Here is the passage to which I refer, and I print it not because I can for a moment bring myself to believe that it is true, but in order that it may receive the promptest possible refutation by those who are in a position to know the facts:—

This system of obtaining labour prevailed all through Matabeleland and in some districts of Mashonaland, not in the towns, but in the mining districts and through the country generally, and, being so widespread and persistent, it operated perhaps more powerfully than any other cause in bringing on the rebellion. But a cause perhaps almost equally powerful was the treatment of the women and girls.

## CHILD SALE AND RAPE.

Girls between twelve and fifteen years old are taken by the whites as mistresses, sometimes they were bought and sometimes they were forced, but I never spoke to one of them who did not wish to get away from her master and back to her own people. The vilest part of the business, I used to think, was that when one of the girls gave birth to a child, she was sent back at once to her kraal with the baby. One has heard of rough settlers getting on well with native wives and a family of half-castes, but this Rhodesian business was simply beast-like. They used the girls and flung them aside. And it must be remembered, too, that the Matabeles and Mashonas think very seriously of this offence. Adultery and violation among them is punished by death both to the man and woman, and, in fact, the crime is almost unknown. It was with difficulty that I could get any of them to speak on the subject at all. The men relapse into a stony silence, and pass the matter by with an ugly shake of the head. The women and girls, poor things, would bow down their heads and with the greatest reluctance speak at all. The disgrace rankled deeply, especially among the young men—it was the cause of the most bitter feeling against the whites.

## VIOLATION OR DEATH.

The native police were the most brutal offenders, I think, in this respect. Nothing that one would be allowed to say in print would give any adequate idea of their conduct. The forcible violation—the cold steel rifle-barrel glaring in the girl's face—what shocking methods were adopted by these brutes, the Chartered Company's servants, in committing their many acts of violence! There was enough, yes, ten thousand times enough to envenom native feeling against the whites.

## "UNIVERSAL!"

The practice of taking and keeping native girls is universal throughout Rhodesia, both in the towns and mining districts. They are not content with one; storekeepers, as a rule, keep two or three. Native commissioners and the white police have

such power that they can do as they please and use as many as they please. Not the slightest secret used to be made of all this. On the contrary, men used to boast of the number they kept. Sometimes the girls tried to escape. On one occasion I came on a young man, about fifty miles from Bulawayo, with a shot-gun on his shoulder and driving three girls before him back to his place. He told me that he had been after them all day. These are the causes of the rebellion.

## WHY THIS CANNOT BE TRUE.

The natural incredulity of any Englishman confronted with such an accusation levelled against his countrymen, is reinforced by certain facts which are indisputable. First, that Lord Grey, than whom there is not a more chivalrous gentleman in all England, has been for a long time past in authority in Rhodesia, and we have no word or hint from him that any such infernal brutalities were practised in the region under his control. Secondly, that when Olive Schreiner was believed to have suggested that there had been some misconduct of this kind, she was roundly taken to task by Mr. Selous, an honest and most truthful man, who has lived in the heart of the country ever since it was opened up. However, Mr. Blake's statements, which have now obtained the currency of the circulation of the *National Review*, cannot remain unnoticed.

## BUT IF TRUE—THEN!

I have never been a partisan of those who would perpetually subject our Colonists to the unsympathetic and censorious supervision of theorists at home. Our fellow countrymen who are at the front bearing the burden and the heat of the day, have a right to be judged leniently, and if they are rough-handed now and then, we should put ourselves in their place and err on the side of sympathy rather than of severity. But no consideration on earth would justify such a hell as Mr. Blake describes as having been established under theegis of the Chartered Company in the territories with the administration of which they were entrusted for the purpose of advancing the boundary of civilisation. Mr. Blake says:—

The enslaving and sjamboking of the men; the debauching of the women and young girls; the appropriation of their cattle and then their mealties were the real causes which gradually ripened and forced the natives into rebellion, and be it said they rebelled none too soon.

With that last sentence, everyone, of course, would agree if Mr. Blake be right. The only regret would be that they did not rebel long ago. Certainly if these things be as universally true as this witness asserts, every decent man must wish the natives hearty God speed if they would but take in hand the massacring out of the whole white male population.

THE value of the kite as an aid in partridge-shooting is shown by Mr. J. A. Milne in the October *Badminton*. The kite, shaped like a hawk, is kept hovering over the coveys, and the birds, frightened at the sight of their enemy, either remain in their coveys or fly low, or take to the nearest hedge. Thus they offer good shots, and the sportsman is saved the mortification of seeing the birds rise beyond gun range. Hon. J. N. Kirchhoffer describes wild goose shooting in Canada. Mr. Leonard Williams, recognising the revival of croquet, pleads for the tightening of the rules with a view to its evolution as a game of skill, and warmly opposes concessions to the garden party and juvenile party ideal of an easy game. Miss Muriel Gathorne Hardy gives a humorous account of her tribulations with "tires on tyres." Miss Fanny Hughes d'Aeth supplies a spirited sketch of an afternoon ride in Florida.

## THE PROSPECTS OF RHODESIA.

## THE TESTIMONY OF MR. HOLLAND.

IN very marked contrast to the horrible article which Mr. Blake contributes to the *National Review*, is the paper on "The Prospects of Rhodesia," which Mr. F. Catesby Holland contributes to the *Contemporary Review*. Upon the native question, Mr. Holland says comparatively little, but what he does say is not very reassuring. The only danger, he says, in the native question, seems to be that of injudicious interference by the Imperial Government. "The white settlers in Rhodesia must be left to manage their native labourers. If the Home Government is going to dictate a native policy according to the advice of ignorant and far-off Englishmen moved only by sentimental considerations, there will be trouble." There will be trouble indeed, no doubt, but there will be much worse trouble if Mr. Blake be right, and the white settlers in Rhodesia claim to manage their native labourers in the fashion described in the *National Review*. But let us hope that Mr. Blake is Ananias *redivivus*, and proceed to see what Mr. Holland has to say concerning the prospects of the country.

## THE COMPETENCE OF THE WITNESS.

Mr. Holland says:—

I have business interests in the country, and have for years been in touch with it, and been in the habit of receiving constant reports and information, both written and verbal, from men at work there. I have recently returned from a visit to it; and, although my stay was not a long one, it was specially devoted to examining the business prospects of the land; and I had exceptional opportunities of getting at facts. I hold no brief for the Chartered Company, and have no interest in it; and the main object of my journey was to determine whether the expenditure of capital in the country and the further development of its mineral resources would be prudent and likely to be profitable. My answer to that question was in the affirmative. On going to Rhodesia in May last, I did so with many doubts and considerable misgivings as to whether or not there really were payable gold reefs.

## WHY THE OUTPUT OF GOLD IS SMALL.

The question to which on entering the country I was determined to get an answer was why, seeing that the country had been open to prospectors since 1894, had so little gold been produced? Strange as it may sound, it seems clear that what has militated against a considerable production of gold in Rhodesia (apart from other causes) is the enormous area over which the gold reefs extend. Moreover, the mining laws have favoured large holdings of mining claims, so that the attention of both prospectors and capitalists has been, until quite recently, directed towards making discoveries of and acquiring claims. I find satisfactory and abundant evidence of the existence of reefs carrying rich pay-hoots, underlying the old workings. But the reefs are distributed over a large area in wild spots widely separated and difficult of access.

## A PREHISTORIC GOLD MINE.

Mr. Holland seems to think that the evidence continually multiplying as to the extent to which the gold in the country was worked by the ancients, encourages his faith in the richness of the gold-bearing reef. He tells a very interesting story concerning one miner who actually came upon the workings of the ancients, possibly the same men who built the great ruined city of Zimbabwe. He says:—

Having found an enormous heap of what appeared to him to be discarded quartz, he tested it, and found it to carry a few pennyweights of gold. He then proceeded to examine the Geelong hill, and in digging down from an "outcrop," some

of his "boys" fell into what turned out to be very extensive old workings. The whole hill seemed to be undermined, and "on the move." Further excavations revealed an underground timbered chamber, 500 yards long, containing vast quantities of rich quartz ready broken down from the reef, partly burnt, and ready for the battery. The timber was still in this mine, and large numbers of the diorite hammers were found.

## A CHEERFUL OUTLOOK.

Mr. Holland is a very cheerful optimist, which is probably due to the very exhilarating effect of the Rhodesian air, for he says:—

If one were to judge Rhodesia from much one reads in England just now, one would judge it to be a dreary, cheerless, hopeless spot. What struck me during my visit to the country was its inherent vitality, its supreme cheerfulness, its absolute confidence in its future. Those who are intimately acquainted with the gold-mining industry are satisfied that there is a great future for it. In addition to this, the country possesses a fertile soil and climatically is healthy and exhilarating beyond power of expression. In whatever direction therefore one looks, there are signs of active progress. For the last fifteen months the inhabitants of Rhodesia have suffered adversity. In spite of all this, and of the high price of living, and the absence of transport, values have increased. Churches of all denominations are to be found in Bulawayo. It has a population already of some 4000 souls. It boasts an excellent social club, and another is about to be built at a cost of £20,000. It has some beautiful suburbs. It has also a good sports club, and polo, cricket, and football grounds.

## A Great Possible Market for British Goods.

A visit to the Western Sahara is vividly described by Mr. Harold Blindloss in *Gentleman's* for October. He mentions incidentally that "any negro with a trace of Arab blood in him is invariably a Moslem, and the Mahomedan black is generally head and shoulders above either heathen, or, it is to be regretted, Christian (or semi-Christian) negro in the qualities of sobriety, courage, and fidelity." Of the sea between the Canaries and the mainland the writer says:—

In few other parts of the world is there such profusion of excellent fish as in these little-known waters; and that, if caught only for oil or manure-making, there are heavy dividends in store for any company who would start the industry. An eight-foot "trampa" or wicker cage lowered with a few mussels in it is filled half-solid in an hour.

Commerce with the tribes east of Cape Bojador is uncertain and occasionally dangerous, but might be very lucrative. Sheep can be bought at 1s. 5d. a head, and wool, which would sell in Great Britain at 10d. or 1s. a pound, can be got for 1½d. a pound. "Gold seemed fairly plentiful, and we made out in our much mixed idiom that a metal, which answered to the description of copper, was worked somewhere in the interior." Spanish officials claim heavy bribes, and the Arabs refuse entrance to strangers. Yet

there is in the Western Sudan a great market for British goods, and an unlimited supply of valuable produce which would yield large returns if it could be reached. At present, the French have secured a portion of the trade, a little of which goes through their colony of Senegal; while a certain quantity of goods filters through the fever swamps of Sierra Leone and the Gold Coast. The major portion, however, innumerable camel loads of spices, feathers, gold, ivory, gums, and skins, crosses thousands of miles of wild and generally hostile country to Morocco and Fez, some of the caravans passing within a few hundred miles of Cape Bojador on the Sahara coast, where there is a safe and easy outlet.

## MR. HENRY NORMAN ON THE GREEK WAR.

## LIGHT ON THE INSIDE TRACK.

"The Wreck of Greece" is the title of the paper in *Scribner's*, in which Mr. Henry Norman reveals to the world some of the secrets and services which he shared during his recent position as confidential adviser to the Court of Greece. He introduces his readers into the inner circle of Greek diplomacy, and traces the events which made war inevitable.

## WHO MADE THE WAR?

The Greek people were bent on war. The Greek Ministry could no longer hold them back. The King had held them back before, exhorting them to trust to the Great Powers; but the Powers had done nothing. Mr. Norman quotes the King's own words:—

"In person," he said to me, "I have pleaded the cause of Crete at almost every European capital. I have begged the Emperor of Austria, Lord Salisbury, Prince Lobanoff, M. Hanotaux, and Count Goluchowski to intervene. I have warned them that otherwise a revolution here was certain."

In April, 1896, when the Sultan suddenly ordered the recently conceded Cretan Diet not to meet, Prince George was at the Moscow Coronation. The King went on:—

"I telegraphed to him, saying: 'Beg the Tsar, for God's sake, to make the Sultan issue an irade permitting the Cretan Diet to meet, or we shall have a revolution.' The Tsar telegraphed immediately to the Sultan, and on the following day the irade was issued. . . . Months passed and the Powers accomplished absolutely nothing."

## WHY THE KING WENT TO WAR.

He felt he had no choice but to yield to the strong purpose of his people, and plunge. He sent his son to Crete. Mr. Norman thinks that though the result has been fatal "it may yet be that history will date from his order of February 10th the beginning of the end of Turkey in Europe." Mr. Norman announces that no serious person expected Greece to defeat Turkey single-handed, but to create such a situation as would compel the Powers to intervene in favour of Greece and the Balkan States.

## HOW THE GREEKS MISMANAGED THINGS.

Mr. Norman feels free now to tell the true story of the relations between Bulgaria and Greece. Tricoupis, he says, visited Stamboulouff with the preposterous proposal that Greece and Bulgaria should divide Macedonia between them. Stamboulouff listened politely, and then divulged the plan straightway to the Sultan, thereby gaining at once certain concessions he wanted from the Porte. A few months before the outbreak of the war Bulgaria proposed to Greece that Greece, Servia, and Bulgaria should unite in a memorandum to the six Ambassadors at Constantinople embodying the reforms needed in Macedonia. This scheme for putting the three Balkan States in evidence before the Powers as united claimants for a voice in the settlement of the Eastern problem the Greek Ministry rejected.

## ENTER MR. HENRY NORMAN—TOO LATE.

The King was no party to the rejection, and Mr. Norman, on his arrival, set about to amend what he held to be a grave blunder:—

It was in consequence of my suggestion that negotiations were once more entered upon, and if I speak with some confidence on this point it is because I was a party to them. What Bulgaria had been willing to give, however, as an arrangement in the course of peaceful diplomacy, she was, not unnaturally, unwilling to offer as part of a plan of campaign. She, therefore, replied finally in effect that *inter arma silent*

*leges*—that war must now take its course, with such results as fortune might send.

## THE GREAT POWERS AND GREECE.

The attitude of the Great Powers towards Greece suddenly changed from sympathy to antagonism. This change Mr. Norman ascribes to the unfortunate wording of the Greek King's charge to Prince George "to take possession of the island of Crete in my name." Had he only said "to restore order," umbrage might not have been taken. Mr. Norman does not hesitate to contradict M. Delyannis, and assert that the Sultan himself approached the Greek Minister at Constantinople with a view to a mutual settlement of the Cretan question apart from the Great Powers. These overtures were squashed by Russia. Yet Russia made an "isolated" proposal to King George, promising as a reward for the withdrawal of Greek troops now that within six months the island should be a principality under Prince George. The Greek people would have none of this proposal.

## AGAIN H. N. ATTEMPTS TO SAVE GREECE.

When the Powers presented their identic note to Greece demanding her withdrawal from Crete, the Greek reply was, at almost the last moment allowed, communicated to Mr. Norman. Thereupon the Ambassador of the *Chronicle* intervened to save Greece from herself:—

I took the very strong step of pointing out, in a long letter to a high personage, that only the enemies of Greece would be helped by the vagueness of the reply. . . . It was intimated to me that if I would put upon paper, in definite diplomatic form, the conciliatory proposals upon the omission of which I had commented, they should receive such consideration as they might be found to merit. I did so.

## BUT THE GREEKS REFUSE TO BE SAVED.

Had Greece only accepted the terms which Mr. Norman drafted for her, she might yet have been saved. But her Ministers deviated from his draft in one particular, and the ray of hope was extinguished. Says Mr. Norman of his note:—

With one difference these three suggestions formed the contents of the now famous *Note Verbale* which was despatched by telegraph to the Greek representatives abroad, and communicated by them verbally at the same moment at which they handed in the written reply of the Greek Government. The difference, unfortunately, was a vital one. Instead of definitely offering to place Colonel Vassos under the control of the Powers, the *Note Verbale* wrapped up the suggestion in the expression of a desire to see the Greek forces co-operating with those of the Powers in the restoration of order.

## WHO IS TO BLAME?

The responsibility for the war Mr. Norman divides between the Great Powers and the people of Greece. The motives of the Powers were, he holds, two: pique at Greece presuming to solve the problem which had baffled them, and an eye to future eventualities:—

The great maritime Powers all look forward to a desperate naval struggle some day in the Mediterranean. Suda Bay is the finest harbour in that inland sea, and its possession would be of inconceivable advantage. Turkey will be the stake of the war. If Crete is at that time merely an autonomous province of Turkey, the Power which is able to get its ships to the spot first will be the abler to seize Suda Bay, and perhaps to hold it. If, however, Crete should then be an integral part of the kingdom of Greece, the seizure of any portion of it would be an international outrage from which any nation would shrink.

Mr. Norman admits "the wreck of Greece," and deplores the corruption and personal faction of her politics, "the national vice of windy enthusiasm for great ends, combined with unwillingness to perform the solid labours by which alone these can be secured."

## THE TURKISH ARMY OF TO-DAY.

BY CAPTAIN NORMAN.

CAPTAIN C. B. NORMAN contributes to the *United Service Magazine* an article in which he pats his own back, not without cause.

## A TRUE PROPHET.

Two years ago Captain Norman published to the world a report upon the then condition of the Turkish army, in the course of which he expressed his deliberate conviction that if war were to come, the reforms made by the high military commission which sits permanently under the presidency of the Sultan at Yildiz Kiosk would enable the Turkish army to give a very good account of any probable assailant. Captain Norman was attached to the headquarters of the Turkish army in Epirus during the late war, and in the *United Service Magazine* he gives the most detailed account that I have yet seen as to the operations in that quarter. Passing over the details of the campaign, the following passage describing the change that has been effected in the Turkish army in the last twenty years is of permanent political importance.

## THE TURKISH ARMY IN 1877—

The radical faults in the Turkish Army during the Russian War were the absence of a staff and the ignorance and incapacity of officers. Mukhtar Pasha possessed no staff, there was not an officer in his army capable of making a reconnaissance, few who could read a map, and such maps as there were, were obtained from Vienna. No field telegraph was used, outposts were unknown; divisional, brigade, and regimental commanders were ignorant of the art of handling their troops; no attempts were made to enforce cleanliness in encampments. Field hospitals were practically non-existent, amputations were forbidden without reference to Constantinople. The field treasure chest was empty, and commissariat arrangements were conspicuous by their absence.

## —AND IN 1897

How changed was everything in 1897! The divisional commanders, Osman and Ibrahim Pashas, were men of education, well versed in the theory and practice of war. The staff officers were as smart and efficient as those to be met with in any army. The two chief divisional staff officers, Majors Essad and Saleh Bey, had served for years in the German Army, and were soldiers every inch of them from fez to spur. All staff and regimental field officers were served out with a most accurate map of the country on a scale of 1:100,000. The divisional commanders had in addition a large well-contoured map on the scale of 1:250,000, a map the superior of which I have never seen. A field telegraph accompanied the troops, and though it was cut on several occasions by the Christian insurgents, the telegraph department worked well and expeditiously. Outpost duties were thoroughly understood by the Nizam troops. The encampments of these three brigades were models of neatness and cleanliness; watering-places were marked out for men and horses, latrines were properly constructed and daily filled in. Field hospitals were established at the headquarters of each division; there was one at Prevesa, three at Philippiadis, one at Plaka and five at Janina capable of accommodating an aggregate of two thousand patients; fortunately no strain was thrown on the medical men. As regards amputations, the responsibility for these rested on the senior surgeons of hospitals. There was a well-filled treasure-chest at Janina, and Osman Pasha was always able to pay not merely the villagers whose beasts were requisitioned for transport purposes, but also for the sheep and goats purchased for the use of his troops. The men too were not without money, and though the Albanians had a habit of annexing property, the men of the 2nd Army Corps were as scrupulous as our own native soldiery in paying for all they needed. Subsequently to the advance from

Janina, at the end of May, the army was well provided with transport trains, each battalion being provided with two hundred ponies or mules, and depôts were established at Strevena and Philippiadis, at Kerasovon and Karavan Serai, and also at Janina.

## THE REGULARS ALL IN RESERVE.

Captain Norman reminds us that the Turkish troops put into the field against Greece did not in any way represent the most effective part of the Turkish army. With the exception of four regiments the Sultan did not move a single battalion of the regular army to the front. The campaign was won by the Redifs, while the Nizams, or the troops of the active army, remained in their barracks:—

Had Serbia or Bulgaria thought of throwing in their lot with Greece (and those nations are much more likely to make common cause with Turkey against Greece so long as that country maintains its pretension to Macedonia), Turkey still had 123 battalions of Nizam troops, all armed with the Mauser rifle, echeloned along the frontier. Although the Porte was assured of the neutrality of the Balkan State, there was no need to make use of the Nizam troops when fighting against such an antagonist as Greece.

Turkey therefore has shown that she can beat Greece with her left hand, for the Redif is to the Nizam as our militiaman is to Tommy Atkins.

## Seismogram v. Telegram.

MR. MILNE, in the paper on sub oceanic changes, which appears in the *Geographical Journal* for September, calls attention to the fact that "movements resulting from a large earthquake originating in any one portion of our globe can, with the aid of suitable instruments, be recorded at any other portion of the same." He shows that not pure science alone is furthered by this fact. A sudden break in the cables connecting Australia with the rest of the world in 1888 gave rise to a dread of war as the possible cause, whereas the real cause, a sub-marine earthquake, would have registered itself by seismogram had Australia possessed the proper instruments:—

Other direct benefits, which have already been derived from the records of instruments such as it is here proposed to establish round the world, are that they enable us to extend, correct, and even to cast doubt upon certain classes of telegraphic information published in our newspapers. Late in June last year we learned from our newspapers that a great disaster had taken place in North Japan, and that nearly 30,000 people had lost their lives. Seismograms taken in the Isle of Wight not only indicated how many maxima of motion had taken place, but showed that there had been an error in transmission of two days, the catastrophe having taken place on the evening of June 15, so that all who were to reach the stricken district after that date were in safety. On August 31 of the same year, the Isle of Wight records showed that a disturbance similar to that which had occurred in Japan had taken place. On account of this similarity, it was stated that we should probably hear of a great earthquake having taken place in or near that country on the above date at 5.7 p.m. Four weeks later this was verified by mail. Another instance occurred some weeks later, when our newspapers announced that a great earthquake had taken place and several thousand lives had been lost in Kobe. No doubt those who had friends and property in that city were filled with anxiety. On this occasion the Isle of Wight instruments were still indicating that nothing of the magnitude described could have occurred. Later it was discovered that the telegram was devoid of all foundation.

It is also hoped that these instruments will shed light on the movement of these tremors through the earth, and on the effective rigidity of our planet.

## THE FORWARD POLICY OF THE UNITED STATES.

AMERICANS BEGINNING TO COUNT THE COST.

"We are one of the great Powers," writes Murat Halstead in the September *Forum*. That conviction, with a sense of much that it involves in aggressive expansion and equipment, appears to be slowly deepening in the American mind. Mr. Halstead cheerily dismisses as an illusion the hope of universal peace, and bids his countrymen prepare for the advent of ever greater wars. He recalls with pleasure that "the greatest gain of land by the sword in modern times was that which we acquired from Mexico," but grumbles because Vancouver and North-west Canada do not now belong to the United States. He points to the three late wars, Cuban, Japanese, and Greek, and pronounces the United States to be "deeply concerned" in them all. Cuba, he holds, properly falls to the United States. The ascendancy of Japan in the Pacific is a menace to American expansion westward, and may even threaten to hurl the overflow of Asiatic population on American shores.

## KAISAROPHOBIA—

But the most curious alarm raised by Mr. Halstead is occasioned by the Imperial members of the European Concert. He says:—

It is well worth while for us to consider that the combination of emperors growing out of the Greco-Turkish war is the most formidable alliance of military Powers ever formed. There are four great armies in it—the Turkish, with half a million men, being the smallest—and three considerable navies. The Kaiser and the Tsar are young and inexperienced, and are not limited within defined responsibilities. Germany is the leader, and has the colonising passion. This country is the one that would naturally appear to the mediæval mind of the Kaiser as the worst example of a wrong form of government; and other despots could hardly help agreeing with him. . . .

It would not be unlike the Emperor William to take an interest in Cuba. . . . It might very well happen that Germany, whose beet-sugar production has become a great industry, should care to have the cane competition in her charge. If, therefore, the United States should offer her good offices to Spain to secure the liberty and independence of Cuba, the Eastern despots might support Spain, whose Queen Regent is an Austrian. . . . And, at the same time, Japan might face us in the Pacific with the ancient Asian aggression opposing superior civilisation.

## —AND ANGLOPHOBIA.

Then, too, the command of the sea is not in American hands:—

England is all around us, with her Dominion of Canada, her fortresses, her naval stations, and reserves of material for armies and navies on the Pacific shore. . . .

We are sensible of the friendliness that the policy of England would cultivate with this country; but her splendid, grasping policy is selfishness defended in diplomacy and fortified with a fleet ready to appear in superior force in any sea. The very pith of this matter—sympathy and closer union of the colonies of England with the mother-country—marks with more definiteness the assured and haughty independence of our Union of States that once were colonies.

## ARM AND ANNEX!

Therefore "we need to formulate a colonial system." "We need to equip ourselves with effective artillery and to augment our fleet":—

Now is the time to provide armaments. We are one of the great Powers. This fact should appear elsewhere than in our statistical tables and on the maps. We should care nothing for the "balance of power" in Europe. That is a matter of locality and detail. We should have no concern how Africa, Asia, or Australia is cut up. But the American islands are

ours for the hereafter; and we should, in good time, annex Cuba as we annexed Florida, Texas, and California, and add her tropical riches to the arctic resources of Alaska, so that all the zones may be included in the patrimony of our people.

## HAWAII AND A BIG NAVY.

This general claim for augmented armaments Mr. H. A. Herbert, Ex-Secretary of the United States Navy, presents in the same magazine as "A Plea for the Navy." After comparing the naval resources of the United States with those of other great Powers, and observing that so far as the ships go the Reserve Navy of the States is superior to that of any other Power except Great Britain, Mr. Herbert points out that his countrymen "have more property on shore assailable from the water than any other nation;" "more property (commerce) afloat and assailable by navies than any other nation;" and "more merchant ships afloat on the ocean (great lakes included) than the five greatest naval Powers of the world combined, excepting Great Britain." These considerations lead him to conclude that the navy must be increased now in time of peace; for "a modern naval war would be over in less time than it takes to build a single gunboat."

The United States Pacific fleet is unequal to the Japanese fleet; and the United States Atlantic fleet would take ninety-seven days to reach Honolulu from New York, while the home fleet of Japan could cover the distance in sixteen or seventeen days. Therefore—

If we annex Hawaii, we must add largely to our Pacific fleet. We cannot otherwise defend this outpost, 2,000 miles from our present boundaries.

The practical conclusion is:—

Certainly it would not be too much to add, say, six more battleships to our Atlantic fleet and half as many to the Pacific. And seventy-five torpedo-boats would not be an undue addition to this class of our vessels. These, it is believed, should be built during a programme of some five years—two battle-ships and about fifteen torpedo-boats to be laid down each year.

## PLEA FOR AN ANGLO-AMERICAN AND JAPANESE ALLIANCE.

"Hawaii and the Changing Front of the World" is the title of a paper in the same magazine by Mr. J. R. Procter. He recognises as the outstanding facts of the century the expansion of Russia, England, and the United States. He claims that Great Britain owes her unparalleled position to the lessons in Federation which America taught her. The pupil has even surpassed the teacher, he admits, in "the science of administration." He anticipates Imperial Federation, and the formation of a yet higher Court of International Arbitration over all English-speaking peoples. But he sees a danger in the movement of Powers which tends to make the Pacific the theatre of international rivalry, and to close the Far East to English-speaking trade. He asks:—

Should not the United States and Great Britain, having like interests at stake as in 1823, stand together to guard from danger Anglo-Saxon liberty, law, and interests? I believe events are so shaping that these two great World-Powers, and probably Japan, will be drawn into an alliance which will insure the well-being and progress of the world. Warships flying the American flag first opened the ports of the Far East. Warships flying the Stars and Stripes, the Union Jack, and the flag of Japan may be forced to unite to prevent the closing of these ports.

## ANNEX AND DISARM!

Certainly such an alliance would be supreme in the Pacific; but, as Mr. Procter goes on to advocate the annexation of Hawaii, the Japanese element in the

alliance may be considered decidedly problematical. This, however, is his argument:—

In the possession of a hostile power, Hawaii would give an additional base for coaling and repair from which to attack our extended coast-line. With Hawaii in our possession, and Pearl Harbour fortified and stored with coal—furnishing a safe harbour for our merchantmen—we need fear no attack from across the Pacific. We should require fewer war-ships in the Pacific, and fewer fortifications on our Western and Alaskan coasts, than would be required if Hawaii should remain in its present condition or pass to the possession of a foreign Power.

Mr. Procter's argument holds good only if his projected alliance with Great Britain becomes a fact; for the Power that commands the sea practically carries Hawaii in its pocket.

The annexed islands Mr. Procter would rule as the District of Columbia is ruled—the American parallel to our Crown Colony.

In the *North American Review* for September, Mr. Longfield Gorman points out that if Hawaii is once annexed its people must by the Constitution of the United States possess the American franchise, and “thus the detested and dangerous Asiatic must reach the American ballot-box.”

## HERO STORIES FROM THE POLICE.

GLEANED FROM THE STREETS OF NEW YORK.

MR. THEODORE ROOSEVELT, who was recently at the head of the New York Police, has contributed to the *Century Magazine* for October a very delightful paper under the title of “The Roll of Honour of the New York Police.” I have so frequently insisted upon the fact that the services of the police are never adequately recognised by the authorities, that I am delighted to reproduce what Mr. Roosevelt says upon the subject. “The policeman is often called upon,” says Mr. Roosevelt, “to display qualities which in a soldier would be called heroic.” His feats in saving life or in arresting dangerous criminals, often imply just as much courage as those of the man who captures an enemy's flag in battle or plants his own flag on a hostile parapet. To the average dweller in a tenement house district, the policeman is in his own person all that there is of Government. He is judge, executive and legislature, constitution and town meeting. This witness is true. It can be imagined, therefore, what is the state of a city when the sole representative of the Government becomes as hopelessly corrupt as he was before the Reform Administration took office in New York. Side by side with the purifying of the police force from corruption, Mr. Roosevelt undertook the encouragement of heroism, with the result that crime has decreased steadily through the two years, and the proportion of arrests for offences has steadily decreased.

### POLITICAL PULL V. PERSONAL PROWESS.

In the old days, courage and heroism counted as nothing in obtaining promotion compared with a political pull. He, however, determined to change all that and to make the display of daring and personal prowess count as an element in estimating claims for promotion; and he further began to award medals or certificates in remembrance of any deed of exceptional bravery. During the two years he was head of the police force, he decorated on an average one policeman a week for saving someone from drowning, from a burning house, from stopping a runaway team, or arresting lawbreakers under exceptional circumstances. One policeman, whom Mr. Roosevelt

promoted to be sergeant, had been passed over time after time and denied promotion because he had no political pull, yet that man in twenty-three years of service had saved no fewer than twenty-nine persons from drowning, and other persons from being burnt alive. He was sober, trustworthy, and his record entirely free from any complaints as to infraction of duty; but as he had no political backing either in Tammany Hall or the Republican Ring, he was never promoted until a year ago. Mr. Roosevelt's paper is full of capital stories of the energy, resource, and personal courage shown by the police. Shooting stories are much more common in New York than they are in London, and Mr. Roosevelt takes special credit to the Reform Administration that it undertook to train the police in the use of the pistol.

### FEATS ON THE BICYCLE.

Members of the bicycle squad are perpetually riding after scorchers, runaway horses, and reckless drivers. Sometimes the adventures of the bicycle police are as thrilling as any of those that are performed by any scouting. For instance, here is the story of a Yankee bicycle “cop,” as they are called, which may be introduced by saying that their usual mode of proceeding is to scorch after the runaways and reckless drivers as hard as possible, catch hold of the horse's reins, kick their bicycle out of the way of the wheels, and hang on to the horse's head:—

On one occasion he had a fight with a drunken and reckless driver who was urging to top speed a very spirited horse. He first got hold of the horse, whereupon the driver lashed both him and the beast, and the animal, already mad with terror, could not be stopped. The officer had of course kicked away his wheel at the beginning, and after being dragged along for some distance he let go the beast, and made a grab at the wagon. The driver hit him with his whip, but he managed to get in, and after a vigorous tussle overcame his man, and disposed of him by getting him down and sitting on him. This left his hands free for the reins. By degrees he got the horse under control, and drove the wagon round to the station-house, still sitting on his victim. “I jounced up and down on him to keep him quiet when he turned ugly,” he remarked to me parenthetically. Having disposed of the wagon, he took the man round to the court, and on the way the latter suddenly sprang on him, and tried to throttle him. Convinced at last that patience had ceased to be a virtue, he quieted his assailant with a mash on the head that took all the fight out of him until he was brought before the judge and fined.

### Socialist and Catholic in the same Boat.

MR. AUBERON HERBERT's reply, in the October *Humanitarian*, to Mr. Grant Allen's confession of the Socialist's creed, is chiefly interesting for the parallel drawn between Catholicism and Socialism. Both systems are, in Mr. Herbert's judgment, artificial, protective, exclusive; both rest on compulsion and shrink from competition; both are authoritarian and official; and both are wont to spoil the best minds which embrace them. After a “funeral oration over Mr. Grant Allen's mental powers,” the writer develops the parallel still further, and concludes the first instalment of his reply by resolving both systems into materialism:—

The temper of the Socialist, like the temper of the Catholic, is essentially materialistic. Indeed, . . . if you believe in machinery, if you believe in changing the nature of men and safeguarding their actions by external contrivances, if you cling to uniformity and restriction, if you cannot trust liberty and welcome difference, you are only, by whatever name you call yourself, a worshipper of matter, not a believer in spirit.

## THE FORLORN STATE OF THE LIBERALS.

A PARTY WITH NEITHER LEADERS NOR POLICY.

AN anonymous writer in the *Contemporary Review* throws into the form of a dialogue, which is supposed to have taken place in the luncheon-room of the Reform Club, what is the common talk that goes on wherever two or three Liberals meet each other. The parties to the dialogue in the *Contemporary* do not, however, put the case against the party anything like as strongly as it might be put, although they certainly sum up pretty strongly concerning the utter collapse of the leadership on the part of the Liberals.

## LEADERLESS.

Sir William Harcourt, of course, is past praying for. His absolutely inconceivable abandonment of the plainest and most obvious duty of the South African Committee has finished him, and as the "New Radical" in the *Contemporary* points out, Sir H. Campbell-Bannerman, who might have been a leader, has done nothing of late except to help Harcourt to reduce the South African Inquiry to its idiotic result. Obligations of personal loyalty compel Mr. Morley to lie down in the dust beside his chief. Mr. Asquith, according to "A New Radical," has the fatal fault of believing in nothing, and is now one of the governing classes, a strong man whom the great trust, but who has no longer any force behind him.

## WITHOUT POLICY.

As for policy, "A New Radical" makes one of his talkers say, addressing the Liberals:—

Not a man of you, from the captain to the cabin-boy, has any notion where you are steering to. What is worse, not a soul is even thinking seriously about it. You are all trusting to luck and the blunders of the Government.

The Government blunders enough, but their blunder brings no good luck to the Opposition. As for the leaders and the policy, this extract sums up what "A New Radical" has to say by way of a practical proposal:—

"Which of them ever says a word that is likely to restore confidence? I know, and you know, why they don't. It is because they have no policy on this subject, any more than on the others. They do not even worry about it. They are content to drift and see what turns up. If you ask me what I propose, I will tell you. I propose that the party should take over the work which the Front Bench cannot or will not do. If they won't lead, let them be driven. The National Liberal Federation is not an ideal caucus; but it can compel the serious discussion of all these problems, if it chooses, in all parts of the country."

"Then you will say," said Laudator, "that it is not representation, because it is controlled by the capitalists and the Nonconformists."

"Yes," said Criticus, "it is; and its cogitations will be of no use unless it can frankly take the working men's own leaders and organisations into its confidence."

## LEAVING THEIR COUNTRY FOR THEIR COUNTRY'S GOOD.

A rather more practical conclusion than this of setting the National Liberal Federation to evolve a policy by a series of provincial Conferences, is the proposal made in the *National Review* by the writer of the Colonial Chronicle. He suggests that the best thing for every-body would be if all the members of the Front Opposition Bench were to leave the country and inspect the Empire:—

They prefer to spend their unearned holidays in discharging turgid platform oratory which no one wants to hear and no one wants to read, and which throws no light on any political problem. They should open their minds and make themselves useful by Imperial travel.

## THE HAND OF PROVIDENCE IN HISTORY.

A SIGNIFICANT REMARK BY CAPTAIN MAHAN.

IN the October *Harper* there is a careful study by Captain Mahan of the strategic governing naval war in the Caribbean Sea. Captain Mahan holds that what the Mediterranean Sea was to the Old World the Caribbean Sea will be to the New, chiefly because that it holds the two points—namely, the Mississippi River and the gate to the Isthmus. His paper is chiefly devoted to the comparative advantages of the different positions held by the various Powers in this region; but the most important part of his paper is devoted to a discussion of the comparative strategic value of Jamaica and Cuba. Captain Mahan comes to the conclusion, which seems indeed obvious enough on the map to a non-strategic eye, that Cuba offers much greater advantages to a strong naval power than any that can be claimed for Jamaica. Nevertheless, considering our preponderance of naval strength, Jamaica is a position by no means to be despised. Captain Mahan says:—

In the matters of entrance to the Caribbean, and of general interior control of that sea, Jamaica has a singularly central position. It is equidistant (500 miles) from Colon, from the Yucatan Channel, and from the Mona Passage; it is even closer (450 miles) to the nearest mainland of South America at Point Gallinas, and of Central America at Cape Gracias-á-Dios; while it lies so immediately in rear of the Windward Passage that its command of the latter can scarcely be considered less than that of Santiago. The analogy of its situation, as a station for a great fleet, to that for an army covering a frontier which is passable at but a few points, will scarcely escape a military reader. A comparatively short chain of swift lookout steamers, in each direction, can give timely notice of any approach by either of the three passages named; while, if entrance be gained at any other point, the arms stretched out towards Gallinas and Gracias-á-Dios will give warning of transit before the purposes of such transit can be accomplished undisturbed. With such advantages of situation, and with a harbour susceptible of satisfactory development as a naval station for a great fleet, Jamaica is certainly the most important single position in the Caribbean Sea.

To British readers by far the most important passage in Captain Mahan's paper is that in which he is driven, as the result of his observations on the growth of empire, to moralise as to the providential design behind the building up of British sea power. Speaking of Jamaica, and the way in which it came into the hands of the English, Captain Mahan says:—

When one recalls that it passed into the hands of Great Britain in the days of Cromwell, by accidental conquest, the expedition having been intended primarily against Santo Domingo; that in the two centuries and a half which have since intervened it has played no part adequate to its advantages, such as now looms before it; that, by all the probabilities, it should have been reconquered and retained by Spain in the war of the American revolution; and when, again, it is recalled that a like accident and a like subsequent uncertainty attended the conquest and retention of the decisive Mediterranean positions of Gibraltar and Malta, one marvels whether incidents so widely separated in time and place, all tending towards one end—the maritime predominance of Great Britain—can be accidents, or are simply the exhibition of a Personal Will, acting through all time, with purpose deliberate and consecutive, to ends not yet discerned.

If it had been a native-born Briton who had indulged in this reflection, how the enemy would have blasphemed! But Captain Mahan is not an Englishman, and his expression of marvel will carry weight in quarters but little disposed to listen to claims put forward in support of the providential mission of Great Britain.

## THE SUPREMACY OF RUSSIA.

NOT TO BE DREADED, PERHAPS TO BE DESIRED.

PROFESSOR THOS. DAVIDSON performs something like a feat in the September *Forum*. He gives a readable compendium of Russian history from the beginning down to the present day, all in the space of ten pages; and in two pages more gives a forecast of the destiny adumbrated by the previous national evolution. The busy man may well be grateful for so vivid and brief a story of one of the greatest peoples of time; and the optimism of the writer's outlook is not less welcome, although he seems to take an unnecessarily gloomy view of the present Tsar's character.

## TWO CENTURIES OF OSCILLATION.

He thus epitomises the course of events after Peter the Great:—

Since his time, the history of Russia has been an oscillatory effort to combine Oriental absolutism with Occidental constitutionalism, to find a means of making her people free without undermining the unity and strength due to despotism. The task has proved one of extreme difficulty; and it is but fair to the Tsars to say that, whatever may have been their mistakes in judgment, they have, on the whole, honestly and steadily kept it before them, going forward as far as they dared, and then shrinking back in dismay on seeing the results of their own audacity. If they have all insisted on keeping intact the autocratic power until the nation show itself capable of holding together, in undiminished strength, without it, this cannot surely be made a reproach to them. It is to this insistence that Russia owes her supremacy in Europe to-day. She is strong because she is unified by a single principle, organising and functioning with ease and rapidity: she is influential because her vast forces are wielded by a single will.

## WHAT "THE OLD WORLD NEEDS AND CRAVES."

Passing to inquire what her supremacy means for the future, the Professor answers:—

That depends upon what it shall stand for. If Russia is to go on maintaining and championing despotism; if she is to ally herself with other despotisms for the suppression of all liberalism in the Old World,—then her supremacy must prove the greatest possible calamity to all that civilisation means. If, on the contrary, she shall proceed cautiously along the path marked out by Peter the Great, Catherine II., and Alexander II., and shall gradually substitute the noble, moral bond of freedom for the coarse, material one of despotism, and, in so doing, shall profit by all the rich experience of the Western nations without losing her own individuality and becoming a mere imitator,—then her supremacy will be what the Old World most needs and craves.

## FOUR PROGRESSIVE FACTORS.

Relapse into pure Orientalism is impossible, however reactionary the young Tsar may be; equally impossible is the continuance of the present chaotic transition. By evolution or revolution cultivated Russia will acquire constitutional freedom. "She must go forward or perish from among the nations." The Professor believes she will go forward, and he observes four great aids to safe and successful progress:—

(1) The complete, almost superstitious, devotion of the lower classes to the Tsar, and their consequent plasticity in his hands; (2) the high culture, broad humanity, and freedom from conservatism of a large section of the upper classes, which would enable them to undergo a political metamorphosis far more easily than older and more stiffened peoples; (3) the village communities, with their rudiments of self-government, and their remedy for landless, homeless proletarianism, such as threatens the peace of Western Europe; (4) the compactness, combined with vastness, of the Russian Empire. With these advantages, all that Russia requires is a far-sighted, heroic Tsar.

Under such a Tsar Russia should, the Professor calmly requires, be allowed by Europe to possess ice-free ports and to annex Turkey to her dominions. The article ends with the cheery confidence:—

Whether Russia is to be blest with a liberal Tsar or not, there is no reason to fear her supremacy. If she remain coarsely despotic, it cannot last: if she become liberal, it can be only a blessing.

## ENGLAND'S DUTY AND INTEREST.

"Diplomaticus," writing on "The Triumph of the Cossack" in the *Fortnightly Review* for October, parades the accumulating evidence of the ascendancy of Russia in Europe. He maintains that Russia's strength has long been gradually growing, and that the moral ascendancy of Russia has now become the one stable fact of the international situation. Her real power is not only found in military strength, but in internal political stability and social contentment. Even the Poles are now abandoning their ancient enmity and manifesting a desire to be reconciled to their conquerors. The facts being so, "Diplomaticus" asks whether the triumph of the Cossack is a menace to civilisation or a danger to the peace of Europe. He replies that it is nothing of the kind. It is indeed a good thing rather than otherwise for Europe that Russia should have the position and wield the power which she possesses.

## RUSSIA A PEACE POWER.

He thinks that Russian influence makes for peace:—

No Power, except Great Britain, perhaps, has given such substantial hostages to European peace as Russia. Her whole future depends upon the tranquil cultivation of the immense industrial movement in which she has embarked all her fortunes and all her hopes. Even when she reaps the harvest, it is unlikely that Europe will have any cause to fear. By her alliance with France she has abjured the principles which brought her armies into Western Europe in 1849. The aspirations of Pan Slavism are becoming as impracticable as the dreams of Panpolonism. Moreover with the great vested interests which must accrue from the fruition of her present policy she will find, like England, that the greatest of all her interests, as Lord Derby once said, is Peace.

## A SUGGESTED ARRANGEMENT.

If England and Russia are the two great pacific Powers, why should they not join hands? "Diplomaticus" thinks that this is just what they ought to do, and he says:—

I am convinced that in both countries a friendly and definite understanding with Russia would be hailed with delight. Certain it is, that when, towards the end of 1891, such an arrangement was thought to be in progress, it was very cordially entertained by both peoples. There need be no question of our joining the Dual Alliance as such. All that is required is that we should follow out with Russia, and to some extent with France, in China, Persia, and Asiatic Turkey the policy we inaugurated with France in Indo-China and Yunnan in 1895, and which Austria and Russia have in principle adopted in regard to European Turkey. We should come to an arrangement by which, jointly with Russia, we should guarantee the integrity of the Asiatic States in question, provide for freedom of trade and equal privileges in all three countries, pledge ourselves to action of a definite and effective kind for reforming and reinvigorating their internal administration, and finally mark off the respective spheres of influence and action of both contracting Powers in the event of a collapse of any of the three States proving inevitable.

THE oft-told tale of Miss Weston's work in the Royal Navy is repeated by Mr. Charles Middleton in the *Sunday Magazine*. It appears that her Sailors' Rests are now making a profit of £2000 a year.

## THE LAW OF THE WILD BEAST.

## THE MORAL DEFENCE OF MACHIAVELLISM.

MR. FREDERICK GREENWOOD, in an article entitled "The Law of the Beast," undertakes the defence of Machiavellism in the *Nineteenth Century*. His article is in part a reply to an attack upon a previous paper which Mr. Frederick Greenwood contributed to the *Cosmopolis*. It is a very interesting and thoughtful article.

## MACHIAVELLISM DEFINED.

Mr. Greenwood thus defines the doctrine of Machiavellism:—

If nothing less will serve to secure the existence of your State in freedom, you may do anything that a wild animal will do—knowing nothing of God or devil, or sentiment, or morals, or any sort of *point d'honneur*—for his life and liberty. And you may do anything that a wild animal would do if he had a finer cunning and no more conscience.

## THE STATE BELOW MORALITY.

After thus carefully stating the doctrine impugned, he says:—

"Is, then, the State above morality?" It has the look of a question that answers itself, and must be left to do so amid decent silence. But it is no concern of mine. What I say is, that for a great and peremptory part of its function the State is *below* morality; not from depravity, not from decadence, but from certain original and but slowly alterable conditions of existence.

## THE BED-ROCK OF SOCIETY.

These conditions of existence are the law of the wild beast, which is the bed-rock foundation on which all the laws of men are reared. Mr. Greenwood says:—

What is the law of the beasts which Machiavelli sets behind "the laws proper to man," where, indeed, it has lurked in readiness for a call ever since the beginnings of civilisation. It is the universal law which for ever destroys in order to rebuild: "the law of conflict celebrated in the description of Nature as 'red in tooth and claw.'" That is the law of the beasts—at some remote time ours too; and though within all progressive communities of mankind it has been superseded more and more by "the laws proper to men," so that its extinction is nearly approached, international relations still proceed upon it. Proceed with constant though slow modifications and softening, no doubt; yet the truth is that no State, in its relations with other States, is able to free itself from the domination of the primal law of Nature. The proof of this is the right of resort to war and the persistent necessity of it; for resort to war is appeal to the law of the beasts. Conceivably, of course (though the thing has never yet been done), a nation might spurn the Machiavellian counsel as too wicked for adoption in any extremity. But mark that no country could do so without sharpening in rival States the old forest-born rapacity which it would invite to its own destruction; and that the sharpening of those rapacities, the invitation to destruction, the voluntary submission to it, would be all wrong together: not only bad politics, but bad morality.

## IF TO THE SOLDIER WHY NOT TO THE STATESMAN?

Continuing this line of argument, Mr. Greenwood points out that the soldier is permitted even by severe moralists to fall back on this law of the wild beasts, and if it is permitted to the soldiers in a state of war, why may it not be permitted, he says, to a statesman whose state is threatened with extinction? He says:—

The statesman and the soldier are one. The statesman also is part of the machinery of war both when it stands as a threat or moves to action. There is—that is to say, there generally is—a distinctly existing state of war before a blow is struck: storm before the lightning strikes. And anything done in that period to avert a dangerous conflict that may be done in

carrying it on is justified. All along, remember (mark this), we speak of a nation that is menaced with destruction; as a weak State by a strong one, or as it might be if England (or Germany or France) were threatened by a great coalition. A state of war has commenced which may have ruin for result, and if so will proceed to it by means of the most dreadful slaughter, plus the practice of all manner of lies, deceits, ambushes and betrayals. Why may not the rulers of the endangered country end the matter, if they can, by lies, deceits, and ambushes minus the slaughter? Why must they rather risk the existence of a settled and benign civilisation? I say that I do not know.

## ESPECIALLY IF PERMITTED TO THE PARTIZAN.

Then carrying the war into the enemy's camp with side glances at Mr. Morley, and some of his political friends, he asks why they should be so very squeamish about Machiavellism in defence of the State while they see it practised every day without remark in the promotion of the interests of party:—

What kind of political ethics is it which tolerates such offences for the sake of party, and rises at the wickedness of attempting them for the sake of the country? Deceit is deceit; fraud is fraud; betrayal of trust is no more worthy when played upon friends than upon an enemy. Practise these arts to secure the existence of your party in office, and it is one of the unfortunate necessities of public life. Attempt them to secure the existence of your country in freedom, and it is infamous. There is something much worse here than confusion of thought.

## THE MORAL OF THE WHOLE MATTER.

If party interests justify such adoption of the morality of Machiavellism, much more does patriotism. For he says:—

In one way or another patriotism constitutes nearly the whole morality of citizenship, and in nearly every sense is a determination to maintain the existence and freedom of the State. It cannot be got rid of without destroying the State itself. Here, it seems to me, is clear justification of the Machiavellian precept on moral grounds. Of course, it can be misconceived, misconstrued, transformed by arbitrary interpretation, and that cannot be helped. But there will be agreement on one point. If Machiavellism is detestable in foreign affairs, it is not less so in domestic affairs. Doubt about keeping a nation in existence if it may only be done by unvarnished, false profession, breach of faith, is not well countenanced by the practice of these arts in an infinitely more immoral way to keep a party in office. And if, as appears certain, the best hope of evicting the Law of the Beasts from international affairs is by the elevation of political sentiment in the several States of the world, it is plain that their rulers have a double duty in harmonising their scruples to the tune of Morality begins at home.

ANOTHER reminder of the absurdity of the old "figure-head theory" of Royalty is supplied in Mr. W. H. Wilkins' sketch in the *Humanitarian* of chimney sweep reform. The sufferings of the climbing boys and the cruelties of their masters had led to legislation so long ago as 1834, but, as Dickens and Kingsley testify, without much avail so late as 1838. But then, fortunately, the Mother-Queen intervened. "Kingsley's 'Water Babies' was the means of bringing the evil before the notice of the Queen, who, it is said, on reading the book, summoned the Home Secretary, and the immediate result of Her Majesty's interposition was the stringent legislation which followed. . . . It may be said, for all practical purposes, that the abolition of the climbing boys took place in 1864, and also that this desirable consummation was largely due to the personal intervention of the Queen."

## THE BUILDER OF OUR NAVY.

AN INTERVIEW WITH SIR W. H. WHITE.

SIR WILLIAM H. WHITE is the subject of the illustrated interview in this month's *Strand*, and his interviewer, Mr. W. G. Fitzgerald, has much interesting matter to unfold. Born in 1845, he was in 1867 confidential adviser to Sir Edward Reed, then chief constructor of the Navy. In 1881 Mr. White became chief constructor himself. Next year he entered the service of Lord Armstrong as chief naval constructor in the Elswick yard, where he built the ill-fated *Victoria*, besides two warships for Austria, two for China, two for Japan, two for Spain, and one for Italy. The United States also purchased designs from him. In 1885 the illness of Sir N. Barnaby, and the agitation for a larger Navy, led to his return to the Admiralty.

## "A TRULY TERRIFIC INCREASE."

He tells his interviewer:—

"Lord George Hamilton, then First Lord of the Admiralty, wrote to me and asked me if I would take Barnaby's place. Now, I was under legal obligations to Armstrong's to remain, and, moreover, there was an immense amount of work in hand. The result of much correspondence was that Sir William Armstrong (as he was then) agreed to my leaving, provided that his firm might consult me whenever they wished until the work then in hand should be completed."

Here it may be mentioned that Sir William White's return to the service of his country has cost him quite a large fortune in the way of income; besides which, his freedom of action has, of course, been curtailed. He felt, however, that he could really do something worth while for the Navy, and be of some service to the nation at a very critical time. Doubtless also the splendour of the position weighed with him. . . . Sir William White recommenced his work at the Admiralty only to face a truly terrific increase.

## THE BUILDER OF FIFTY MILLIONS' WORTH OF SHIPS.

The totals of that increase are interesting:—

"I have now," he said, "been at the Admiralty eleven and a half years, as Director of Naval Construction; and during that time the average expenditure on new construction has been £4,300,000, or about three times what anybody could have foreseen. This last year, ending 31st March," he added, turning to his notes, "the expenditure is 7½ millions, or, say, five times the previous average. The total expenditure on new construction in the eleven and a half years is close on 50 millions sterling." In other words, Sir William White has designed ships for the Navy to the value of this stupendous sum. I asked him for some details respecting the ships built and building from his designs for the Royal Navy. "If we except 'destroyers' and the like," he replied, "the ships number 174, carrying 1,510 guns; the total tonnage is 861,000. Taking the ships designed by me for foreign navies, they are 12 in number; 76 guns; 32,000 tons; and 75,000 horse-power."

## THE TOTAL VALUE OF OUR NAVY IN £ S D.

Sir William gave answer as to the cost of our warships, and first as to the battleship:—

By the time the ship is fully equipped, you may say that the captain has charge of a million of money. A first-class cruiser costs £450,000; a second-class about £250,000; and a third-class about £130,000. A "destroyer" of the latest type represents something like £60,000. All these figures are exclusive of armament.

Asked to estimate the total worth of the British navy—a rather tall inquiry, by the way,—

"In 1813," he replied, "the Navy, exclusive of armament, might have been valued at about ten millions sterling. Its value to-day, according to Parliamentary returns, is sixty-one millions, excluding small ships, steam tugs, and the like."

More than two-thirds of the money value of the whole British Navy is represented in ships designed by Sir William White.

Our entire navy, then, is worth about three-fifths of our annual revenue.

## HOW WE FORESTALL FOREIGN RIVALS.

There is something amusing in the following frank confession of the way we are able to cope with all foreign naval expansion:—

"You see," pursued Sir William, "we have substantial facts to deal with in foreign navies. Our policy is just this: we can build more rapidly and more cheaply than anybody, and we simply wait until we know what we have to meet, and then we go to work at once." . . . "A first-class battleship is completed in this country in from two and a half to three years, or about half the time our foreign rivals take."

Sir William has no difficulty in ascertaining what foreign Powers are doing:—

"Then," he said to me, "I must have an intimate acquaintance with foreign navies. I am personally known to the naval authorities of nearly all the nations of the world. I was in Russia and Germany only last summer, and both Governments gave me the utmost facilities in prosecuting my researches. Last year also, when I was in Italy for my health, I visited nearly all the Italian dockyards. I am acquainted with the Ministers of Marine in Italy, France, Austria, and Russia; also with the Secretary of the Navy in America. I have been on board all their ships."

## How Bands of Hope Began.

THE Band of Hope Jubilee is being celebrated this month. The *Quiver* contains an account by Mr. Arthur Burnage of the origin of the movement. Mrs. Ann Jane Carlile initiated it, and Rev. Jabez Tunncliffe was her Barak. She used so far back as 1833 to visit the women in Dublin prison and urge them to join a Temperance (i.e., moderation) Society. A female prisoner one day replied: "Thru for ye, m'm, the whisky brought us here; but you can afford to drink your wine and we cannot." That remark made Mrs. Carlile an abstainer:—

Mrs. Carlile's prison work was really the means of her beginning to labour amongst boys and girls. One of the prisoners had a bright little girl, named Mary, and Mrs. Carlile determined to do her best to prevent the child following in the footsteps of her mother. The girl went to live with her, and was roaming about the house one day, when she saw a servant drop a bottle of spirits. Without a moment's hesitation, Mary fell on her knees and began to lick up the fiery spirit. This incident made a wonderful impression upon Mrs. Carlile, and she made up her mind to do all she could to save the children.

In August, 1847, Mrs. Carlile visited Leeds for this purpose, and there she met Mr. Tunncliffe, who, curiously enough, had just been moved to recognise the necessity of juvenile temperance.

A dying drunkard, formerly a Sunday-school teacher, had adjured him to warn young men against taking the first glass:—

Mr. Tunncliffe did not forget his mission, and at a meeting held in honour of Mrs. Carlile expressed his views. There and then a committee of ladies was formed under the auspices of the Leeds Temperance Society, which ultimately resulted in the formation of the first Band of Hope.

On November 9th, 1847, little George Mitchell, who is still alive, attended the first Band of Hope meeting. On New Year's Day in the same year, Councillor John Hope started in Scotland the "British League of Juvenile Abstainers," but though sooner in the field, his movement was absorbed by the Bands of Hope. London formed its first Band three years later.

## THE ADVANCE ON KHARTOUM.

## THE STORY OF THE RECENT FIGHTING.

LAST month I noticed the inimitable poem which Mr. Rudyard Kipling contributed to *McClure's Magazine* concerning the achievements of the British sergeant-instructor in converting the miserable troops of the Khedive into a first class fighting army. Some of the verses are in his best vein:—

Said England unto Pharaoh, "I must make a man of you  
That will stand upon his feet and play the game;  
That will Maxim his oppressor as a Christian ought to do."  
And she sent old Pharaoh Sergeant Whatisname.

Mr. Kipling goes on to describe how this said Sergeant set about his work:—

He's a charm for making riflemen from mud."  
It was neither Hindustani, French, nor Coptic;  
It was odds and ends and leavings of the same,  
Translated by a stick (which is really  
half the trick),  
And Pharaoh hearkened to Sergeant  
Whatisname.

This stick drill having been successful, the time came for the advance into the Soudan:—

Said England to the Sergeant, "You can let my people go!"

(England used 'em cheap and nasty from the start)

And they entered 'em at Firkeh on a most astonished foe—

But the Sergeant he had hardened Pharaoh's heart

That was broke, along of all the plagues of Egypt,

Three thousand years before the Sergeant came—

And he mended it again in a little more than ten,

So Pharaoh fought like Sergeant Whatisname!

There were vipers, flies, and sandstorms, there was cholera and thirst,  
But Pharaoh done the best he ever done.

Down the desert, down the railway,  
down the river,  
Like the Israelites from bondage so he came,

'Tween the clouds o' dust and fire to the land of his desire,

And his Moses it was Sergeant Whatisname!

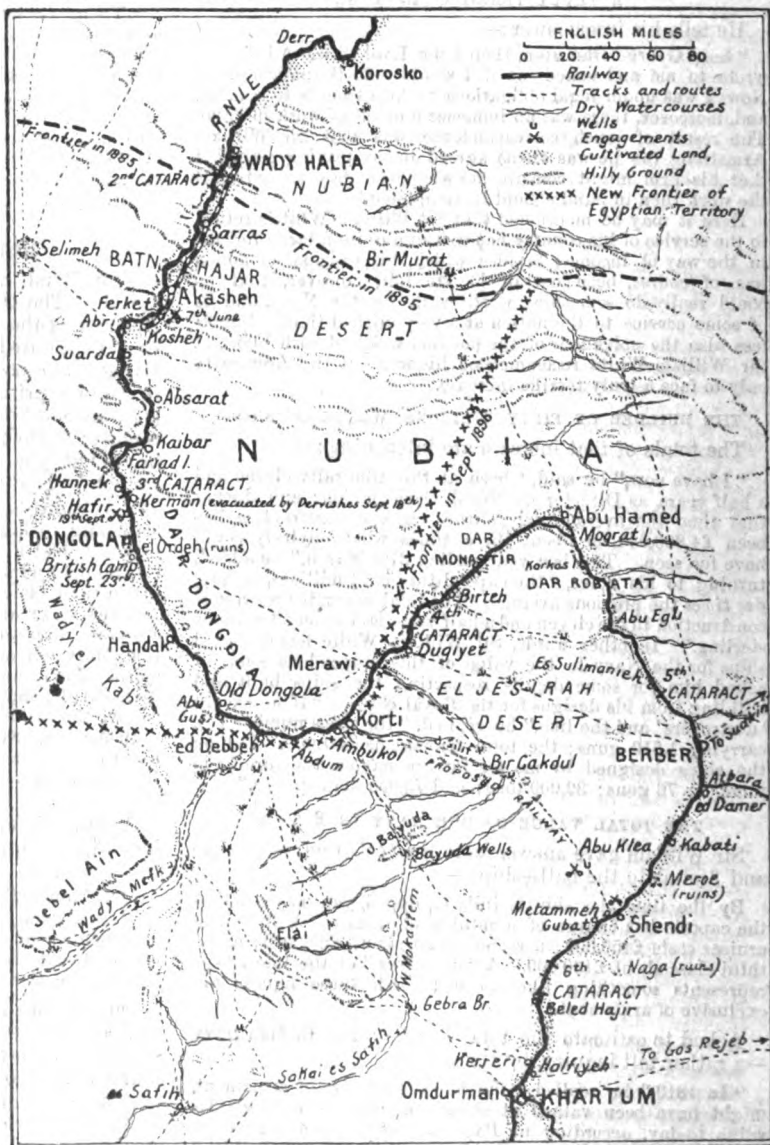

Since Mr. Kipling wrote this poem, Sergeant Whatisname has been achieving still further successes and justifying his laureate's claim for him that he "drilled a black man white and made a mummy fight." The story of the latest victory is told with some detail by Major Arthur Griffiths in the *Fortnightly Review* for October. It is a curious comment upon the occasional gaps that occur in newspaper enterprise, that the victory which secured the command of the Nile all the way down to Metemneh—that is to say, to the very gate of Khartoum—was fought without the presence of any newspaper correspondent.

## THE ADVANCE ON ABU HAMED.

The battle of Abu Hamed, according to Major Griffiths, was a much more serious business than most people imagined. He publishes a diary of the march across the desert, which was attended with great difficulties. He says:—

Hunter's column left Kassingar on the 29th July, 3,000 strong: four battalions of infantry, three of them black Soudanese, with six Krupp and two Maxim guns. The transport consisted of 1,200 camels, carrying eighteen days' food and forage. It must be borne in mind that no supplies, except perhaps grazing for animals, were to be had by the way; it would be necessary to establish posts at intervals with depôts of food, so that camels returning to the base empty or after their loads had been consumed, might be fed.

The march took ten days, and the troops were greatly tried by flies, and the absence of shade, the heavy sand

THE SUDAN CAMPAIGN.

in the road, and lack of water. Their conduct, however, was admirable throughout. There was no grumbling, and the most perfect discipline.

#### THE DEFEAT OF THE DERVISHES.

On the eleventh day they reached the enemy:—

Abu Hamed was now in sight, and Hunter lost no time in making his dispositions for attack. No exact knowledge existed of the strength of the garrison, but it was believed they were full of fight, confident they could hold the place against any attack from the land side, unaided, that is to say, by gunboats. Numbers of men could be seen lining the shelter trenches which had been thrown up across the entrances to the village, and along the front to cover the outer walls. It was seen that the larger houses were held and loopholed.

At 6.30 A.M. Hunter's attacking force, thirteen companies, in all some eight hundred men, with half as many more in support, and accompanied by the Krupps and the Maxims, were deployed in two lines in front of the desert side of the town. Each of the three battalions to be engaged had four companies in the firing line and two in reserve; the remainder of the battalion left with the baggage had two companies in front and one in reserve. The order was to fix bayonets and advance to within three hundred yards of the place, where the Krupps were to open fire and prepare the attack. When the final "advance" sounded the Soudanese rushed the trenches, and charging over walls, down little alleys, and through narrow lanes, forced their way into the place. Then small knots and groups worked through the whole village, coming out at the upper end. Here and there small parties of dervish horse dashed out at a gallop, and were off out of range before the Maxims could be brought to bear. Already the village was in flames, but many of the houses were still held stubbornly. These houses were peculiarly well adapted for defence. How stubborn was the defence may be seen from the details of the fighting; the garrison was seven hundred strong; of these some fifty escaped, the rest died at their posts fighting strenuously to the last like rats in a pit.

Major Griffiths somewhat takes the guilt off the Egyptian soldier's gingerbread by pointing out that although he fought well, he is still far from being able to fight quite like Sergeant Whatisname. He says:—

It cannot and must not be forgotten that hitherto they have fought invariably with an overwhelming superiority of numbers. The Sirdar said openly last year that he never meant to attack unless his force was as three to one. Hunter the other day at Abu Hamed was at least two to one, and the desperate nature of the fight forecasts what the dervishes will do with their backs to the wall.

#### THE RESULTS OF THE VICTORY.

The consequences of the victory at Abu Hamed were immediate and dazzling. Berber was evacuated, thereby rendering it possible to advance from Suakin, affording a clear waterway to the threshold of Khartoum:—

So firmly do our officers at the front believe in the speedy opening up of the Suakin-Berber road, that it was said in Cairo not long since that all parcels and papers, even the linen left behind at the wash, were to be forwarded *via* Suakin.

The position at the present time is thus summarised by Major Griffiths:—

Sir Herbert Kitchener is firmly established on the last reach of the great river within touch probably of Khartoum itself; his gunboats will certainly have free and unimpeded access at least to Metemmeh, if not to Omdurman. He has a second and much shorter line of communication from Berber to the Red Sea, although the older, the earlier-established road through all its length from Abu Hamed to Wady Halfa, Assuan, Naghamadi, and Cairo, is by railway, now nearly completed, and, therefore, to be preferred.

#### "ON TO KHARTOUM!"

Major Griffiths says that all the authorities are agreed that the advance upon Khartoum cannot be undertaken until the Egyptian army is reinforced by Indian and British troops:—

It has been calculated that two full brigades would be wanted for the business, and if this force is to be brought together in Egypt it can only be by denuding the Mediterranean garrisons or unduly drawing upon the army corps at home.

He says:—

The Sirdar's idea, I understand, is to run his British regiment straight through from Cairo to Abu Hamed by train; the distance can be covered in five days when all is ready; possibly an Indian brigade might be brought to co-operate from Suakin if the present Frontier troubles have so far settled down as to allow the withdrawal. Under such conditions the final rush might be completed within a few weeks, and Khartoum would be carried with great *éclat*. The alternative is to sit down and wait for the development of events, for that natural collapse of Abdullahi's power that is already foreshadowed.

There is a very good account of the campaign on the Nile in the first pages of the *National Review* for October. The writer holds that we should reinforce General Kitchener with 4,000 British troops, force our way through the position at Metemmeh, and fight the decisive battle at Omdurman. France would object, no doubt, but the editor of the *National Review* says that we cannot allow ourselves to be either intimidated or scared out of the discharge of our onerous duties because the French nation cherishes a sentiment about Egypt—that sentiment being that she should possess it. "We claim our entire freedom of action in Egypt. The annexation of Tunis by France annuls the pledges of both countries. May we not hope that when the agreement was signed the other day by M. Hanotaux and Sir Edward Monson, which cancelled our old treaty with Tunis, something more was obtained than a paltry three per cent. reduction of duty on cotton. We think it likely that a more friendly attitude was officially taken about Egypt."

#### The Spanish Game Pelota.

A NEW popular game is a most important addition to the sum total of human happiness. This fact justifies attention being given to a paper in *Cornhill* for October by Mr. Charles Edwardes on Pelota. The vogue which football has in Britain and America pelota has in Spain. Mr. Edwardes has faith that if introduced into England it would acquire great popularity. "Once established, it would soon rank with tennis, football, and cricket." The essential feature of the game seems to be the striking of a ball against one wall so as to rebound against another wall at right angles to it, and in any case to be kept up by the players. The court is generally about sixty-four yards long, by less than forty broad, and the walls are about twelve yards high. The ball must strike the walls below a line thirty-four feet from the ground. The cemented floor is marked off into from fifteen to twenty divisions of four yards each, and the ball on starting must drop on rebound from the front wall between the fourth space and the seventh. The player is armed with a cestus or "sickle-shaped basket-work gauntlet, one of which covers each forearm to the finger-tips"; and with these he strikes the ball. The ball is of leather or rubber, and weighs some four ounces. There are four players, two on each side. The balls are flung with terrific rapidity; and the contest, which may last eighty to ninety minutes, involves very violent exercise. "The Basques are at the top of the tree as professional pelotaris."

**HOW TO TEACH CIVIC DUTY TO SCHOLARS.****A CAPITAL HINT FROM NEW YORK.**

BEFORE the next issue of the *REVIEW OF REVIEWS* is in the hands of its readers, the Municipal elections will be over, and we shall be in the thick of the School Board elections. Every year adds fresh evidence to the urgency of the need for quickening and educating public interest in the careful and continuous discharge of civic duty, especially in the field of municipal administration. The efficiency, the purity, and the progressive character of the municipal institutions of the Old World constitute a precious heritage which it is our duty not only to maintain, but to hand down to our children with improvements not unworthy of this generation. It is in this particular department of human affairs that the Old World has the advantage of the New. In many things, notably, in its freedom from its crushing burden of Imperialism, the New World beyond the sea has an immense advantage over Europe, but in the matter of municipal administration the New World has still to sit at our feet. This position of pre-eminence can only be maintained by constant vigilance, and by carefully instructing the young in the principles of local self-government.

**TRAINING OUR FUTURE CITIZENS.**

Of late years much attention has been bestowed upon this subject. A league or society for promoting the education of our future citizens in civic duty has been formed, and much good has resulted from the increased attention that has been paid to the subject. It would be difficult to suggest any more admirable handbooks on the subject than those which have been written by Mr. Arnold Forster concerning the duties of a citizen. They constitute text-books which ought to be in the hands of the teachers in all our public elementary schools. But there is still much to be done in this respect; and I can hardly do better service to my readers on the eve of the Municipal elections than by calling their attention to a scheme which has been tried with singularly good results in the city which of all others affords the most painful object-lesson as to the consequences which follow the lack of good civic spirit on the part of all classes of citizens.

**AN EXAMPLE FROM NEW YORK.**

Where evil abounds there grace sometimes much more abounds, and the very extreme evils which have been suffered by the citizens of New York in the past have been as schoolmasters to bring them to realise the need for adopting the most effective and drastic measures for preventing any recurrence of a similar state of things in future. Whether the plan which has recommended itself to the Patriotic League in New York commends itself or not to our local authorities, the present month is of all others one in which the suggestion can best be brought before the public. I especially commend it to the attention of candidates for the School Boards and the Town Council, and to all those who are practically engaged in the teaching of youth.

**THE NATION IN THE SCHOOL.**

The New York project to which I wished to call attention was started last July at a Vacation School. It was based upon the experience gained by a somewhat similar experiment tried the previous year at the West Farm School. This school had for some time been very unruly and extremely hard to manage. Last year it occurred to the Vice-principal that school discipline might be

improved if he invoked the principle of self-government, and a large part of the duty of maintaining order were turned over to the scholars themselves. His plan was to treat the scholars as if they were a nation, and to throw upon them the duty of electing the House of Congress, Senate and President. The plan worked extremely well. The President elected by the scholars, aided by his Ministers and by Congress, effected a magic change in the discipline of the school. From being turbulent and unmanageable, it became an orderly institution which gave the teacher hardly any trouble at all. The success of treating a school as if it were a microcosm of the nation, led Mr. Wilson L. Gill, founder of the Patriotic League, to hit upon the happy idea of developing the scheme, by substituting the organisation of the city for the organisation of the nation, as the conception before the scholars. American City organisation is very different from that which prevails in our country, but there is no reason why, if the principle were accepted, the scheme could not be carried out in any English school with the alterations necessary to adjust it to the different circumstances. Without explaining the alterations that would be necessary, I proceed to set out exactly what was done in the Norfolk Street Vacation School, where the first experiment was tried in the City of New York.

**THE CITY IN THE SCHOOL.**

Vacation Schools in America are held in the public school buildings, but they are not under the control and rules of the Board of Education, and it was therefore decided to make the experiment in a Vacation School instead of waiting for the assent of the Board. It was also argued that consent would be more readily accorded if the experiment succeeded in a Vacation School, than if it had to be tried for the first time in a public school. When the Patriotic League took hold of the Norfolk Street Vacation School, the first step was to declare all the scholars, irrespective of age, citizens of the mimic city of Norfolk Street School. There was no distinction of sex or of age. Every scholar was a voter with one vote. The first step in organisation was to declare that each class was an election district, or as we should say, a ward. As the beginning of all things in America is the holding of a caucus, each class met in a Primary, and selected delegates for a City Convention, composed of delegates elected by each class in the school. This Convention nominated two candidates for each of the offices, which in American cities are voted upon by the people; to wit, mayor, controller, and President of the Board of Aldermen. After the nominations were made in due form, polling booths were opened in each class-room, the voting being by ballot. When the poll was closed the votes were counted and the successful candidates were duly installed in office. The Mayor nominated the President of the Board of Health, the Commissioner of Street Cleaning, a Commissioner of Police and three judges. The Board of Health consisted of its President, a teacher, and a Commissioner of Police. The Commissioner of Police selected a Chief, a Captain, and policeman for each class, while the Judges named a Clerk of the Court. The experiment, which began on July 10th, lasted until August 20th, when the school was to close.

**THE VISIT OF THE MAYOR OF NEW YORK.**

On closing day, the Mayor of Norfolk Street School, a boy of fourteen years of age, wrote a letter to the Mayor of New York inviting him to pay a visit to the Mayor of the School City. Two couriers were despatched to the

City Hall, where they were ushered into the Mayor's presence. Mayor Strong was very busy, but on reading the invitation, he laughed, and in ten minutes he entered his carriage and drove off to Norfolk Street School. According to the narrative in the *New York Sun*, from which I am quoting, the visit of the Mayor was a great success:—

After shaking hands with the Mayor he insisted upon meeting all the other city officials, and then inquired as to the process of law in the city. He was hugely delighted when he was told that a regular trial had been held the week before, that a police captain, accused of dereliction of duty, had been the prisoner, and that he had been convicted and dismissed from the service. Thereupon Mayor Strong asked that the court be brought before him. His amusement was great when he saw that one of the judges was a girl. But the crowning feature to Mr. Strong was when the police force was assembled for his benefit, and he discovered that more than half of the policemen were girls. The offence of which the police captain was convicted was "conduct unbecoming a gentleman and an officer" while the school was off on a picnic. His was the only breach of the public peace serious enough during the existence of the city to make a trial necessary.

#### THE EXTENSION OF THE SCHEME.

So successful did the Mayor deem the experiment, that he has given his support to the movement, the promoters of which hope will result in the establishment of similar mimic cities in all the public schools. The Commissioner of the Charities and the Civil Service Commissioners are united with the other officials of the city in drawing up rules. In the new scheme it is proposed to make a considerable improvement upon the simple organisation of Norfolk Street School. The chiefs of each of all city departments in New York are at present preparing drafts explaining the actual work and purpose of their departments, the mimic counterpart of which is to be established in the school. By this means it is hoped each scholar will get a good idea of the actual work and purpose of the city department of which he becomes an officer. The Civil Service Commissioners, for instance, are preparing a set of useful service questions for office-seekers under the new municipality. The head of the New York Police School is preparing a scheme explanatory of the work of the policemen, while Colonel Waring is framing a simple constitution for the School Street Cleaning Department, modelled upon the lines of his own bureau, which has effected so marvellous an improvement in the outward appearance of New York. The Board of Health has sketched out a miniature Health Department on scientific and practical lines, and has added a sanitary code, somewhat like that under which New York city is controlled, adapted to children and their needs in the public schools. The Patriotic League is taking this very seriously, for they believe that the children, while apparently playing, will be learning practically the actual work of municipal government, and will communicate their interest to their parents when they go home.

#### HOW THE SCHEME WORKS.

It is rather staggering to the slow-going Conservative English mind to know that the whole machinery of Government in a School City is to be turned upside down every month when new elections will take place, so that every one may have a chance of holding an office. Out of a school of 1,000 children, 150, it is estimated, will be needed as officers. There are about twenty-five classes in a New York city school, each of which will become an election district electing one member to the municipal council. Courts will be established and judges chosen

and jurors empanelled in the ordinary way. The most elaborate provisions have been drawn up to enforce sanitation and teach the children the laws of health:—

There is to be a sanitary bureau and a bureau of records. The officials are: a president, a commissioner (a teacher, corresponding to the health officer of the port), the president of the police board, one secretary, a sanitary superintendent, five assistant sanitary superintendents, ten food inspectors, fifteen sanitary inspectors, five hygiene inspectors, and several medical inspectors, besides a squad of ten sanitary policemen commanded by a sergeant.

"The food inspectors," says the sanitary code, "shall inspect all articles of food and drink brought into the city for consumption within its limits. They shall give information to citizens regarding proper food and drink; how prepared at small expense, etc., and shall assist citizens in properly preparing food for consumption (e.g., removal of the decayed parts of fruit, etc.)."

"The hygiene inspectors shall examine the citizens with reference to cleanliness of face and hands, condition of hair, condition of clothes in respect to cleanliness, neatness and repair, etc."

"The sanitary inspectors shall inspect the condition of desks, school books, clothes, closets, toilets, etc., as to neatness and cleanliness. They shall prevent spitting on the floors, staircases, etc., and shall warn citizens against spitting on sidewalks or elsewhere, except into proper receptacles, and then only when absolutely necessary."

"The medical inspectors shall examine the citizens daily, immediately after they enter the city, and shall report to the assistant sanitary superintendent the names of any who do not feel well."

The sanitary police are to enforce the regulations, and reports are to be made. Verbal reports on the part of each assistant sanitary superintendent to the proper teachers each morning in regard to those citizens who do not feel well, and warnings and complaints are to be issued.

#### REPLIES TO POSSIBLE OBJECTIONS.

The School Superintendent of New York has generally approved of the scheme, but he is at present somewhat dubious as to whether it might not interfere with the regular work of the schools, keeping the pupils longer than the regular hours, or distracting their thoughts from their studies. The Patriotic Leaguers, however, are confident that none of these evils will result:—

The teachers are required to be in their class-rooms about twenty minutes before school begins every day, they say, and a part of this time would be all that would be required for the running of the whole of the city government.

On one morning the primaries could be held, and the next the convention could sit, and the next morning the election be held. The counting of the votes, the canvassing, and the induction into office of the elected members could each be taken up in turn. On Mondays the commissioners could receive reports from their subordinates, make their own reports on Tuesdays, and on Friday afternoons the council could sit. Except for enforcing the rules there would be no work or thought required of the pupils during any but the time now wasted in the mornings while waiting on the half hour on Friday when a part of the pupils are now allowed to go home early.

#### WHY NOT ADOPT IT HERE?

Such is the scheme as it was described to me in New York. It seemed quite the most original and promising project that I came across in my hurried visit to the New World. I therefore lose no time in describing it for the benefit of my readers at home, and in the Colonies, where I hope that its intrinsic merits will commend itself to those who are practically interested in the teaching of children and the training of our future citizens for their duties to the city and the State.

## THE GROWTH OF GREAT CITIES:

INEVITABLE, NORMAL, AND SALVABLE.

"BACK to the land!" is the frequent watchword of philanthropic observers of "the rush to the towns." Dr. Josiah Strong, in the September number of the *North American Review*, boldly assails that popular remedy. He writes on "The Problem of the Twentieth Century City." He points out the rapid growth of cities, not in the New World only, but in the Old. "It is found that in Europe, in Asia, and even in Africa, wherever the breath of nineteenth century civilisation has been felt, it has breathed new life into cities." Cities, he holds, have come to stay; and the ground of his conviction, shortly put, is that agriculture requires yearly an ever smaller proportion of the human race.

## WHY CITIES HAVE EXPANDED.

The causes of the expansion of cities are primarily three:—

(1) The application of machinery to agriculture, which enables four men to do the work formerly done by fourteen; (2) the rise of manufactures in the cities, which attracts the men released from the farms; and (3) the railway, which not only makes the transfer of population easy, but, which is more important, makes it possible to feed a massed population, no matter how vast.

There is a gregarious instinct in men, which has always made the city as large as it could well be; and these three causes have liberated and emphasised this instinct during this century. As this instinct and these causes are all permanent, it is obvious that this tendency will prove permanent.

## AGRICULTURE ALREADY OVERSTOCKED.

It is of no avail to increase the number of agriculturists:—

The world's demand for food must necessarily be limited, and that the food supply to-day is equal to the demands of the civilised world to-day. It is true there is want even to starvation, but that is due to the lack of distribution, not to any lack of production. There are already more persons engaged in farming than are needed . . . to supply the world's demands for food.

Improved methods of agriculture will only drive more farmers from farming to the cities. The consumption of food being naturally limited in proportion to population, consumption will increase in products of manufacture and other pursuits of city life.

## DR. ENGEL'S LAW.

This harmonises perfectly with what is known as Engel's economic law. Dr. Engel, formerly head of the Prussian Statistical Bureau, tells us that the percentage of outlay for subsistence grows smaller as the income grows larger; that the percentage of outlay for rent, fuel, light and clothing remains the same, or approximately the same, whatever the income; and that the percentage of outlay for sundries becomes greater as income.

From all this it follows that as population and wealth increase, an ever-enlarging proportion of men must get their living by means of the mechanical and the fine arts; or, in other words, an ever-increasing proportion of population must live in cities.

## THE CITY THE CHIEF HABITAT OF THE RACE.

The greater part of our population must live in cities—cities much greater than the world has yet seen—cities which by their preponderance of numbers and of wealth must inevitably control civilisation and destiny; and we must learn—though we have not yet learned—to live in cities with safety to our health, our morals, and our liberties.

This is the problem of the twentieth century city, and Dr. Strong makes it the basis of a strong plea for civic reform. Local self-government and federation are the two pillars of American liberty; in the effort to maintain

the second in the Civil War, the preservation of the first was neglected. We want a higher type of citizenship; and to this end Dr. Strong advocates, in schools of every grade down to kindergarten, a thorough teaching of civics.

## ARE AMERICAN SCHOOL BOOKS ANTI-BRITISH?

PROFESSOR GOLDWIN SMITH ANSWERS NO.

MR. CHAUNCEY DEPEW recently alleged that the prospect of war between the United States and the British Empire is due in part to the anti-English teaching of American school histories. Professor Goldwin Smith examines this statement in the September issue of the *North American Review*, inquiring "Are our School Histories Anglophobe?" He tells how he endeavoured to make sure of the facts:—

I requested a leading publisher of New York, an Englishman, and representative of an English firm, to send me the school histories which were most in use. He sent me three, those of Higginson (1875), Anderson (1874), and Quackenbos (1857). These I have examined, and I must confess that I do not find in any one of them aught of which an Englishman could seriously complain. They are patriotic, of course; and in the quarrel between Great Britain and America take the American side; but they certainly are not venomous, nor should I say that they were willfully or even materially unfair.

This was followed by a second effort:—

On reference to a friend thoroughly cognisant of the subject, I was told that Higginson, Anderson, and Quackenbos were favourable specimens, and that there were other school histories in which more of anti-British feeling would be found. My friend has been so good as to send me a series of extracts. Even in these I really find nothing that I should say was intended to stimulate hatred of Great Britain, and I find generally a desire at all events to be fair. . . . As a rule, though not invariably, it will be found, so far as the specimens before me are concerned, the acrimony and the space allotted to the incidents of the Revolutionary War diminished with the increase in the distance of the date of publication from that event.

The Professor goes on to regret that "Great Britain is the only foreign nation with which the Americans have waged wars whereof they have much reason to be proud." The war with Mexico and the great Civil War were not of a kind to stir collective patriotism. He considers that "sensible Englishmen and Americans must be pretty well agreed about the rights of the quarrel." According to the Professor's well-known opinion, "nobody can imagine it possible that the Colonies, with all their present millions of people, should for ever have remained dependencies and in allegiance to an old-world Government and Parliament on the other side of the Atlantic." Recognition of the inevitableness of the disruption renders historical dispassionateness possible. The Professor does good service by quoting from British school books their account of the War of Independence, which he finds "laudably free from prejudice or passion" and ready fairly to blame the British Government and to praise the Americans:—

On the whole, however, I am confirmed in my belief that the influence of the American books in stimulating international ill-will has been overstated. It is too likely that if Great Britain persists in maintaining herself as a political and military power upon this continent Mr. Chauncey Depew's prediction will be fulfilled. But I cannot think that the catastrophe will be due to so great an extent as he and others suppose to the vicious influence of American school histories.

Want of literary art is the chief fault he finds with these school books; and he concludes with the hope that writers may be found who will shed over the achievements of peace the glamour now reserved exclusively for the exploits of war.

## THE CONCENTRATION OF AMERICAN WEALTH.

## ITS DANGERS AND ADVANTAGES.

THE spectre of a ring of plutocrats controlling the greatest commonwealth of time seems to be haunting with increasing terror the finer imaginations of our American cousins. It invades not merely the strenuous and semi-revolutionary magazines, but the most sober and sedate of Transatlantic reviews. The discussions of the currency have widened to include the whole economic situation. The September monthlies bring fresh evidence of the general economic anxiety.

## AN INCREASE OF WEALTH WITHOUT PARALLEL.

The rapidity with which American wealth is increasing is illustrated by our own Mr. Mulhall in the *North American Review*. In a series of eloquent statistics he portrays "the progress of the Pacific States." Here are a few of the statements made by this dispassionate master of figures:—

The annual product of precious metals in the Pacific States since 1890 has averaged 55 tons of gold and 1,800 of silver, worth 100 million dollars, which exceeds the value of precious metals that any country has yet produced, in the history of mankind. . . . There is no parallel to the increase of wealth which has taken place in these States. In twenty years wealth multiplied ninefold. . . . In whatever aspect we may view the Pacific States, their progress must appear marvellous. Although of such recent formation that most of them have sprung into existence since 1860, they possess more miles of railway than any European state except France or Germany, and their wealth exceeds that of Sweden, Norway, and Denmark in the aggregate.

In the *Arena* Herman E. Laubeneck declares:—

The Census Report tells us that every month in the year we, as a nation, create \$150,000,000 more wealth than we consume. Every time the sun sets the people of the United States produce over \$5,000,000 more wealth than they use in the same time. . . . The *per capita* wealth in 1870 was \$780; in 1880, \$870; and in 1890, nearly \$1,000.

## HOW FEW OWN BY FAR THE LARGEST PART.

Mr. Laubeneck next quotes the estimates of various experts to show how this superabundance of wealth is distributed. 91 per cent. of the families in the United States own 29 per cent. of the wealth, and 9 per cent. of the families own 71 per cent. of the wealth. 20 per cent. of the wealth is owned by  $\frac{1}{100}$  per cent. of the families. Another reckoner concludes—

Less than half the families in America are propertyless; nevertheless, seven-eighths of the families hold but one-eighth of the national wealth, while one per cent. of the families hold more than the remaining ninety-nine.

These facts are adduced by the writer as results of the adoption of the gold standard; but, however explained, the disproportions are ominous enough.

## IN PRAISE OF "TRUSTS."

Mr. F. B. Thurber, however, writing in the *North American Review* on "The Right of Contract," views the concentration of capital with cordial satisfaction. His only fear is that legislation may attempt to override the sacred freedom of contract. He advances statistics to show that "trusts" have lowered the price and improved the quality of commodities and services. Combination among the railways has reduced the freight per ton per mile from 3.08 cents in 1865 to 0.72 cents in 1895. The Standard Oil Company has reduced the price of oil per gallon, which was 25.7 cents in 1871, to 6.8 cents in

1896. The Sugar Trust, which now does about 75 per cent. of the sugar refining business in the States, has reduced the price of raw sugar from a nine years' average of 6.807 cents per lb. to a nine years' average of 4.291 cents. Chiefly by concentration of capital it has come about that "at no previous period would a dollar buy so much of the necessities and comforts of life as at present." Mr. Thurber will not even admit that "trusts" do away with competition:—

Formerly it seemed that combinations of capital would abrogate competition, but experience has shown that, instead of abrogating competition, it has elevated that force to a higher plane. If a combination of capital in any line temporarily exacts a liberal profit, capital immediately flows into that channel, another combination is formed, and competition ensues on a scale and operates with an intensity far beyond anything that is possible on a smaller scale, resulting in the breaking down of the combination and the decline of profits to a minimum.

Mr. Thurber quotes freely from recent legal decisions in American and British Courts, and points the moral thus:—

The conclusion is inevitable to any dispassionate thinker, that we are in danger in this country of going too far in condemning aggregations of capital and hampering their rights of contract in their application to modern commerce; that in this age of steam, electricity, and machinery, such aggregations are a necessity; that they result in the greatest good to the greatest number.

In the *Forum* Mr. David Willcox argues that recent anti-trust legislation is unconstitutional:—

The great aggregations of capital, whatever may be their form, are the great employers of labour. And wherever there may be found a large union of capital and labour, the revenue produced goes principally to paying wages to a great number of employees, and only secondarily to paying dividends and interest upon the capital invested.

Freedom for these great aggregations of capital is, he thinks, essential to the welfare of the entire community.

## WHAT THE MINERS GET.

No such roseate picture of the effects of concentrated capital is drawn by Mr. Samuel Gompers, president of the American Federation of Labour. His appearance as a contributor to the *Forum* may be taken perhaps as a bit of a portent. He puts the case for the miners' strike, now happily over. Before the strike, wages were being continually reduced:—

The rates paid in the Western-Pennsylvania mining district in 1893 were 79 cents per ton for thin vein, and 65 cents for thick vein. The rates at the time of the strike (July 4, 1897) were 47 to 54 cents per ton for thin vein, and 28 to 30 cents per ton for thick vein.

The rates averaged in Ohio \$2.87 per man per week, inclusive of cost of powder, tool-sharpening and wear and tear.

The sanguinary scenes which took place after the article was written make a grim commentary on these closing words:—

Pursuant to the call, more than 150,000 miners, spread over five States, quit work at one and the same time. In five weeks, among all that number, not a breach of the peace has occurred; and this record has been maintained in spite of the greatest provocation caused by armed and disreputable hirelings, whose continuance of service has depended upon their thugging, brutal, and unscrupulous propensities. The miners, as well as their friends and sympathisers, have realised that much of their success—if not all—would depend upon their sterling, law-abiding deportment.

## SETTING UP THE KINGDOM OF ISRAEL.

## WILL THE JEWS RETURN TO PALESTINE?

THE *Contemporary Review* publishes two articles from very different pens, both of which suggest a very emphatic answer to this question in the affirmative. Much the most important paper is Dr. Theodor's Herzl's enthusiastic account of the success which attended the Zionist Congress which has just been held at Basle.

## THE BASLE CONGRESS.

Dr. Herzl and Max Nordau summoned the Jews of all lands to a Conference in Basle for the purpose of discussing so-called Zionism, by which they mean the re-establishment of the kingdom of Israel in the Holy Land. Dr. Herzl says:—

We have held a gathering at Basle before the whole world, and there we saw the national consciousness and the popular will break forth at times like a convulsive upheaval. To Basle came Jews of all countries, of all tongues, of all parties, and of all forms of religious confession. There were more than two hundred representatives of the Jewish people—most of them delegates for hundreds and thousands. Men from Roumania alone brought over fifty thousand signatures of those who had sent them there. There surely was never such a motley assembly of opinions in such a narrow space before.

## THE RESURRECTION OF ISRAEL.

Still more remarkable than the multifarious nature of the delegates was the unanimity which characterised the assembly. Assembled Zion was all of one mind; unanimity was the note of the Congress. It was the resurrection of a nationality, the dawn of the resurrection of the kingdom of Israel. Dr. Herzl says:—

The public opinion of the whole world must assist us in the settlement of our difficulties. We open up a new thoroughfare for human well-being.

## ANTICIPATED ADVANTAGES.

The diplomatic difficulties are manifold. In the first place, it must be recognised that we shall solve a portion of the Eastern Question when we make a treaty with his Majesty the Sultan with the consent of the Powers. The appearance of the European civilised Jews in the Orient would undoubtedly provide a protection for the Christians settling, or about to settle, there, just as it would signify an improvement in all the conditions prevailing in the Ottoman Empire.

But apart from the gain to Turkey there would be a great relief to all the European nations. "What," he asks, "are—

the interests which other Governments would have in assisting the realisation of a legally guaranteed Jewish home? The interests would vary with each country, but it is present in some form or other everywhere. It would mean the drawing off of an unhappy and detested element of population which is reduced more and more to a condition of despair, and which, scattered over the face of the earth, and in a state of unrest, must perforce identify itself with the most extreme parties everywhere."

## FROM THE CHRISTIAN POINT OF VIEW.

So much for the Jews. Now for the Christians. Canon MacColl, who is a very militant Christian indeed, writing on "The Crisis in the East," for the purpose of replying to the *Quarterly Reviewer* who advocated the handing over of half European Turkey to Austria, stops in his stride in order to put in the following plea for the return of the Jews to the Holy Land:—

The Sultan would, further, do well to take advantage of the widespread feeling among the Jews to return to Palestine. There has been a great influx of them into the Holy Land during the last twenty years, and they now far outnumber in

Jerusalem all other races together. Let him lease Palestine to them. So far from being a danger to him, they would be a protection, keeping out more formidable claimants, and enriching his treasury with the tribute of a land which, under their revived husbandry, would again abound in wealth and become the emporium of a thriving trade. It is as surprising as it is lamentable that the wealthy Jews of Europe have so little imagination as not to see the fascinating prospect which restoration to the Holy Land, with its vista of glorious possibilities, opens up to them. They claim to be citizens of the countries wherein they dwell, and fear that the revival of a Jewish State would destroy their *status* in the various States of Christendom. But, in matter of fact, they still exist, wherever they live, as "a peculiar people," traversing the ocean of humanity, as the Gulf Stream does the Atlantic, without mingling with it except in minute dribblets. Besides, the Jews were largely dispersed among the cities of the world long before the extinction of their polity. But what is curious is that the Jewish opponents of the Zionist Congress so signally fail to see the new dignity and *status* which a political home of their own would give them in the world, with its healthy reflex action on the character of the race. I have never myself been touched by anti-Jewish prejudices; but they exist, and have an injurious effect on the Jews themselves, else why do they take pains, as many of them do, to disguise in various ways their names and race? The Jew would cease to be despised if he had a country and a metropolis of his own with representatives at the Courts of kings. That Disraeli would welcome with enthusiasm the restoration of the Jews to Palestine is plain from his writings. Their gifts in the realm of literature and art are proverbial, but will never blossom to maturity out of the soil and atmosphere which gave them birth. Surely they may be regarded as the degenerate sons of a race that has been dowered with an illustrious past and apparently predestined to a mysterious future, who still prefer "the flesh-pots of Egypt" to the Promised Land, the home of their fathers and the heritage of their nation.

## THE AIM OF ZIONISM.

Mr. Herbert Bentwich writes in the *Nineteenth Century* on "Philo-Zionists and Anti-Semites." He is an enthusiastic advocate of Dr. Herzl and the Basle Congress. He says:—

All the ecclesiastics in Jewry might have cogitated the Jewish Question for centuries, and not have produced such a practical revival of the ancient ideals, such a real step in advance towards their attainment, as followed from the scheme of this very *fin-de-siècle* and free-thinking journalist. Herzl himself was the first to recognise that his original conception of the Jewish position had not been complete, and to proclaim that "Zionism is the return home to Judaism, even before the return to the land." He admitted here the predominance of the religious element; and after the discussions of the three memorable days over which the Congress extended, with the concurrence of Max Nordau, his co-worker, he definitely subordinated the political part of his programme in the formula unanimously agreed on by the delegates: "The aim of Zionism is to create for the Jewish people a publicly legally assured Home in Palestine."

The work has already begun in a small way, "for," says Mr. Bentwich—

To-day we have in Palestine between twenty and thirty distinct colonies or communities spreading along the coast from Askalon in the south to Carmel in the north, and along the Jordan from the Waters of Merom to the Sea of Galilee in the east. The population of these colonies varies from 100 to 700 souls, and they may safely be estimated to number 10,000 souls in all, independently of the large number of Jewish day labourers from neighbouring towns and villages, to whom they give occasional employment. There are 50,000 more Jews—mostly refugees—in the various Holy Cities, and the immediate problem is to get these—or the better part of them—also on the land.

## MR. HUTTON OF "THE SPECTATOR."

## SOME PERSONAL TRIBUTES FROM HIS READERS.

IN the death of Mr. Richard H. Hutton of the *Spectator*, which occurred last month, we have lost—not our foremost journalist, for journalist in one sense he never was—but the man who, of all those writing regularly on the periodical press, held the highest place. Mr. Hutton had his limitations, but take him altogether, his was the ablest pen that was constantly employed in British journalism for the last thirty years. Mr. St. Loe Strachey who has been appointed to occupy his chair, is a young man of parts and promise—an editor of skill who has renewed the life and popularity of the *Cornhill Magazine*. But it would indeed be a miracle if he were able at the same time to wear the two-fold mantle of Thackeray and Hutton.

## WHAT I OWED TO HIM.

It is probable that those who knew Mr. Hutton best, would say that of all modern journalists, I had less in common with him than any other editor. But that difference of temperament, of style, of method, and of political opinion, only renders more significant the humble tribute which I make to his memory. I can remember as if it were yesterday the first time I ever opened the *Spectator*. I had barely attained manhood, and I had not read three pages of it before I felt that I was in the presence of what was to me at that time, an entirely new thing in journalism. I heard a man with strong convictions, speaking with unconventional earnestness and perfect simplicity exactly what he thought of the public questions of the day. All other journalists with whose lucubrations I had previously been familiar, wrote in a more or less conventional style and failed entirely to leave the impress of personal conviction and perfect candour. I felt within me a great leap of soul and a determination that in all my writing, I would endeavour to emulate this great ideal; to aim before all things at a clear expression of personal conviction, to sacrifice to this all the usual flummery and conventionality of the professional journalist, and to speak straight out just what I had to say. From that day to this I have never ceased to read the *Spectator*, and always with a sense of personal gratitude to the man whose life had moulded and fashioned a journal which uniformly maintained so high an ideal. And for all these years, however far short I may have come of attaining to the aspiration born in me on the reading of the first number of the *Spectator* upon which I ever set eyes, I have always felt and frequently acknowledged, that I owed more as a journalist to Mr. Hutton than to any other man of my craft. Mr. Hutton objected so strongly to any reference to himself that his personal friends feel it incumbent on them to remain silent at a time when speech would certainly be golden. For when a teacher in Israel is removed from his seat, it is the duty of the disciples to preserve the tradition and to preserve reverently the memory of the words and deeds which gave him his influence.

## JULIA WEDGWOOD'S TRIBUTE.

Julia Wedgwood in the *Contemporary Review* endeavours to account for the unique influence which Mr. Hutton exercised upon his readers. She says:—

Rarely can it have happened that death brought so keen a sense of personal loss to many homes where it extinguished the light of no familiar countenance, as when, on September 9

of this year 1897, it forbade all readers to hope for another word from Richard Hutton. The lay sermons from him had come to be looked for no less eagerly than the letters of an Indian mail day. We cut the *Spectator* with as much confidence as we broke the seal dropped by a friendly hand. The article expressed a relation as well as a judgment; it left the mind stimulated as by news of the beloved absent, cheered as by expressions of affection for oneself.

Thirty-six years ago, when the *Spectator* came under his influence, such guidance as his was even more consciously needed than it is at the present day. A man of science had just startled the world by showing (as it seemed then) that the creation needed no creator. A brave missionary had admitted the atmosphere of rational judgment to that closed chamber where the notion of literal inspiration, like the corpse in a hermetically sealed tomb, crumbled to dust at that admission. A multitude of agencies, of which these were the most obvious and important expressions, converged upon the faith of the past, and either destroyed or expanded it. Men were shown at the same time that the Bible was full of errors, and that the creation was a process going on at the present day. Either half of the demonstration would have shaken the fabric of orthodoxy; combined they shattered it. Those who were driven from its tottering walls found various refuges. Many among them awakened to the discovery that, if it were no longer possible to believe in God, it was quite easy to forget Him, and that, while belief was arduous, distracting, incomplete, oblivion might be absolute.

For coping with such a state of things, Mr. Hutton was peculiarly qualified both by temperament and training:—

A double vision of the reasonableness and unreasonableness of Agnosticism qualified Hutton to be the religious teacher of our generation.

Miss Wedgwood enters at some length into the theological position of Mr. Hutton, without, however, making it plain. He was at first a Unitarian, but later inclined more and more to a belief in what she calls the sacramental Church. But these weighty matters cannot be dealt with in a brief extract. Of his influence in political matters, she says:—

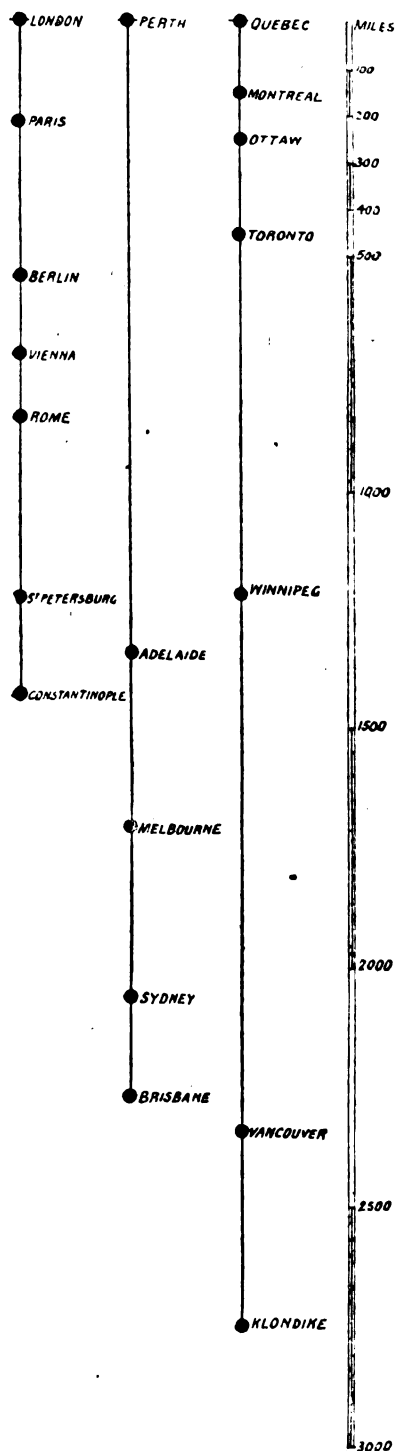

He is admitted by respectful but decided opponents to have been a force on the side of our national union, a tribute to his political weight which could be given to no other spiritual teacher of this century. Few indeed are the leaders of thought who turn, as he did, both to the heights of eternal principles, and to the valleys of concrete application.

**Burns and the Board of Excise.**—Mrs. Emily Crawford, in her Character Sketch of Sir Isaac Holden last month, inadvertently stumbled upon a burning question. She remarked that Sir Isaac Holden's schoolmaster had burned with anger because Robert Burns had been dismissed from the situation of gauger for writing "A man's a man for a' that." Mr. J. Steele, a correspondent, writes to me calling attention to the fact that (1) Burns was not dismissed by the Board of Excise for writing that poem, for he was not dismissed at all; (2) that the then Board of Excise did not censure the poet so as to interfere in any way with his promotion. Mr. John Sniton, supervisor of Inland Revenue, Carlisle, has written a small pamphlet on the subject, which is published by Simpkin, Marshall and Co. In this pamphlet all official facts bearing upon Mr. Burns's dismissal are duly set forth by Mr. Sniton. Mr. Sniton's pamphlet passed into the fourth edition last July. I have great pleasure in publishing this vindication of the Board of Excise, whose reputation was so seriously compromised by the story to which Sir Isaac Holden's schoolmaster gave credence.

## HOW LARGE IS AUSTRALIA?

(See Frontispiece.)

In the *Review of Reviews* for Australasia, for August 15th, Mr. W. H. Fitchett writes an entertaining and instructive article entitled "Australasian Geography in European

Terms." Mr. Fitchett complains that the geographers are very unkind to Australia. Their books reflect no personal or local knowledge. They deal with unkind emphasis upon its physical defects, and in the newest editions they set forth what is more a caricature than a description of the salient features of the Australian landscape. Mr. Fitchett says drily that Australians are of course sufficiently sensible of the shortcomings of their continent, and if they were allowed an opportunity, they could no doubt arrange it with much more advantage to themselves and to the planet. The mountains being very old and timeworn are not picturesque, and for the most part they are in the wrong place. They are largely responsible for the capricious quantity of the rain. As they lie along the coast the shore has too much rain, the central plains too little. If only the mountains ran as a kind of backbone through the middle of the continent, the value of Australia would be immensely increased; but accepting Australia as it is, Mr. Fitchett declares that, in spite of all the geographers, in its climate, in its soil, in its mineral wealth, in its freedom from climatic mischief, and from dangerous forms of animal life, in its wide states, its vast stretch of sea coast, its purple edged landscape, it is one of the greatest, richest, most beautiful lands of the planet. But Australia is pre-eminently remarkable on account of its size. It is twenty-six times as large as the United Kingdom, fifteen times as large as France, and almost equal to the United States of America. The map drawn to scale of 400 miles to the inch, showing the whole of Europe, minus Russia and Scandinavia, comfortably ensconced in the interior of Australia, will be found in our frontispiece, reproduced from the *Australasian Review of Reviews*. The European area which is marked on the map of Australia carries a population of nearly 250,000,000 of people, and yet it covers only about two-fifths of the surface of Australia.

Australia is indeed a continent of magnificent distances, as will be seen from the accompanying diagram, which enables us to compare the distances as the crow flies between the capitals of the Australian colonies and the capitals of Europe. Mr. Fitchett illustrates his article with a variety of diagrams, which bring out very clearly the fact that New South Wales is twice the size of Italy; Western Australia is four times the size of Austria; and South Australia more than four times the size of France; Queensland is three times the size of Spain; New Zealand is larger than Turkey in Europe; and Victoria would contain the whole of England and Wales; Tasmania is nearly twice the size of Belgium. We have therefore in Australia geographical room for at least a dozen mighty States on the European scale. Its total area is 3,161,458 square miles.

*Gentleman's* for October is a capital number. Mr. Harold Bindloss's visit to the Western Sahara claims separate mention. Mr. Wm. Miller writes interestingly on Prince Bismarck as a student of history, and Mr. Arthur Nicholson argues that if the copy of "Montaigne" with Shakespeare's name on it was really Shakespeare's, then the markings are fresh revelations of the dramatist's mind. One marked passage reads, "Few men have wedded their sweethearts, their paramours, or mistresses, but have come home by weeping crosse and ere long repented their bargain." The writer finds here a reference to Anne Hathaway. Mr. F. A. Edwards questions whether our reconquest of the Soudan will repay us, and observes that as Greeks alone am not whites can stand the climate, theirs is the commercial future of the country.

## THE POET'S HISTORY OF ENGLAND.

## AWARD OF PRIZES.

I AM very pleased with the result of the Prize Competition which I announced in the August number for the best list of poems covering the history of England from the earliest times down to the present day. Nearly thirty lists have been sent in, of which about ten display evidence of great interest paid by the compilers in the subject. It is somewhat difficult to arrange all the competitors in order of merit, but contrary to the usual rule there has been no difficulty in awarding the first prize of £5. The list sent in by

T. C. PHILLIPS, 3, Bangor Road, Roath, Cardiff, is far and away the best. I have seldom received a contribution sent in for a prize competition which was so admirable in every way. His list contains two hundred and sixty entries. And in every case the dates, both of the incident referred to, and of the birth and death of the author, were carefully filled in, together with an exact reference to the edition from which they were quoted. Further, Mr. Phillips has in every case specified the exact number of verses with the number of lines in each, and has prepared a brief historical statement of the incident dealt with by the poet. This was not stipulated for in the conditions of the competition, but it naturally increases my appreciation of the care and patience of the compiler. Add to this, that the list is compiled with extraordinary neatness, without an erasure or a blot in the whole of the two hundred and seventy quarto pages, and even the defeated competitors must admit that the subsidiary merits of Mr. Phillips' contribution are beyond comparison with their own.

The second and third prizes are nearly equal; but after much consideration I place them as follows:—

Second Prize, £3.—ALEX. R. MCFARLANE, 24, Afton Place, Baxter Park Terrace, Dundee.

Third Prize, £2.—H. W. V. TEMPERLEY, 2, Newnham Terrace, Cambridge.

## Postlude to the Jubilee.

THE *Leisure Hour* for October contains a large-hearted poem by Frederick Langbridge, entitled "The Heart of the Pageant: a Postlude." The first stanza tells how "the great year dies like any common year," and asks if all the pomp and the poetry of the great Jubilee end in "ash and the shortest day." Then follows the noble answer:—

Nay, London folds her fogs, but nevermore  
Our kindled English hearts can shrink and dry  
To con our gospel in the daybook's lore,  
To make the world our square of dusty floor,  
Our patch of smoky sky.

The northern lights have stream'd above our door—  
The southern cross has hung o'er London's roar;  
A moment did the living earth explore,  
And life is larger than it was before;

God's moments cannot die.

England is one with sea and continent,  
With peak and prairie, pole and tropics, one  
Her robe of night and morning hath no rent;  
She weights the globe to wheel and swing unspent  
About the burning sun;

All oceans wash her feet; to her is lent  
The heart of man for language eloquent;  
Her flag is sunrise, and behold! her tent  
Spreads where the light's unwoven gems are bent  
And the swift meteors run.

These are the two finest stanzas out of the five.

## TISSOT'S "LIFE OF CHRIST."

THE English edition of this marvellous work is about to be issued by Messrs. Sampson Low, Marston and Co. It is long indeed since a work of so much interest and importance has been published in London. The story of how Tissot, the French painter, attracted by the Divine figure of Jesus of Nazareth and by the entrancing scenes of the Gospel story, was impelled to make a pilgrimage through Egypt and Palestine in order to paint a series of pictures illustrating the life of Christ, is now a somewhat familiar one, thanks to the exhibition of the original pictures at Lemercier's Gallery in Bond Street. Eleven years ago, at the age of fifty, James Tissot started on this painter's pilgrimage; and when he returned, ten years later, it was with three hundred and eighty water-colour drawings and one hundred and fifty pen-and-ink sketches, tracing, step by step, the progress of our Saviour from His birth to the cross. James Tissot's "Life of Christ" was subsequently produced in France at a cost of over £40,000; it was published in that country at £60 a copy; and will now be issued in England at 12 guineas. At the time of writing only the prospectus has been issued; more will be said on the subject when the first part of the work has been laid before us. For the present it is only necessary to say that the two volumes, of about three hundred pages each, will be printed on large Imperial quarto paper (15½ x 12½ inches) and will contain over 500 illustrations, of which there will be 24 chromo-lithographed plates printed in colours and 14 monochromes or photogravures; while accompanying the text there will be 150 coloured facsimiles of Tissot's original drawings, 200 engravings, and 150 woodcuts. The work is to be published by subscription in twelve parts, the first part, dated October, being devoted to the Holy Childhood. The succeeding numbers will appear at monthly intervals, each part being priced at one guinea. In this preliminary notice it is only necessary to say that, having gone over much of the ground traversed by M. Tissot in his pilgrimage, and having seen the original paintings in the Bond Street Gallery, we can and do willingly testify that the coloured reproductions in the prospectus before us are marvellously faithful renderings, and that it is difficult to imagine any merely mechanical process which could surpass the results here attained.

## "Ranji's" Message to British Boys.

Boys, young and old, will be glad to possess themselves of a copy of the *Windsor* for October, for it contains a sketch by Mr. J. V. Morton of the great Indian cricketer, Prince Ranjit Singhji, with several photographs, and—what is more—a facsimile of his autograph letter to the boys of Great Britain, specially written for the *Windsor*. This is his epistle to the budding manhood of this nation:—

My Dear Boys,—Keep yourselves in good condition at all times. Cultivate patience and perseverance; both qualities are necessary for doing things which are well worth the trouble. Do not be despondent at your failures, and be molested in the hour of your success. Wishing you all good luck, believe me your well-wisher, RANJIT SINGHI.

It appears that the prince asked a Cambridge professor to glance over the proofs of his book on cricket, and, "where necessary, give a classical polish to the sentences." As a consequence, the proofs went back to the printers with such a dense fringe of corrections as almost to turn the compositor's hair grey, and to develop an "explosive and explosive humour" in the management.

## THE BEST CHRISTMAS PRESENT:

## A LIBRARY FOR A POUND.

It is rather early to speak of Christmas publications. But a word spoken betimes is often a word in season. And it may be well to remind those who are thinking of their Christmas presents, that the very cheapest and best thing going in the way of books—especially for those who live out of the way of public libraries—is the Masterpiece Library of Penny Books.

The Library originally contained about sixty volumes of the Poets, ninety volumes of Novels, and twenty volumes of Books for the Bairns. Some dozen of these are now out of print. But one hundred and fifty volumes—each of which contains as much printed matter of poetry and fiction and children's picture-book as is to be found in many books published at 2s. 6d. or even 6s.—may be supplied in a Bookcase for 20s. No such collection has ever been offered before at six times the price.

N.B.—In order to avoid disappointment, intending purchasers should send in their orders as early as possible, as a limited supply of cases is kept in stock.

A complete list of Poets, Novels and Books for the Bairns is published in our advertising columns. If any reader wishes to make up a 10s. or a 5s. parcel he can order what selection he likes, and it will be forwarded to any address by parcel post, at Christmas, on receipt of remittance.

## PAINTING BOOKS FOR THE BAIRNS.

The success which has attended "The Books for the Bairns" has encouraged me to publish, as a Christmas

gift book at 1s. 6d., the charming illustrations of Nursery Rhymes. This handsome volume is printed on cartridge paper suitable for painting, and I have no doubt it will be a great favourite this Christmas tide.

The REVIEW OF REVIEWS Annual this year, now in course of preparation, will be a new departure. It will be entitled "Satan's Invisible World Displayed," and will be published in November at one shilling.

The most recent publication in the Masterpiece Library is Mr. Laird Clowes' thrilling romance of "The Captain of the Mary Rose," a tale of the naval war of the future.

## PUBLISHING BY AND FOR THE MILLION.

It is now two years since I began the publication of the Masterpiece Library with the production of the Penny Poets. Of these little volumes I have now published sixty numbers, the two latest being the second Jubilee number, which brings the metrical narrative of the events of the Victorian era down to the present day, and the fourth part of "Poems for the Schoolroom and the Scholar," edited by Mr. Robt. S. Wood, of Bolton, and devoted to Shakespearian selections for dramatic representation.

The Penny Poets were succeeded by the Penny Novels, which have appeared weekly for over eighteen months. I have up to the present issued about 5,276,000 of the Poets, and over 9,000,000 of the novels, making a total of over 14,000,000 in all. The sale has fluctuated greatly from causes which often bear no relation to the intrinsic merit of the publication, for some of the best novels show the lowest numbers, while some of those which could only by a stretch of courtesy be regarded as Masterpieces, had quite a long run. Taking it altogether, in these two years I think I have produced well on to fifteen millions of penny publications. Looking over the issues of the Poets and the Novels, I think I may fairly claim to have supplied the reader with an adequate collection of books in these two fields. As nearly all of them are constantly on sale, and can be ordered from any bookseller, no person can now complain that the treasures of our literature are denied them owing to inability to pay for them. With the exception of a few copyright works, such as Ruskin, Tennyson, and Darwin, there are very few books that are not accessible to any one who can command the price of a cigarette.

I shall be glad to receive suggestions from those who are interested in spreading the light of literature in those vast dark but populous regions where people read nothing, or next to nothing. The cheapened parcel post enables clubs, schools, and local centres of reading unions to be supplied in places where no newsagent or bookseller exists, at the same price at which they are sold over the counter in London, provided they are ordered in parcels of not less than fifty. Fifty copies will be sent post free for 4s. 2d.

## ÆSOP IN MALABAR.

I was very much interested to receive the other day from West Mottakadth, in South India, the first "Book for the Malabar Bairns," edited by T. K. Krishna Menon, the translation of my edition of Æsop's Fables. It is printed at the Vidya Vinodini Press in Trichur, the letterpress being translated by a young Malabar lady. The editor says that in Malabar there are no delightful romances of childhood. There are only gruesome tales of bad ghosts and wicked giants, which are worked up mainly to frighten children to sleep. There is no humour in the Malabar stories; the epic is shrouded in a grim unapproachableness. The editor therefore trusts that every girl and boy in Malabar will be grateful for the opportunity of procuring our series of "Books for the Bairns." Illustrations are omitted from the first number, but if the Bairns of Malabar respond to his appeal, Mr. Menon intends to continue the series, and to illustrate them by the use of our plates.

# THE REVIEWS REVIEWED.

## THE NINETEENTH CENTURY.

THE *Nineteenth Century* for October is a capital number. I notice elsewhere Sir Lepel Griffin's impeachment of the forward frontier policy in India, Mr. Frederick Greenwood's vindication of Machiavellism, and Mr. Herbert Bentwich's account of "The Philo-Zionists and Anti-Semites."

### COWS CONVEYING CONSUMPTION.

Mr. James Long, in a rather gruesome paper, entitled "Consumption in Cattle Conveyable to Man," suggests the thought that the meek and inoffensive cow is, nevertheless, capable of avenging the wrongs of its race upon its butcher-man. Mr. Long declares that—  
it is not improbable that more lives are annually lost through the consumption of tuberculous milk than would be occasioned by war with a first-class Power.

In order to minimise the death-dealing vengeance of the cow, Mr. Long suggests three methods of self-defence, of which he admits that the first would drive the farmers wild :—

(1) Systematic inspection and slaughter of all diseased animals. (2) Inoculation with tuberculin and slaughter, followed by payment of the appraised value of every animal slaughtered. (3) Gratuitous inspection, inoculation, and advice, by Government officials, and general encouragement to isolate and periodically test the apparently healthy animals, fattening and selling off those which react until a herd is free.

### THE EXTENSION OF COUNTY COURTS.

Judge Snagge, in a paper on "Fifty Years of County Courts," attempts to show how these courts have grown and prospered. He claims for them that they have been proved to be—

An institution absolutely demanded by the requirements of the people, and justified to the full by the test of time; and an instrument for extending civil justice throughout the land and placing millions under the protection of the law, from which they would otherwise be excluded.

But the Judge is still not content. He would have their range made wider still, although—

at least two-thirds of the minor business of the Queen's Bench Division has drifted to the County Courts, whither the Bar, as a body, have not followed it.

He makes the following proposal :—

Let the 500 County Courts, with their original jurisdiction, their original and ancient designation, their officers and their Judges, remain exactly as they are. Let the litigation in respect of all claims not exceeding, say, £30, be carried on locally and swiftly in those Courts, as at present. Give to them such increase of jurisdiction as may be deemed expedient—if, indeed, it is not large enough in all conscience as it is—but let the trial and disposal of all the heavier claims . . . take place before the County Court Judge (unless the Judge shall otherwise direct) at *Special Sessions* to be held periodically at one or other of the larger and more accessible Court towns of each County Court Circuit, say at the Central Courts to which District Registries of the High Court are at present annexed.

### WANTED—A ROWTON HOUSE FOR CLERKS.

Mr. Robert White has a very sensible article concerning the need in London for clerks' homes. In 1891 there were over seventy thousand clerks in London :—

Of the great army of clerks some nineteen-twentieths receive salaries of two guineas weekly, and under. We may

take as typical the young man who earns thirty shillings per week, and is without a home, or other resources, in London.

The majority of these, when unmarried, are at the mercy of the boarding-house, and do not enjoy half the advantages that might be secured in a co-operative home. The Hampton House is an attempt in this direction, but it is of too small a scale. It has only room for two hundred persons, whereas the first condition of success in such establishments is that they must provide accommodation for at least six hundred. Mr. White quotes the following expression of opinion from Lord Rowton :—

I have little doubt that the thing can be done on a paying basis. It ought to be done. I have often sympathised with the poor clerks. The great point to bear in mind is the importance of providing for a number of lodgers sufficiently large to ensure that the scheme shall pay.

### WILL THE CLERGY REVOLT?

The Rev. Heneage H. Jebb thinks that they ought, although it is very doubtful whether the worm will turn. Mr. Jebb says :—

It may be asserted with perfect truth that there is at the present moment no one in England who is so heavily taxed as the country parson. He is the only person in the land who is rated upon his whole professional income, and the demands made upon him are so enormous, that one has to look for a parallel to mediæval times, or to social conditions resembling those of the Russian peasant. If any other professional class suffered from one half of his burdens, the expression of horror would be universal. The case stands thus : the clergy, being already taxed more heavily than any other class in the country, the present Government, so far from relieving them by the Agricultural Rates Act, has immensely added to their burdens. Nor can it be overlooked that the Cabinet responsible for this unjust Act consisted chiefly of large landowners.

What he proposes, therefore, is that the standard of revolt should promptly be raised. He says :—

Let the clergy form a Defence League, placing other political considerations aside, and with the one object of securing their rights as citizens. If the clergy at the next General Election were to unite in demanding a pledge from their parliamentary candidate that he should endeavour to secure for them the same benefits as those given to agriculturists under the Act of 1896, their cause would be won.

### AN UNSPEAKABLE BOON TO TRAVELLERS.

Sir Algernon West deserves the benediction of mankind. With all the authority attaching to his great position in the Treasury and his intimate acquaintance with the men who govern the Empire, he comes forward with a proposal to abolish that unmitigated and useless curse, the examination of travellers' luggage at Dover. He points out that 350,000 persons land in England every year at the Channel ports, all their luggage is examined by a large staff of Customs officers, with the result that no duty is collected worth speaking of. He proposes to get rid of all this worrying and costly nuisance by a very simple expedient. He suggests that :—

Every passenger crossing the Channel should be furnished on embarkation with a declaration bearing a shilling stamp, which might, by arrangement, be procured at the booking-office or on board the vessel. The form of it should be prepared by my very able friend the Solicitor to the Board of Customs. On this document the passenger electing to make use of it should declare that his baggage contains, or does not

contain, any dutiable article. If it does it must be stated in a schedule, and he must pay the proper duty to the Customs. If there exists no liability his luggage should be labelled and allowed to be landed without any examination.

Sir Algernon thinks this scheme would be welcomed, both by the present Chairman of the Customs Board and by the Chancellor of the Exchequer, who would certainly gain both revenue and popularity at a stroke.

#### MR. REDMOND ON IRISH LOCAL GOVERNMENT.

Mr. Redmond, writing upon the proposed Irish Local Government Bill, contents himself with urging with as much emphasis as he can command, that if anything is to be done with Irish Local Government, the whole existing system must be swept by the board, and a popular Democratic elective system introduced, modelled on the lines of that which exists in England and Scotland. He pleads strongly for dealing with the whole subject in one Bill, instead of handling it piecemeal. Of course the article concludes with the usual declaration that Home Rule or National Self-Government must be the necessary complement of Local Self-Government.

#### ART IN THE DAILY PAPER.

Mr. Joseph Pennell describes what has been done by the *Daily Chronicle* in the way of printing good pictures in daily papers. He believes that in sixty years' time the daily will supersede and surpass the weekly and the monthly, and the daily papers will then contain pictures as admirably drawn, engraved and printed, as those now to be found in the best American magazines. By way of bringing all out this blessed consummation, he makes the following suggestion:—

What I think, therefore, is an imperative necessity in this country at the present time is a technical school for artists who wish to become illustrators, engravers, or printers—not for students. Such a school cannot be started by any one artist, no matter how much he knows. For it would have to be equipped with, not only the ordinary appliances of an art school, but complete engraving outfits of all sorts, with presses, for lithography, for etching and for letterpress printing, as well as three at least of the huge printing machines: one for fine magazine work, one for a daily paper, and a third for colour printing. Besides this, there should be stereotype and electrotypes and type foundries, and a book-binding. At the head of each department, not a theorist or a lecturer, but a man of wide practical and successful experience should be placed, and the student should be able not only to make his drawing, but to engrave it and print it, and do everything but distribute it to the public.

#### OTHER ARTICLES.

Mr. Harold Russell contributes a very useful paper describing the state of the English law on the subject of the preservation of birds and birds' eggs. Mr. Edward Dicey writes an article in which he endeavours to prove that the Convention of 1834 did not surrender our suzerainty over the Transvaal, which was explicitly asserted by the Treaty of 1881. He puts his trust in Chamberlain, believing that the duty of asserting British suzerainty over the Transvaal could not be left in better hands. Mr. Swinburne writes on the poetical work of John Day, the Moulvie, Rafiuddin Ahmad has "A Moslem's View of the Pan-Islamic Revival," and Mr. Wolffsohn translates into English verse specimens of Italian Folk Song.

The paper on Geographical problems which Dr. Scott Keltie read at the Toronto meeting of the British Association appears in the September number of both the *Geographical Journal* and the *Scottish Geographical Magazine*.

#### THE FORTNIGHTLY REVIEW.

The *Fortnightly Review* is a fair average number, with one or two articles of exceptional interest. Major Griffiths' "Khartoum in Sight" is noticed elsewhere. Hannah Lynch's paper on the love letters of Guy de Maupassant reveals the famous French novelist in a new rôle. A correspondence has been published between Philippe and Denise under the title "Amitié Amoureuse," and according to the general rumour, Philippe was no other than Guy de Maupassant. Denise was a married woman with whom he fell in love, and who at first resisted his passion, and then herself succumbed to a devotion which he in turn resisted, and the correspondence which passed between them as the temperature alternately rose and fell is full of intense human interest. The lady at last flung herself unreservedly with ardent crudity and white-heat passion at his feet, but all her impassioned outbursts were in vain. He wrote to her:—

"I would only guard you from a transient ill, from a vulgar fall of which you would have to blush—were it only before me—of a shame that not even all the tenderness in which I should envelop you would prevent you from feeling." Noble words at a critical moment, fit to redeem a lifetime's ignominy. This whole letter is magnificent. His allusion to her child, to the degrading necessity for lying that a *liaison* involves, his consciousness of the fatuity of a man in the position of a Don Juan, and his simple cry to her whom not so long ago he pursued with so different a prayer: "Denise, Denise, understand me. Have pity on yourself, on Hélène; think well before this vulgar and irreparable evil happens. It costs me something to play the ludicrous part of repulsing your tenderness. But to make of you whom I respect, whom I love—you, my sister, the friend and companion chosen of all others, recognising in her the highest virtues, the loyalty and honour of a man—to make of you what I have made of others! I am heartbroken. But, Denise, dear delicate soul, dear nature of the elect, measure my great probity in saying to you Don't love me! I transcribe a law of sorrow for my own grief. But it is my duty and I accomplish it. Ah, poor, cherished frail friend, how deeply I must love you to inflict this pain on you!"

#### NON-PRINCIPLED TORIISM.

Mr. A. A. Baumann, in an article entitled "An Apology for Unprincipled Toryism," emits the familiar wail of a Tory in search of principles. He has not found them yet, although he evidently yearns after Protection. He says:—

For the last ten years I have been endeavouring, in my humble and unprejudiced way, to discover what are the principles of the Tory party. When I first sought the suffrages of a metropolitan constituency in 1885, after some years of previous research into written records and much consultation with living authorities, I inserted three planks in my election platform—no Central Municipality for London, no Free Schools, and no English money for Irish tenants. In the seven years that followed I saw the establishment of the London County Council, the abolition of school pence, and Mr. Arthur Balfour's Irish Land Act. This set me on thinking, and has brought me to the conclusion that government is the science of expediency, and that it is very dangerous in an election address to talk about principles. I observe that the leaders eschew all allusion to them. The truth is that the exciting causes of Burkeism, the only systematic body of Conservative doctrine that has ever been presented to the world, and of Unionism, are dead. There might be a recrudescence of Jacobinism, or a revival of Irish Separatism; in which case the old-fashioned Toryism of repression would again become a vital force. But such a danger is, for this generation at all events, hardly possible. For some time past the Tory party has been engaged in the pastime of kicking at nothing, which, as Sam Slick observed, "jerks horribly."

## A ROYAL LORD-LIEUTENANT FOR IRELAND.

Mr. J. G. Swift MacNeill, M.P., pleads for the appointment of a Royal Prince as an Irish Viceroy, on the understanding that he is not to be connected with any political party. He says:—

The Royal visit to Ireland has necessarily produced many suggestions for the modification or abolition of the Lord-Lieutenancy and the establishment in Ireland of a Royal residence. It would, perhaps, be worthy of consideration whether the Lord-Lieutenancy would not without Act of Parliament, but simply by the application to Ireland of the constitutional principles which prevail in England, be wholly divested of its political character, and the establishment of a Royal residence rendered at the same time feasible.

The Irish Viceroyalty is an instance of arrested political development. The charges brought against that institution of lowering the Viceregal office to the level of a mere partisan and political appointment, and of being at times a focus of jobbery and corruption, could also be brought up to the time of the Irish Union, and for some decades after, against the kingly office itself. The Viceroys continue to be political partisans, just as the English king was in former times a political partisan.

Mr. MacNeill's proposal is—

to divest the Viceroyalty of all patronage, and to provide that the term of office should extend to a certain number of years and be absolutely unaffected by the change of administration. In that way the Irish Viceroy might become in reality a representative in Ireland of the English constitutional Sovereign. The acceptance of that office by a Prince of the Blood would, as a necessary consequence, entail a Royal residence in Ireland.

## AGAINST "ONE MAN ONE VOTE."

Mr. W. S. Lilly, in reviewing the book of M. Charles Benoist and another by an American, Mr. A. Lawrence Lowell, who has written on "Governments and Parties in Continental Europe," treats us to an "Object Lesson in Politics." Mr. Lilly's point is that Universal Suffrage has failed. Neither education nor compulsory voting or indirect election will, in his opinion, succeed in remedying matters. In France at the present moment the country is really governed by the delegates of the minority of the electors. There are altogether in France over 10,000,000 electors:—

Of these, 7,147,903 are stated to have voted in the election of that year. The total number of votes obtained by the successful candidates was 4,512,550. The result therefore was that the majority of the electors, viz. 5,930,828, were not represented at all in the Chamber elected in 1893; that number being made up of 3,018,024 who did not vote, and 2,912,804 who voted for unsuccessful candidates. Such is one result of universal and equal suffrage in the country which originated it and which has carried it to its greatest perfection. The majority of sovereign men and citizens is absolutely disfranchised. The country is ruled by the so-called representatives of a minority.

Mr. Lilly hankers after giving men votes according to their qualifications. In an ideal scheme he can conceive some men having as many as twenty-five votes all to their own cheek; but the Belgian system he says is better than nothing:—

Age, headship of a family, property, and education ought to count: and it is better for them to count according to the rough-and-ready process of the Belgian constitutional revisionists than not to count at all.

## THE HATES OF NAPOLEON.

Mr. Charles Whibley, reviewing the recently published letters of Napoleon, dwells chiefly upon the evidence which they afford of Napoleon's hates. Mr. Whibley says that this series of letters, for brutality and for per-

suasiveness, cannot be equalled in the literature of the world:—

The Napoléon who thus lays bare his naked soul is not a hero for the schoolroom or the pulpit. He is no warrior in kid gloves, anxious to do good and obey the rules of morality. He is, on the contrary, an egoist, magnificent and profound, who knows no other law than tyranny and triumph. Though France and her glory are ever on his tongue, it is Napoléon alone that governs his heart; and on every page he betrays his hatred and contempt for everything and everybody that opposes his progress towards the headship of the civilised world. He is Machiavelli in action, Machiavelli strengthened by the belief that his theory of cunning may instantly be put into practice. His correspondence contains a very gospel of hate. In the first place, he hated stupidity, and, alas! he encountered it in all those to whom he entrusted the performance of his designs. Then he hated opposition by whomsoever offered; and remembering the superiority of his intelligence, you are not surprised that his hate expressed itself in a general irritation. But he reserved for three objects a peculiarly active detestation, and there is hardly a page in which Madame de Staël, England, and the Pope do not receive a share of vituperation.

## LORD CARNARVON.

Mr. T. H. S. Escott, in an article entitled "A Statesman's Autobiography," reviews the privately printed essays and messages of the late Lord Carnarvon. He finds in them a sketch of a country gentleman of the old school named Miles Mannering, whom he has not much difficulty in identifying with Lord Carnarvon himself. Mr. Escott's paper is appreciative. He says of Lord Carnarvon:—

No more successful Colonial Minister has lived in our day. His success and the personal affection with which his memory is cherished throughout the foreign possessions of the British Crown are due to the fact that his whole policy derived unity and animation from the pervading presence in every portion of it of a definite and carefully thought out idea. Such men as these serve their generation not only by adding to the material resources of their country, but by keeping before it a standard of duty based on convictions up to which the governed, as well as the governors, can live.

## SWEDEN'S GRIEVANCE AGAINST NORWAY.

Miss Constance Sutcliffe, in a paper entitled "Scandinavia and Her King," thus states one of the grievances which the Swedes have against their Norwegian allies and fellow subjects:—

At the time of the Union, Norway's population consisted of only eight hundred and eighty-five thousand, an army of twenty-three thousand stood at the disposal of the Swedish Commander-in-chief, but now while her population is reckoned at over two millions, she has only twelve thousand ready to join in the common cause. It is added that while every other country on the Continent is making immense sacrifices for its military and naval defence, Norway is neglecting her coast-protection and arsenals in the same way as she grudges every kroner spent on her army and navy; that her system of mobilisation and of organisation is altogether antiquated; that she has no organised field commissariat; that she has an insufficiency of officers, and that their professional training is deficient; while the time devoted to the drilling and training of recruits is shorter than that of any country in Europe, some of the smallest German states alone excepted.

## OTHER ARTICLES.

Miss Hogarth writes at some length on "Madame Geoffrin and her Daughter." Sir W. H. White replies out of the fulness of knowledge to a paper written by a clever Eton boy on the speed of warships, in which he has no difficulty in showing that the Eton boy in question did not know his facts, and had fallen into a series of

curious blunders, which were quite as bad as any of those frequently made by experienced journalists. Vernon Lee discourses in her own fashion upon "Imagination in Modern Art," and W. M. Fullerton describes his experiences of Arcachon. It is interesting to note that at Arcachon there lives a noble sorcerer who can prevent the crabs eating oysters, and effects marvellous cures of cases which all the doctors have given up. The article on the "Triumph of the Cossack" is noticed elsewhere.

### THE WESTMINSTER REVIEW.

I NOTICE elsewhere the article on "Woman's Suffrage."  
THE SPANISH COLONIAL POLICY.

Mr. John Foreman, who has written several very interesting articles concerning Spanish rule in the Philippine Islands, contributes a paper on Spain and her colonies. He has evidently no hope that Spain has any future in her colonies. He says:—

The colonial is trammelled in every conceivable way. No scope is allowed for his genius; he is fettered at every turn by a network of restrictions and vexatious regulations. Their only remedy has been rebellion.

They naturally resort to their only remedy, and at the present moment 70,000 insurgents are in the field against Spain in the Philippine Islands. Mr. Foreman says:—

I have lived among them for several years; but even to those unacquainted with the islanders and the maladministration of the colony it is not conceivable that 70,000 men should risk their lives and for ever abandon their homes without serious cause. Small brigand bands have always existed and always will, but in the recent movement, not yet totally extinguished, the flower of Luzon joined hands. And why? The extortions and avarice of the Spanish employés; the impossibility to redress one's wrongs without bribery; the corruption of all individuals, high and low, connected with the law courts; judicial persecutions by delaying sentences from one to ten years; banishments without trial, and the familiarity and consequent contempt of the native due to the frequent intermarriage of Spaniards with the women of the country, are only some of the causes of discontent. But superior to all this is the attitude of the priesthood.

The fundamental cause of hatred of Spanish rule is the domination of the monk.

### AN INDIAN ON BRITISH INDIA.

Mr. A. S. Ghosh, writing upon the condition of his country, puts forward his suggestions for the improvement of the state of affairs at present existing. He says:—

A more equitable employment of Indians in the services of their own country is one of the chief means for lessening the present economic drain from India, which is daily carrying away a part of her capital, and is thereby hampering her political and economic development. Let British India cease to be a happy hunting ground for young Englishmen, and she will soon become at least as prosperous and happy as the Native States of India.

### LIBERALS AND THE CHURCH.

Mr. C. F. Garrett urges that Liberals should drop the cry for Disestablishment, and join hands with Churchmen on the basis of Church Reform. Social reforms in the State, and Liberal reforms in the Church, might be achieved if this alliance were consummated. He says:—

It remains for Liberals to decide if they will give their help. A coalition between the Church and the Liberal party would render certain the eventual acceptance of these reforms. Principle and expediency urge the Liberal party to boldly adopt, instead of disestablishment, a policy of Church reform. Liberals would obtain support from quarters which have

hitherto been hostile; they would disarm the enmity of the majority of the laity and clergy, and, above all, they would be helping to apply and carry out those principles of self-government and popular control which lie at the foundation of all true Liberalism.

### AUSTRALASIAN PROSPECTS.

Mr. Oliphant Smeaton takes a rosy view as to the future of Australasia. He says:—

An era of steady expansion is now being inaugurated. With the early years of the twentieth century there is little reason to fear but that another great wave of prosperity will be seen to sweep over the whole of Australasia—a prosperity that will be permanent because it will be the result of honest work as well as of careful and legitimate trading. If therefore the financial depression of 1893 has not wholly disappeared, it is already rapidly passing away to be succeeded by the clear sunlight of recovered public credit.

### A PLEA FOR SMALL BANK NOTES.

Mr. Robert Ewen writes upon Banking R. form in England. His idea is that—

a National Bank, in connection with the Treasury, would have to be established, to act as the Government Bank, and issue such an amount of national notes as required—in denominations of *ten shillings, one pound, five pounds*, and upwards—for a circulating medium, which may supersede gold coin and save the expense thereof. Suppose that issue is £100,000,000, it would be as good as paying off as much of the National Debt. Other banks should also be allowed to issue bank notes, on lodging Consols with the Treasury to cover their issues. These bank notes would be payable on demand in national notes, which would be the *standard money* of the realm, and could always be converted or turned into gold, silver, or any other commodity or article at market value. Then gold bullion would come to be dealt with as before 1816, and in Pitt's time, as a medium of international exchange. Free Trade in gold would make Free Trade in everything else, and nullify all anti-free-trade tariffs in the world.

### OTHER ARTICLES.

There is one paper devoted to the private life of Pitt, for the purpose of proving that he was very different from what he appeared to be. "Seldom, assuredly, among a nation's illustrious sons has so mighty a spirit been allied to so gentle and guileless a heart." There is a short paper describing an Old Bailey Calendar of two hundred years ago, from which it would seem that they disposed very differently of their prisoners than they do now. Only one was sent to prison, while four were condemned to be hanged, and seven were burnt in the hand, and others were either flogged or reprimanded.

### Cornhill.

THERE is much that is light and readable in the October number, without any paper of eminent importance. Colonel Vibart's reminiscences of the Sepoy revolt at Delhi are as thrilling as the most sensational romance. Under the title "The Romance of Race," Mr. Grant Allen serves up a number of "odd hints of unsuspected quaintness," and many scraps of interesting information derived from a rummage through the stores of ethnology. Mr. Andrew Lang gossips concerning "some spies." Mr. Charles Edwards' account of the Spanish game, *pelota*, is more attractive than clear. Another writer gives some insight into the mechanism of the Stock Exchange, without any startling disclosures of the way that mechanism can be abused.

THE story of Birmingham, its greatest mayor, and its experiments in municipalisation, is told anew in the October *Leisure Hour* by Mr. W. J. Gordon. In the same magazine Mr. Edward Porritt gives a glimpse of the legislative houses at Quebec and Toronto.

## THE NEW REVIEW.

THERE is more in the October number than has been found of late in this magazine. A portrait of Mr. Rudyard Kipling by W. Nicholson forms the frontispiece.

## "UNPUBLISHED NAPOLEON."

Under this title James Fitzmaurice-Kelly reviews M. Léon Lecestre's two volumes of some 885 letters of Napoleon previously unknown. Of some 30,000 letters in the national archives, 20,000 were issued under official supervision; the rest, as not likely to add to the great man's glory, were withheld or tampered with. The new publication thus contains "nothing but precisely those materials which the house of Bonaparte thought most injurious to its founder's memory":—

The *Lettres inédites* manifest the great man in his smallest and most secret moods. He strikes no picturesque attitude after the manner of those two arch-poseurs Augustine and Rousseau, but unmask himself as he felt and as he was, petulant with his mother, bullying his brethren, speaking his mind to defaulting monarchs and to unsuccessful marshals, menacing, cajoling, stern, indulgent, reserved, exhorting, meddlesome, stealthy, frank, all by turns as interest and occasion prompt. . . . But the fact remains, that even in his hours of pettiness he shows unabated the vigilance, energy, and resource of genius incarnate. Nowhere else is it possible to find such an example of masterful versatility, absorbing with equal intelligence the details of a vast campaign and the contents of a letter from some nameless village priest.

## "THE INTERNATIONAL ORIGINAL SIN."

The stirring which Mr. John Morley's "Macchiavelli" has given to the conscience of our publicists appears afresh in Mr. T. G. Law's essay on International Morality. There is, he contends, no such thing. It is ruled out by the fact that each State claims to be sovereign and independent. Patriotism overrides humanity. "The *origo mali* is the claim of independent existence. This is the original blot, the International Original Sin." *Fiat justitia, ruat cælum*, has always seemed "the extremity of wickedness" to Mr. Law, for, if heaven falls, hell must take its place. Yet, though now independence and patriotism banish international morality—

History has had, as yet, no experience of that event, that crisis in mundane affairs, which must come some day, perhaps within two or three centuries, viz., the complete peopling of the whole habitable globe. The effect of this upon morals, private and public, must be immense. . . . Possibly nations may then confederate into a universal commonwealth, with a central judiciary and executive, forming a vast United States of Humanity. War may become a thing of the past, and the human conscience triumph for a time over Nature's great law of battle.

Only for a time. Extinction of war means extinction of desire: Nirvana: national euthanasia!

## OTHER ARTICLES.

Mr. John Dalgleish holds Mr. Le Gallienne up to severest reprobation for his novel, "The Quest of the Golden Girl." He describes it as an "amazing farrago of underclothing, fornication, lickerishness and 'purity'"; and as "quite the most thorough and adequate embodiment of the Bounder to be found in our literature." Mr. Ernest E. Williams laughs at the Agricultural Commission's Report for the dread with which it avoids the nameless thing (Protection) ever present to its thoughts. "Vindex" discusses "the crisis in the Civil Service," and pleads for an outlet by way of promotion for servants in the Lower Division. Mr. C. de Thierry labours to prove that Lord Beaconsfield was the founder of the modern Imperialism as against Lord Rosebery's contention.

## THE CONTEMPORARY REVIEW.

THE *Contemporary Review* is a good number, so good that I have had to notice under the head of "Leading Articles" six of the eleven papers which it contains. For the remainder comparatively brief notice must suffice. The most interesting paper is Sir C. Gavan Duffy's very entertaining reminiscences of his return to Europe as an Australian thirty years ago. These autobiographical reminiscences will constitute one of the most useful and entertaining political memoirs of our time. A writer, calling himself "Corn Hill," denounces the action of the Bank of England in giving a modified consent to the proposal to substitute silver for gold to the extent of one-fifth of its reserve. Mr. Phil Robinson has one of his delightful natural history papers describing the re-establishment of the rookery. Vernon Lee and C. Anstruther-Thomson begin a series of papers on "Beauty and Ugliness," from which this reviewer flies appalled. Sophie Bryant, writing upon the "Celtic Mind," thus explains the object which she had in view:—

The object of this essay has been simply to sketch in outline a theory of Celtic character capable of explaining those qualities commonly observed in average Irish human nature as based, not exclusively but generally, on a variation from Teutonic standards in the readiness, and hence the concreteness, of psychological reaction. If the description of admitted characteristics has been correct, and if the reasoning has been accurate in tracing the effects of such a peculiarity of psychological constitution, then it may be claimed for the theory that it has some grounding in the solid basis of fact.

## The New Century.

THERE are no very striking papers in the *New Century Review* for October. Dr. Blake Odgers advocates the creation of one body of private law for all Australia, and the formation of a Supreme Court for that continent, as a substantial instalment of federation. Mr. T. H. S. Escott pleads for the army doctors that a medical corps be formed like that of the Engineers, and that a Royal Commission be appointed to suggest the remedy for their wrongs. Surgeon-Colonel Welch suggests a great many means for improving the morals of our soldiers, among them an institute for every corps, teaching of trades, greater facilities for marriage, encouragement of temperance, and the inclusion of vicious disease under our general sanitary code. Mr. Maltman Barry bewails the woes likely to result to industry and health from the invasion of the destitute alien. Mrs. Mona Caird, rebutting arguments against Woman Suffrage, once more kills the slain. Demetrius C. Boulger sees no sign of China recovering from the rôle of the Sick Man of the Far East, her only hope being to fall back into the arms of Russia. Dyke Rhodes' sketch of the *Spectator*, as "the lone spinster of Wellington Street," heartbroken, yet resolutely and heroically resigned because compelled to renounce her heart's love, Mr. Gladstone, is racy reading, but coming immediately after the death of Mr. Hutton, rather jars on one's taste.

THE great service rendered by Salvage Associations and their fleet of wreck-savers is the subject of the first paper in *Cassier's* for September. The writer, Mr. G. E. Walsh, urges the need of salvage work on the high seas, and suggests that before it is proved to be a paying business "naval cruisers, in times of peace, might be put to a profitable use in 'wrecking' on the high seas after severe gales and winter storms."

## THE NATIONAL REVIEW.

THE chief feature of the *National Review* for October is five papers entitled "Great Britain's Opportunity," which are all devoted to setting forth the doctrine of bimetallism. Sir Robert Low's paper on "The Indian Frontier Risings," and Mr. Blaks's account of "Native Rhodesia," are noticed elsewhere.

## WHAT CANADA WANTS.

Mr. Arthur Shadwell, writing on "The Canadian Enigma," declares that Canadian sentiment is not in the least in accord with the Free Trade doctrines of Sir Wilfred Laurier. He says:—

What Canada wants to-day is discrimination in the English market against foreign produce, and, above all, against the United States. That would gratify sentiment and business at the same time. It would undoubtedly lead to a great expansion of the agricultural industry in the Dominion. Last year we imported ten times as much wheat from the States as from Canada; she could grow it all, without any doubt. There is plenty of room, and Canadians believe they could do it in a few years with a little encouragement. The effect of a slight preference in the English market, they say, would be to bring over hundreds of farmers in the Dakotas and other northern states, who would become Canadian citizens and settle in Manitoba and the North-West. However this may be, it is easy to see why such a programme should have attractions for Canada. The sturdiest Free Trader does not venture to deny its popularity; he takes his stand on the improbability of England consenting to a preferential arrangement. Sir Wilfrid Laurier himself admitted in the *Daily Chronicle* interview that the temptation would be almost irresistible.

## THE APOSTLES' CREED IN BOARD SCHOOLS.

Mr. Evelyn Cecil, of the London School Board, writing on "The Religious Issue in London" in the coming contest, pleads for adding the Apostles' Creed to the syllabus of religious instruction. He says:—

It is not expedient to set up a system of religious instruction which would operate mainly as a religious test for teachers. In order to include the Apostles' Creed in the syllabus of religious instruction it would not be necessary to do more than insert into the rule of the Board dealing with religious instruction words to express that such instruction is to be given "on the basis of the Bible, the Lord's Prayer, and the Apostles' Creed." I would then leave it to the honour of teachers—and I trust them—to ask to be relieved from giving the religious instruction if their convictions did not enable them conscientiously to teach on that basis. I do not want to institute a metaphysical inquisition into their mind or consciences.

## MR. GISSING AS A NOVELIST.

Frederick Dolman writes on "George Gissing's Novels" from the point of view of a discriminating admirer:—

The slow growth of Mr. Gissing's reputation as a novelist must be regarded as one of the literary problems of the time. It is eleven years since the publication of his first novel, "Unclassed"; it is seven years since the appearance of "Demos" convinced most of us who read the book that in him we had a writer of great, if not of supreme, power. To most households, on the other hand, Mr. Gissing's books, with their rich qualities of dramatic force, realistic picturing, and trenchant style, are still strangers . . . This deficiency in the sense of humour . . . with his pessimism, has hitherto made his other fine qualities so unacceptable to men in the street.

## THE WEAK POINT OF TORPEDO BOATS.

Captain H. J. May replies to Admiral Colomb's paper on "Future Naval Warfare" noticed in the last number of the *REVIEW*. Admiral Colomb backed the torpedo boat against the ironclad. Captain May in reply reminds us that the case in favour of the torpedo boat is by no means so strong as might be imagined:—

It has been found that a very short stay at sea impairs the efficiency of these fragile craft to an enormous extent, the strain upon both officers and men is almost unendurable in anything but smooth weather, whilst the speed attained is often little more than half that with which a boat is credited. All the Powers of Europe have endeavoured in manoeuvres and at other times to have torpedo boats accompanying their main fleets, but in all cases the boats have been found to be such a drag and anxiety, owing to their unseaworthiness and liability to accidents, that it is now fully established that boats can only be relied on when they come fresh from their base. So that as the result of twenty years' experience it has become recognised by all the principal maritime nations, that the only method of ensuring the efficiency of torpedo boats is to keep them in harbour, and also that their best chance of success is to rely upon surprise. Notwithstanding their speed, it is generally considered hopeless for these fragile craft to force their way to within six hundred yards of a battleship or cruiser bristling with quick-firing guns, unless their approach is shrouded by darkness, mist or fog.

The chief point which Captain May makes is that whenever the wind rises, torpedo boats have to retire, otherwise they go to the bottom. Hence it is impossible to blockade big ships permanently by torpedo boats. They have only to wait until the wind rises and then the coast is clear.

## THE UNITED SERVICE MAGAZINE.

THE first paper in the October number is entitled "The System of Command." Its object is to call attention to the woful deficiency of training company officers in the British army. The writer maintains that the good qualities of our troops, their excellent fire discipline, their intelligence, and their coolness are simply wasted for lack of skilful teaching. The younger officers, he maintains, ought to have the same latitude of action that is allowed to the Germans. Surgeon-Major Foreman sets forth the remedies he suggests should be adopted to improve the army medical staff, which at present he thinks is sadly deficient in *esprit de corps*. He would give more power to the senior officers, hold out more inducements to attract the best men into the army, and he would give medical officers army rank. Dr. Foreman declares that the sum-total of our medical arrangements in India to meet a national emergency spells only one word, and that word "chaos." It would be much more to the credit of the Indian authorities if they would endeavour to amend the state of things to which Dr. Foreman calls attention, instead of intriguing and mutinying in order to re-establish houses of ill fame under the patronage of the Queen. Lieut.-Col. White describes the reign of Mahmoud II., who seems to have been not an unworthy predecessor of Abdul the Damned. Major Beresford writes briefly about "The Turco-Grecian War," and Captain Norman's paper on the same subject, which is much more interesting and important, is noticed elsewhere. Captain W. P. Drury contributes another of his amusing extravaganzas, which have already given him a deserved reputation as a humourist.

A VERY vivid picture of what delimitation of frontiers means in Africa is given in Colonel Trotter's paper on "An Expedition to the Source of the Niger" in the *Geographical Journal* for September.

A VERY interesting sketch of President and Mrs. McKinley at the White House, with many photographs and descriptions of their official home, is contributed to the October *Woman at Home* by Miss C. O'Connor-Eccles. "Ian Maclaren" supplies the same magazine with a short dialogue on "Mistress and Maid."

## THE NORTH AMERICAN REVIEW.

THE September number offers an attractive and varied bill of fare. Many of the articles fall to be quoted elsewhere. One of the most suggestive is Dr. Josiah Strong's forecast of the twentieth century city problem.

## ATHLETIC CONTESTS IN ALIEN CLIMATE.

Mr. Hamblet Sears contributes a thoughtful paper on the influence of climate on international athletics. Climate is, he thinks, a disturbing factor which has hitherto prevented a fair contest between British and American athletes. So far as boat-racing is concerned, Harvard men collapsed in contest with Oxford in 1869 on the Thames. Columbia's team was beaten in the first heat for the Stewards' Challenge Cup at Henley in 1878, but did win a less important Cup. In 1881 Cornell was beaten at Henley in an early heat. Again in 1895, Cornell collapsed on the Thames. Yale in 1896 came to grief on the Thames. Harvard, Cornell and Yale teams alike found they did best work on their first arrival, and the longer they stayed in England the poorer was their time. The races simply exhausted them. In 1876 the British Leander Club was beaten, but the London Rowing Club barely conquered Yale. Mr. Sears finds the explanation in differences not of stroke, but of climate. In America, the rivers being frozen over in winter, the men must then practise in tanks and gymnasium, and in spring have to resort to severe training on the open rivers to get into condition. In England men can row all the year round, and their training is merely getting eight men who are constantly in rowing practice to row together. Mr. Sears goes on to argue that—

the hard training of American athletes is too much for the low malarial valley of the Thames; or, to put it otherwise, the damp, enervating climate of England does not require and cannot stand such severe training as does and can the more vigorous atmosphere of New England.

He cites the case of this year's defeat of Harvard, though coached by Mr. R. C. Lehman, to show that "crews, coached according to American methods, were overtrained in England, and the Harvard crew, coached by English methods, was actually undertrained in the United States." Other sports tell the same tale, "that the snap which wins races is taken out of Englishmen competing in America and Americans competing in England."

## WHO SHALL HOLD THE CENTRAL AMERICAN CANAL?

Mr. J. G. Whitely gives a succinct review of the diplomacy of the United States in regard to Central American canals, up to and after the Clayton-Bulwer treaty of 1850, which guaranteed joint Anglo-American protection. He recapitulates the grounds adduced by Mr. Blaine for considering that treaty void, and has little difficulty in upsetting them. He remarks:—

The "Monroe doctrine" is not a principle of international law. It is a guiding rule of conduct for the United States... In the absence of any evidence other nations will refuse to believe that all inter-oceanic canals are the property of the United States by the law of nature. Great Britain prefers to rely on the documentary evidence afforded by the Clayton-Bulwer treaty.

The writer's own policy is stated thus:—

The old policy of seeking no exclusive advantage and of wishing to place the canal under the protection of all nations, for the benefit of all nations, is in accordance with treaty obligations, justice, and practical wisdom. ... The canal can be neutralised, in the proper sense of the word, only by conventional agreement between the great maritime Powers. Similar arrangements in regard to Belgium, Switzerland, and

other places have been found satisfactory. The neutralisation of Colombia or Nicaragua would remove them from the danger of attack by any foreign Power, while leaving their domestic affairs free from the control of external influence.

## THE WEST AND SOUTH.

A note by Mr. C. M. Harger points out the "new business alliance" which is being formed between the West and the South. From Kansas City, the basing point of much of the Western traffic, to the Atlantic ports is a railway distance of 1,200 miles; to the Gulf ports only 760 miles. The railway rate for grain to the latter ports is 15 cents per 100 lbs., to the former 35 cents. The tide of exports is following the cheaper route, and the East is being left. The centre of gravity is shifting southward.

## THE MAIDEN TRIBUTE OF SAN FRANCISCO.

"Chinese Slavery in America" is the title of a painful paper by Mr. C. F. Holder. The Chinese in San Francisco number 21,000, including 2,500 women:—

Of the 2,500 females it is estimated with more or less accuracy that 1,000 are legitimate wives, the remaining 1,500 being slaves in the fullest sense: girls kidnapped in their homes in the Orient, brought to America by fraud and imposture, passed through the custom-house under false oaths, in fear of death or dire consequences, put up at auction before professional slave merchants, knocked down to the highest bidder, and condemned, in the majority of instances, to a life under duress in the Chinese brothels of an American city.

A young Chinese girl, from nine to twelve years of age, in San Francisco to-day has a market value of from 150 dols. to 500 dols. A girl from twelve to sixteen, if attractive, is quoted on exchange... at from 500 dols. to 1,500 dols., while for girls over this age the prices range up to 3,500 dols.... The life of the slave is a chapter telling of total debasement and ill treatment. The mission managers have found girls who have been burnt with red-hot irons, dragged about by the hair, and had their eyes propped open with sticks.

What the law can do is being done, but the existing law is not able to cope with the infamous traffic.

## LETTING WOMAN "KNOW HER PLACE."

Mr. G. G. Buckler makes an attempt to sum up judicially the *pros* and *cons*. of the argument concerning woman's proper function and sphere, and this is his conclusion:—

Probably woman's kind in literature will always be found to be the humbler species, the lyric, and especially the hymn, letter-writing, and domestic novels. In art she will do well to confine herself to the lower and no less useful branches, decoration, and the various art industries; in music and drama she must be content with being indisputably a finer interpreter than man. In teaching, philanthropy, and medicine she can take an honourable place, and in religious work (apart from the vexed question of preaching) she will be universally welcomed. In the sciences of invention and discovery she had best not hope for great achievement, but be satisfied with a large arena of usefulness in assisting and carrying out the creations of men. For it is in this subordinate relation that women can probably find their truest and widest sphere—that of Influence.

The paper is appropriately headed "The Lesser Man."

## OTHER ARTICLES.

Major Griffiths, in a paper on Egyptian prisons, bears witness to the salutary effect produced by England in Egypt. He pronounces the prison system to be "excellent," although the number of convicts increases, and warmly eulogises Dr. Crookshank, the head of the prisons department. Professor Blaikie, of Edinburgh, passes under review the course of affairs in Central Africa since the death of Livingstone. He hopes much good from the extension of European protectorates, but wishes that the Powers, and "those somewhat suspicious bodies which

we call Chartered Companies," would devote their energies, not to the mere accumulation of wealth, but to the moral and intellectual elevation of the natives. Mr. Frederic Taylor describes the growing work of education done by Farmers' Institutes.

### THE FORUM.

The September *Forum* is an excellent number and contains many articles of importance. Most of these are quoted elsewhere.

#### THE CLIMATE OF KLONDYKE.

The inevitable paper on Klondyke derives significance from the fact that it is written by Professor W. H. Dall, of the U.S. Geological Survey, from personal investigation of the region. He gives a less repellent account of the weather than has been given by rumour:—

As far as rainfall is concerned, the Yukon district is almost arid. If it were not in the far North, where congelation holds in its firm grip almost all the undrained rainfall, the region would be a desert. Including the melted snow, less than thirteen inches of water are recorded as falling during an entire year. . . . There are light showers, but no thunderstorms or heavy rains; and very high winds are rare. As regards temperature, the winters may be compared to those of Canada and Minnesota. The air is crisp and cold, with occasional blizzards. The mid-winter temperature may average thirty degrees below zero (Fahrenheit): in two winters, minus sixty-eight degrees was the coldest observed with standard instruments. . . . The most favourable months for travelling are March and April. The mid-winter days are short, with sunlight in some latitudes from ten in the morning to three in the afternoon. . . . Summer, swift-footed, trips upon the heels of winter. The sun pours down with a violence not soon forgotten, though in the shade it is always cool.

#### WOMEN AS CIVIC HOUSE-CLEANERS.

"What women have done for the public health," by Miss Edith P. Thompson, is a noble record. The story begins with eleven women on Beaman Hill, in New York City, who had long been annoyed by the foul odours of an adjacent manure yard, and, at last, in resolute determination to abolish the nuisance, formed themselves in 1884 into "The Ladies' Health Protective Association." They fought the matter out in teeth of the Board of Health, and even to the Senate at Albany, but abolish the nuisance they did. Then they fought the butchers and compelled them to replace model abattoirs for the old disgraceful slaughter-houses. In two years more they renovated "little Italy," an overcrowded rookery with filthy cowsheds. They next tried, but with less success, to compel the stablemen to keep their stables clean. Now the authorities are meekly acquiescent and no longer antagonistic. A similar Association in Philadelphia has secured a superior water supply for the city, and a Pittsburg Association has saved the river from the dumping of garbage. Some idea of the courage of these associated ladies may be gleaned from the fact that they are everywhere setting themselves to eradicate "the disgusting habit of expectoration in public places." The Association of Collegiate Alumnae in Boston examined the schoolhouses and found only 13 out of 186 provided the required amount of air, and in 41 per cent. of the buildings the floors had never been washed. Similar inspection has been made of shops and factories. "Chicago has the honour of having been the first city in the world to appoint women as sanitary inspectors"—thanks to Miss Jane Addams, of Hull House. In 1889 the Woman's Educational Association of Boston established the Boston Cooking School, culminating in the

scientifically managed New England Kitchen, which supplies clubs and schools extensively.

#### IS THE HISTORICAL NOVEL POSSIBLE?

Mr. Brander Matthews discusses the historical novel, with criticism of the history of Shakespeare, Scott, Dickens, Tolstoi, George Eliot, and, in his own words, has tried to show—

first, that the novelists cannot reproduce in their pages the men and women of another epoch as these really thought and felt; and, second, that the novelists who have attempted historical fiction have best succeeded when they brought the fiction to the centre of the stage and left the history in the background.

He disclaims any desire to disparage the historical novel; he only wishes to point out "its essential inferiority to the more authentic fiction" of the true realist.

#### CAN CUBANS GOVERN THEMSELVES?

Mr. T. G. Alvord, Jun., inquires "Is the Cuban Capable of Self-government?" and argues in the affirmative. Cubans are, he urges, free from the despotic and religious fanaticism which has made many Spanish-American Republics unstable. Cuba is one in language, history, and spirit. In no province have the negroes a majority, and their number is diminishing. Returned Cuban refugees have learned democracy in the United States. Cuba free would attract by her fertile soil thousands of United-Statesmen. Cuban exiles have built up many cities in the United States:—

The history of these Cuban-American cities shows clearly that the first thing done by the Cubans, when opportunity offered on free soil, was to establish schools for their children, and that the next was the creation of local governments in accordance with the civil laws of their adopted country. The statistics from these cities show that, as regards morality and respect for human law, their citizens compare favourably with those of cities of like size anywhere in the United States.

#### Harper's.

*Harper's* for October begins a new romantic story entitled "Spanish John." The author is William McLennan, and the hero is an Irish Colonial in the service of the King of Spain, serving in Italy in the eighteenth century. Captain Mahan's paper, "The Strategic Study of the Caribbean Sea," is noticed elsewhere. Mr. Caspar Whitney's paper on the "Golfer's Conquest of America" describes how golf has, in the course of ten years, made the conquest of the United States. The golf wave did not really set in until the end of 1894, but now the rage for golf is as great in America as in the old country. It is played under difficulties, owing to the fact that with few exceptions the Americans have no turf like that of the old country; nevertheless, an expert golfer, whose opinion is taken as authority, says the form in America is much better than in Britain, and more promising. There are now more than one hundred golf clubs in the United States, and the women are progressing more rapidly than men as golfers. The paper is illustrated by numerous pictures of the best golfing clubs in the States. Professor W. Libbey describes the volcano of Kilaua in the Sandwich Islands. Mr. Stockton's story of "The Great Stone of Sardinia" develops this month the theory that the interior of the earth is solid adamant. His hero sank a shaft fourteen miles deep to the diamond core of the world, and could get no further. Mr. H. S. Williams describes the progress made in chemistry last century, and Mr. W. A. Crane briefly discusses the future of railroad investments.

## THE ARENA.

ONE of the most interesting things in the September *Arena* is the frontispiece. This is a facsimile of a treasury note of Massachusetts, dated 1780, promising to the recipient the payment in four years of a sum of money able to purchase a given quantity of corn, beef, wool, and leather. This multiple-standard note was a safeguard against fluctuations of the currency, and is described by the editor as "the most nearly honest piece of paper-money that was ever issued by a civilised State." The moral is pointed in the following contrast: "The Massachusetts soldier of the Revolution got one for one in payment for his services; the soldier of the Union War got four-tenths for one for fighting our battle, and the bondholder got four for one for being a shark." This note is typical of the most of the contents. Mr. Taubeneck's paper on the concentration of wealth requires separate notice. Mr. I. W. Hart pleads for land-municipalisation, at least in the case of new cities, and quotes Mr. Chamberlain's experiments in Birmingham with great approval.

## ULTIMATE IDEALS.

Studies in ultimate society are contributed by Mr. L. Groulund and a Japanese, K. T. Takahashi. Mr. Groulund offers what he calls "a new interpretation of life," founded on the idea of society as an organism, which he puts forward as a synthesis of the Christian and more ancient faiths, taking from the latter devotion to the commonwealth, and from the former the conception of a divine humanity, and combining egoism with altruism in collectivist morality. The Japanese writer extols individualism somewhat in Nietzsche's vein, over against altruism, Christian, Socialistic, and evolutionary.

## THE CUBAN REVOLT AN EXOTIC!

Mr. Crittenden Marriott severely criticises the tactics of the Spanish general in Cuba and the quality of his troops. The officers are cowardly and cruel. The privates are ploughboys, stupid and homesick—a whole company bursting into tears because one comrade had received a letter from home. This is the outspoken way in which the war for Cuban independence is described:—

The truth is, the war was not started by Cubans, but by foreigners—Central and South Americans and naturalised citizens of the United States. The former, soldiers of fortune who had fought in every revolution from Mexico to Patagonia, scented the rich plunder that must fall to their share if they could control the government of Cuba, and hasted to the banquet; the latter, learning for the first time what freedom was, and thereby gifted with imagination,—the first requisite in a battle for an idea,—yearned to free their country from the yoke of Spain. The home people of Cuba, bovine, indolent, unimaginative, took no part in the uprising, take no interest in its progress, and will care little if it fails. Between the rebels and the Spanish they are ground to powder.

## GROWTH OF POVERTY IN THE UNITED STATES.

The editor, Mr. J. C. Ridpath, gives piteous vent to "the cry of the poor." He looks back for the time at which poverty began its invasion:—

When the venerable Lafayette was in Boston in 1825 he made a speech from the balcony of an old house, still standing, at the corner of Park and Beacon Streets. Looking round over the well-ordered multitude of free men who blocked all the open spaces, the honoured guest said, "Where are your poor?... The poor are not here. They are not *anywhere* in America! They are in Europe." Down to the middle of this century the condition of equality, of common happiness, of free industrial pursuits, of fairly equal distribution of wealth, with plethora for none and poverty for none, still

prevailed in our country... As late as the outbreak of the Civil War the cry of the poor was nowhere heard.

Only after the Civil War poverty began its advance. The money sharks diverted to their gain the processes of national recovery, and now the United States are a people of "inchoate paupers."

## THE CENTURY.

The *Century* for October is a very good number indeed. I notice elsewhere Mr. Roosevelt's stories of Police heroism in New York. The art articles are devoted to Sir Joshua Reynolds, whose art is illustrated by engravings on wood by Timothy Cole from the original pictures. Mr. Pennell on "The Art of Charles Keene." The historical element is supplied by Miss Anna L. Bicknell's description of Marie Antoinette as Dauphine, and Horace Porter's conclusion of his most interesting series of papers on "Campaigning with Grant." This last chapter tells the story of the surrender of General Lee to Grant at Appomattox Court House. Both the serials, which belong to the category of historical romances, are brought to a close. The other two important features in the magazine are Mr. Alexander McAdie's carefully written and excellently illustrated account of "What is an Aurora," and Mr. Farris's description of "The Corbin Game Preserve in New England." This article is beautifully illustrated, and one of the most interesting natural history papers I have read for some time. The late Austin Corbin spent two hundred thousand dollars in buying and fencing the great game park of twenty-six thousand acres in extent at Newport, in New Hampshire. The wire fence is nearly eight feet high and twenty-seven miles in circuit. It contains four thousand wild animals, which are looked after by from twenty-five to fifty keepers. The total cost of maintaining the park is said to be about five thousand pounds a year. It was only started in 1889, but already the animals have increased to such an extent that they will have to be thinned out. The buffalo herd of six bulls and eighteen cows is now represented by eighty-five buffaloes; twenty moose have multiplied until there are now one hundred and fifty; one hundred and forty elk have risen to one thousand; while one hundred and twenty deer, of four varieties, are now twelve hundred strong. Fourteen wild swine were brought over from the German Black Forest, there are now eight hundred of them, and they are increasing at such a geometrical ratio that boar hunting and pig sticking are likely to become recognised New Hampshire sports. One very curious thing is that since these forty square miles were laid down as a park, and peopled with wild animals, the country round about, outside the wire fence, has been colonised by bears, panthers and deer.

The *University Magazine* for October is as usual in a state of nervous irritation against accepted creeds in morals and religion. Mr. J. M. Robertson begins a study of "One Hundred Years of Malthusianism." Mr. Arthur Ebbels denounces what he conceives to be the dishonesty and immorality of Professor A. B. Bruce's Apologetics, and Mr. Perry Coste continues his onslaught on Mr. Lilley's Catholic criticism of evolutionary ethics. Mr. Cyprian Cope describes Russia in short, almost asthmatic sentences, as "a land of paradox," and in its ignorance, misery, poverty and vice, "the ideal Christian State." The fallacy of Marx's theory of Surplus-value is set forth by Fred. Rockell, with a view to advocating "free trade in money or credit."

## THE REVUE DES DEUX MONDES.

THE September numbers of the *Revue des Deux Mondes* are in their bareness eloquent of the effect of the holiday season. With the exception of M. Goyau on German Protestantism, M. Benoist on Señor Canovas, and M. Geffroy on the metamorphosis of Rome into a modern capital—all of which articles we have dealt with elsewhere—there is little of special importance.

In the first September number M. Ritter's paper on the second part of J. J. Rousseau's "Confessions" certainly throws some new light upon the career of this singular genius. The last half-century has seen the unearthing of so many contemporary papers and diaries, and the publication of so many memoirs and letters, that our knowledge of Rousseau has grown perhaps more than is generally realised. M. Ritter greatly desires to see the production of a definite critical edition of the "Confessions," preceded as it would have to be by an equally full and careful edition of Rousseau's "Correspondance Générale." Where is the devoted publisher who will furnish the means for so colossal a task?

## SWEDISH ART.

M. Gandolphe has what is apparently a fairly good article on the art and the artists of Sweden, but its merits are somewhat to seek, as, owing to a mistake in folding, the copy of the *Revue* supplied to us only contains about half of M. Gandolphe's remarks. However, he shows that, some time before the name of Ibsen was on every criticaster's tongue, the painters and sculptors of Sweden, Norway and Finland had attracted to themselves in the salon of the Champ de Mars a considerable amount of careful and intelligent criticism. Sweden is the cradle of Scandinavian art and Stockholm remains the centre of northern artistic life. Early Swedish art was extremely simple. In it may be noted an instinctive love for simple colours and clear lights, harmonising well with the green of the Swedish forests and the grey of the Swedish rocks. The Lutheran Church remained for years indifferent or hostile to the progress of Swedish art, and when at length this attitude was modified, Swedish Christianity borrowed its architecture and its decoration from the models of France and Germany. The seventeenth century was for Sweden a period of artistic education. Swedish artists emigrated in great numbers to foreign countries, especially to France, where they assimilated the qualities and the defects of Greuze and Watteau. Lafrensen blossomed out as Lawrence; the miniaturist, Hall, became a member of the Academy of Fine Arts and Painter to the King; and Roslin, by his portraits of Louis XV., earned for himself a pension and an establishment in the Louvre. These men, and many others of less note, were all Swedes who had become Parisians. This national versatility, exhibited in a so remarkable quickness of imitation, also characterised Swedish art in the first half of the nineteenth century, and it is only comparatively lately that critics have been able to recognise the growth of a really individual and characteristic national art.

## THE EXPLOITING OF CHINA.

To the second September number of the *Revue* M. Pinon contributes a careful paper entitled "Who will Exploit China?" acknowledging his indebtedness to information supplied by an unnamed traveller who happened to be in the Far East at the time of the outbreak of the Chino-Japanese war. It is a relief to find

that M. Pinon does not believe in the "Yellow Peril" with which Europe has been so eloquently threatened. The 350 or 400 millions of Chinamen are not, he says, of the stuff out of which great conquering races are made. The vast majority of them are small proprietors or little traders, absorbed in their own petty interests, unenterprising—emphatically producers, not fighters. The real "yellow peril" is not that Europe may be swallowed up by advancing hordes of Chinese, but that the opening up of China to trade may produce baleful results of both an economic and a social kind. What are the principal States which are competitors for this gigantic prize? First, of course, is Russia, whose earliest Treaty with China dates back to 1689. Russia and Great Britain are the two Powers of Europe which have understood since the dawn of the eighteenth century that Europe is not the world. While the Powers around them were wasting their resources in fruitless struggles, Great Britain and Russia were steadily founding new empires beyond the seas. The single aim of Russia's policy has been to obtain a free port on a free sea, and M. Pinon, in tracing the successive moves in the game, shows how at every turn Russia has found herself checked and hampered by Great Britain. It is rather amusing to note that the enormous modern development of Canada, which may be said to date from the Canadian Pacific, and of which we have lately heard so much, fits in to the whole game merely as one of Great Britain's moves. Russia played the Trans-Siberian Railway; Great Britain followed suit with the Canadian Pacific. Thus do events group themselves when viewed in the perspective of history. M. Pinon informs us that on the outbreak of the Chino-Japanese war Great Britain helped China by every possible underhand means, but that when the victory of Japan was assured we abruptly turned round and adopted the cause of the victor. To this M. Pinon attributes the decline of British influence in Peking, and thenceforward he says the competitors for the Chinese prize were reduced to two—Russia and Japan. It is needless to go over again the old story of how Japan was deprived in a great measure of the fruits of her victory. The upshot of the matter, according to M. Pinon, is that Russia by means of her railways is sure to obtain a great part of the profits of exploiting China; Germany finds herself left out in the cold, in spite of her arrogant interference in Far Eastern politics, between the Franco-Russian, Franco-Belgian, and American syndicates; while Great Britain is hopelessly checked at every turn by Russian and French influence in Peking. It is probable that M. Pinon may have to revise his views at no very distant date, at any rate with regard to Korea, where, in the opinion of the most competent observers, Russia has had an unexampled opportunity and has let it slip, to the great satisfaction of Japan.

## OTHER ARTICLES.

M. Lévy has a well-informed article on the appreciation in the price of corn and the depreciation of silver. He looks forward to a time when there will be a complete and absolute divorce and separation between the corn and the silver markets of the world, and then, he is sanguine enough to expect, we shall have heard the last of bimetalism! If so, it is certainly the golden age which is coming.

Among other articles in the *Revue* may be mentioned M. Michel's on the diplomatic missions of the great painter, Peter Paul Rubens, from 1627 to 1630, and M. Sorel's paper on the Neapolitan Republic, part of his series on Europe and the Directory.

## THE REVUE DE PARIS.

We have noticed elsewhere the curious article on Liszt and his Princess in the first September number of the *Revue de Paris*.

## LOTI IN ANNAM.

Undoubtedly the most attractive of the other papers in the *Revue de Paris* for September is the first instalment of Pierre Loti's "Impressions of Annam." These notes of travel, apparently just the rough sketches jotted down in a naval officer's diary, are probably not in themselves half so informing or useful as many a ponderous volume of travels, but they are written with all that indefinable grace, ease and charm of style which is likely to rank Loti among the great names of French literature. The diary form is scrupulously preserved, as in most of Loti's writings, and begins with the date August 17th, 1883. He describes in his own inimitable manner the attack on the forts and the town of Hué, the capital of Annam. Then we have the French debarkation and some miscellaneous fighting, with blazing villages and flying sheep and pigs, all presented with marvellous vividness.

M. Georges Stirbey has discovered in the papers left by J. J. Weiss several numbers of the *Journal de Saint-Petersbourg* of the year 1871, which contain certain correspondence dated from Paris and signed "X. Z." Against these initials Weiss had in three cases written his own name in blue pencil. The presumption thus set up—that he was the author of the letters—is confirmed both by the evidence of style and by the testimony of the manager of the *Journal de Saint-Petersbourg*. The letters are in themselves interesting as being contemporary descriptions of Paris on June 5th and June 19th, 1871, and of the trial of the Communards.

## POPULAR EDUCATION IN FRANCE AND ENGLAND.

M. Béranger contributes to the second September number a painstaking article on "The Education of the People in France and in England." He informs us, for example, that "University Hall" is "the outcome of a novel by Humphry Ward." Mr. Ward must really admit France, as well as England and America, to a knowledge of his wife's fame. But it would be unfair to judge M. Béranger by this slip. He has "got up" the University Extension movement in England, as well as the growth of polytechnics and technical education, very conscientiously. This is of course well-known ground, and it is much more interesting to note the conclusions at which M. Béranger has arrived. These are: (1) England and France are about equal in respect of secondary education and of technical and professional education. There is yet much to do, but only in matters of detail; the essential points have been seized. In respect of general intellectual education and of moral and social education England is ahead of France by her University Extension, her University Settlements, and the People's Palace. (2) The State has helped popular education more in England than in France, where secondary education only receives a subvention of 130,000 francs in 1897. (3) Education (by which M. Béranger no doubt means secondary education) is not free in England as it is in France, where the teaching profession offers no career, and the work is naturally done badly in consequence. (4) In England every class—the aristocracy, the great merchants and manufacturers, University professors, teachers of all kinds, bodies of workmen, and individual working men—have all contributed to the work of popular education, whereas in France the subject only interests the teachers themselves and a few publicists and the working classes. The elementary teacher in France who receives £48 a year and works ten hours a

day, and the young workman, are the people who do the work of secondary education, generally without hope of reward. Certainly it is not creditable to the rich and cultured classes in France, who have never troubled themselves to be missionaries of culture and "sweetness and light" to the wage-earners and producers.

## THE NOUVELLE REVUE.

MADAME ADAM's review is rather more interesting than usual, there being several papers which show that she can gather good material on occasion.

M. Hamelle contributes a study of Mr. Cecil Rhodes, under the title of "An Englishman of To-day." It is mainly biographical, and may be called intelligently appreciative, though there are of course many threads in the complicated web of South African politics which this Frenchman has not been able to seize. He thinks that the famous Committee resulted in revealing Rhodes as the champion *par excellence* of a race and of an idea.

In the first September number M. Pesce has an entertaining paper on submarine boats. For a whole century the great naval Powers of the world have been experimenting and endeavouring to produce some such marvellous submarine vessel as the *Nautilus*, familiar to all readers of Jules Verne's "Twenty Thousand Leagues under the Sea." It would be tedious to trace in detail the improvements which successive engineers have effected in the form, construction, and motive-power of these vessels, which seem destined one day to play so important a part in naval warfare. So far, in M. Pesce's opinion, the last word has been said by Mr. Holland, the winner of the competition established in 1883 by the United States Naval Department. Mr. Holland's boat presents several remarkable divergences from the lines usually followed by his predecessors. It has a double motive-power—steam for ordinary navigation, and electricity for ascending to the surface of the water and for descending. It is furnished with a regulator which prevents it from descending more than twenty-one yards below the surface, probably a sufficient depth for most people, except, of course, the Prince of Monaco.

M. Maclair's essay on "Perversity" recalls Dr. Nordan and "Degeneration," for he means by the term all that quality of the abnormal in literature, art, and philosophy, as well as in the physical life of man, which is so much regretted by those of us who retain our sanity. It is impossible to feel any sympathy with a writer like M. Maclair, who says in so many words that the extreme austerity of Pascal, the ecstasies of St. Theresa, of Bœhme, and of Swedenborg, the intoxication of Poe, the methodic hallucinations of Poe, and the artistic aberrations of Hokusai, are all absolutely analogous to the erotic mania of the Marquis de Sade. To say that is to destroy the postulates, the ultimate foundations upon which we all of us act. M. Maclair included, every hour of our lives. We could forgive M. Maclair his heresies if they explained anything. But they simply enable him to ticket everything he does not understand as "perverse" or "abnormal." He cannot explain the case of a lady of his acquaintance who is so systematic a kleptomaniac that she has an arrangement with the shops she frequents that she shall not be disturbed in her thieving. M. Maclair thinks that in all ages women are the great examples of the abnormal. Bacchanals, priestesses of the Eleusinian mysteries, riotous Mimallonides, sorceresses from Asian harems, Syrian poisoners, mediæval mad girls—the eternal feminine throws a sinister shadow across the page of history, from Circe and Medea of old to the fascinating Brinvilliers.

## THE ITALIAN REVIEWS.

THERE are signs that the Italian women are awakening at last to a sense of their moral responsibilities. In a really eloquent article in the *Rassegna Nazionale* (September 1st) the well-known writer, Fanny Zampini Salazari, appeals to her sisters to take their share in the moral and intellectual regeneration of the Italian nation. A new women's association, "The National League of Social Peace," has recently been founded in Rome by the Countess di Brazza (*née* Cora Slocumb). Its object is to educate women in an intelligent patriotism and an understanding of the social needs of their country; they are to devote themselves mainly to the improvement of education on its moral and social sides, and to elevating the moral tone of domestic life. The means to be employed include the formation of circulating libraries, the holding of conferences, private correspondence, and the ventilation of their views in the press.

The official Italian view of the present European situation may be gathered from two articles in the *Nuova Antologia* (September 16th): one on the effects of the Franco-Russian alliance in the Far East, the other on the recent visit of King Humbert to Homburg. In the former, the author, Professor Nocentini, maintains that the alliance in no way affects the political situation in Europe, but is really intended as a means of resisting English encroachments in the Far East. England, it is asserted, has always stood in the way of the colonial and territorial expansion of both France and Russia, and it is the destruction of her prestige in the East which is the immediate aim of the Dual Alliance. The second article describing the German military manoeuvres at Homburg, at which the author, Signor E. Arbib, appears to have been present, is written quite frankly in the interests of the *Triplice*. The beautiful friendship between Humbert and William is dilated on with characteristic Italian effusion, and the German nation is credited with every heroic and amiable virtue.

*Bessarione*, amid much learned matter, has a very interesting article on the various readings of the petition for bread in the Lord's Prayer, which in the Coptic version still in use runs, "Give us this day the bread of to-morrow." This, it appears, is a very ancient rendering, also adopted in the Alexandrian Church, where a spiritual and not a material interpretation was always placed on the petition. To-day the rendering only exists in the Coptic Church "as a last echo of an exegesis which dates from the earliest Christian times, and which, whatever its scientific value, does not lack a certain noble beauty at once intellectual and moral."

THE article of principal importance in *Blackwood's* for October is one on the French and English in the basin of the Niger, in which the writer contrasts French energy with British sloth in the occupation of territory and opportunity. He asks why we have not yet a resident at Kano or Sokoto. The French are building up a vast West African empire, while we have not yet clearly ascertained our assigned boundaries. The press prosecutions in India are approved in another article, and two sayings quoted from former Viceroy. Lord Metcalfe said that "India, if ever it was lost to us, would be lost in the House of Commons." Lord Lawrence said "he would not give us more than fifty years of India, as he never knew what those fellows at Westminster would be at." Professor Andrew Seth reviews Nietzsche's life and writings. Sir Herbert Maxwell recalls some gruesome punishments in the calendar of Scottish crime.

## A Quarterly Owned by Conference.

WITH its October number the *London Quarterly Review* appears for the first time as the legal "property of the Conference of the people called Methodists." The *Review*, it appears, was started in 1853 by Mr. John R. Kay and Mr. J. S. Budgett. In 1862 it passed into the hands of a "limited" company of shareholders, whose it has remained until the Conference took it over this summer. The demise, some thirty years ago, of the *North British Review*, organ of the Scottish Free Church, and, more than a dozen years ago, of the *British Quarterly Review*, organ of the Congregationalists, leaves the *London Quarterly*—so it states—as "the only high-class quarterly which represents orthodox Protestant Nonconformist views and culture," ranking side by side with the Catholic *Dublin* and the Anglican *Church Quarterly*. The experiment of a Quarterly Review owned and run officially by a great ecclesiastical body will be watched with more curiosity than hopefulness. Its October contents include appreciations of Nelson, Peter the Great, and Mrs. Oliphant. It treats of a theme of which much might be made—"the treatment of Dissent in English fiction"—and warmly recognises the truth of George Eliot's portraiture. Dr. Farrar is severely dealt with as the popular purveyor of fashionable views posing as expectant martyr. Canon Gore's conception of the Incarnation is pronounced unsatisfactory. The growth of London during the Queen's reign is sketched, and, it is stated, our drink bill is "as nothing compared to that of 1837, when the number of visitors to fourteen gin shops in London was found to average 1,000 per diem, and there was one public-house to every fifty-six houses."

## The Use of the Eye in Education.

THE Comparative Synoptical Chart, of which I gave a specimen in our last issue in the map of the gold production of the world, has come to stay. It is an ingenious application of a very simple principle for the purpose of teaching history and impressing facts upon the mind in their proper sequence and in comparative significance. By a glance at a Comparative Synoptical Chart, the eye teaches you more in a second than the ear can receive in an hour. It is an invaluable addition to the resources of the educationalist, and will help enormously to enable us first to realise and then to remember things as they occurred. The map showing the whole history of the great Civil War in America on a single sheet, on which every movement of every army on both sides is shown clearly and graphically, with due distinction of place and exact locality in time, is one of the cleverest things in its way I have ever seen. The Comparative Synoptical Chart comes to us from British Columbia. But it will soon be acclimatised all over the civilised world. The offices of the Synoptical Chart Co., Ltd., are at Leadenhall Buildings, E.C.

EIDER-DUCK farms in Iceland are described by Miss Eliz. Taylor in *Good Words* for October; and the humane reader will be glad to learn that the old practice of robbing the nests of the eider down twice while the eggs are hatching has been given up. The Iceland farmers now never take the down till the little ones are hatched. "The birds thrive better and increase faster when they are allowed to live as Nature meant them to do." How long, one wonders, will it be before a parallel discovery is made in the world of human industry on the question of the factory-labour of mothers?

## ILLUSTRATED MAGAZINES.

---

Strand.

THE October number is considerably above the average. The interesting interview with Sir William White, our chief naval designer, and the sketch of Longfellow by his daughter, both require separate notice. Photographs of tornadoes in active process and of their terrific effects lend a striking value to Mr. J. W. Smith's paper on the subject. Mr. Grant Allen makes the natural history of the spider as interesting as a romance. Mr. Framley Steelcroft illustrates old travellers' yarns with old prints, quaint and grotesque. Mr. George Dollar begins a series of "foolhardy feats" with the story of "The Niagara Fools."

---

The Lady's Realm.

THE *Lady's Realm* for October abounds in portraits and sketches of notable women. Miss Grace Cooke tells of Ellen Terry at home, and speaks of the exemplary conduct of the great actress to her children and grandchildren, for she is actually a grandmother. Miss Beatrice Knollys gives likenesses and notices of several "mothers of celebrated men." The Queen of Roumania is described in a special article. Francis Gribble supplies a gallery of noted lady mountaineers. "The Real Flora Macdonald," by one of her descendants, Miss M. A. Williamson, appeals to curiosity more than romance. The Countess of Malmesbury, writing on the modern marriage market, urges the importance of marrying in the same social rank, and of avoiding marriage with persons of different race or colour. The Duchess of Sutherland gives an enthusiastic account of Taormina in Sicily.

---

Pearson's.

THE Jubilee bonfires are turned to good account by Mr. P. W. Everett in October *Pearson's*. He gives details and photographs of a number of these festive pyres, and instances one, that at Englefield Green, which was kept at full blaze by spraying oil upon it from perforated pipes connecting with a buried cask, whence the oil was forced by pumps. The more permanent commemorations made by cutting monuments out of turf, commencing with the White Horse of Westbury, and coming down to Victorian times, are portrayed with photographs by Mr. J. R. Creed. Mr. Merriden Howard tells over again the well-known story of Madame Tussaud, and describes the making and dressing and painting of waxworks. Mr. J. M. Fraser writes about the innocent "postcard craze" in Germany—the mania for despatching illustrated postcards. Mrs. Alec Tweedie gives glimpses of the life of the Silent Sisters of the convent near Biarritz.

---

Ludgate.

THE *Ludgate* for October has in it plenty of light and readable matter. Mr. Robert Machray makes vivid and graphic the story of Great Britain's greatest storm, that on December 21st and 22nd, 1894. He mentions how Mr. R. H. Scott, Secretary to the Royal Meteorological Society, has frequently received letters addressed to the "Clerk of the Weather." Mr. H. C. Shelley describes the gymnasium at Aldershot—said to be the best in the world—and the training given there. The Rocking Stones of Cornwall are pictured by Mr. A. S. Hurd. The arrangements made by Trinity House as to buoys and lightships are sketched by A. Krausse. Mr. Frank Hird

makes audible "the cry of the children," who are to-day in the capital of British Christendom sweated in belt making and umbrella making. They are paid at the rate of five farthings a dozen belts and one and sevenpence per dozen umbrellas covered.

---

Pall Mall.

THE *Pall Mall Magazine* for October combines with the usual excellence of illustration a slighter kind of reading matter. The Countess of Pembroke describes Wilton House, the pictures of the interior being unusually sumptuous. Miss Louisa Parr recounts the follies of fashion, beginning with card playing, and lights up her story with quaint old prints. Miss Alice Dryden supplies, with varied photographs, jottings of village scenes in Northamptonshire, which she declares to be an almost undiscovered county. Lord Ernest Hamilton gives a short sketch of partridge shooting. Mr. Tyrrell continues his story of "Lee of Virginia." The reproductions *de luxe* are of G. A. Hessler's "Don't," and E. Gelli's "Marietta."

---

McClure's.

THE October number has in it several notable papers. Quoted elsewhere is Mr. Grenfell's story of how he found the Logia in Egypt. A fine piece of realistic writing by Ira Seymour on "The Making of a Regiment" vividly recalls "what a service of seven months did for a troop of volunteers" in the Civil War. An important feature is the representation of life-masks of Thomas Jefferson, James Madison, Charles Carroll, John Adams, and De La Fayette. These were taken in the early part of the century by a John H. I. Browere, who had a secret, now buried with him and his son, for taking painlessly masks of living persons. They have been hidden from the time their author became unpopular, and are now discovered and reproduced in picture form by the enterprise of *McClure's*. Miss Ida M. Tarbell tells how Lincoln sent Charles A. Dana to the front during the Civil War to act as the eyes of the Government, or as its special correspondent. This sketch introduces a series of reminiscences from Mr. Dana, which begin next month. Pictorialisations of the greatness of Greater New York are supplied by Mr. G. B. Waldron.

---

Scribner.

THE October number of *Scribner* contains two important articles which require separate notice—Mr. Henry Norman's on "The Wreck of Greece," and Mr. Steffens' on "The Business of a Newspaper." The artist whose pictures are reproduced and work described is Miss Cecilia Beaux. Mr. Bliss Perry discusses the various types and felicities of the American college professor. The scene from a great novel, which forms the frontispiece, is by Bernard Partridge, and is that in which Rawdon Crawley surprises Becky Sharp and Lord Steyne.

---

The Windsor.

THE October number is strong on athletics. Prince Ranjit is interviewed on cricket by Mr. J. V. Morton. Mr. Fred Perriman sketches the famous cyclists of the day; and C. L. M. Stevens describes Madame Österberg's Physical Training College at Dartford. Mr. A. S. Hurd treats of Naval Engineers and their training, with special description of the Royal College at Devonport. Mr. W. G. Bell explains how telescope and camera are together continually discovering fresh planets. There is also a sketch of the defences of "Kronstadt the impregnable."

ALFRED LORD TENNYSON

FROM THE PAINTING BY G. F. WATTS, R.A.,  
In the possession of Lady Henry Somerset.

# THE BOOK OF THE MONTH.

## TENNYSON. A MEMOIR.\* BY HALLAM LORD TENNYSON.

### I.—THE PERSONALITY OF THE POET.

**T**HE late Earl of Selborne wrote shortly before his death, "Lord Tennyson realises to me more than any one else I have known the heroic idea. He was great in himself as well as in his work. The foremost man in my eyes of all his generation, and entitled to be ranked with the greatest of all the generations before him."

Lord Selborne's estimate is shared by multitudes who never had, like Lord Selborne, the advantage of a personal acquaintance with one who, as Russell Lowell finely says, has been recognised by all English-speaking men "as the Laureate of the Tongue and not only of the Nation." For, as Jowett remarked, "Those who read Tennyson attentively and consecutively know much more about him than can ever be learnt by passing observation." He lived out his own doctrine, which he once defined in a letter to a working-man who had sent him a copy of some verses, "Poetry should be the flower and fruit of a man's life in whatever stage of it, to be a worthy offering to the world." Tennyson's poetry was indeed from first to last "the flower and fruit of his life," and this it is which adds such intense interest to these fascinating volumes which have this month been published by Macmillan. Seventeen years ago Mr. Froude truly said, writing to the son who is the biographer of the poet, "Your father has two existences. Spiritually he lives in all our minds in forms as imperishable as diamonds, which time and change have no power over."

Every reader of Tennyson's poetry will turn to these volumes with a keen interest of curiosity not unmingled with a slight sense of fear. To this possibly Mr. Froude, by his life of Carlyle, has somewhat contributed. The feeling which causes some persons never to wish to meet the authors of any book that has given them great pleasure, fearing the disenchantment of familiarity, will make some hesitate to read this revealing of the intimate life of the poet, who for so many years has been as a high priest in the inner sanctuary of their souls. They may dismiss their fear. There is nothing within these two handsome volumes which will in any way jar upon their highest ideal of their spiritual teacher. His son may be congratulated upon having presented his father to the world, if not as "one entire and perfect chrysolite," nevertheless as an entirely human and altogether admirable personality—a man among men, whose private life and relations to his fellow-men were such as might have been expected from the work which they bear as their flower and fruit.

What volumes they are, a perfect treasury of all manner of literary jewels! From the Queen upon the throne down to the humblest of her subjects, they are all represented here at their best, for the genial temper and sympathetic genius of the poet suffuses them all with the light and warmth of its own mellow radiance, and we are introduced, as it were, into a great assembly of the worthiest, a Valhalla of the nineteenth century, in which all those whose names are most familiar and honoured amongst us, stand grouped in friendliest familiarity round the poet. A great life nobly lived down to its perfect close,—the verdict pronounced by all when he died,—is amply confirmed by a perusal of these volumes.

At the close, various eminent men express their impressions of Lord Tennyson. The late Master of Balliol, in a short monograph which occupied him during the last days of his life, speaks of him as "always living in an attitude of humour. His humour," he says, "was constant, though he never, or hardly ever, made puns or witticisms." Sir Francis Palgrave, after forty-three years of unwavering friendship, declares "the dominating note Lord Tennyson left with him was that of loveliness"; while the Duke of Argyll describes him as "a man of the noblest humility he had ever known." All these estimates, and more besides, are explained and justified by the collection of letters, memoranda and reminiscences which the present Lord Tennyson has embodied in a biography. It is a model of what such memoirs should be. The son speaks seldom in his own person, but at the close of his preface he expresses the opinion, which will be shared by most of his readers, that "the main and enduring factors of his father's special influence over the world lie in his power of expression, the perfection of his workmanship, his strong common-sense, his humility and open-hearted and helpful sympathy." "History," Lord Tennyson wrote, "is half dream.—Aye, even the man's life in the letters of the man." But undoubtedly the letters, though they may be half dream, enable us the better to understand the poems, which after all to the immense majority will always be the best interpreters of the poet's life.

### II.—HIS PHILOSOPHY AND RELIGION.

Tennyson himself thought that the poem of "Merlin and the Gleam" would be enough of biography for those friends who advised him to write about himself. Of this poem, his son gives us an interpretation in the preface which may be briefly summarised as follows:—From his boyhood, Alfred Tennyson had felt the magic of the spirit of poetry which he personified as Merlin. It made him follow throughout his work a pure and high ideal, with a simple and single devotedness of desire to ennoble the life of the world. This helped him through doubts and difficulties to endure seeing Him who is invisible. In his youth he sang of Nature and of the surroundings of his early home, and of the imaginary beings with which he peopled them. The croak of the raven was heard in the harsh voice of unsympathetic critics; but still the inward voice told him not to be faint-hearted, but to follow the ideal. Then he sang the songs of country life, and the joys and griefs of country folks. But by degrees, having learned somewhat of the real philosophy of life and of humanity from his own experience, he celebrated the glory of human love and of human heroism, and of human thought, intending in his epic of "King Arthur" to typify the life of man, representing therein some of the great religions of the world. The death of Arthur Hallam darkened his world, but after a time he fought with death, and came out victorious with the stronger faith and hope which he expressed in "In Memoriam." This faith and hope never forsook him through the future years. Up to the end, he faced death with the same earnest and unflinching courage that he had always shown, but with an added sense of the awe and the mystery of the infinite. That, says his biographer, is "the reading of the poet's riddle as he gave it to me."

Thus it will be seen that the life, the philosophy, the poetry of Tennyson constitute his Message to his race. In his "Idylls" he tells us he tried to teach men those things and the nature of the ideal. "I have a great conception of your father," wrote Mr. Gladstone in 1895, "as a philosopher. The sage of Chelsea, a genius too, was small in comparison with him." In like manner wrote the Master of Balliol, "Your poetry has an element of philosophy more to be considered than any real philosophy in England." In letters and conversation recorded in his memoir, we have innumerable bright points which bring into clearer relief this philosophy which the masters of our time held in such high honour. The essence of it stated in many forms, varying according to whether he was writing to his Sovereign or to some unknown correspondent, is always the same. After a conversation with Bishop Lightfoot, Tennyson wrote:—

The life after death, Lightfoot and I agreed, is the cardinal point of Christianity. I believe that God reveals Himself in every individual soul; and my idea of heaven is the perpetual ministry of one soul to another.

His whole hope was anchored on eternity. On this subject there is an extract given from the Queen's private journal which is very interesting:—

He talked of the many friends he had lost, and what it would be if he did not feel and know that there was another world, where there would be no partings; and then he spoke with horror of the unbelievers and philosophers who would make you believe there was no other world, no immortality, who tried to explain all away in a miserable manner. We agreed that were such a thing possible God, who is love, would be far more cruel than any human being.—Vol. ii., p. 457.

He felt he had firm holding ground for his anchor on the other side, and as he wrote to Her Majesty on another occasion:—

As to the sufferings of this momentary life, we can but trust that in some after-state, when we see clearer, we shall thank the Supreme Power for having made us, through these, higher and greater beings.—Vol. ii., p. 444.

How he originally arrived at this faith, which was to him the most sacred and precious of all things, it is not difficult to say. After he published "The Idylls of the King," his old mother wrote to him a letter which will hereafter always find a place among the arguments of those who claim that great men owe more to their mothers than to any one else:—

O dearest Ally, how fervently have I prayed for years that our merciful Redeemer would intercede with our Heavenly Father to grant thee His Holy Spirit to urge thee to employ the talents He has given thee, by taking every opportunity of endeavouring to impress the precepts of His Holy Word on the minds of others. My beloved son, words are too feeble to express the joy of my heart in perceiving that thou art earnestly endeavouring to do so. Dearest Ally, there is nothing for a moment to be compared to the favour of God.—Vol. i., p. 452.

He was a man saturated through and through with faith in the invisible world which encompassed him, and of which he believed he had direct personal experience in those periods of trance or of mystic meditation which he described in his "Ancient Sage," and which he explained with more personal reference to his own experience to Professor Tyndall. Always it is with him, as he on one occasion exclaimed, "What matters anything in this world without full faith in immortality of the soul and of love?" Shakespeare and the Bible were his books of books. Jowett says:—

He spoke of two things, which he conceived to be beyond the intelligence of man, and it was certainly not repeated by

him from any irreverence; the one, the intellectual genius of Shakespeare—the other the religious genius of Jesus Christ.—Vol. ii., p. 465.

On the first day he came downstairs after a long illness, having then reached three-score years and ten, he talked with his children about Job, which he thought one of the greatest of books, and asked for St. John, the "Little children love one another" passage, and "The Sermon on the Mount." In "Crossing the Bar," which his son told him when he wrote it was the crown of his life's work, he said, "It came in a moment." A moment, indeed, of sudden inspiration. He explained the Pilot as "The Divine and Unseen who is always guiding us."

There was ever present with him the thought that this life was but a shadow, and but a small part of the great world's life. And again he says:—

Matter is a greater mystery than mind. What such a thing as a spirit is apart from God and man I have never been able to conceive. Spirit seems to me to be the reality of the world.—Vol. ii., p. 424.

In the chapter on "In Memoriam" his son dwells at some length on his father's religious faith. He says that while religion was no nebulous abstraction for him, he dreaded the dogmatism of sect and the rash definitions of God. A week before his death he talked long of the personality and of the love of God. For him the world was but the shadow of God, and the sorrows of nature and the miseries of the world were but pre-ludes, necessary as things are, to the higher good. Humility was to him the only true attitude of the human soul, and he spoke with the greatest reserve of the unfathomable mysteries of which many men love to dogmatise. His faith in the hidden purpose of the Infinite Power was to him the breath of life, and never failed him to the very end. He believed in the possibilities of communication across the borderland; but I reserve a discussion of Tennyson's convictions on this point to the pages of *Borderland*, where he finds a place this month in our Gallery of Borderlanders.

When asked as to his opinion about Christ, he would say, "I have given my belief in 'In Memoriam,'" but he used to say that the spiritual character of Christ was more wonderful than the greatest miracle. 'In another occasion he said, "I am always amazed when I read the New Testament at the splendour of Christ's purity and holiness, and at His infinite pity." This union of tenderness and strength in Christ he called the "man-woman" in Christ. He disliked discussion on the nature of Christ, saying that such discussion was mostly unprofitable, for "none knoweth the Son but the Father." The parables were "perfection beyond compare." But "Christianity with its divine morality, without the central figure of Christ, the Son of Man, would become cold, and it is fatal for religion to lose its warmth. The forms of Christian religion would alter, but the spirit of Christ would still grow from more to more until each man in the roll of the ages, till each man found his own in all men's good, and all men work in noble brotherhood." His opinions upon prayer are also well worth quoting. "God," he said, "reveals Himself in each individual soul. Prayer is like opening a sluice between the great ocean and our little channels, when the great sea gathers itself together and flows in at full tide." He said, "O! Thou Infinite. Amen," was the form of prayer he himself used in time of trouble and sorrow.

It is interesting to note from a remark in the second volume that the pictures of Christ which most appealed to Tennyson were those of Sebastian del Piombo in the

National Gallery, which he described as "Christ-like," and Leonardo da Vinci's sketch of the head of Christ in the Brera in Milan.

### III.—THE POET LAUREATE AND THE QUEEN.

After this exposition of philosophy, which was to him the religion and the stay of his life, the most interesting passages in the book are those which describe the relations between Her Majesty and her Poet Laureate. The Memoir is dedicated to Her Majesty, and opens with an unpublished version of the dedication to the Queen which was written in 1851. In it he expresses a trust in "her woman's nature, kind and true," and he did not trust in vain. They became personal friends, and no letters in the book are more interesting than those exchanged between the Sovereign and her subject. When he met her, which he did for the first time in 1862 after the death of the Prince Consort, they took to each other at once:—

He said that she stood pale and statue-like before him, speaking in a quiet, unutterably sad voice. "There was a kind of stately innocence about her." She said many kind things to him, such as "Next to the Bible 'In Memoriam' is my comfort."—Vol. i., p. 485.

Writing to Lady Augusta Stanley immediately after the interview, Tennyson said:—

I have a very imperfect recollection of what I did say. Nor indeed—which perhaps you may think less excusable—do I very well recollect what Her Majesty said to me; but I loved the voice that spoke, for being very blind I am much led by the voice, and blind as I am and as I told her I was, I yet could dimly perceive so great an expression of sweetness in her countenance as made me wroth with those imperfect *cartes de visite* of Her Majesty which Mayall once sent me.—Vol. i., p. 486.

Lady Tennyson was also much impressed with the fact which every one noted at the Jubilee, that the Queen is so much better looking than her portraits. "Her face," she wrote, "is full of intelligence and is very mobile and full of sympathy. A. was delighted with the breadth and freedom of her mind."

The Queen's letters to Lord Tennyson are just like the Queen, characterised by the same strong traits of affection and sympathy which distinguish all the letters written from her heart. Here, for instance, is an extract from a letter which she wrote acknowledging a telegram received from him on the fiftieth anniversary of her marriage day. She wrote:—

How kind it is of you to have written those beautiful lines, and to have sent the telegram for this ever dear day, which I will never allow to be considered a sad day. The reflected light of the sun which has set still remains. It is full of pathos, but also full of joyful gratitude, and he, who has left me nearly thirty years ago, surely blesses me still.—Vol. ii., p. 452.

Again after the death of the Duke of Albany she wrote to him:—

Almost all I needed most to lean on—and who helped and comforted—are taken from me! But though *all happiness* is at an end for me in *this* world, I am ready to fight on, praying that I may be supported in bearing my heavy cross—and in trying to be of use and help to this poor, dear young widow of my darling child, whose life, which was so bright and happy for barely two years, has been utterly crushed! But she bears it admirably, with the most gentle patience and courageous and uncomplaining resignation.

Of Tennyson's own letters to the Queen I can only give one or two extracts. The first is that from the

letter which he wrote to her on her first Jubilee Day, 1887:—

The multitude are loud, but *They* are silent. Yet, if the dead, as I have often felt, though silent, be more living than the living—and linger about the planet in which their earthly life was passed—then *they*, while we are lamenting that they are not at our side, may still be with us; and the husband, the daughter, and the son, lost by your Majesty, may rejoice when the people shout the name of their Queen.—Vol. ii., p. 448.

Only in one case does the correspondence trench upon the burning question of politics. Tennyson wrote:—

The Queen has a wonderful knowledge of politics, quite wonderful; and her sagacity about them seems unerring. The Queen never mistakes her people.—Vol. ii., p. 350.

When they met in 1883, the Queen records in her private Journal that he spoke of Ireland and the wickedness of ill-using poor animals, and I said, "I am afraid I think the world is darkened; I dare say it will brighten again." The poet's political opinions were well known. He loved Mr. Gladstone, but hated his Irish policy. In this it is probable the Queen agreed with him not a little. Hence in 1886, when Mr. Gladstone committed himself to Home Rule, the Queen wrote, "I cannot in this letter allude to politics, but I know what your feelings must be." Tennyson was not slow to rise to this friendly lead, and wrote:—

Since your Majesty touches upon the disastrous policy of the day, I may say that I wish I may be in my own grave beyond sight and hearing when an English army fires upon the Loyalists of Ulster.—P. 446.

With such phantoms of the imagination even the sanest of men can torment themselves at will!

I cannot resist making one other extract from the Royal correspondence. In the middle of a letter to Tennyson, written on October 9, 1883, the Queen bursts out with the following hearty expression of opinion:—

How I wish you could suggest means of crushing those horrible publications, whose object is to promulgate scandal and calumny which they invent themselves!—Vol. ii., p. 437.

One wonders what pestilent gadfly it was that stung Her Majesty into this ebullition of wrath.

### IV.—THE POET AS POLITICIAN.

Tennyson's views on politics are written out large in his poems.

When he was at college, the misery of the poorer classes filled him with an earnest desire to improve the condition of the masses of the people. He was in those days a strong Liberal, and an enthusiastic reformer. When he was asked what politics he held, he replied—"I am of the same politics as Shakespeare, Bacon, and every sane man."

He was a Conservative-Liberal—a Whig rather than a Radical. Late in life he declared:—

Men of education, experience, weight, and wisdom must continue to come forward. They who will not be ruled by the rudder will in the end be ruled by the rock.—Vol. ii., p. 339.

But he was not opposed to semi-Socialist legislation. He admired the graduated property-tax in Victoria, saying that a modified tax of the same nature would soon have to be passed in England.

Owing to a kind of ancestral tradition, he hated Russia, and was always touch-and-go with noble rage whenever any complaint was made concerning Russian policy anywhere; more especially in connection with the Poles and the Jews. And yet no man ever expressed more beautifully the aspiration for an Anglo-Russian

Alliance than he did in his welcome to the Duchess of Edinburgh, when, speaking of the bridal pair, he prayed that some diviner air should breathe through the world, and change the hearts of men, so that there might be—

Howsoever this wild world may roll  
Between your peoples true and manful peace.

As to the other great nation, the securing of whose alliance should be one of the first objects of our policy—the United States of America—his record is much more satisfactory. In one of his earliest poems, "England and America in 1782," he bade England to be proud of those "strong souls of thine who wrenched their rights from thee."

So far from sharing the feelings of Russell Lowell's grandmother, who every 4th of July draped the knocker of her door in crape, he exulted in the Declaration of Independence, believing that England should recognise that its authors taught the lesson they had learned from the Motherland. The same note of proud recognition of the essentially English character of the men who rebelled against George III. finds continual expression.

His son republishes his first draft of "Hands all Round," in which the following stanza occurs that is omitted in the later editions:—

Gigantic daughter of the West,  
We drink to thee across the flood,  
We know thee most, we love thee best,  
For art thou not of British blood?  
Should war's mad blast again be blown,  
Permit thou not the tyrant Powers  
To fight thy mother here alone,  
But let thy broadsides roar with ours.  
Hands all round!  
God the tyrant's cause confound!  
To our great kinsmen of the West, my friends,  
And the great name of England round and round.

Vol. i., 346.

In his closing years he continued to indulge the great hope that the United States might enter into a close alliance with the federated British Empire. Few objects were dearer and nearer to the heart of Tennyson than the promotion of imperial federation. He believed that such a federation would be the strongest force for good and for freedom that the world had ever known. His son said:—

One of the deepest desires of his life was to help the realisation of the ideal of an Empire by the most intimate union of every part of our British Empire. He believed that every different member so united would, with a heightening of individuality to each member, give such strength and greatness and stability to the whole, as would make our Empire a faithful and fearless leader in all that is good throughout all the world.—Vol. ii., p. 223.

It is interesting to notice that, so long ago as the early seventies, the poet was praying for measures to unite the colonies with the Motherland which have only recently been adopted. He wrote:—

How strange England cannot see her true policy lies in a close union with our colonies!—Vol. ii., p. 101.

And again:—

A general council for the purposes of defence sounds to us sensible. He advocated intercolonial conferences in England, and was of opinion that the foremost Colonial Ministers ought to be admitted to the Privy Council or to some other Imperial Council, where they could have a voice in Imperial affairs.—Vol. ii., p. 109.

He was not very sound on the subject of the Alabama Arbitration, but he welcomed every expression of opinion,

even from unknown correspondents, that tended to the reunion of the race. Of one such letter he wrote:—

The feeling of American brotherhood which it bespeaks cannot but be welcome to an Englishman.—Vol. ii., p. 262.

It was always a pleasure to him to think that English men of letters might largely undo the mischief that had been done by men of affairs. For instance, he wrote to the scholars of Brooklyn public school No. 9, who had sent him an album of his own verses:—

Such kindly memorials as yours make me hope that, though the national bond between England and America was broken, the natural one of blood and language may bind us closer and closer from century to century.—Vol. ii., p. 312.

He ever recognised that "it is the authors more than the diplomatists who make nations love one another." When the Americans were about to celebrate their centenary, he wrote to Walt Whitman:—

The coming year should give new life to every American who has breathed a breath of that soul which inspired the great founders of the American Constitution, whose work you are to celebrate. Truly, the mother country, pondering on this, may feel that how much soever the daughter owes to her, she, the mother, has, nevertheless, something to learn from the daughter. Especially I would note the care taken to guard a noble Constitution from rash and unwise innovators.—Vol. ii., p. 315.

This was not the only reference which Tennyson made to that clause of American Constitution which operates so effectually as a bar upon heedless or revolutionary change. When, in 1885, Mr. Boswell Smith published letters against Disestablishment, Tennyson wrote to him sympathetically, and added:—

As to any vital changes in our Constitution, I could wish that some of our prominent politicians, who look to America as their ideal, might borrow from her an equivalent to that Conservatively restrictive provision under the Fifth Article of her Constitution. I believe it would be a great safeguard to our own in these days of ignorant and reckless theorists.—Vol. ii., p. 315.

Closely allied to his passionate sense of brotherhood with English-speaking men all round the world, was his anxiety to strengthen the race, especially on the sea, so that it would not fear to speak with its enemies at the gate. His "Rifleman Form" was largely instrumental in launching the Volunteer movement, and in this memoir we have another patriotic song hitherto unpublished. It is entitled "Jack Tar," and begins thus:—

They say some foreign Powers have laid their heads together  
To break the pride of Britain, and bring her on her knees,  
There's a treaty, so they tell us, of some dishonest fellows  
To break the noble pride of the Mistress of the Seas.  
Up, Jack Tars, and save us!  
The whole world shall not brave us!  
Up and save the pride of the Mistress of the Seas!

I am glad to see now, for the first time publicly recognised, what I have always been proud to believe, that it was my articles on "The Truth About the Navy" which inspired his sonnet about the Fleet. His biographer says:—

In April the *Pall Mall Gazette* had some articles on the weakness of our navy, which roused my father to write for the *Times* his lines on "The Fleet." "These lines," Cardinal Manning said, "ought to be set to music, and sung perpetually as a National song in every town of the Empire.—Vol. ii., p. 314.

He was a determined opponent of Home Rule, and a fervent believer in the institutions of his country, from the Crown downwards. As a peer, the only part he took in politics was to use his influence with Mr. Gladstone in

favour of an arrangement with the House of Lords when the county franchise was under consideration. Considering these were Lord Tennyson's views, it is not very surprising to learn that Mr. Carlyle once said of him:—

Alfred always from the beginning took a grip at the right side of every question.—Vol. ii., p. 241.

But it is rather remarkable to know that Mr. Gladstone, on offering him his peerage, told his son that he believed that the Laureate's political poems were among the wisest of political utterances. "The only difficulty in Gladstone's mind," says the biographer, "was that my father might insist on wearing his wide-awake in the House of Lords!" No doubt his poems appeal to the essential Conservatism of Mr. Gladstone's nature. Tennyson regarded Mr. Gladstone with great personal affection, but he records his opinion that no Prime Minister of England should ever be an orator, from which it would seem that the poet held much the same opinion as Mr. Croker as to oratory being a minus quantity in estimating the value of a statesman. Apart from politics, Mr. Gladstone had much in common with Tennyson, but it was rather philosophical than ecclesiastical. Mr. Gladstone could hardly have much sympathy with the man whom Bishop Colenso declared was the only man he was most anxious to see, because he thought him the man who was doing more than any other to frame the Church of the future.

#### V.—SOME LITERARY JUDGMENTS.

As might be expected from a poet who read so much and read so constantly, the memoir bristles with literary judgments which are thrown out as passing *obiter dicta*, but some of which are more carefully expressed. For instance, of Edgar Allan Poe he said, that taking his poetry and prose together he was the most original American genius. Shakespeare, of course, was to him sole and supreme, far away above and beyond all other poets. "No one has ever drawn the true passion of love like Shakespeare." Hamlet was "the greatest creation of literature." He was fascinated by Byron's poetry when a boy; although he regarded him as endlessly clever, he never cared for his poems later in life:—

Keats he placed on a lofty pinnacle. "He would have been among the very greatest of us if he had lived. There is something of the innermost soul of poetry in almost everything he ever wrote."—Vol. ii., p. 286.

Of Shelley he said, "He is often too much in the clouds for me, but in his blank verse he is perhaps the most skilful of the moderns." He drew a great distinction between Keats, Shelley, Byron, and the great sage poets of old, who are both great thinkers and great artists.

Goethe lacked the divine intensity of Dante, but he was among the wisest of mankind, as well as a great artist.—Vol. ii., p. 288.

"Edel sei der Mensch" he regarded as one of the noblest of all poems. Again he said:—

Scott is the most chivalrous literary figure of this century, and the author with the widest range since Shakespeare.—Vol. ii., p. 372.

Wordsworth at his best seemed to him on the whole the greatest poet since Milton, and his line, "Whose dwelling is the light of setting suns," is almost the grandest in the English language.

"Poets," said Tennyson, "enrich the blood of the world," but in fulfilling this function they need to be enriched themselves by the work of their predecessors. Tennyson's judgments are perhaps more important as

illustrating the material which ministered most to his own mental and spiritual growth, than for any other reason. It is interesting to note that Tennyson was not too old to recognise, the year before he died, the merits of Rudyard Kipling's "English Flag." In that poem Kipling really does little more than expand a then unpublished verse of Tennyson's addressed to the Queen in 1851:—

Your name is blown on every wind,  
Your flag through Austral ice is borne,  
And glimmers of the Northern morn,  
And floats in either gold and Ind.

Kipling's reply to Tennyson's note of praise is characteristic and good. He wrote:—

When the private in the ranks is praised by the general,  
he cannot presume to thank him, but he fights the better next day.—Vol. ii., p. 392.

#### VI.—SOME TENNYSONIANA.

Tennyson was a poet, and the son of a poet. He was born in his father's rectory on August 6th, 1819, the fourth of twelve children—eight sons and four daughters. Most of them, we are told, were more or less true poets, and all, excepting two, have completed their three-score-and-ten years. Tennyson lived to be eighty-three, but during his infancy he was thrice given up for dead, owing to attacks of convulsions. If ever there was a poet who lisped in numbers, Tennyson was that one. When he was eight years old he covered two of his slates with Tennysonian blank verse; at ten or eleven he wrote hundreds and hundreds of lines in the metre used by Pope in his translation of the Iliad; when he was twelve he wrote an epic of 6,000 lines after the fashion of Sir Walter Scott; when fourteen he wrote a drama in blank verse. His father was stern, not to say unkind; liable to fits of gloom which preyed upon Alfred's nerves. Once he was so upset by his father's treatment that he went out into the black night, and threw himself on a grave in the churchyard, praying to lie beneath the sod himself. Notwithstanding these gloomy fits, he educated his children himself; even taught himself Greek in order to teach them.

Mrs. Tennyson had been one of the beauties of the county. She had a great sense of humour, and intense love for all living things. It is mentioned that she had had no fewer than twenty-five offers of marriage.

His grandfather gave him half-a-guinea for a poem on his grandmother's death. "It is the first half-guinea," said the old gentleman, "that you have ever earned by poetry, and, take my word for it, the last." When he was eighteen, he and his brother received £20 for the "Poems by Two Brothers," which were published by Jackson of Louth. At the time they were written Alfred Tennyson was between fifteen and seventeen. His son publishes ten pages of verses written by his father, which he wrote at the age of fourteen and fifteen.

As might be expected, the Memoir is full of vivid pictures of Tennyson as he appeared to his contemporaries. Bishop Phillips Brooks writes of him, for instance:—

He is finer than his pictures—a man of good six feet and over: a deep, bright eye, a grand eagle nose, a mouth which you cannot see, a black felt hat, and a loose tweed suit. These were what I noticed in the author of "In Memoriam."—Vol. ii., p. 295.

Notwithstanding his "deep, bright eye," it comes with somewhat of a shock to the reader to know that he could hardly see with one eye, and with the other was so near-sighted that on one occasion when the Empress of Russia paid him some very pretty compliment, when he

was in Copenhagen in 1882, he mistook her for a Maid of Honour, patted her on the shoulder, and said, "Thank you my dear."

Owing to his extreme short-sight he could see objects at a short distance better than anyone; and at a long distance with his eye-glass or spectacles he could see as far as any long-sighted person. His hearing was extraordinarily keen, and this he held to be a compensation for his short-sight; he "could hear the shriek of a bat," which he said was the test of a fine ear.

Notwithstanding that slight physical defect he seems to have had superb physical strength, and preserved the exuberance of youthful spirits almost down to the last. His son says:—

At eighty-two my father preserved the high spirits of youth. He would defy his friends to get up twenty times quickly from a low chair without touching it with their hands while he was performing this feat himself, and one afternoon he had a long waltz with M—— in the ball-room.—Vol. ii., p. 381.

In 1890, but two years before his death, his son says:—

This winter my father amused himself by making water-colour sketches. Watts had urged him to do this, and sent him the advice to "add a daub every day," saying he "would then soon have a picture." He was interested in every form of art and craft, and at this time placed round the windows of a cottage at Farringford bricks moulded from a wreath of ivy-leaves, which he had carved in apple-tree wood.—Vol. ii., p. 369.

He was a great talker, a great smoker, a great worker, a man who literally brimmed over with delightful anecdotes and reminiscences of all kinds. Plenty of his sayings are quoted, as, for instance, one in which he says:—

If on either side of an Irishman's road to Paradise shillelaghs grew, which automatically hit him on the head, yet he would not be satisfied.—Vol. ii., p. 338.

Besides the impressions which are contributed by Mr. Leckie, Mr. Froude, and half-a-dozen other eminent men of letters, we have notes of a characteristic conversation between the poet and Carlyle. In the course of their talk, Tennyson declared if he were a young man he would head a Colony out somewhere or other. "Oh, aye, so would I, to India or somewhere; but the scraggiest bit of heath in Scotland is more to me than all the forests of Brazil." Tennyson was a voracious reader who diligently kept himself posted on scientific subjects. His son says:—

His knowledge of astronomy was most remarkable, and the accuracy of his talk about the stars surprised more than one

of the great astronomers. Of late, the spectrum analysis of light, and the photographs which reveal starlight in the interstellar spaces, where stars were hitherto undreamt of, and the idea of the all-pervading luminiferous æther, particularly interested him.—Vol. ii., p. 408.

The following anecdote of the way in which he learnt Italian was interesting and amusing:—

He told us that he taught himself Italian by writing all the words and sentences he wanted especially to remember (making a kind of private grammar) on the sides of a large, old-fashioned mantelpiece in his Somersby bedroom. He wrote them in a fine small hand, very elaborately, and he got them up whilst he was dressing and smoking; but he went away for a few days, and when he came back the writing had all vanished. He blamed the housemaid, who answered "contemptuously," that she "had washed off the nasty, dirty mess, and cleaned the mantelpiece nicely for him."—Vol. ii., p. 51.

## VII.—FAREWELL.

In noticing such a book as this, the reviewer's only embarrassment is what to mention in the midst of such a treasure house of literary reminiscence. But I perhaps cannot do better than bring this rapid survey to a close than by quoting Mr. Carlyle's estimate of Tennyson's poetry. Carlyle was the greatest Scotch man of letters of our time, Tennyson the greatest Englishman; and this is the way in which Carlyle wrote to Tennyson after reading his poems:—

Truly it is long since in any English Book, Poetry or Prose, I have felt the pulse of a real man's heart as I do in this same. A right valiant, true fighting, victorious heart; strong as a lion's, yet gentle, loving and full of music; what I call a genuine singer's heart! There are tones as of the nightingale; low murmurs as of wood-doves at Summer noon; everywhere a noble sound as of the free winds and leafy woods. The sunniest glow of Life dwells in that soul, chequered duly with dark streaks from night and Hades; everywhere one feels as if all were filled with yellow glowing sunlight, some glorious glowing Vapour; from which form after form bodies itself; naturally, *golden* forms. In one word, there seems to be a note of "The Eternal Melodies" in this man, for which all other men be thankful and joyful!—Vol. i., p. 213.

To this add as a vivid vignette or tail-piece Carlyle's description of Tennyson at the mid-term of his life:—

One of the finest-looking men in the world. A great shock of rough, dusky dark hair; bright, laughing hazel eyes; massive aquiline face, most massive yet most delicate; of sallow brown complexion, almost Indian looking, clothes cynically loose, free-and-easy, smokes infinite tobacco. His voice is musical, metallic, fit for loud laughter and piercing wail, and all that may lie between.—Vol. i., p. 187.

# SOME NOTABLE BOOKS OF THE MONTH.

## IMPRESSIONS OF FRANCE.

By M. TAINÉ.

M. TAINÉ's impressions of France have now been published in England under the title of "Journeys through France" (Fisher Unwin, 7s. 6d.). M. Tainé was for some time examiner to the Military School of Saint Cyr during the Second Empire. It was one of his duties to conduct examinations in various provincial centres; and in three successive years he made the tour of France. He jotted down from time to time notes of his impressions. They were usually made in pencil in small note-books. M. Tainé never had time to edit them, and they have been published exactly as he left them. They are probably all the more interesting on that account. The notes give a picture of France in the 'Sixties by a keen though somewhat pessimistic observer, and at the same time enable us to obtain a glimpse of M. Tainé's own character.

### A DEMOCRACY OF PEASANTS.

M. Tainé's impressions are essentially those of a Parisian who lives apart from France and is out of touch with the people. As he himself says, the Parisians "live in a little world of cultured and intellectual sceptics, and lose sight of the vast public, the vast France." At times he admits that Parisian life is somewhat unnatural, but he finds it impossible to break away from it. The two most interesting impressions formed by M. Tainé are his opinion of the results of democratic government and the influence of the priests in provincial France. Although he describes France under the Second Empire, his observations are more concerned with French character than with any particular set of political institutions. In spite of the French Revolution, there still seemed to him to be two nations in France—the Gauls on the one hand, and on the other the class of Latin officials and German aristocrats. He says:—

The provinces are like a second France, under the guardianship of Paris, which civilises and emancipates it from a distance by its agents, its movable garrisons, its colonies of officials, its newspapers, and to a small extent, by its books.

France appears to M. Tainé as a very respectable but by no means showy democracy. It is organised for the benefit of the peasants and townfolk. Their ideal, acquired since the Revolution, is—a patch of land. Their ambitions do not rise beyond it. If they can also have an occasional good dinner and no very heavy taxes they are perfectly contented:—

I find myself coming back again and again to this idea, that France is a democracy of peasants and working men under a motherly administration, with a restricted town population which lives cheaply and grows rusty, and with needy officials who are on the look-out for promotion, and never take root.

### CHINESE OF THE WEST.

But as a whole, he thinks, France has reached a high level of justice and prosperity. Equality is practised, no favours are shown, and justice is independent. The most conspicuous feature of modern France, M. Tainé thinks, which has produced the greatest amount of good and evil is that the builders of modern France seem to have argued that there are a certain number of things worth having, and that every one must have his share—no one too large a share, but almost every one a small or a middling-sized share. Everything is on a petty scale, there is no individual initiative and no soul:—

We are developing the system of the Chinese. We prepare for examinations, we pass examinations, and we fall into line. This system implies a mechanical or a forced education, college life, the high stool from morning to night, boredom, suspense, intrigue, narrow ideas, and the spirit of a hireling.

### THE POWER OF THE PRIEST.

M. Tainé was very much impressed with the increasing power of the priests in provincial France. The priest had it all his own way. When the Catholics opened schools in opposition to the Government lycées, the lycées lost half their scholars. M. Tainé says:—

There is no one to compete with them, for their education is not general for all alike, but suited to the needs of the individual. They make friends of their boys; the teachers, free from family cares, are governed by a feeling of corporate union; their thoughts and efforts are devoted to the success of their colleges; and having no domestic ties, they bestow their paternal tenderness and friendship on their pupils.

Young men escape from their influence at about twenty to twenty-five years of age, but almost invariably return to their allegiance when they settle down in life. Provincial life seemed to M. Tainé to attenuate the individual and exhaust his faculties in little whims and trifling duties. The great thing is to kill time. The prevailing characteristic of French provincial life is that men have no occupation. In the absolute dearth of all employment the clergy find their great opportunity:—

The clerical net is spread in these stagnant marshes. It is the old ladies, the fathers who have turned Conservative in their dotage, who make bequests to the clergy. They have no excitement, no mental stimulus; religion with its pomps and associations, the weight of traditions, the never-ending solemn litany, draw them back into the old routine. . . . Religion owes much of its power in the country to the fact of its being an occupation, a mechanical exercise which gets through a certain number of hours, and the power of the clergy consists in their being a class of officials.

### M. TAINÉ'S LOVE OF NATURE.

M. Tainé in his notes is rather fond of generalisations; he deals with the human beings and the country he passes through in the mass. The objects which attract his attention are the types of the whole rather than the exceptions. His general estimate of his countrymen is pessimistic, as he himself admits. He compares them with what they might be rather than with what they have been. He does not consider so much the progress which has been made as the immense improvement which is necessary before man reaches his ideal. When M. Tainé describes the scenery it is otherwise. His mind always seems to be on the watch for the ideal in nature, and his notes contain many charming descriptions of land and sky and water. Water especially had an absolute fascination for M. Tainé. To him the sparkling blue sea was the most beautiful thing in the world. He is always forgetting the "human swarm" and revelling in the beauties of the landscape. M. Tainé was a Northerner, and although the brightness and vivacity of the South fascinated him, he always seems more at home in the sober North. The following passage is a good example of the criticisms with which the notes are full:—

In the south you must live sensuously, like a painter—love a dainty, well-dressed woman, a merry face under a dark veil of hair; a deep shade beneath a long grey wall that cuts sharp into the living blue; exquisite grapes that melt like honey in the mouth; but you must hide away all that is within you, all meditation, profound and tender.

## WOMAN AS GOD ALMIGHTY.

MISS HOLDSWORTH'S "THE GODS ARRIVE."\*

THIS story of Miss Holdsworth's is extremely interesting and very clever. Its chief interest is psychological, for it is the latest and in many respects one of the most characteristic expositions of the philosophy of the modern woman, or at least of some modern women. "The Gods Arrive" is an attempt, and on the whole a brilliantly successful attempt, on the part of a clever woman to embody in a six-shilling novel her whole theory of existence. And that theory, strange though it may seem to the unregenerate man, is nothing more or less than this: That it is the duty of every woman to play the rôle of terrestrial Providence to all her men folk; that in the discharge of this tremendous duty she has to tread the dolorous way of the Cross; and if she does not achieve an impossible success in her mission, she ought to torture herself with unending remorse. The whole philosophy is never dogmatically stated, but very subtly insinuated—it oozes out, so to speak, at the pores, it is the very atmosphere of the book. The author's standpoint, and that of her heroine, is nothing less than the assumption, sublimely audacious though it was, that every woman is born to the responsibilities and duties of God Almighty.

Miss Holdsworth's heroine, Katherine Fleming, is a Newnham girl, who, when the story opens, is winning a good place for herself in the ranks of London journalism, with which she combines also the practice of addressing public meetings in the interests of labour. She is a clever girl, is Katherine, full of smartness and energy, with an ambition too big for her fragile body, but with an iron will and an unlimited capacity for self-sacrifice. This poor girl, in deference to her idea of playing the part of terrestrial Providence, is compelled, first, to give up her career on the press in deference to one brother, then to efface herself for a second brother, and finally to abandon her lover and dedicate herself to a life of single blessedness out of deference to her ideal of her duty to her family.

There is something very exalted, very ideal, in this conception of a woman's duty, and readers of "The Gods Arrive" are perpetually being reminded of the tremendously exacting standard to which the modern woman has to live up. Katherine is always reproaching herself for not having done perfectly impossible things, for not having reconciled two perfectly incompatible duties; and, in short, she is covered with remorse and bowed to the dust with shame because she is not able to combine functions impossible to mere mortals. She goes down, for instance, to take charge of the farm which her easy-going brother Tom had allowed to go to wrack and ruin. By a great *tour de force* she was able, even in those days of agricultural depression, to pull the farm together and save the family from ruin. But because she did not at the same time do this good work through the agency of Tom, and left him at a loose end to do as he had been doing before, she must charge her sensitive conscience with all the responsibility for the said Tom's philandering with his sister-in-law, and his desertion of his betrothed. Nay, further, when the said betrothed, in despair at his abandonment, virtually commits suicide by riding a horse at an impossible gate, with the result that she was picked up dead with a broken back, this unconscionable Katherine debits herself with the responsibility for the girl's death. In short, Katherine Fleming

considers herself the hub of the universe, and when anything goes wrong writes it down against her own account, never recognising that the responsibility of mortals is limited by their opportunities, by their physical strength, and by the amount of light that is given them to discern what they should do. If woman, or man either, is to play the part of God Almighty, the first thing they need is omniscience and at least sufficient prescience to see what is going to happen at least a year or two ahead. As they have not got either one or the other, they cannot be held responsible for qualities which they have been denied by their Creator.

Katherine does not recognise this. It is evidently her inborn conviction that she has to run the whole show, and that if she fails in any opportunity, she ought to sit in sackcloth and ashes and give up her profession, her prospects, her love, in order to atone for the consequences of her shortcomings.

All this is very noble in one way, but it is very impracticable in another. A tender conscience is a very good thing, but when your conscience takes to worrying you because you have not, with finite faculties, achieved infinite tasks, your conscience is little better than a crying nuisance.

Having said this much concerning the philosophy which underlies "The Gods Arrive," I hasten to say that the characters are well drawn, especially the women. The men are a poor lot, very poor, but this perhaps corresponds to the status which is allowed to our sex in the new era when woman has begun seriously to exercise her divine attributes. There are three young women who all stand out conspicuously from the canvas: Katherine the journalist, Tonina the musician, and Peggy, the smart young woman who takes to breaking in horses, and ultimately breaks her back as a remedy for disappointed love.

The nearest approach to a hero in the book is one Franklin, a poor stick, a very poor stick, who does nothing worth doing excepting make one speech, which wins an election—quite an impossible feat, by-the-way—and who generally muffs all his chances and seems to be created for the purpose of showing how poor a creature a man is who does not recognise the divine woman. As for the heroine's brothers, they are quite unworthy to have been born in the same family as Katherine Fleming; not even the accident of their unfortunate sex is sufficient to account for the gulf which yawns between them. But the person in the book who stands out as far the most real and delightful creation is old Martha, the cowman's wife. She is a gem. Her homely, motherly talk, her dealings with her chickens, her puppies, and especially her old man, are quite admirable. There are very few more palpably living and lovable old women in modern fiction than Martha.

Miss Holdsworth has a great faculty for saying extremely smart and incisive things, but I am not going to gut her book for epigrams. The reader will find them in plenty when he turns over the pages. One more remark and I have done. Miss Holdsworth does not make her heroine a Christian, much less *the* Christian, but in everything that constitutes the Christian ideal, Katherine Fleming is far and away more worthy of that name than Hall Caine's demented hero. Katherine lost her hold upon the Christian faith when at College; but there is in her an unswerving devotion to the principle of sacrifice, culminating at last in the dedication of her life to the service of her fellows, which is immeasurably superior from every point of view to the hectic fever of John Storm.

\* "The Gods Arrive." By Annie E. Holdsworth. William Heinemann, 21, Bedford Street, London, W.C.

**SOCIAL EXPERIMENTS.****WHAT SWITZERLAND HAS TO TEACH US.**

SWITZERLAND has been called the playground of Europe, but it is also a kind of European laboratory in which social experiments can be tested and tried on a small scale before being adopted by other nations. No one will deny that the Swiss are an independent and sturdy race, but nevertheless they have gone further in the direction of State socialism than any other country. Both the federal and cantonal governments have been making social experiments in many directions which are well worth the attention of all those who are interested in the amelioration of the condition of the people.

**THE WORKING-MAN'S SECRETARY.**

Mr. W. H. Dawson has written, and Messrs. Chapman and Hall published, an interesting book on "Social Switzerland" (6s.), in which he gives some account of the present-day social movements and legislation in the Swiss Republic. It is impossible to notice more than a few of the subjects Mr. Dawson deals with in his book. He describes at some length the factory legislation, both federal and cantonal, one of the most interesting features being the law that children under fourteen may not legally be employed in factories. Mr. Dawson's account of the Swiss Workman's Secretary is very instructive. This official is elected by the Swiss Working-men's Federation, a union of labour associations. He is a private individual, but is paid by the State. The Workman's Secretary is a kind of tribune of the people, who has the general oversight of the welfare of the working classes. His duties are to further the economic interests of the labour world in general, investigate industrial conditions in all directions, and facilitate the realisation of the needs and desires of the working classes in so far as they are of an economic nature and fall within the rightful province of legislation. Neither the Federation nor the Secretary regard public agitation as part of their work. They only deal with questions of general interest to the community. The Secretary is the link which connects all the various movements for reform. When he was appointed he at once placed himself in communication with the various cantonal governments of the country, with the Labour Departments of other States and with private associations concerned, including commerce, agriculture, and social reform in Switzerland. He is constantly appealed to for advice by labour associations and individuals, and acts as the intermediary between them and the local authorities. The institution is one which has proved an unqualified success, and in ten years has gained the confidence of the industrial classes.

**SOCIETIES OF PUBLIC UTILITY.**

Some towns in Switzerland seem to have realised the ideal of the mission of the Civic Church. The Societies of Public Utility correspond exactly to the Civic Centres which have been commenced in a tentative fashion in some English towns. Mr. Dawson's account of the work of these societies is extremely interesting, and should be an incentive to the formation of similar associations in this country:—

They seek to discharge the multiplicity of philanthropic duties incumbent upon modern society which are everybody's business in general yet somehow nobody's in particular. The Society of Public Utility is a sort of philanthropic clearing-house, by whose agency the human objects of educational and reformatory experiment are handed over to the experts most interested in, and best able to deal with, their case.

Mr. Dawson describes at length the work of the "Society for Promoting the Commonweal" of Basel. It

was established in 1777, and has a membership of over one thousand. It is impossible to summarise its almost innumerable activities, but it covers the whole ground of philanthropic endeavour in a systematic fashion. It has promoted systematic movements in the interests of thrift and education, and these have multiplied in variety and number until now the society either supports entirely or liberally subsidises over fifty institutions and agencies for the welfare of the industrial and the poorer classes of Basel.

**BOARDS OF CONCILIATION.**

The various experiments in favour of arbitration between employers and employed have on the whole proved very satisfactory. A Board of Conciliation established by private agreement between employers and employed in Zurich collapsed after two years, but when either the Municipality or the State has been connected with the Boards they have been very successful. The "Conseils de Prud'hommes" of Geneva has done excellent service in the cause of industrial peace. It was established in 1883 and has completely gained the confidence of the public. Mr. Dawson says:—

It is not too much to say that the hopes of the promoters of the "Conseils" have been altogether realised. Far from having fostered ill-feeling, and provoked disputes between employers and employed, they have made industrial relationships more amicable, have removed many misunderstandings and defects in relation thereto, and have promoted the formation of organisations on both sides for the friendly readjustment and regulation of the conditions of labour.

**WORKMEN'S RELIEF STATIONS**

Switzerland is covered from end to end with Workmen's Relief Stations, where the genuine labourer travelling in search of work is provided with free food and lodging. These stations are for the most part under the control of the local authorities, and have been found to work successfully. Before admission to the station the workman has to produce papers proving his identity:—

The examination satisfactory, he receives a stamped and dated certificate, entitling him to admittance to the lodging house; his name, calling, age, and home being entered in a register for record and future reference. Not only is he lodged, but an attempt is made to find him work in connection with a register of employers which is kept on the premises, and new garments may be given to him if he should stand in need. As a rule, no relief is given if the applicant proves not to have been in work for three months, and if he refuses work offered to him, though exceptions are frequently made. A workman is only given dinner and lodging once in six months at the same station. When the wanderer goes on his way, he takes with him a stamped and dated certificate which he must present at the next place at which he stops, but he must have travelled at least two hours from one station to another in order to qualify again for relief.

The effect in the Canton of Zurich of the Relief Station system has been to discourage vagabondage, owing to the stringent control which is exercised.

**VARIOUS EXPERIMENTS.**

The various Municipal Labour Bureaux have done good work, and at Basle have been found to be almost self-supporting, the State subscription having fallen from £145 to £24. The Geneva Labour Exchange acts as a centre of information as well as a labour registry. It instructs parents in matters relating to apprenticeship and the choice of employment for their children. It also helps working people in case of accidents, and advises them upon the laws relating to employers' liability, factories and wages contracts. This advice is given free. Among other interesting experi-

ments which Mr. Dawson notices, are various schemes for compulsory and voluntary Out-of-Work Insurance. These have, however, not progressed beyond the experimental stage. The voluntary scheme of insurance at Berne is doing good work. Its membership numbers over 600. In 1895, out of 333 members, 219 claimed relief, and received sums varying from 6d. to £4 6s. 8d. The compulsory insurance, which was in force at St. Gall for a short period, failed because it did not sufficiently classify the workers. Mr. Dawson also describes the various efforts which have been made in regard to Poor Law Relief and Technical Education. Switzerland has a very complete system of technical education, the Federal Government having taken the industry of the country more completely under its protection than any other Continental Government. There is also an interesting chapter dealing with the Federal monopoly of alcohol, which Mr. Dawson thinks has worked beneficially. The book is full of information, and is one which should be very useful to the social reformer.

### THE LIGHTS AND SHADOWS OF LONDON LIFE.

#### "LIZA OF LAMBETH."

MR. FISHER UNWIN has sent me a human document in the shape of a book called "Liza of Lambeth." It is a study of life in a mean street—Vere Street, leading out of Westminster Bridge Road. The author, W. S. Maugham, is a medical man who has had ample opportunity of studying low life at first hand. Liza is a factory-girl who luxuriates in feathers and fringe, and dresses, when she is out for a holiday, in brilliant violet. Her story is very simple. It is a story of which no doubt there are numerous examples, and it is on that account all the more painful to read. Her tale is told with a ruthless realism, which will cause the book to be tabooed by all those who do not care to hear the unadorned vernacular of the London slum, or to join in the intimate discussions of matrons on their doorsteps.

Liza in the first chapter does various astonishing things. As, for instance, the performing of a skirt dance in the middle of the street to the tune of a barrel organ. In the course of this dance she kicked the hat off the head of one of the bystanders, and then at the end fell on her hands and turned head over heels in a magnificent Catherine wheel, which apparently did not in the least interfere with the ostrich feathers in her hat. Then the men all try to kiss her; she bolts, and as she is running, a man steps out in her way, lifts her up, and imprints two sounding kisses on her cheeks. Whereupon there is language which even Mr. Maugham has to veil behind the decency of the —. The acquaintance thus begun ripened at an outing on Bank Holiday, and culminated in her succumbing to the very primitive love-making of her admirer, who happened to be unfortunately furnished with a wife and several children already. The story of Liza's love for her married lover is told with considerable simplicity and pathos. The wife inevitably appears on the scene at last, and there is a horrid description of the fight between the two women, both of whom are in an interesting condition, but who stand up and pound each other until the blood flows, in a public street in the presence of an applauding ring of loafers. The whole thing is hideous and squalid to the last degree. Liza's mother, who is an extremely well-drawn character, as indeed are all the characters in this strange and awful little book, plies Liza with spirits, she takes to bed, and dies of the natural consequences of the violence to which she had been subjected. The story is very slight, but

the characters are depicted with great vigour, and stand out before us as life-like as if we were actually standing in the street listening to their talk. And the charm of the book is not its brutality, but the pathos of it all. Poor Tom, Liza's lover, who, with a devotion and loyalty to the girl he loves, offers to marry her even when he knows the worst, stands out in vivid contrast to the drunkenness, violence, and general riot of the selfish sensualism which surround him. The book is open to plenty of criticism on the ground of its coarseness; but it is life, life as it is lived in a Lambeth slum. There is no attempt at moralising, and oddly enough you even feel sympathy with the man who was the author of Liza's downfall.

#### "STUDIES IN BOARD SCHOOLS."

What a relief it is to turn from "Liza of Lambeth" to Charles Morley's "Studies in Board Schools." It is like coming out of a steaming dungeon, rank with all mephitic odours and hideous with the sound of oaths and curses, into the fresh bright fragrance of a May morning. Charles Morley was one of our old Pall Mallers; he is John Morley's nephew, and began his journalistic career as his uncle's private secretary when he was on the *Pall Mall*. For the last fourteen years he has done any amount of good work on the press, but he has never hitherto had an opportunity of really showing what there is in him of keen observation, of sympathetic insight, and of facile penmanship. In his "Studies in Board Schools," which Messrs. Smith, Elder and Co. have published in a collected volume, he describes the bright side of life in London, that side indeed which is as the radiance of dawn behind such dark clouds as those described by Mr. Maugham. Many of our readers will have read the sketches in the *Daily News*, to which they were originally contributed, and they will be glad to know that they are now accessible in volume form. Every one who is inclined to be despairing about the future of our civilisation should never come out of range of Mr. Morley's book. He should lay it on the desk before him in the morning, and he may put it in his pocket and carry it about with him through the day. There is no printed matter I know of that has been published for years that is so well calculated to give a man courage and hope and comfort and faith in the future. Multitudes of Lizas exist in Lambeth, no doubt, and Vere Street swarms with children, but to all the Board School doors stand open, and they are not left to perish untaught. Charles Morley has the distinction of having been the very first writer since the Education Act was passed in 1870 to give the general public a vivid life like picture of the work which the Board Schools are actually accomplishing. To most of us, the word School Board, or Board School, suggests nothing but a weary wrangle between Diggleites and anti-Diggleites, between Church and Chapel. Mr. Morley brushes all these sight-obscuring clouds of controversy away, and takes us right into the Board Schools themselves, enabling us to hear and see the teachers at their work. There is not a single uninteresting page in the book, and if speakers in the School Board campaign would but give readings from its pages, they would considerably enliven the meetings which the citizens are summoned to attend. The last chapter, that as to the religious teaching given in London Board Schools, should be reprinted as a tract and circulated by the million throughout London this election. I heartily congratulate Mr. Charles Morley on having achieved a work, which, although unpretending enough, is nevertheless of more national importance than many more imposing works that are issued from the press.

## WHAT SHOULD BE DONE IN INDIA.

BY A NATIVE.

"ENGLAND and India" (Chatto and Windus, 2s.), by Mr. Romesh C. Dutt, is a very timely book. Mr. Dutt is a native who has been in the service of the Indian Government, and who has taken a keen interest in all that concerns his native land. He endeavours in his book to give a record of progress in India during the last hundred years, and at the same time sets forth how he thinks that progress may be continued.

## ENGLAND'S MISSION IN INDIA.

Mr. Dutt thinks that the welfare of India is bound up with that of England, and that the chief and almost only guarantee for future progress is that the history of the two countries runs in parallel streams. The state of public opinion in England sooner or later influences the policy of our administration in India. Mr. Dutt elaborates this point at rather too great length, devoting a large portion of his book to summaries of English and European events. He is strongly convinced of the beneficial effect of British rule in India. His remarks on this point may be commended to those whose one panacea for all the ills of India is that England should promptly be cleared out of the country. The great principle upon which we have ruled India is that India should be governed for the benefit of the Indians, and that any advantage we may derive must be "incidental to, and inferential from, that course of proceeding." England has not always acted up to this high principle during the last sixty years; but Mr. Dutt admits that the principle has never been entirely lost sight of since the time of Bentinck. The history of the past hundred years is the best proof of this assertion. Life and property are protected, education and culture have become widespread, and popular rights and privileges have been extended.

## SOME DEFECTS.

But British administration has not been without its flaws, and Mr. Dutt points out some of them. He is afraid lest the progress of the past should be interrupted in the future. He thinks that the Indian administration, although undoubtedly honest and able, has made several serious blunders, which he enumerates as follows:—

The worst of these blunders is its inordinate expenditure, which is impoverishing the people, and making them defenceless against droughts and famines. It will be found that the continuous increase of the State-demand from the produce of the soil, which is virtually the only means of subsistence for the mass of the people in India, is making them incapable of saving in good years, and resourceless in bad years. It will be found that the imperial policy of England in the East to secure a 'scientific frontier,' and to maintain an adequate army against Russia at the cost of India, is exhausting that rich and fertile country. It will be found that a system of almost unlimited borrowing of English capital and of increasing the public debt of India in times of peace, drains the resources of the country for the payment of the interest in gold. And it will be found that the non-representation of the views and opinions of the people in the administration of the country makes it weak and uninformed in essential matters, wanting in touch with the people, and ignorant of the real condition and even the real poverty of the voiceless millions.

## LIMITATION OF THE STATE DEMAND FROM THE SOIL.

The great difficulty to be faced by all English administrators is the extreme poverty of the Indian people. Four-fifths of the population depend upon agriculture, and agriculture in India is a very precarious

mode of livelihood. To aggravate matters, English competition has ruined Indian industries, and driven the workers back to the land. The agriculturist is crippled by the uncertainty as to the amount the State will claim as revenue from his holding. Mr. Dutt is of opinion that it would be the salvation of India if there could be a permanent limitation of the State demand from the soil. This remedy was adopted by Lord Cornwallis in Bengal, and it has saved the greater part of that province from the famines which have desolated the rest of India. At present there are five principal land systems in India, only two of which are permanent. Under the other systems the land revenue is fixed at the end of a period of years. At each recurring settlement the Government can and does increase the revenue demanded from the produce of the land. This makes it impossible for the people of India to save anything, and so they have nothing to fall back upon when the crops fail.

## LORD BEACONSFIELD'S LEGACY.

The cause of the continual drain upon the resources of India is the large military charges entailed by the defence of the North-West Frontier. Our present difficulties are largely due to the baneful influence exercised by Lord Beaconsfield on the administration of our great dependency. We are now reaping the harvest which he sowed. The military expenditure has grown beyond all proportion to the resources of the country. The money is not spent in Indian wars, but in the desire to obtain "a scientific frontier." This expenditure, Mr. Dutt argues, is really not Indian but Imperial, and he thinks England should pay a fixed proportion. This would be better than paying a definite amount, as it would not only relieve the Indian taxpayer directly, but would secure a much needed popular control over Indian military expenditure.

## MORE REPRESENTATION.

The third reform which Mr. Dutt advocates is an improvement of the system of administration. At present power is too much centralised in individuals. He also thinks that the time has come when the people in the villages might safely be entrusted with the management of purely village concerns. The subject is a difficult one, but it should be possible to invest the village unions now in course of formation throughout India with power to settle local disputes, to adjudicate simple money claims, and generally to manage the concerns of their villages. A fourth reform is somewhat similar. It is that the educated Indian should be allowed to take a greater share in the administration of the country. England has solemnly promised that natives shall be admitted to a large share in the administration, but these pledges have been as yet very imperfectly fulfilled, as the following statistics show:—

Out of over 100 district and divisional judges in the five advanced Provinces of India, only 8 are Indians; out of nearly 200 district officers, only 7 are Indians; there are 16 Indian doctors of the higher rank out of over 200; there are 3 Indian higher police officers out of over 200; and the number of Indian engineers is only 18 out of over 200. The proportion of Indian officers in the higher grades of the Postal, the Telegraph, and the Opium departments is still smaller; and the proportion of Indian officers in the less advanced Provinces is, of course, very much smaller.

The best administration, Mr. Dutt maintains, may err through ignorance, but if the native Indian were allowed more opportunities of expressing his views, many blunders which are now committed would be avoided.

## EPISODES IN A SAILOR'S LIFE.

THE general reader owes a debt of gratitude to Mr. W. T. Booth for inducing his friend Capt. Frederick Benton Williams to write an account of his life and exploits as a sailor. "On Many Seas" (Putnam, 6s.) is the plain story of a plain man, but it enables the reader to realise more than any book published for some time past the real conditions of life at sea. Capt. Williams began as a boy on board a trading vessel, and is now captain of a sailing ship. He has had experience of a sailor's life in all parts of the world, and under all conditions, during the last forty years.

## ON BOARD A "LIME-JUICER."

Captain Williams is an American, but has sailed under all flags, chiefly British however. He served his apprenticeship as a boy on a local trading vessel, and very rough training it was. What with fights and cuffs he soon became acclimatised to the normal conditions of a sailor's life. He had visited China and the Indian Ocean, and lost a finger in a fight with Chinese pirates before he saw London. He then joined a British vessel, and became what is regarded by American sailors about the most despicable being afloat, that is a "British tar," or as Yankees say, a "lime-juicer" or "lemonader," or, "lemon-pelter," or simply a "pelter." This extraordinary nickname is due to the Act of Parliament by which English ships are required to provide lime-juice as a preventive of scurvy. Adventures followed close upon each other from this time onwards. Captain Williams was twice wrecked, losing all his possessions, once on the English coast and once off Dunkirk. A sailor hardly ever remained with a vessel more than one voyage. If he did not leave of his own accord, the captain treated him so badly as to compel him to desert. This was done in order to procure a crew at lower wages than the old one, and if the men deserted their wages were not paid, and the captain retained them. A sailor seems to be in a chronic state of want of cash. Short voyages are no help, for there is no time to accumulate money for pay day. So whenever Captain Williams desired to refurnish his wardrobe he was compelled to take a long-distance voyage.

Almost the only joys of a sailor's life were sleep, beer, and grumbling. Captain Williams got into many a scrape by indulging rather too freely in liquor. To be jailed for mutiny was a common day occurrence, but then mutiny covered a great many offences. For a time he was in the Chilean navy and had an easy time of it, the chief business being to smuggle liquor on board the war ships and fight the town police. But the Chilean mode of punishment was the reverse of pleasant, and Captain Williams deserted. Almost by chance he was made the mate of a vessel in which he had taken service as a common sailor. He then made the discovery that he knew as much about navigation as any mate, and wisely determined never to go to the fore-castle again. His book is filled with accounts of adventures from end to end, until we wonder how he has lived to tell the tale.

## "BUCKO" OFFICERS.

The crew and the captain and mates seemed to live at perpetual feud. Discipline was maintained by sheer brute force. A "bucko" officer was a man who would stand no nonsense. When a crew got an opportunity of paying off old scores against such a man no mercy was shown. Perhaps the best instance of this is the following

account of what happened on board a New Orleans packet. This is no isolated case; the book contains many similar instances of brutality. According to the expression on board the packet ships, it's "slaughter from the word go." The mates had their reputation to maintain as "bucko" officers, and on the other hand the crew had their own reputations as bad men to uphold. There was not much monotony about the voyage at any rate:—

It was soon dark, and then the circus began in earnest. The cuss word and the crunch of the belaying pin were continually in our ears and on our heads. Every little while one of the mates would be overpowered and go down under a yelling and kicking crowd; but only for a moment, when the others would come to his rescue, and, as they were sober, it was easy to pull off the sailors and club and kick them out of the way.

After having been knocked about Captain Williams retired to his bunk:—

How long I slept I had not the slightest idea, but I was rudely awakened by being dragged out of the bunk by the hair of the head. McDonald was holding a lantern, and it was the mate who had come across my house again. Amid a volley of curses he kicked, thumped, and flung me out of the door on deck; and following me out picked me up by the hair again, and standing me up against the rail, he grasped me by the throat, and, with my head jammed solidly against a dead eye, he hit me as hard as he could right on the eye, laying my cheek open to the bone, and giving me a mark I shall carry to the grave. Up went his fist again, and, believing my life to be in danger, I tried to get out my knife, but my arms were jammed in such a way that I could not reach it; and just as I was scringing for a second blow I felt his grasp on my throat release, and he fell away from me to the tune of a wild Irish yell. "Ho, ye blackguard, I have ye now! and be the powers I'll pay ye for some of the work you've done this night, ye murderin' brute, ye!" and all the time the good solid blows were being rained down on the mate, who was on his knees on the deck, trying to rise, and cursing and yelling for McDonald and Parker (the other officers). The blood was pouring down my face in a perfect torrent, and I felt weak and dizzy, but I got in a good kick on his jaw, and another in his ribs, besides a couple of punches, which, though weak, I found highly gratifying. All this time the Irishman was working away like a p-le-driver with something I couldn't see what, and yelling and cursing like a madman; and the mate, who must have had a head of iron to stand the terrific blows he was getting, now began to shout that he was being murdered. As I was shifting round to get in another kick, somebody caught me by the neck and threw me down on my back on the deck and a heavy foot was planted on my chest, while I heard a strange voice say, "Here, stop that; let up, do you hear, or I'll blow the d— head off you!" "Who the h— are you?" said the Irishman, who had just been grabbed round the waist by one of the mates. "I'm captain of this ship, and I want this thing stopped; it's gone far enough."

## The Story of India.

A USEFUL little book at the present moment is "The Story of India" (Horace Marshall, 1s.), by D. C. Boulger, which is the second volume in the Story of the Empire Series. Mr. Boulger gives a brief sketch of Indian history, which is supplemented by the editor with some useful statistics gathered from the Indian blue books. Mr. Boulger devotes the greater part of his book to the story of the rise and consolidation of our Indian Empire. He deals rather too casually with events after 1817, and does not give any adequate idea of what English administration has accomplished in India. But the volume gives, in a small compass, the salient facts of Indian history since the days of Clive.

## "AN OUTRAGE UPON ART AND UPON MORALS."

A READER of the REVIEW of REVIEWS last month wrote to Mr. Hall Caine asking him whether I had correctly interpreted the scene in "The Christian" when I stated that John Storm had been saved from murder by a breach of the Seventh Commandment. To this correspondent Mr. Hall Caine sent the following letter:—

I am much obliged by your letter, and shall feel indebted to you if you will make it known that the interpretation of the scene given by you is the right one, the only right one, the only possible one, unless the words are to be sub-edited (as in the *R. of R.*) and the meaning imposed upon it be helped out by tactics which I cannot but call unfair and illicit. The interpretation given by Mr. Stead is, I am sorry to say, an outrage both on art and on morals.

I entirely agree with Mr. Hall Caine that "an outrage upon art and upon morals" has been committed. We differ as to its author.

Of course I am bound to accept Mr. Hall Caine's explicit repudiation of any intention on his part to suggest that his heroine saved her life by sacrificing her honour.

But the book stands as he wrote it. It is "an outrage on art and morals." If Mr. Hall Caine did not intend it to mean what it says, then he was also guilty of an outrage on common sense and the plain meaning of the English language.

If Mr. Hall Caine did not mean to imply this, he will have to rewrite the culminating scene wherein John Storm succumbs to the temptation of earthly love. It is said that he wrote and rewrote three times expressly to preclude the possibility of any reader falling into the error of imagining that his homicidal hero rigidly denied himself the natural expression of overmastering passion. Mr. Hall Caine had better try a fourth time. It is evident he felt the suggestion in his own mind. Its traces are only too obvious in his book.

If Mr. Hall Caine should reply that he does not know how he could do more than he has done to prevent the reader from drawing the only possible inference from the story, I can explain what could be done with the utmost ease.

He has only to introduce (1) a sentence saying that after Storm had clasped Glory in his arms—by no means for the first time—and covered her with kisses, she took him to the door and showed him out; (2) to introduce another sentence in the description of John Storm's remorse in order to explain that he was remorseful, not because of attempted murder or actual adultery, but solely because his celibate ideal had been tarnished; and (3) in describing how Glory felt when she woke next morning he can omit the following passage:—

She was conscious that a subtle change had come over her. She was not herself any longer, but somebody else as well; not a woman merely, but in some sort a man. Not Glory only, but also John Storm. Oh! delicious mystery, oh! joy of joys. His arms seemed to be about her waist still, his breath to linger about her neck.

To do this would clear things up. It would also, it is true, make the whole scene impossible and unnatural. But if Mr. Hall Caine does not want his story to bear the interpretation placed upon it, some such changes he will have to make.

It is a delicate question discussing whether an author does or does not suggest a breach of the Seventh Commandment. But it must not be forgotten that in English novels the violation of that law can only be suggested. All that

the most risky authors do is to portray the guilty pair, to bring their narrative up to the precise point that Mr. Caine does, and then to ring down the curtain just in the same way. They very seldom ring it up again first thing next morning. But this Mr. Hall Caine did in order to describe the feelings of both the parties in terms which could hardly be more explicit as to what had actually taken place.

What are the facts? Here is an actress, full of exuberant, physical vigour, who has made a great success by the fidelity with which she has personated on the stage the emotions of a fallen woman. She had lived for months in the atmosphere of music-halls and theatres. The whole of that Derby Day she had been revelling in the Cockney Carnival at Epsom. She had been drinking glass after glass of champagne, and the whole party had got into such a state of excitement that the Home Secretary's Secretary, who had won the Derby, did not hesitate to kiss her publicly on the coach before a company of demireps. After that she went with the same crowd to a kind of West-end night house, frequented by the vicious of both sexes. After more wine and a scandalous orgie, broken up by a fight, her lover kisses her again and swears he will go home with her, and if he is refused he will break in her door. Fresh from such scenes of debauchery, flushed with the passionate adjurations of her lover, and excited by the champagne which she had been drinking the whole day, Glory comes home to find her old lover ensconced in her room. Her maid had gone to bed, and the man, who had manifestly gone crazy, threatened to take her life. He was madly in love with her, but his erotic passion had taken a murderous turn. Glory, seeing this, to save her life, deliberately uses to the uttermost every physical influence she could bring to bear upon him. She unlooses her hair, tears the lace off her neck and bosom, intoxicates him with the fragrance of her breath, and then, as the supreme moment comes, she cries "Kiss me!" and they collapse into each other's arms.

Then ensues a significant silence—an interval of indefinite duration. When it was over day was dawning, and we are shown John Storm slinking away from the house, where he had spent the night, overwhelmed with bitter remorse, feeling like a damned soul. Glory, on the other hand, sleeps soundly, and when she wakes later in the day she is proudly conscious of a new existence. She is no longer only a woman, but in some mysterious sense also a man. Her feelings are curiously like those of "Liza of Lambeth" on the morning after her fall, only in the realistic page from the Book of Life in the Slums the consciousness of union is not stated so boldly as it is by Mr. Hall Caine.

Now I put it to Mr. Hall Caine himself: So long as the story stands so, what other conclusion can the reader come to but one? even though that is one which he declares makes mincemeat of his heroine and a hash of his tale. If he questions this, let him empanel a jury of six actresses and six men of the world and take their verdict.

### IS IT AN "UNWARRANTED INFERENCE"?

Dean Farrar, in his review of "The Christian" in the *Contemporary Review*, takes a hand in the controversy between Mr. Hall Caine and myself in the following passage:—

"But here I must correct the entirely unwarranted inference that, in the scene between John Storm and Glory Quayle,

which is the climax of the book, it was meant to be inferred that the hero and the heroine fall at the supreme moment into mortal sin. This has been assumed in more than one review. Such a *dénouement* would have been shocking, horrifying, thoroughly inartistic, and entirely needless. I can only say that when I read the book it never even crossed my mind that such a sin was hinted at; nor can I find anything to justify the assertion that Glory Quayle only marries John Storm upon his death-bed in order to save her future reputation. . . . There is not a word to show that the writer had any such thought in his mind, and it is unfair to attribute it to him when he gives no justification for it. He ought not to be held responsible for the mistaken inferences of his reviewers; and in future editions he will, I hope, exclude the possibility of so complete a misreading of his intention."

Now let us look for one moment at this "entirely unwarranted inference" in the light, not of what crossed Dean Farrar's mind when he was reading the book, but the cold, hard facts as they stand. Fortunately, Mr. Hall Caine has himself supplied us with the standard by which to measure the significance of his language. It is not as if he had never written any books before, nor is the scene between Glory Quayle and John Storm the only time that he has attempted to suggest to the reader the commission of mortal sin.

#### THE LEADING CASE OF KATE IN "THE MANXMAN."

When I read Mr. Hall Caine's indignant repudiation of the statement that this suggestion was plain and unmistakable, it occurred to me to look up "The Manxman," in order to see in what way Mr. Hall Caine does describe the scene in which the mortal sin in question admittedly was committed. In Mr. Hall Caine's opinion, I believe, the sentiments ascribed to Glory Quayle are "never those of a woman who has transgressed the moral law." Now Glory is not the only woman whose feelings after the transgression of the moral law have been described by Mr. Hall Caine. In "The Manxman," Kate throws herself at the head of Philip, and succeeds in inducing him to become as oblivious to the obligations of the moral law as Glory did in the case of John Storm. But in the case of Kate in "The Manxman," Mr. Hall Caine expressly states in so many words that the seventh commandment was broken; whereas, in "The Christian," he merely suggests the fact, but does so in stronger terms than any of those he used in "The Manxman" to describe the sin which was actually committed. In order that Dean Farrar may have an opportunity of understanding how entirely well warranted was the inference which he condemns, I quote in parallel columns the parallel passages in the two novels. Of course I do not, and with all due deference to Mr. Hall Caine, I cannot, quote in full, the whole of the scenes, merely because he objects to my quoting the passages which bring the salient facts into strong relief, but I quote textually as follows, indicating omissions thus:—

#### KATE.

##### FROM "THE MANXMAN."

He began by stammering, and went on stuttering, blurring out his words, and trembling at the sound of his own voice.

"Philip, you must not go!" she cried.

"I'm sorry, Kate, very sorry. Shall always remember so tenderly, not to say fondly, the happy boy and girl days together."

"Philip, Philip, you must

#### GLORY.

##### FROM "THE CHRISTIAN."

She was sobbing and laughing by turns. . . . But still he struggled. "What is the love of the body to the love of the soul?" he told himself.

But even at that moment the wonderful eyes pierced him through and through.

"Am I so much changed, John? Am I? No, no, dear! It is only my hair done differently. See, see!" and

not go, you cannot go, you shall not go!"

He could see her bosom heaving under her loose red bodice. She took hold of his arm and dragged at it.

"Won't you spare me? Will you shame me to death? Must I tell you? If you won't speak, I will. You cannot leave me, Philip, because—because—what do I care?—because I love you!"

"I want you! I want your eyes, that I may see them every day; and your hair, that I may feel it with my hands; and your lips, can I help it?—yes, and your lips, that I may kiss and kiss them!"

"Kate! Kate! Turn your eyes away. Don't look at me like that!" She was fighting for her life. It was to be now or never.

"If you won't come to me, I'll go to you!" she cried; and then she sprang upon him, and all grew confused, the berries of the nightshade whipped his forehead, and the moon and the stars went out.

"My love! My darling! My girl!"

"You won't go now?" she sobbed.

"God forgive me, I cannot."

In the middle of the night following the Mellish, Kate, turning in bed, kissed her hand because it had held the hand of Philip. When she awoke in the morning she felt a great happiness.

But everything was transfigured, everything beautiful, everything mysterious. She was like one who had gone to sleep on the sea, with only the unattainable horizon round about, and awakened in harbour in a strange land that was warm and lovely and full of sunshine. She closed her eyes again, so that nothing might disturb the contemplation of the mystery. She folded her round arms as a pillow behind her head, her limbs dropped back of their own weight, and her mouth broke into a happy smile. Oh, miracle of miracles! The whole world was changed.

with trembling fingers she tore her hair from its knot. It fell in clusters over her shoulders and about her face. He wanted to lay his hand on it, and he turned to her and then turned away, fighting with himself as with an enemy.

"Or is it this old rag of lace that is so unlike my jersey? There—there!" she cried, tearing the lace from her neck, and throwing it on the floor and trampling upon it. "Look at me now, John—look at me! Am I not the same as ever? Why don't you look?"

She was fighting for her life. He started to his feet and came to her with his teeth set and his pupils fixed, "This is only the devil tempting me. Say your prayers, child!"

He grasped her left hand with his right. . . . In an explosion of emotion the insane frenzy for destroying had come upon him again. He longed to give his feelings physical expression.

"Say them, say them!" he cried. "God sent me to kill you, Glory."

A sensation of terror and of triumph came over her at once. She half closed her eyes and threw her other arm around his neck. "No, but to love me! . . . Kiss me, John!"

Then a cry came from him like that of a man flinging himself over a precipice. He threw his arms about her, and her disordered hair fell over his face.

Here the chapter abruptly closes. The next opens thus:—

"I thought it was God's voice—it was the devil's!"

John Storm was creeping like a thief through the streets of London in the dark hours before the dawn.

It seemed as if eyes looked down on him from the dark sky and pierced him through and through.

He was himself a sham, a mockery, a whitened sepulchre, and had grossly sinned against the light and against God.

With such feelings of poignant anguish he plodded through the echoing streets.

Glory's awakening is described in still another chapter:—

When Glory awoke on the

Her joy was too bold to be afraid of tangible things. So overwhelming was her happiness that her only fear was lest she might awake at some moment and find that she was asleep now, and everything had been a dream.

morning after the Derby and thought of John, she felt no remorse.

She was conscious that a subtle change had come over her. She was not herself any longer, but somebody else as well; not a woman merely, but in some sort a man; not Glory only, but also John Storm. Oh, delicious mystery! Oh, joy of joys! His arms seemed to be about her waist still, and his breath to linger about her neck. With a certain tremor, a certain thrill, she reached for a handglass, and looked at herself to learn if there was any difference in her face that the rest of the world would see. Yes, her eyes had another lustre, a deeper light, but she lay back in the cool bed with a smile and a long-drawn sigh. What matter whatever happened?

She was happy, happy, happy!

Here is indeed an extraordinary coincidence! I put these two passages before Dean Farrar, and ask him to read them carefully and to say which of the two passages most clearly suggests the inference that mortal sin had been committed. I do not think the Dean or anyone else will for a moment deny that of the two, the inference is more justifiable in the case of Glory than it was in the case of Kate. To read the story of Glory after the story of Kate, knowing that Kate succumbed, no human being could possibly draw any other conclusion than that Mr. Hall Caine meant to suggest that Glory had equally succumbed to an overmastering temptation, reinforced in her case by a sheer dread of murder. As for what the Dean says concerning the *dénoûment* being "shocking, horrifying, thoroughly inartistic, and entirely needless," I leave him to settle that with Mr. Hall Caine. The *dénoûment* is not mine, but his.

### MR. HALL CAINE'S "CHRISTIAN."

By DEAN FARRAR.

DEAN FARRAR'S review of Mr. Hall Caine's "Christian" occupies half-a-dozen pages in the *Contemporary* for October. The Dean says the book cannot be regarded as an ordinary one. Whatever its merits or demerits, it is a book which makes one think. In America, the novel has been welcomed with almost extravagant adulation. In England, it has been angrily, and by some almost contumeliously, condemned. Dean Farrar says, what is by this time very obvious even to Mr. Hall Caine himself, that the title of the novel "was perhaps unfortunately selected." But leaving that out of account, the book is a love story in which a tragical complication is produced by the passion inspired for one another by two natures radically opposed. But in presenting this love story, the Dean says, Mr. Hall Caine "unquestionably meant to urge his own moral and religious convictions upon the consciences of his readers." At the same time he thinks it would not be fair to attribute to the author the views of his characters. Storm, he thinks, can be regarded as a Christian only in so far as he "realises, with one fatal and overpowering excep-

tion, the Christ-like ideal of self-renunciation." He is a man of pure heart and high mind, of a very moderate intellect, and very shallow attainments. "It is monstrous," says the Dean, "to attribute to Mr. Hall Caine the design of presenting this distracted creature, torn asunder by two separate impulses, as the new ideal of the Messiah needed by our century." But if he did not, why did he call him "The Christian"? That question the Dean leaves unanswered.

The Dean carries his charity to great lengths. He is quite sure that the author did not mean to imply that Glory Quayle and John Storm fell into mortal sin, and he is equally "quite sure" that his book is not intended to teach that the aims, methods, and the whole work of the Church of England are hopelessly ineffectual. If Mr. Caine intended his clergymen to be representative of the whole body, then, the Dean admits, no caricature of the conditions of the Church could be more gross than Mr. Hall Caine's picture. He pleads for the addition of "a couple of sentences" to show that this in no way resembles his real opinion.

The Dean does not like Glory Quayle; she is not at all an attractive heroine to him, and he ingenuously concludes that the indirect teaching of the book is exactly the contrary of what every one supposed to be intended when Mr. Hall Caine set forth his story under the title of "The Christian." "The Christian life," says the Dean, "is not attainable by convulsive and hysterical efforts, but by uttermost faithfulness in the common round and trivial task." This certainly is not the lesson emphasised in "The Christian." It is exactly contrary to the whole drift of the book.

### SUNDRY OPINIONS OF MR. HALL CAINE.

"I AM CERTAINLY IN FAVOUR OF THE C. D. ACTS!"

MR. R. H. SHERARD contributes to the *Humanitarian* for October an interview with the author of "The Christian" on "Social Questions." Mr. Caine, we are informed, has seen and corrected the proofs of this series of *obiter dicta*—a point to be remembered in view of the nature of some of the opinions expressed. He indicates that drink will very likely be the subject of his next novel. Referring to Ibsen, he avers that the great dramatist has done no good to the world that he can see, and predicts that in the future Ibsen will be thought "a mad poet who imagined he was a man of the world." Mr. Caine next asserts that impurity is rampant amongst idlers, but not amongst workers. Some admirers of "The Christian" may be rather chilled by the closing paragraph of this interview:—

"You are no doubt in favour—on behalf of our soldiers in India—of the re-enactment of the C. D. Acts?"

"I am certainly in favour of such a re-enactment, horrible as is the necessity of the step. I feel it to be an awful outrage on womanhood. It is terribly one-sided, too, being made first of all in the interests of the man only. Apparently the inequality is a part of the price we are compelled to pay for one of the great necessities of civilisation. But then arises the question why such a necessity should exist at all. Without expressing an opinion on the conduct and management of armies of men, it seems to me awful that masses of men should be forced to live in unnatural conditions of life. Celibacy in armies is just as unnatural as it is in religious houses. And where the escape from it is prostitution, the State is made party to one of the foulest sins against God and humanity.

Here we have the cloven hoof indeed! What are we to think of a man who is "certainly in favour of" what he admits to be an "awful outrage on womanhood?" This is much worse even than the *dénoûment* of "The Christian."

# THE BISHOP OF THE LARGEST DIOCESE IN THE WORLD.

## DR. HARTZELL, THE AMERICAN METHODIST BISHOP OF AFRICA.

*Photo by Howland, Cincinnati, U.S.A.]*

BISHOP HARTZELL.

**A**T the end of last year, a hale, cheerful, vigorous American citizen crossed the Atlantic in the *New York*, and landed at Southampton as the first step of his stage on the way to Africa. He was a handsome, stalwart man, with iron grey hair, kindly intelligent face, with a determination visible on every line that he was in for business and meant to do it. This visitor to our shores was none other than Bishop Hartzell, who was last year appointed by the American Methodist Episcopal Church as the Bishop of Africa. The American missionaries have many stations in the African continent, and they are all placed under the episcopal authority of Bishop Hartzell. Notwithstanding that a troublesome ailment attacked him almost as soon as he landed in England, the Bishop lost no time in making his way to Africa. He spent several months in an episcopal tour, which began in the Gulf of Guinea and ended in the heart of Angola.

Bishop Hartzell did not make his first acquaintance with black men by any means when he landed in the Gulf of Guinea. For years past he has been recognised as the first authority on all questions relating to the

coloured men of the United States. He is emphatically the Bishop of the Blacks, and it was therefore felt, when his predecessor in Africa died, that Bishop Hartzell was made for the post. His appointment was regarded with great interest. From the President downwards all wished him God speed, and expected great things from the fresh energy and stimulus which they were all sure he would give to American missionary work under the African sun. Bishop Hartzell first visited Monrovia, Liberia, and then went to Sierra Leone. At Sierra Leone he was down for a week with fever, but fortunately escaped with his life from "The White Man's Grave." From thence he went down the coast to the mouth of the Congo, travelled as far inland as the Falls, and then coming back he launched into the heart of Angola. He was delighted with the prospect in Africa. He travelled more than six hundred miles into the Hinterland of Angola, and found himself in the midst of a Bantu race, which has profited largely by the enterprise of the American missionaries, and seems to the Bishop as good material for creating a Christian State as Uganda itself. The American missionaries have it all to themselves, and the bishop himself longs to go in to it, and possess it; that is to say, to Christianise and civilise a race that is eminently susceptible to such influences. There is no travelling in first-class carriages for African bishops. Bishop Hartzell visited these outlying parts of his diocese mounted upon an ox, and, as will be seen from the accompanying photograph, the figure which he cut was more picturesque than episcopal.

From Portuguese South-West Africa he returned to England, where he met his wife, and received a reinforcement of four additional missionaries, with whom he departed on October 2nd for Cape Town. The American missionaries are already in Cape Colony, but Bishop Hartzell sees openings for further developments. He intends to prospect the land, and then, travelling round the eastern coast, call at Natal and make his way into Nyassaland.

Bishop Hartzell is just the man for his diocese, with a heart as big as the continent, and ambition for the success of his work even more continental in its magnitude. He is a hearty, genial, excellent American citizen, whom I have the greatest pleasure in recommending heartily to all such readers whom he may come across in his apostolic peregrinations in and about Africa.

### THE BISHOP ON THE BLACK MAN'S CHANCE.

Before he departed, Bishop Hartzell was good enough to send me the following observations upon his mission and its prospects:—

I firmly believe that the day for the black races of the world has really dawned. Slavery no longer exists in any civilised land, and the black man is accorded, technically at least, his civil rights in the institutions and laws of all great nations, so that he has a chance to make a record on his own account. The veil of mystery has been held over Africa until within a comparatively few years, when, with a suddenness unparalleled in history, the whole of the continent has been explored. Besides this, the nations of Europe, led by England—which up to date has been the nation-builder of the world—have parcelled out the continent, and with marvellous quickness inaugurated great commercial enterprises touching every section of both coast lines. Already the era of exploration and loose occupation of the whole continent is giving place to

permanence in national outlines, commercial highways, and philanthropic movements. The sons of Shem had their chance as a governing people and lost it; the sons of Japheth now rule: and I believe that the sons of Ham, in God's good providence, are to be given a chance. Whether there will be any black nationalities in Africa, or whether there can be any large advance among its native peoples outside of white superintendence, and whether Christian civilisation will be accepted and made permanent among them, are questions which only time will settle. The real genius of the negro has not yet been tapped. Africa presents evidence of an arrested development. The late find—Benin—the results of which are now in the British Museum, shows that even far down the West Coast, two hundred years ago, the people understood moulding in bronze and brass.

It is evident that the nearly nine millions of negroes in the United States of America, freed men and their descendants, are to have much to do with the civilisation of Africa, their fatherland. There will probably never be any great migration of blacks from America, but from America will go thousands of ministers, teachers, artisans, and emigrants from the black

America had their great humiliation in slavery their future is to be chiefly worked out under American Christian civilisation.

The Methodist Episcopal Church, the largest Protestant denomination in the world, proposes to have a share in the great work of redeeming Africa. The great body of her membership, institutions of learning, and wealth, are in the United States, but she has one hundred thousand communicants in India, five annual conferences with large followings in China, conferences in Japan, Bulgaria, Finland, Denmark, Sweden, Norway, Italy, Germany and Switzerland, as well as Mexico and South America.

God willing, I expect to reach America in May, 1898, and report to the Bishops and Missionary authorities of the Church the results of my observations and plans for reinforcements for my African missions.

### "Bleeding Bread" Explained.

MR. CLARKE NUTTALL, B.Sc., in *Good Words* for October, shows how science steps in to refute alike the credulity of the Catholic and the incredulity of the Protestant. Catholic piety used to treasure the fact that the holy wafer at times sweated blood. Bleeding "Hosts" were the object of adoring pilgrimages. These facts were accepted as proofs of transubstantiation, and accordingly scouted by the sceptical Protestant. But bacteriology comes to the rescue and explains:—

A certain bacterium—*bacterium prodigiosus*—is responsible for the apparition. Its blood-red colour and its comparatively rare occurrence giving rise to its "portent" aspect. This bacterium appears at times suddenly and without apparent reason or cause on substances rich in starch, such as white bread, dressed potatoes, or any rice stuffs; or the characteristic red patches may one morning be found floating on the surface of milk. And though it is not a common phenomenon, yet like others of the bacterium class, it is most persistent when it has once put in an appearance. It can stand a long period of desiccation and great changes of temperature without its vitality being at all impaired. Under the microscope, the moist red patches resolve themselves into a great assemblage of infinitesimally small round, or egg-shaped cells, sometimes isolated, sometimes connected in chain-like groups; but whether isolated or connected in chains, each is a distinct organism.

BISHOP HARTZELL MAKING A VISITATION IN CENTRAL AFRICA, JUNE, 1897.

masses of that great Republic. There are now nearly one million five hundred thousand black boys and girls in the public schools of America. There are over fifty thousand young black men and women in the schools of higher grade, supported some by the States, but up to this time principally by great education societies. The Northern States alone have expended forty millions of dollars in the sixteen Southern States for the higher education of the negro since the close of the war in 1865. The Southern States themselves support the public schools by taxation for both whites and blacks, and the great churches of the South, as well as those in the Northern States, are also taking hold in this phenomenal movement. Race prejudices yet exist socially and politically in America, but the negroes are developing intellectual, social, and religious centres of their own, and at the average rate of increase during the past thirty years, the black population of the States will, in seventy-five years, probably number forty millions. This is a conservative estimate. Four-fifths of the black population of America is in the sixteen Southern States, and that number will probably remain there; and it now looks as if in the very section of the Republic where the blacks of

The paper of chief interest in the *New England Magazine* for September is Mr. W. E. Griffis's sketch, with portraits, of the original Brother Jonathan, which claims separate notice. Mr. E. H. L. Randolph describes the origin and growth of the Greek Letter Societies in American Colleges. Miss A. L. Hill gives a vivid account of the methods, attractions, and drawbacks of travel in early New England. Mr. W. C. Lawton laments the decay of the lecture as a means of popular education in rural New England, for which University Extension offers perhaps a more systematic substitute. The editor speaks out plainly and valiantly on the plutocratic conspiracy against the freedom of University teaching, illustrated in the virtual dismissal of President Andrews from Brown University.

# LEARNING LANGUAGE BY LETTER-WRITING.

**B**Y the time this number is in print we shall be well on into the Autumn term, and the interchange of letters between schoolboys will have recommenced. A good many girls and boys continued the correspondence during the holidays, and those were probably the most amusing letters; but change of address, the excitement of the holiday time, and, as regards French boys, the need of extra study for some special examination, made letters less regular.

Many friends have responded to the request for volunteers willing to help in making the scheme known to schoolmasters, but as a large number of educationalists have never had the advantages of the scheme placed before them, we will gladly continue to forward the "Circulars" for schoolmasters to any friends ready to help in "passing them on" if such will send an addressed envelope. The editor of the *Revue Universitaire* still writes, "I have hundreds of French boys awaiting their turn," and it is still said in England 'Boys will never write letters except under compulsion.' I should like to disprove this sweeping assertion, and therefore invite any of my schoolboy friends who have really enjoyed the correspondence to write and tell me so, and if anything in their letters has especially amused or interested them perhaps they will let me share in their pleasure. I hope they will be interested in the following English letter from a French boy:—

My dear Robert,—You will excuse me, please, if I have been a long time without writing to you, but I have been prevented. Answering to your question I am sixteen years old. From your letter you seem to be a fervent collector of stamps. So am I, but only when I have a spare time; but I have some rare enough. With your indication I have found B—— on an English map. I see that it is what we call a *champ de manœuvres*. First I could not understand "Common." I have also two guns. Last year I got a silver gilt medal for first prize for shooting. I have also a bicycle and a photographic apparatus. The roads in Normandy are very large and nice and the landscapes agreeable. With my photographic apparatus I take views, and I send you one from the dormer window of our house. Good-bye, my dear Robert. I pass my arm through the "Manche" and I give you a vigorous hand-shake. Yours truly,

R—— S——.

So many inquiries reach me that I am obliged to repeat that "The scholars' letters are fortnightly, alternately in their own and the foreign language. The English boys' English letter should be written the first week of the month, and corrections of the French boys' English should be made then. This is a point to be noted, as we English folk scarcely realise our deficiencies in the matter of *writing* French. I have seen an attempt at correcting a Frenchwoman's faulty English, in her own tongue, which is too laughable for words. For example, the unhappy lady received her letter again annotated thus:—

|          |           |               |
|----------|-----------|---------------|
| know,    | signifier | signifier.    |
| knew,    | "         | j'ai su.      |
| knowing, | "         | j'ai sachant. |

"In order to exchange our languages" is thus commented upon:—"Evidemment la langue d'une française, on dit en Angleterre, with whom to correspond."

"An English translating" should have been, according to the corrector of the letter, "Un anglais traducteur" (an English translator), and the lady is directed to "observe la terminaison de la mot 'translating.'"

No, I think we should show wisdom by correcting in

our own language our French friends' mistakes in English.

The Editor of the *Revue des Revues* of Paris is willing to co-operate with us, with the result that I have already been able to pair many of the adults who desired correspondents, and am therefore ready for more applications. I am continually asked whether there is any fee, and repeat that if our adult applicants are able they should send me one shilling's worth of postage-stamps.

M. Finot says, in an article published in the *Revue des Revues*, for September 15th, entitled "La fraternité internationale par correspondance":—

This exchange of letters should become not only a study of language but also an exercise of mind and heart. It is difficult to conceive of a more efficacious means of promoting a good understanding between the people of different nations, than these letters between *inconnus* who endeavour across the frontiers to sympathise with, appreciate, and love one another. A correspondent of several months becomes an acquaintance, one of a year almost a friend, and all are as electric wires placed between country and country, links of mutual attraction. Relations formed under these conditions have a good chance of becoming durable, often even advantageous in the struggle for life; "influences" are exchanged as well as opinions. These abstract attachments, signified by the flying leaves, are often more substantial than the friendships which are exposed to daily contact. M. Finot then invites his readers to join this fraternal correspondence.

M. Francesque Sarcy in the *Depêche* of Toulouse writes most amusingly that:—

The Editor of the *REVIEW OF REVIEWS* acts as a sort of Master of the Ceremonies. He introduces people who do not know one another, will never perhaps even see one another, and when he has placed in each of two hands the thread which is to unite them, he makes his bow and says, "Now, talk away." Ah, that is easy to say, but what shall we talk about? "Why, the things which interest you. A judge of his law business, a doctor about the newest scientific methods, a business man about his trade, and all about balls, books, concerts, amusements." But, if I chance upon a duffer or a rake? "What matter, it is not a life and death matter, and need not, therefore, be very difficult to find a polite way of dropping the correspondence and parting company with a person who is a bore."

I am reminded by this that a lady gives as a reason for asking for two correspondents, that the one writes such perfect English that she needs another not so proficient in order to get a little fun out of the exchange of letters.

The German correspondence is more slow in its progress as regards adults, and especially is it difficult to find German ladies willing to write. Neither is the attempt to find Spanish correspondents very successful.

A Frenchman gives us a queer task. Some years ago he passed some pleasant days in England with a family of the name of Fowler, who lived first in Stratford and then in Upper Thames Street. He has lost sight of them. How can we help him in renewing their acquaintance.

As the French school terms commence later than our own—lists of girls have not yet been sent over—and hence delay may arise with regard to them.

As French men sometimes ask to correspond with English ladies, our adult lady applicants are asked to state whether they have any preference with regard to sex, but young men are warned not to "apply" for lady correspondents at present.

# LIST OF THE LEADING CONTENTS OF CURRENT PERIODICALS.

### THE GENESIS OF OUR IDEAS OF GOD.

"The infinite ascending spiral traced by the finger of God between the Universe and the Ideal."—MAZZINI.

"The World's great Altar Stairs  
That slope through darkness up to God."—TENNYSON.

From the Sinai of Sex to the Sacrifice of Calvary the human race has mounted with bleeding feet who can say how many thousands of these winding stairs, each of which represents a hundred years. Few were born late enough in the upward march to catch the rays from the Cross, but not one of all the children of men but has been driven along these altar stairs by the sacrifice of love that finds its best expression in the Mother and the Child—See "The Book of the Month," p. 519.

# THE PROGRESS OF THE WORLD.

LONDON, November 2nd, 1897.

## The Month.

The progress of the world last month has been somewhat like the progress of King Pharaoh when, as he pursued the Israelites, the Lord God of Israel took the chariot wheels of the host of the Egyptians so that they drove them heavily. We have been driving somewhat heavily in a wheelless chariot of late. The campaign or series of campaigns against the independent highlanders of the North-Western frontier of India drags its slow length along, and at home the great strike and lock-out in the Engineering trade is going on without any prospect of peace. The cloud that hangs over our relations with France has gathered somewhat in gloom, with electric sparks flickering visibly in Western Africa. At home no one has done anything worth noting or said anything that is worth quoting. Almost the only good thing about October has been the splendid weather. No Indian summer could excel these perfect days of autumnal beauty in which the bracing air of October was tempered by the sunshine of June. And considering that to the masses of mankind, happiness and unhappiness depend far more upon the weather which affects all, than upon politics which directly affect very few, the month which has been to the publicist somewhat dull, may have been to the majority the Red Letter month of the year.

Good month or bad month, its death roll has been somewhat heavy, and among those summoned hence there have been several who in their time played somewhat conspicuous parts. The Duchess of Teck—that good soul in a comfortable body, cousin of the Queen and mother of the Queen Consort that is to be—died somewhat suddenly on October 27th. Whether as Princess Mary of Cambridge, or the Duchess of Teck, she was embodied kindness of heart. A kind of Royal Lady Bountiful, overflowing with flannel petticoats for the poor, and all manner of coddling comforting

ways for the troubled and sorrowing in her wide circle of friends and relatives, her heart was as capacious as her bosom, and her beneficence as solid as her person. The Shah, to whom, like many Asiatics, beauty and *emb.ppoint* are interchangeable terms, is said to have regarded her as the most beautiful woman in England. Gossip says that both Napoleon the Third and Prince Napoleon (Plon-plon) aspired to her hand, which she bestowed, when no longer young, upon the Duke of Teck. Her death removes an estimable matron from the royal circle, but, so far as can be seen, it is entirely without political significance or public importance.

Photo by Bassano.]

THE LATE LORD ROSMEAD.

Another and very different figure The Late Lord Rosmead. disappeared when

Lord Rosmead went to his last account. Some men live too long for their reputation; Lord Rosmead was one of them. The last year or two of his life, although not without indications of a latent capacity on emergencies to do the State some service, was a melancholy anti-climax to a long and useful career. If Lord Rosmead had been ten years younger, the Jameson Raid would never have taken place. It pleased the old gentleman to imagine that he had never been

informed of what was going on under his nose, under the direction of his Prime Minister, and with the knowledge of his secretary. Considering the amazing faculty for forgetting which Mr. Chamberlain developed at Downing Street, it is hardly to be wondered at that the impressions on the senile brain of the High Commissioner were as easily rubbed out as pencil marks on a slate. Of course, if Lord Rosmead did not realise the significance of what was told him, he must have been so astonishingly slow in the uptake as to stand convicted of a worse incapacity than that of a recurrent liability to have the slate of his memory wiped clean by the sponge of official expediency. Peace be to his manes! Even in his ashes lived his wonted fires, and he never performed a more useful service than when he put the strong curb upon Mr. Chamberlain and held him

back with an iron hand from plunging into the war with the Transvaal in the spring of 1896 which his telegrams might have rendered inevitable.

But Death, which ever loves a shining mark, found its most distinguished victim neither in the royal palace nor in the person of the eminent Pro-Consul. The sudden passing of Henry George, who was snatched like a Greek hero by the immortal gods from the midst of a desperate conflict against overwhelming odds, produced a profound impression. Of George's position as an international man I have spoken at some length elsewhere. It is enough in this place to record the disappearance of one of the persons who contribute to the driving forces of the world. His sudden death occurring in such circumstances will probably give a fillip to the propaganda which is associated with his name. But a living dog, says the proverb, is better than a dead lion, and the Single Tax men in every English-speaking world realise only too keenly the blow that has been dealt the cause by the removal of its leader.

The great political event of the month has been the contest for the Dictatorship of Greater New York. The Mayoralty is a misleading term. The struggle which for weeks absorbed the interest of the greatest city but one in the world was not by any means a contest for what the English newspapers this month will be calling "mayoral honours." An English Mayor is a useful and honorific person who acts as Chairman of the Town Council, dispenses hospitality, wears a gold chain, and generally acts as the social centre and municipal figurehead. The municipal machine is not wound up by him or controlled by him in any way. It goes by itself. Its mainspring is in the Town Council. And the permanent staff of experts would run the town almost as well if the Mayor's chair was empty. In the City of London the Lord Mayor, who this year raised a million sterling in various relief funds, is an imposing figure, especially to the imagination of Frenchmen, but as a ruler and governor he does not exist. Hence to talk of the Mayoralty of Greater New York is to convey an entirely misleading idea to the British public. For what New York was voting for to-day is not an English Mayor, but a Roman Caesar or a French Emperor; that is to say, an Elective Autocrat who will be charged with the duty of creating, maintaining, and running the government of Greater New York.

The contest for the Dictatorship brought into the field the representatives—(1) of Tammany; (2) of the Republican party; (3) of the Citizens' Union; and (4) Henry George. Of the candidature of Mr. George, which was so suddenly terminated by his death, I have spoken elsewhere. Mr. Seth Low, the candidate of the Citizens' Union, although personally a Republican, stood solely as a representative of the interest of the citizens of New York. No better candidate could have been put into the field to raise the issue as to whether municipal interests should be subordinated to the ambitions of national parties. He is a gentleman and a scholar. The President of the Columbia University, he has served two terms with brilliant success as Mayor of Brooklyn. Against him personally no one has said a word. New Yorkers, like the Athenians, are apt to get tired of hearing of the justice of Aristides, and Mr. Seth Low's admitted qualifications for the post palled a little by the very monotony of their excellence. But he was not a partisan. He ignored the issues of the tariff or the currency. He refused to subordinate the question how New York should be governed to the question as to who should succeed Mr. McKinley in the White House. Therefore he had to face the deadly hostility of both the great political machines, and only polled as a consequence 150,000 votes out of half a million.

The Unionists, who will use the whole strength of their party organisation in order to defeat the Progressive candidates at next County Council election, need no explanation as to the motives which led the Republicans to raise these extraneous issues of national policy in a purely civic contest. We who have seen with shame and indignation London electors adjured to vote against excellent candidates, who have done good service on the Council, because they believe in Home Rule for Ireland, can understand why General Tracy was brought forward by the Republicans. It was necessary for the Republicans to hold their own, to demonstrate their strength, and to use the New York Election in order to show they could re-elect Mr. McKinley in 1900. For in the United States they are already ciphering about next Presidential Election. Last election satisfied neither party. The probability is that both McKinley and Bryan will enter the lists again in 1900, when the battle will be far more desperate than it was last time. Our Unionists were tolerably scared by the

Mr. Seth Low.

The Plebiscite  
for a  
Dictator.

General Tracy.

GENERAL BENJAMIN F. TRACY.

SETH LOW.

spectre of Home Rule. The Republicans feel much worse about Bryanism. At any cost, without even counting the cost, they must keep up their fighting organisation, and be prepared to do battle with the wild men of the West in the great Armageddon of 1900.

**The  
Republican  
Campaign  
Fund.**

Therefore Mr. Senator Platt, the great boss of the Republican machine, nominated General Tracy, his son's partner and ex-Secretary of the Navy, to carry the Republican banner at the late contest. General Tracy is a capable and intelligent administrator, who has done good service to the State. His age, however, was against him. He is nearly seventy, and to swing the new-born city of Greater New York demands the energies of youth. That, however, was a mere bagatelle. Platt and his friends were not thinking of New York City government. They were scheming and planning how best to use the election in order to strengthen their forces in the coming Presidential Election. So they sounded the alarm, proclaimed their candidate the champion of anti-Bryanism, and set to work to raise money. The solid men, the financial corporations, scared by free silver, the trusts, the protected interests, all the wealthy classes who subscribed to the McKinley fund.

were bled again. The campaign fund of General Tracy is said to have reached three millions of dollars—two-thirds of which were contributed by a levy upon the Republican money-bags outside New York. Armour, of Chicago, was assessed, it is said, at £20,000; Mr. Carnegie, of Pittsburg, and other wealthy Republicans were mulcted in proportion. As Tracy only polled 100,000 votes they must have cost an average of £6 each. What they will spend in 1900, when the real tug of war takes place, who can say?

**Tammany's  
Candidate.**

The Democrats did not so cynically prostitute a great civic opportunity for the purpose of strengthening their ranks in the country at large. Tammany is a Democratic organisation, but Tammany is first of all for New York, if only because New York is the area within which it gathers up the spoils. But even though the motive may not be of the highest, the fact that Tammany's horizon is more or less conterminous with that of the City made the candidature of Mr. Van Wyck less revolting from a civic point of view than the candidature of General Tracy. The latter stood for national issues pure and simple. He was the banner-bearer of the whole Republican Party, supported by the undis-

guised sympathy of McKinley and the whole McKinley administration, which has received a severe blow by his defeat. But Mr. Van Wyck, while a Democrat and the regular candidate of the Democratic Party, stood primarily for Tammany and New York. He is a City Court judge, who was quite unknown before the election. He took little or no part in the campaign and in the newspaper warfare; he was quite overshadowed by the figure of Mr. Croker. He was "Croker's man." That was enough; and his election by a heavy majority—he polled nearly a quarter of a million votes—shows how well Croker knew his New York. He told me that he would win by 100,000. His man has won by 85,000, near enough in a poll of 500,000.

On the day before the poll, a very intelligent New Yorker called at Mowbray House. He said he was a strong individualist, who believed at the next panic there would be wild work in the United States. "But," he said, "we shall come out all right. For the salvation of the Republic is the utter rottenness of its government." Asked to explain this startling paradox, he said that when Herbert Spencer two years ago proclaimed that the drift towards Socialism was so great that nothing could save society from the military despotism in which Socialism would eventuate, he thought Spencer was off his head. "But," he continued, "when I came to England I saw he was right. You are all posting to Socialism as fast as you can ride. And why? Because all your best people are in politics, in the Administration, in your city government. All your honest men, your business men, your solid men, your best men, they are all there all the time. And so you are trusting them more and more with everything: gas, water, electricity, street-railways. Every way you are heading direct to Socialism. And behind Socialism stands the military despot. From that the United States will escape. And why? Because the rottenness of our city government—the unutterable corruption and vile-

ness of our elected men—renders it impossible for us to dabble in municipal Socialism. You put your best men in where we put our worst, our very, very worst, the scum of creation: thieves, criminals, gamblers, scoundrels of every dye. Do you think we are going to trust that crowd with all the great monopolies of service? No, sir. And that is what will save us." A notable confession of faith or unfaith, quite understandable by all those who have lived in an American city.

JUDGE VAN WYCK.  
Mayor of Greater New York.

The victory of  
Tammany's Tammany in New  
Victory. York has been  
decisive. Mr.

Croker knows his New York. The Municipal Reformers, who have played double or quits, by concentrating all power in the hands of a Tsar-Mayor, have now to face four years of Tammany rule, during which they will be smitten with the rod which they prepared for the back of others. Writing within a few hours of the closing of the polls, it is too soon to express an opinion as to the chief contributory causes which have brought about this result. What Mr. Croker said to me in our talks on board the *New York* was (1) that it was an invariable rule that the Reformers never had two consecutive terms of office, (2) that the increase in the rates had

alienated very many of those who had been disposed to give the Reformers a chance, and (3) that the new government was an unworkable machine which would have no chance of success unless it were run by a strong party organisation such as Tammany supplied. Add to this the irritation against the Raines Liquor Law, which seems to have succeeded in disappointing both the advocates of restriction and the advocates of license, and the popular dissatisfaction occasioned by the way in which the Works Department allowed the roads to be torn up and traffic interrupted, and we have sufficient to account for the result of the poll. These are, however, local issues. The one point outsiders have to take into account is that this crucial test

proves that Mr. Croker knows more about New York than any other man in the city. He has now had his vindication in the shape that he most desired it, and it is not difficult to understand the grim satisfaction with which he must have penned this summing up of the popular verdict :—

The people have registered their verdict against hypocrisy, mendacity, personal abuse and malice. They have given their opinion of fake politics, fake journalism, fake reform, by electing the entire Van Wyck ticket.

Let us hope that Mr. Croker will endeavour to live up to his own professed ideal, and make New York the best city in the world.

#### The English Elections.

The electoral contests at home have naturally not excited a tittle of the interest that has been aroused by the struggle for the New York Dictatorship. The results, however, show an unmistakable reduction of the Unionist strength. There has been only one by-election decided. At Barnsley, the seat lately occupied by Lord W. Compton has been filled by Mr. Joseph Walton, a Liberal who polled almost exactly the same vote as his predecessor. The Unionist vote fell from 4,653 to 3,454, and the Labour candidate, Mr. P. Curran, appears to have carried off the votes which the Unionist lost. In the Municipal elections the same falling off in the Unionist vote was observable. Here are the party gains for 1894 and 1897, as tabulated by the *Westminster Gazette* :—

|                          | 1894. | 1897. |
|--------------------------|-------|-------|
| Liberal .....            | 28    | 68    |
| Tory .....               | 69    | 31    |
| Liberal Unionist .....   | 8     | 1     |
| Independent .....        | 6     | 6     |
| Labour (all kinds) ..... | 18    | 18    |

The change is significant. Coming after Denbigh, it is not surprising that the Opposition begins to feel as if the winter will soon be over and gone, and that the time of the singing of birds is nigh.

#### A Liberal Revival ?

There will be opportunity enough this month for hearing the notes of these songsters of the coming spring. Contests are pending at Deptford, where the Liberals have an adverse majority of 1,229 to wipe out; at the Exchange Division of Liverpool, where the Unionist majority at last Election stood at 254; and the Middleton Division of South East Lancashire, where the Liberals were three years ago in a minority of 865. It is not likely that either of these seats will be captured. It will be sufficient if the Unionist poll is lowered. This is expected to occur in all three constituencies. If so, the Liberals will begin at last to pick up heart.

#### London School Board Election.

The London School Board Election will be decided on November 25th, when 32 candidates pledged to a Progressive Educational policy will go to the poll. The Board consists of 55 members. If out of the 32 Progressive candidates, 28 are elected, it will enable the educationalists, pure and simple, to command the majority of the Board. But this is almost too good to be prayed for. Fortunately, the clerical sections are divided among themselves. They are, as a party, agreed upon desiring more dogma and less rates, but how much more and how much less of either, they cannot say. The following are the five points of the Progressive Programme which are accepted by all the 32 candidates :—

1. Free and efficient Education in Day and Evening Schools alike.
2. The provision in each district of conveniently situated school buildings kept abreast with the growth of population.
3. The abolition of overcrowding and understaffing; the just payment and fair treatment of all teachers, and a liberal supply of educational materials and apparatus.
4. The maintenance of the compromise as carried out since 1871 and the protection of teachers from the imposition of any religious test.
5. A progressive labour policy on the lines adopted by the present London County Council.

As three years ago the Progressives polled a majority of the votes, namely, in round numbers, 850,000 against 730,000, they are not without hope that they may this time carry the majority of the Board. Their strength has gradually arisen from 19 members in 1885 to 23 in 1888 and 26 in 1894. In 1891 they lost a seat, and had only 22 members on the Board.

#### Lord Londonderry's Warning.

The hopes of the Liberals have been somewhat raised by the vehement protest against Mr. Chamberlain and the social legislation which he has favoured, and is known to favour, on the part of the Marquis of Londonderry. Lord Londonderry is a great coal-owner and President of the Northern Union of Conservative Associations. At a Conference held at Berwick on October 15th, Lord Londonderry's action was taken into consideration and his line was unanimously approved. This is very significant, for Lord Londonderry's letter was very outspoken indeed. He declared that disaffection of a very serious character was rife in the Conservative Party, "due to the subordination of Conservative principles to the dominating will of the Colonial Secretary, whose Radical views on home politics we have always regarded with disapproval." He demanded that a check should be placed on the action of the leaders of the party, who, by allowing Mr. Chamberlain so free a hand in home legislation, had converted the

Photo by Russell and Sons.]

LORD LONDONDERRY.

Conservative Union into "an organisation for the promotion of Radical measures." "A policy more disastrous I cannot imagine, and it is one that, if continued, will eventually destroy the Conservative Party." Pretty plain speaking this. It is Mr. Chamberlain's first notice to quit from his new friends; others will follow no doubt.

The dispute which has arisen between France and England on the Lower Niger is annoying but natural. So natural is it that I was startled at finding how exactly I had foreshadowed it in all its essentials in "Blastus the King's Chamberlain." There is a chapter in that romance—written in the autumn of 1895—which with the alteration of the name of the river might be reprinted to-day as a narrative of what has actually happened. What in my tale I said happened in an imaginary region called Monbuttoland on the Congo, has actually taken place in the territory of Borgu on the Niger. Monbuttoland, I said, was admittedly within the sphere of British influence. But we had done nothing to make our occupation effective. Thereupon the

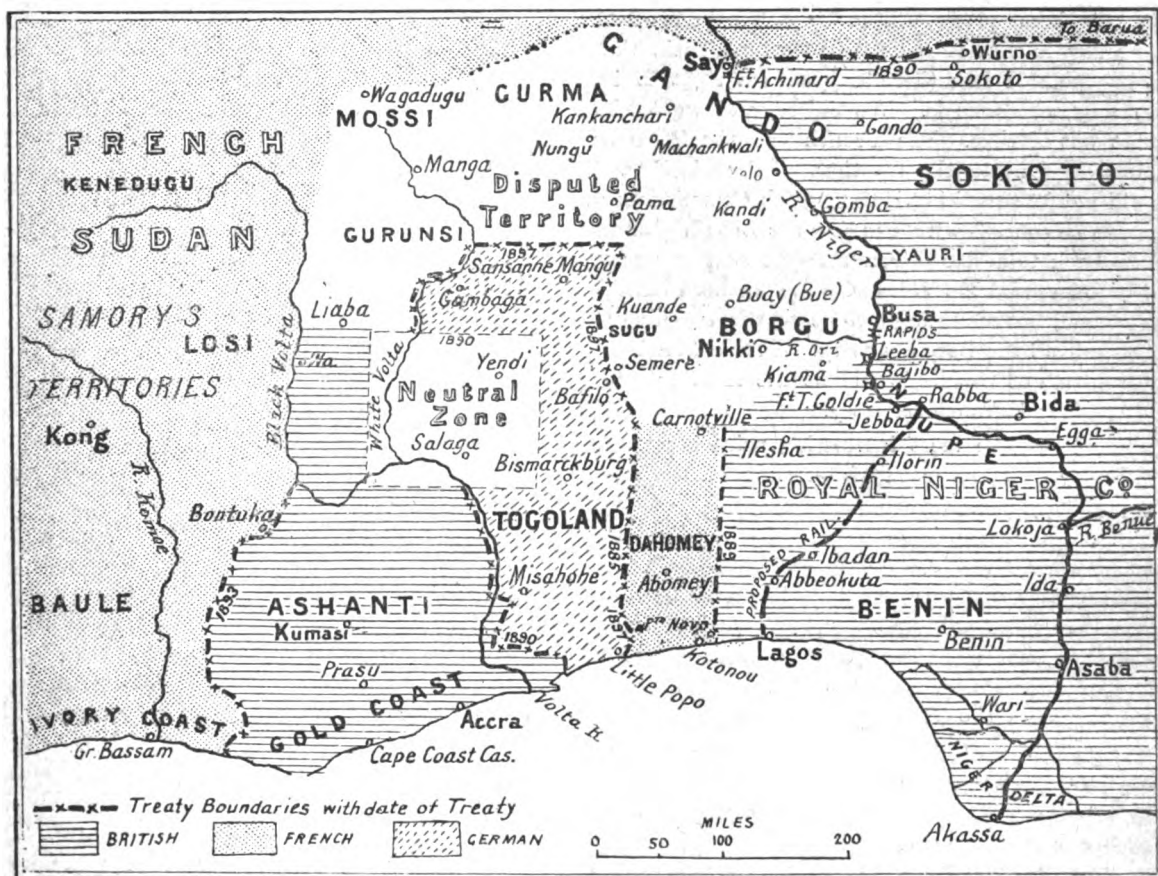

French went in and possessed it, and pleaded the absence of any effective occupation on our part as their justification. A great hubbub arose, in which Blastus worked all the newspapers against France, while the Marquis and the Duke stood out steadily for a conciliatory policy. Ultimately the difficulty was arranged by Lord Adam, who settled it, not without a veiled ultimatum, after a conference at Paris with the French Foreign Minister. Everything except the settlement has already come to pass just as I predicted it. It remains to be seen whether the discomfiture of the bellicose Blastus and the triumph of the pacific Marquis will be brought about in 1897 as I predicted it would in 1895.

The present controversy can easily be understood by the aid of the accompanying map. Without the map any statement of the case is unmeaning gibberish, a mere tessellated paragraph of unintelligible names. It all turns upon the claim of the French to occupy and possess the densely peopled and fertile region that lies back of Dahomey. The British, the French, and the German possessions on the West African coast lie side by side like so many houses in a street, fronting on the sea. We have got much the best frontage, possessing as we do two eligible sites, the Lagos and Gold Coast territories respectively, between which, as a sandwich of ham and veal, come the German Tòngoland and the French Dahomey. There is no dispute about the sea front. The whole controversy arises about the back gardens of these marine villas. We say that they ought to run back as far as Say. The French say No; our territory begins at Nikki and Busa. That is really all the dispute. Where does the back garden of our Lagos property terminate?

Fortunately there is no dispute as to how far the back garden or Hinterland extended in 1890. When the French agreed with us in 1890 to regard the Say-Burua line as the extreme limit of their possessions, they never dreamed of denying that all the land between Say and the sea was within the British sphere of influence. The *Temps* and the *République Française* explicitly stated this, and acquiesced in it. Both the *Temps* and Messrs. Hachette published maps in which the Hinterland of Lagos was coloured red right up to Say. Two years later, when the question of more exact delimitation arose, the French proposed that the frontier should start from Say and run south-west to a point in Gold Coast territory. This was rejected by

Britain as being drawn too near the coast. But there was no question raised by France as to our right to Borgu right up to Say. Our claim to the overlordship of Borgu rests upon two distinct and unassailable foundations: (1) The agreement of 1890, by which France formally recognised that the sphere of action of the Niger Company comprised all that fairly belongs to the kingdom of Sokoto, of which Borgu has always been recognised as a dependency;

Byron Macaulay, to have dispensed with breeches, and to have appeared before them clad in a shirt as his solitary garment. To allow the advance of France to be barred by a coloured *sans culotte* was, of course, not to be thought of, and the French officers established forts and hoisted tricolours wherever they pleased in our British sphere right up to Say and Busa. Against this we have protested. Mr. Chamberlain, acting just as Blastus did in

MAP OF THE NIGER, SHOWING TERRITORY IN DISPUTE BETWEEN GREAT BRITAIN AND FRANCE.

and (2) the local treaties which were entered into between us and all the native chiefs in the disputed territory. There is no denial that we made these treaties before any Frenchman appeared on the scene.

How then does the controversy arise?

**The French Claim.** Very simply. The Borgu territory, although in our sphere of influence, was not in our effective occupation.

The only representative of the Niger Company whom the French found in the region was a coloured official whom they declare to have rejoiced in the name of

Monbuttoland, is said to be breathing forth threatenings of fire and slaughter, which he is held back from fulfilling by his saner colleagues, while in Paris Sir E. Monson is endeavouring with M. Hanotaux to arrive at some rational and definite settlement.

**The Right to Trespass.** The whole question lies in a nutshell. Has any Power a right to trespass on another Power's sphere of influence, if at any point they can find a nook or corner where their neighbour is not in effective occupation? The French maintain in this instance

that they have such right. But in 1884 at the Berlin Conference a proposal to make effective occupation a test of the validity of a claim to spheres of influence was rejected at the special instance of the French representative. Notwithstanding this, the French are at this moment maintaining outposts at Wa and Wagadugu in the Gold Coast Hinterland, and Busa, Nikki, and Kiama in the Hinterland of Lagos. It is doubtful whether they are in any real sense in effective occupation of these places. But they have an officer and a flag in each of them, and they maintain that having planted him there they have a right to let him stay where he is. We object, and want him to get out of that. The French and the Germans have agreed as to the frontiers of Tongoland, and it will not be surprising if the British Commissioners were to be content with running the British Hinterlands back to a line drawn straight east and west to the Niger and the Volta from the northern limit of Tongoland, but mounting a little to the north so as to include all the Borgu country. In that case Yelo, to the north of Gamba, would be the meeting point of British and French territory.

**Blastus  
and  
the Marquis.**

The most interesting point is not the delimitation of territory in the comparatively unknown valley of the Niger, but the delimitation of authority between Mr. Chamberlain and Lord Salisbury within that *terra incognita* the Cabinet. Rumour has it that there will be at least as much difficulty in settling that boundary question as in disposing of the destinies of Borgu. At the Cabinet meeting, when the West African dispute came up for decision, they say the Colonial and Foreign Ministers by no means saw eye to eye. Pushful Joe was all for making our occupation effective without loss of time, even though it involved the push to Yelo and the marching of Houssas to Nikki or to Wagadugu. To this Lord Salisbury is understood to have objected, and the difference of opinion became so accentuated that Mr. Chamberlain remained behind to fight it out with Lord Salisbury after the rest of the Cabinet had dispersed. This may be only ingenious surmise. But there is no doubt that in Paris as in Washington Mr. Chamberlain is regarded as the chief obstacle to settlements of which Lord Salisbury is believed to approve. Lord Salisbury has all the threads in his hands, whereas Mr. Chamberlain only has to deal with the Colonies. It would not be wisdom while bouncing on the Niger to forget the Nile.

**The  
Ocean Gate  
of  
the Soudan.**

On the Nile our affairs appear to be prospering. The great river itself is now free from the Dervishes as far as Metemneh. The Egyptian gunboats from Berber have made a reconnaissance as far as the positions which the Dervishes have fortified there as the outposts of Khartoum. They exchanged a few shells and captured several boatloads of grain; the latter they towed down the stream to Berber. Still more important, it would seem that the short cut across the desert to the sea, known as the Berber-Suakin route, is now once more open. Suakin is the natural sea-gate of the Upper Nile. A light railway across the narrow strip of sand would give us command of the Soudan. From every point of view it is more important than the railway to Uganda; but until the Dervishes retired or submitted we might as well have talked of laying rails across the Atlantic. For more than a dozen years the Eastern gate into Africa has been locked and barred against civilisation. Now that it is opening it is to be hoped that the railway may be laid down without delay. Kassala is to be evacuated by the Italians and occupied by the Egyptians. When that is done we shall probably remain where we are until all is ready for the advance on Khartoum.

**The Wire  
from  
the Cape  
to  
Calro.**

It would really seem as if Mr. Rhodes's dream of an overland telegraph line from Cairo to the Cape was beginning to materialise into fact. The wire now works to Berber, and Mr. Rhodes last month ordered another five hundred miles of telegraph wire from England in order to carry his end of the line northward to Lake Nyassa. There is, it is true, a long stretch of Africa between Berber and Nyassa. But only the other day there was no telegraph post between Wadi Halfa and the frontier of Natal. Disquieting rumours as to the health of Mr. Rhodes have been current for a month past. They do not seem to have had any serious foundation, although the City was full of stories of his death—not for the first time. Not until he really dies will his countrymen as a whole learn to do justice to the work he has done.

**The Railway  
to  
Buluwayo.**

The opening of the railway to Buluwayo, which will take place this month, is an outward and visible sign of one part of the work which Mr. Rhodes has accomplished. To plant a railway terminus in the blood-stained kraal of Lobengula is an achievement which ten years ago would have been relegated

to the twentieth century. But it is already an accomplished fact. With the opening of the railway the effective development of Rhodesia will begin. A select party of M.P.s will be present at the ceremony, where they will meet Sir Alfred Milner, who has been journeying up country, seeing everybody and everywhere, like Falkland, "ingeminating peace, peace." There are reports that at last the gold mines are being got into effective operation, and it is hoped that the visitors from London will be able to bring back a good report as to the prospects of the land and of the people.

#### The Future of Charterland.

It is worth noting that the transparent and hypocritical pretext by which the South African Committee was induced to scamp its business and shirk its work has long ago been abandoned. It was said that the inquiry must be wound up, because it was so urgently necessary to provide for the future government of Rhodesia. Months have passed, but Mr. Chamberlain has done nothing. His resourceful mind is perhaps so busy wool-gathering on the Niger that he has apparently forgotten all about Charterland. He has not even been able to spare time from the engrossing pursuit of holiday making in which to see the late Administrator of the territory. So far as the outside world can see, he has done nothing. The Chartered Company is in a state of suspended animation. It is waiting to know what is to be its fate, what are to be its future prerogatives, or what its punishment. The Oracle is dumb. Perhaps after all it has got nothing to say.

#### The War on the Indian Frontier.

The fighting on the North-West Frontier proceeded all last month, and General Lockhart, with 11,000 Europeans and 24,000 natives, has carried the Afridi Passes which were held by the tribes in force; but although there have been many signal displays of bravery on both sides, I am too sick at heart over this wanton and unnecessary bloodshed to care to chronicle the details closely. Already we have lost more men than have ever before been sacrificed in any police war on the Indian Frontier, nor is the end yet. We are told :—

From June 10th to October 28th the casualties were 247 killed and 843 wounded. This includes 24 British officers killed and 52 wounded. The number of British soldiers killed is 34, and of wounded 151. Among the Native ranks 177 were killed and 595 wounded.

The tribesmen have a good cause, a good leader, and good weapons, and as they have the strength of the everlasting hills behind them, they are making a good fight of it. A desultory discussion

has been going on in the papers as to whether or not Lord George Hamilton brought all this upon our heads by his breach of faith in the matter of Chitral. So far as the natives are concerned, and so far as the majority of the British public is concerned, the apologists for the Government may paint an inch thick, but still they will fail to cover up the breach of faith which is being so terribly avenged.

#### A Bad Look-out for India.

With the exception of famine, the troubles which afflict India show no sign of abatement. It is now announced that the plague has broken out in the great pilgrim centre of Hurdwar. The *Spectator* remarks that "India appears to have entered upon a cycle of misfortune." The observation is interesting, because the Hindu astrologers have long held that India is approaching a great catastrophe, which will culminate in the year of April, 1899, and end in April, 1900. According to a Hindu astrologer who wrote in the *Madras Mail* twelve months ago, famine, pestilence, war and other miseries will devastate India in the year 1899. Madame Blavatsky also prophesied in the same vein. It seems that seven of the planets will meet in the same sign of the Zodiac, and according to the doctrines of Hindu astrology, such a combination is a certain sign of catastrophe at which the world might turn pale.

#### The End of the Bimetallist Mission.

The definite refusal of the Government to do anything towards the rehabilitation of silver, in response to the appeal made by President McKinley, through Senator Wolcott, may have been wise and right. Heaven forbid that I should dogmatise upon any question of currency; but what was neither wise nor right—what, indeed, was excessively unwise and wrong—was the encouragement given to Senator Wolcott, and to the French Government, to believe that we were willing to do something. Mr. Balfour, of course, is a Bimetallist; so is Mr. Chaplin. But the accusations of bad faith which are so freely heard in Washington and in Paris are not levelled against these Ministers so much as against Lord George Hamilton. Senator Wolcott made no secret of his unutterable disgust when he left our shores. He felt that he had been egregiously befooled, and when he and M. Méline, the French Prime Minister, were confronted with the point-blank refusal of our Government to do anything, their observations concerning English faith and the reliance which can be placed upon the promises of English Ministers were more bitter than edifying.

It is most unfortunate that just at the time when there is a little strain on our relations with France upon a territorial question in West Africa, we should have given occasion to so fanatical a Silverite as M. Mèline to consider himself betrayed on the currency question by the non-fulfilment of the expectations held out by Lord George Hamilton as to the re opening of the Indian mints. Of course, it may all have been a hallucination on the part of Senator Wolcott and M. Mèline, but if they publish their correspondence as a supplement to our Blue Book, the public will understand what grounds they have for feeling so sore about expectations that have been raised only to be disappointed.

The retirement of Viscount Esher from the Mastership of the Rolls removes from the English Bench the oldest and most famous judge. Lord Esher has occupied a seat on the Bench since the year 1868, and although juniors thirsting for promotion have from time to time indulged in envious snarls at his retention of the judicial office at an age when most men are incapable of work, there was no physical or mental reason why he should not have

continued on the Bench for years to come. Lord Esher is by no means the least distinguished member of the group of the Grand Old Men of our time. Mr. Gladstone, who gave his name to the group, is, I am sorry to hear, somewhat failing in spirits if not in health. The Pope, the other most distinguished member, seems to be flourishing as lustily as ever, nor is there any trace of weakness on the part of our Queen, who, although belonging to the other sex, is fully entitled to a place in the group. There is no excuse for a judge who remains on the judgment seat after he has lost his hearing or has worn out his mental faculties, but so long as a man retains all his faculties, both of mind and of body, the older he grows the more valuable he becomes. The reverence and respect which is shown to age and experience by the only two great institutions which are more than a thousand years old—the Chinese Empire and the Roman Catholic Church—is, perhaps, one great secret of their longevity.

To another judge who has disappeared from the Bench, Lord Ludlow, who was Mr. Justice Lopes, I owe a passing word of gratitude. Twelve years ago, this month, Mr. Justice Lopes tried me at the Old Bailey, and I owe to him what I have never since failed to acknowledge was the inestimable privilege of a sojourn in Holloway Gaol. My judge was almost immediately afterwards made a Lord Justice of Appeal, a post which he has only now surrendered. I have sometimes wished that in my solitary appearance in the dock I had had the privilege of being tried by a more distinguished judge; but, on the whole, he served his purpose fairly well in familiarising me with the way in which English judges conduct great trials, and also by teaching me how easily they can assume an appearance of impartiality during the hearing of a case the more effectively to sum up at the close with all the vehemence of an advocate. Since things are still done in that way—of which we had a striking illustration only this year—it was an experience well worth going through, and I should probably have had less reason for gratitude had I appeared before a more sympathetic judge.

The Engineers' Strike still continues to paralyse one of the staple industries of the country. After much hesitation, Mr. Ritchie, as President of the Board of Trade, invited both parties to a Conference on terms which it was found needed reconsideration before the much desired Conference could be brought about. Up to the moment of writing, they are still

*Photo by Window and Grove.]*

LORD ESHER,  
Late Master of the Rolls.

"Always  
Arbitrate before  
you Fight."

considering, with but faint prospects of coming to an agreement. While the Engineers are discussing with the Board of Trade the precise terms upon which it will be possible for them to meet face to face, a much more serious calamity is threatening the country. The masters in the Lancashire Cotton Trade have decided that they cannot keep their mills running without a deduction of 5 per cent. in the wages of the operatives. They have offered to submit the matter to arbitration, the result of such arbitration to last six months or any longer period agreed upon. The operatives will vote by ballot on this proposal, and at present it is generally believed they will decide to reject it. If so, it will be difficult to over-estimate the catastrophe that will certainly follow. It is not merely that the industry of Lancashire will be paralysed, but that the cause of industrial peace, to which arbitration is the threshold, will have received a damaging blow. It is much to be desired that the moral sense of the community should make itself felt by both parties in these two disputes; in the case of the Engineering trade, to overcome the reluctance of the masters to meet their men in Conference; in the Cotton trade, to induce the workmen to submit the question at issue to arbitration. The more the subject is considered, the more clearly will it be seen that the formula, "Always arbitrate before you fight," will have to be adopted and acted upon before the more advanced formula, "Always arbitrate instead of fighting," can even be looked at.

**Peace or War  
with  
Spain.**

The rescue of Miss Cisneros by the enterprise of an American Journalist, which is fully described in another part of this REVIEW, is exciting immense interest in the United States, and will, as likely as not, decide the question of peace or war between Spain and the United States. The representations of the American Government on the subject of Cuba have met with the inevitable response from Spain. The Spanish Government was told that it must pacify the island by a given date or be prepared for action on the part of the United States, as the Government might no longer be able to resist popular pressure. To which, of course, the Government of Madrid replied by avowing their determination to pacify Cuba at the earliest possible date,

but repudiating the right of any foreign Government to interfere in what is solely a Spanish affair. Señor Sagasta, the new head of the Spanish Ministry, has recalled General Weyler, and replaced him by General Blanco, who is instructed to offer the Cuban insurgents a local autonomy, which they have already repudiated in advance. President McKinley, therefore, will find himself face to face with a disagreeable alternative. He can hardly go back upon his own declarations without exposing himself to popular indignation. The interest excited by the escape of Miss Cisneros, who will probably be carried in triumph through the great cities of the Union, will combine with the evidence of a Democratic revival to convince the President that he had better go forward. In that case it is difficult to see how war can be averted. The first step will probably be to recognise the Cuban insurgents as belligerents, and the second to wink, and wink hard, while their American sympathisers are conveying stores and munitions of war to Cuba. A strained situation will follow, which at any moment may result in an exchange of shots. When the first gun is fired, nothing will stand between the American people and a war with a European Power which will compel them to reconstruct their military system, and ultimately reconsider the whole of their foreign policy.

**The  
Governor of  
Crete.**

A new Ministry has been installed in Greece; otherwise there has been no change in the situation. The Powers have at last agreed upon a Governor for Crete. Instead of sending the Swiss, M. Droz, they have finally chosen Colonel Schaeffer. He possesses the first indispensable qualification of not having been born a subject of any one of the Great Powers. He is a native of Luxembourg, and is only forty-one years of age. He has been employed in Egypt in suppressing the slave trade; and, as he has married an Armenian, and speaks Turkish and a little Greek, it is hoped that he may be able to organise the gendarmerie and restore order in the distracted island. I hope there is no evil omen in the fact that he "speaks Turkish and a little Greek." What his administration ought to be is just the other way about—mainly Greek and only a little Turkish. However, to get anybody in the saddle who can be trusted not to take his orders from the Sultan is a step in the right direction.

From the Journal, New York.]

H.R.H. THE LATE DUCHESS OF TECK.

*(Photo by Russell and Sons.)*

# CHARACTER SKETCHES.

## I.—H.R.H. THE DUCHESS OF TECK.

BY LADY HENRY SOMERSET.

A GREAT heart and a great lady! Those were the two attributes that especially possessed one's mind in that genial presence whose passing has left the world a duller, greyer place these autumn days. As I think of that rich nature, I am irresistibly reminded of pictures painted by Bellini in which the opulent curves, the splendid depth bring to one a special sense of the colour of life, and glow with warm-hearted mastery.

Princess Mary was essentially a walking, living Bellini, great in all her attributes outward and inward; incapable of pettiness, unlearned in unkindness. She combined in her disposition, it always seemed to me, a singular simplicity with a sweet, wholesome knowledge of the world which gave to her mind the balance rare in one to whom the limitations of position have concealed certain sides of life or very partially revealed them. Royalty is essentially conventional. It is almost a part of its duty to cultivate this attitude. But, with the exception of Her Majesty, the most truly royal of the group of women that has been justly honoured during this generation was so natural in her expression, so human in her sympathy, and so all-pervading in her sunshiny temper that conventionality became with her not the attitude of her mind, but a safeguard to be adopted when occasion demanded. It has often been a surprise to me to realise how quickly her imagination enabled her to put herself absolutely in the position of people whose circumstances she could never have experienced; and her keen appreciation of responsibility made her at once understand just where help was needed, and what that help meant to those to whom it was accorded. On several occasions I have discussed with her the immense service that she could render to some special cause by giving that assistance which she so ungrudgingly placed at the disposal of almost all those who had any good scheme to lay before her; and I have been astonished not only at her eagerness to add to her many duties one more, if it was to be of real service to humanity, but with the infinite pains with which she would inquire into every minute detail, grasping the importance of little things and understanding points which it would seem would only be apparent to those who had in hand the drudgery of arrangement. It was this peculiar power that gave her the influence which made her so widely beloved. Nothing was too small, and nothing was too great; and when she related her own experiences in regard to those charities in which she was particularly interested, you realised how she voluntarily threw herself into the attitude necessary for those who undertake really hard work and mean to do it well. Nobody has performed any public function, in no matter how small or humble a way, who does not know how easy it is to spare himself, how pleasant to do just the minimum of what is required and to shirk the maximum; how infinitely fatiguing are the

extra hand-shakings, the conventional greetings, the few "pleasant words" that are thrown in, as it were, as added bounty to the duty done. I have watched Princess Mary again and again on such occasions, and it has been often a marvel to me how little she has spared herself, with what conscientious solicitude she would consider every detail so that nothing should be omitted. It is almost impossible to believe that that radiant smile and that dignified genial greeting will meet us no more when we go in and out of those public functions which her very presence seemed to redeem from dreariness.

There was another side to the glowing colour of this splendid disposition, a side that could not be absent in such a nature as hers—and that was her power of lasting friendship. Years might separate her from those whom she had known, and the chances of life might have brought changes of fortune; but she was not a friend only for "all time of our wealth;" she too nobly understood the holiness of the human tie. Her utter absence of self-consciousness made you never for one moment forget that she was royal; it was not because she remembered it, but because she was possessed by it, and the sense of responsibility that came to her with the inheritance was never for one moment absent. She had strong, keen sympathy for the poor. Although she was alarmed by the growing democracy of the day, it was from no want of sympathy with the people. Whenever I have met her, I have heard her speak of some new scheme by which suffering could be alleviated; some new development of those plans by which the more privileged classes could, by giving of their time and their money, help not only those who needed it, but in the giving benefit themselves. The very last communication I had with her was about a woman whom she had placed in the Inebriate Farm Colony which she herself had opened one sunny June day. Her solicitude about this woman was as great, and her directions as minute, as though she herself had known all that could be undergone in a workhouse infirmary, and all the trial and the disgrace that the poor woman's habits had brought upon her relatives. It was only one instance of that power of placing herself in the position of those who suffer, which was so characteristic of her great heart.

On another occasion I remember meeting her at a concert given in one of the rich "faubourgs" of London. The people who composed the audience were probably not on visiting terms with the inhabitants of Mayfair; but Princess Mary bowed to this one and the other, mentioning their names, and giving each that individual recognition which meant so much to the recipient. I asked her amazed how she could thus remember faces and names. She gave one of her beaming smiles, and said, "They are good, kind people who help the objects for which these entertainments are held. I always make a point of knowing them and trying to remember where I have met them." True dignity must ever bear about a deep sense of individual responsibility, and all real responsibility must always bring a personal relation to the highest. That was the secret of the royal mind and the royal manner that won every heart that came within the sunshine of her presence.

## II.—HENRY GEORGE.

### I.—AN ENGLISH-SPEAKING MAN.

**B**ORN in Philadelphia, launched in Philadelphia, and dying at New York in the midst of a contest for the second position in the American Republic, Henry George may be regarded as one of the most comprehensively representative Americans of our time.

But he was never parochial enough to be distinctively American. His chief literary success was achieved in London, where his book was selling by the thousand before it sold in America by tens. As a journalist he made his chief mark in Ireland; as an agitator he was *facile princeps* in the Highlands of Scotland. He left his deepest impress upon the constructive legislation of his time in the colony of New Zealand, and he fell fighting as the banner bearer of the cause as the most popular candidate for the Mayoralty of the first City in the American Union.

In the presence of such an English-speaking man, whose personality overleaped the parochialism of continents, and whose influence was felt throughout the whole of our ocean-sundered race, we may indeed thank God and take courage. For the appearance of such men, who are the naturally naturalised citizens of every State that speaks the English tongue, is a foreshadowing of the dawn of the conscious unity of our race. No peddling patriot of the parochial type was ever impertinent enough to banish Henry George from any platform in the Old World or New because, forsooth, he was a citizen of the State of California or of the State of New York. Wherever he went, wherever he found himself among those who could understand his mother tongue, there was George's Fatherland, and there he naturally and immediately took a hand in the politics which are the life of the people.

His sympathies were so broad that they overleaped the Atlantic and the Pacific in their stride. These broad oceans were to him no more than rivulets that divide the fields of an old homestead.

Henry George more than any other American of his time was familiar to the masses of the English-speaking world outside the United States. Mr. Moody's name and personality influenced more deeply and more continuously a smaller section. Like Mr. Moody he was the preacher of a creed, the prophet of a gospel, which he believed to be fraught with salvation to the people. Dwight Moody and Henry George alike started from a deep overmastering conviction of the utter hopelessness of the world as it is. They phrased it differently, no doubt. George did not talk of original sin, human depravity, and the dread doctrine of reprobation and of eternal hell. But George

held quite as strongly as did Moody to the fact that the world, the human race, society, or whatever you call it, is lost. It has strayed from the true fold, and before it can hope for redemption it must return from the wilderness and find salvation in submission to the truth. What Moody applied to the individual soul Henry George addressed to the community at large. They were both earnest, fiery-eyed prophets of the Lord, crying aloud in the highways and byways, "Flee from the wrath to come! The Day of the Lord is at hand!" And both of them believed with all the intensity of their earnest natures that they had been graciously raised up and inspired from on high with the formula of salvation for a perishing world. What justification by faith is to Mr. Moody, the single tax on land values was to Henry George.

The landed system was to George what the kingdom of the devil was to Moody. With it there could be no truce and no compromise. He warred against it by night and by day. It was the *fons et origo* of all the horrors of our social hell.

And so Henry George, the prophet of San Francisco, constituted himself a veritable preaching friar of the great gospel of the Single Tax, and sallied forth over sea and land preaching and teaching and converting the peoples, until there was no land or country or colony or province where they speak the English tongue, where the Georgian gospel was not preached unto men for their salvation or their condemnation.

### II.—H. G. AND J. C. : 1884.

"Henry George called at our office this morning" (I wrote in January, 1885).

"He is full of enthusiasm concerning the uprising of the masses; and for the sake of the agrarian millennium which is dawning in the United Kingdom before his enraptured vision, he could almost wish he were an Englishman."

Such is my note of the last time I remember meeting Henry George. It was in the old *Pall Mall* days, before that journal had become the property of one of the greatest owners of ground-rents the world contains. It is a far cry from Henry George to William Waldorf Astor. There are few men who could be worse hit by the Single Tax than the multi-millionaire, who, in one of his temporary aberrations into the realm of ideas fitted his golden extinguisher to the candle that burnt in Northumberland Street, and then was mildly surprised when the light went out.

In those days I used to see a good deal of Henry George. He used to come and wrestle with me for the conversion of my soul and the winning of the *Pall Mall* to the faith

THE LATE HENRY GEORGE.

of the Single Tax. I think I see the little man with the great head to-day, as he used to come with springy step and swinging gait into the editorial sanctum and discourse concerning the great things which were to be done in the world. For he had a cheerful, genial optimism. A complacent confidence in the triumph of his doctrine enabled him to float like a cork over the waves of adversity. On that last interview I remember he was just fresh from his tour in the Highlands of Scotland. He was radiant with delight. And he had reason. For not only had the common people heard him gladly, but he believed that he had made a convert of a Cabinet Minister.

That Cabinet Minister—alas for the vanity of all human expectations!—was no other than the Right Hon. Joseph Chamberlain, who was then in the throes of the unauthorised programme! Mr. George did not know his Chamberlain. But very few people did in those days, and although Mr. George had the corrective ready to hand in Northumberland Street, he was never a man who welcomed the disillusion of experience. In 1885, he was full of hope and faith and joy in believing that the masses were with him, and with the masses their self-constituted champion Mr. Chamberlain. When I shook my head sceptically over his dithyrambs in praise of the Prophet of Birmingham, he put it all down to an imaginary dislike. When you know a duck is not a swan, you are usually accused of a personal dislike to the swan just because you will not certify it is not even a goose, but is simply and solely a duck. George was fresh from the Highland Land Leaguers whom Mr. Chamberlain had gulled to the top of their bent. "Everywhere," said George, "Chamberlain is regarded as the man who is to lead the great Democratic party, which is to spring into the arena as soon as Mr. Gladstone retires."

George was fully convinced that what he called the English revolution, which was only a phase of the Social revolution through the whole world, had begun. The heather was on fire in the Highlands. Ireland had just been through a revolutionary agitation. The masses were stirring in the great cities in England. Wherever he had gone, crowds were turned away from the doors. Always resolutions had been passed demanding the restoration of the land to the people, the whole eastern sky was radiant with the promise of the coming day. And then there was Mr. Chamberlain and his great speech about the land.

"What is it," I asked, "that you think Mr. Chamberlain has said?"

"Mr. Chamberlain's strength," he replied, "seems to be the belief which I find everywhere, that he is far more Radical than he has yet seemed to be. He was only waiting his opportunity. And now he has found it. He sees the truth and proclaims it."

"Well, but," I persisted, "how do you take his declarations?"

"As a proof of his political sagacity," he replied. "Translated into plain English, I take his words to mean that the land belongs of natural right to the whole people, but as it might be difficult to transfer the fee simple from the landlords to the people, it should be left in form to its present possessors, whilst the people should take over the rent."

Mr. George was full also of the proposal of the Financial Reform Association to reimpose the Land Tax of 4s. in the pound.

"Do you think Chamberlain will support that?" I asked George.

"Four shillings in the pound!" cried George. "I think Mr. Chamberlain is ready to take twenty shillings in the pound."

### III.—COUNT TOLSTOI AND THE TEN COMMANDMENTS.

After this we corresponded at intervals, and I have a hazy idea that I saw him after my return from Russia in 1888. I had spent a week with Count Tolstoi, whom I found full of Henry George, and this I naturally reported to the latter. I see it is mentioned that in these last days, while still in the thick of the Mayoral contest, Henry George referred affectionately to Tolstoi, and expressed a great wish to visit him some day in Russia. The two men would have got on famously—for a time. For prophets whose faiths do not exactly coincide are apt to diverge very widely when they come upon a point of disagreement. Henry George was all for the Single Tax. That was the sheet anchor of his whole system. But Count Tolstoi was absolutely opposed to any taxation at all.

Nevertheless, the man with only one tax is at least nearer salvation from the Tolstolian standpoint than a man who approves of more than one. Tolstoi had been reading "Progress and Poverty," and was full of praise both of the book and its author.

"In thirty years, private property in land will be as much a thing of the past as now is serfdom. England, America, and Russia will be the first to solve the problem. Already the work makes progress. When I was a young man the emancipation of the serf preoccupied the mind of the Russian youth. To-day another work commands the attention of our sons—the destruction of the private ownership of land."

"Henry George," he told me, "has formulated the next article in the programme of the progressist Liberals of the world. How I admire his spirit, which is so Christian; his style, which is so clear, and his metaphors, which are so striking! He has indicated the next step that must be taken. His ideas will spread—nay, they are spreading. During the winter, I have at night the peasants to talk with me round the samovar, and we often discussed the future of the land. I found them of two minds. One section would give every adult male an equal portion of land. The other would have the whole land held by the community cultivated and owned in common. But when I explained Henry George's idea they all agreed that this would be the best. Only last week a peasant came nearly forty versts across the country to ask for further explanations about this land nationalisation."

"And what did you tell him?"

"I told him that under the nationalisation scheme all land would belong to the Government, that there would be probably a reduction of twenty per cent. in the tax they now pay for their land, and that ultimately the reduced land tax would take the place of any other taxes. He was quite satisfied, and he will tell others of the scheme."

"Under George's scheme, instead of paying a terminable seven and a half roubles for forty-nine years, they would pay six roubles in perpetuity. The peasants know this, but they are willing to go on paying the reduced rent to the commune, after the period of repayment is over."

I told Count Tolstoi of the discussions I had held with Henry George in London, and the sore point of the Ten Commandments. "I quite agree with George," said Count Tolstoi, "that the landlords may be expropriated without dishonesty, without compensation as a matter of principle. But as a question of expediency I think compensation might facilitate the necessary change. It will come, I suppose, as the Emancipation came. The idea will spread. A sense of the shamefulness of private ownership will grow. Some one will write an 'Uncle Tom's Cabin' about it; there will be agitation, and then it will come, and many who own land will do as did those who owned serfs—voluntarily give it to their tenants. But for the rest a loan might be arranged so as to prevent the work being stopped by the cry of confiscation."

The reference in this extract to the Ten Commandments will be best explained by quoting from an interview which I had with George in 1884, when we had quite a

little tussle over the righteousness of what he called Restitution, but what I called Plunder.

He had just returned from his first tour in Scotland, and was very emphatic in asserting that whatever I might think, the masses of the Scotch people were to a man in favour of confiscation. He said:—

"I made it a point of putting the question plump and clear at all my subsequent meetings—are you for confiscation or compensation—and I found almost to a man for confiscation. Don't you make any mistake, the public is ripe for plunder!" "Of course," said Mr. George, with a merry twinkle in his blue eye, "there are some methods of compensation that I don't very much object to. For instance, it was proposed in one meeting to compensate the landlords by giving them acre for acre of all the land that they had possessed, but in this way: they would give up their land at home, and the State would give them a similar area in Australia or Canada."

"You talk about plunder!" said Mr. George, rising and pacing the room. "Wherever I went I heard of plunder. Plunder the most shameful, most foul, kept up year after year, and generation after generation, by the landlords. Plunder! Plunder of tenants; plunder of municipalities; plunder of men of business; plunder in all directions. There was not a place that I visited that could not give me instances by the dozen of the most scandalous spoliation on the part of the landlords. They are stealing commons at this moment; stealing them wholesale, without regard to the law or the rights of the people. I hardly visited a town, I repeat, which could not point to common lands that had been filched from the people by the universal thief. And yet we do not propose," continued Mr. George, with an air of virtuous magnanimity, "we do not propose to demand restitution from these plunderers. We are content if they simply give back that which is not their own, and restore to the nation its national inheritance."

"You talk of the Ten Commandments! I am all for the Ten Commandments," said Mr. George. "Restoration is the fulfilment of the Ten Commandments. It is the stopping of the universal breach of the Eighth Commandment on the part of the landlords."

George was always in favour of confiscating land; he was not in favour of confiscating interest, an inconsistency on his part which caused some of his most ardent friends grave searchings of heart, but he was quite intractable on the subject. I remember putting the question to him in reference to the buying of my own house which I was then contemplating.

"Here," I said, "is a house worth, let us say, £1,000, standing upon an acre of ground, which I cannot obtain unless I pay £2,000—for the rent of which I am at present paying £100. If I buy the house it is mine, and you do not object to that?"

"Certainly not," said George.

"But if I buy the land, I become a robber and a land thief?"

"Certainly," said George, without any hesitation, "you have no business to buy the land."

"But," I said, "if I were to invest £2,000 in Five per Cent. Stocks, and pay the rent of the land, it would be the same thing, would it not?"

"No," he said, "because before very long we shall relieve you of the whole of that rent. Do not buy the land," he said; "wait, and we shall be able to give it to you for nothing."

This, however, was only a joke by the way; for if the land had been restored to the people, the only difference would have been that I should have had to pay my rent to the State authority instead of paying it to my landlord.

#### IV.—GEORGE'S RELIGION.

Everybody liked George—even the Atheists whom he did not like. For one excellent thing about George was the intensity of his religious faith. There were very many among the crowd that cheered him who took but little stock in the Christian religion, but George never pandered to their unbelief. On the St. James's Hall platform and everywhere else, no one was left in any doubt as to George's uncompromising belief in God the Father Almighty.

When I was with Mr. Bellamy at Chicopee, Massachusetts, last September we had much talk over the relation between Socialism and unbelief. Mr. Bellamy was profoundly convinced that the Socialists' millennium would never dawn until the Socialists of the militant aggressive atheistic school abandoned their fierce intolerance. "The social revolution," said the author of "Looking Backward," "will never come until it is based on the bed-rock of religion. This hatred of religion on the part of many Socialists is the chief obstacle to the progress of the cause." Henry George agreed with Bellamy. To him God was a living reality and the social revolution was His will. Therefore he worked away at his Single Tax as Rhodes paints the map of the world British red, both feeling equally assured that they are forerunners and pioneers of the Divine purpose.

Cardinal Manning liked George. The Cardinal was always in sympathy with all who cared for the poor and who had faith in God.

"It was my great privilege" (writes a correspondent of the *Daily Chronicle*), "before his visit in 1889 to London ended, to introduce him to Cardinal Manning. The interview between these two men, both of them ardent lovers of democratic institutions, whether under royal or republican forms of government, took place in the inner sanctum of the great cardinal at Archbishop's House. It was a Sunday afternoon, and 'the better the day the better the deed,' said the Cardinal as he rose to receive him. I have a vision of the two profiles facing each other in the dim light of the growing dusk, and I recall the emotion of tone in which each man made frankly to the other a sort of profession of faith. They had traversed to the same goal from opposite directions. 'I loved the people,' said Henry George, 'and that love brought me to Christ as their best friend and teacher.' 'And I,' said the Cardinal, 'loved Christ, and so learned to love the people for whom He died.' They faced each other in silence for a moment, in a silence more eloquent than words."

It was Henry George's faith in Divine Providence which led him to throw himself into the recent campaign which terminated so fatally. Shortly after he had entered the field he met Mr. McEwen and Mr. Dayton, the candidate for the Comptrollership, at dinner. A note of some of the conversation was published in the *Journal*, from which I quote the following extract:—

"What do you think will be the outcome?" I asked Mr. George.

"We shall win!"

"Why do you think so?"

"Because," he said, with a great seriousness, "because I believe that in the Providence of God the time has come for the people of New York and the people of the country to assert the democracy which is in their fibre—to assert the right of self-government, and to advance the battle line against the rule of selfish, unpatriotic and largely mindless wealth. You have been speaking of the great fund that is being raised to overwhelm us. Let it be raised. Let the plutocracy band together here and offer battle, and they will be met."

Born fighter as he was, George exulted in the opportunity of asserting his faith, even although his doctors warned him that he could only enter the field at the risk of his life. Doctors, however, always say that, and one of the last things which the born propagandist ever thinks of listening to is the advice of his medical man. This may appear irrational, but no one knows better than a man like George how much the joy of a fight, with its inspiration and exhilaration, gives strength, renews energy, and acts as the best preservative against the dangers to which his doctors think he will succumb. George was never a strong man, but those who saw him in the middle of the recent contest declare that he never looked more fit than within a few days of his death. He never spared himself on any occasion, and in this last fight he flung himself into the fray with energy. His party was sadly deficient in organisation, and his one hope was to make up for organisation by the personal enthusiasm which could only be generated by personal contact between himself and the masses of the people. "Organisation," he said, "is valuable in politics of course, but there is something of greater value still, and that is to have the democratic instinct of the people with you, and we have that." If he had not, it was not due to any reluctance on his part to spend the last ounce of his strength in generating it.

#### V.—THE GREAT FIGHT OF 1886.

In the contest of 1886, when he stood for the Mayoralty of the City of New York against Mr. Ewart, the candidate who was supported by the combined strength of Tammany and the Republic machine, he went through an ordeal of campaign oratory which might well have killed him then.

It was known as the barrel-head and cart-fall fight. George made ten and twelve speeches a day from the doorsteps, ends of trucks and tops of barrels. He also held monster open-air meetings, and spoke to great gatherings in the leading halls of the city. He was untiring. Every section and part of the city was visited. He spoke to all manner and conditions of men. He met the men going to their work, and on their way home they stopped to hear him speak. It was a hot fight, and brought to the candidate 68,000 votes.

Mr. Croker talked over that ancient history with me on the steamer, and then expressed a confident conviction that the Labour Unions would never again support Henry George. They were all in line, he said, with Tammany. Mr. George's recent candidature, however, showed Mr. Croker's calculations were not founded upon accurate knowledge. George's candidature deserved and obtained general sympathy, because it was the most emphatic, picturesque, and sensational method of expressing dissatisfaction with things as they are.

It was George's fixed belief that he was really elected at the election of 1886, and that he was counted out by fraud. Such things of course are incredible to us who are not familiar with the ballot-stuffing, and all the innumerable devices by which the verdict of the electorate is falsified by the unscrupulous managers of party. George, however, to the day of his death persisted with emphasis in asserting that he was really and truly elected, and if the votes had been honestly counted he would have been Mayor of the City of New York in 1886.

On the night of the election, when the votes were all in, but before they were counted, he made a speech in which he foreshadowed the possibility of such a fraudulent falsification of the returns:—

Under a fair vote of the people of New York I would be to-

night elected Mayor. If, as now seems probable, the official returns do not give me that office, it is because of the money, of the bribery, of the intimidation, of a press perverted and unscrupulous, of the unreasoning fears of the ignorant rich and the hopeless degradation of the miserable poor. But, men, I did not accept your candidacy for the office, nor did you nominate me for the office; what we sought was to bring principle into American politics. I congratulate you upon the greatest of victories that we have won. They may bribe, they may count us out, by their vile arts they may defeat what would be an honest verdict of the people; but we have gained what we fought for. Thank God, we have made a beginning. We have demonstrated the political power of labour. Never again—never again will the politicians look upon a labour movement with contempt.

That speech of eleven years ago is notable for many things, especially for its peroration, which expresses in eloquent language what Henry George would have said had he lived to go to the poll this November:—

The future, the future, is ours. This is the Bunker Hill. We have been driven back as the Continental troops were from Bunker Hill. If they won no technical victory they did win a victory that echoed round the world and still rings. They won a victory that made this Republic a reality, and, thank God, men of New York, we in this fight have won a victory that makes the true Republic of the future certain—certain in our time. Most of you men are younger than I, and to you more years will be given. You will look back to this campaign with pride. We have not been trying to elect a Mayor; we have been making history. We have lit a fire that will never go out. We have begun a movement that, defeated, and defeated, and defeated, must still go on. All the great currents of our time, all the aspirations of the heart of man, all the new forces of our civilisation are with us and for us. They never fail who die in a good cause. So, on and on and on together. We have done in this campaign more for popular education, more to purify politics, more toward the emancipation of labour from industrial slavery than could have been accomplished in twenty years of ordinary agitation.

It is extraordinary how little alteration is needed in describing the campaign of 1886 to make it fit with the story of the campaign of 1897.

Mr. George declared he was a poor man standing as the candidate of poor men. Mr. George simply stood where he did in 1886. Hence he simply had to fall back upon his old thunder, and to reproduce the fierce denunciations which he held against the existing state of things by which the control of the modern American city is given over to the worst classes of the community. Here, for instance, is an extract from a letter in which he lashed the corrupt influences that dominate American politics—

The influences which have degraded the rich and debased the poor, and, under the forms of democracy, given over the metropolis of our country to the rule of a class more unscrupulous and more arrogant than that of the hereditary aristocracy from which it is our boast that we of the new world have emancipated ourselves.

The type of modern growth is the great city. Here are to be found the greatest wealth and the deepest poverty. And it is here that popular government has most clearly broken down. In all the great American cities there is to-day as clearly defined a ruling class as in the most aristocratic countries of the world. Its members carry wards in their pockets, make up slates for nominating conventions, distribute offices as they bargain together, and—though they toil not, neither do they spin—wear the best of raiment and spend money lavishly. They are men of power, whose favour the ambitious must court, and whose vengeance he must avoid.

Who are these men? The wise, the good, the learned—men who have earned the confidence of their fellow-citizens by the purity of their lives, the splendour of their talents, their nobility in public trusts, their deep study of the pro-

blems of government? No; they are gamblers, saloon keepers, pugilists, or worse, who have made a trade of controlling votes, and of buying and selling offices and official acts.

It is through these men that rich corporations and powerful pecuniary interests can pack the Senate and the Bench with their creatures. It is these men who make school directors, supervisors, assessors, members of the Legislature, Congressmen.

Similar extracts might be multiplied if they were needed in order to illustrate the unsparing severity with which George lashed the vices of his countrymen.

In his many visits to England, Ireland and Scotland he was equally uncompromising in assailing the landlords, the Duke of Argyll particularly coming in for his censure.

Henry George was correspondent of Patrick Ford's *Irish World* in Ireland during the Land League times, and when such men as Patrick Ford and Michael Davitt got together, it need not be said that there was no sparing of the misdeeds of the Irish landlords. But George was an eminently fair man, and he never hesitated to declare publicly and privately in the strongest terms that iniquitous, as he believed, the British Landed System to be, the British aristocrat was a much less noxious animal than the American millionaire. In the whole of Scotland though he found many things to censure, nothing seemed to irritate him as the barbed wire fence with which Mr. Winans had closed the great territory which was cleared in order to provide him with a deer forest.

Mr. McEwen writes as follows upon this question of his practical political capacity:—

On the morning of the day upon which Mr. George resolved to be a candidate for Mayor of New York there was, at his request, a meeting of friends to advise him. They came to the number of thirty, and it was for its size a notable representative gathering. There was not a man there who did not at the beginning feel perfectly competent to guide Mr. George in politics and in all the things of common life. At the end there was not a man there who mentally did not stand hat in hand before his superior practical sense. He talked less than anybody else, asking questions chiefly, and wound up by putting the case *pro* and *con* so simply that the matter was clear at once to everybody, and all joined in saying: "Decide it for yourself, Mr. George; and whatever your decision may be, it is ours." The rest had given their thoughts to considerations of expediency, chances of failure or success, or the effect of the canvass upon him. Henry George went straight to the core of the matter and dealt only with the question: "Is it right that I should do this? Am I needed by my cause?" In the presence of simplicity and unselfishness the wisdom of the shrewd became as foolishness to them. There was no doubting his sincerity. When he said: "I live to advance this cause, and if it takes my health or life, and that is needed, I am ready," he said it with no flourish, but quietly, as another man might say he was ready to make some sacrifice of time and business for his party. The thirty who met divided in opinion went away as one, and that one on fire with devotion to Henry George and lifted to his plane for the hour.

Men laughed at themselves for his power over them. They go to him to advise, to expostulate, to argue, and come from him wroth with their own past littleness. For they find in him not only the capacity to think largely and clearly, but utter honesty in speaking his thought. He appals the strategists who enlist under him. He concerns himself not at all with consequences. "I have no secrets," he said to me a few days ago when talking politics; "no concealed policies. My platform is what I think, and if others do not approve my beliefs I don't ask for their votes."

He got their votes all the same, to an extent which considerably amazed the practical politicians who controlled the machine in those days.

## VI.—HENRY GEORGE'S EARLY CAREER.

Mr. McEwen, in his Character Sketch of George in the *American Review of Reviews*, says that he knows of no American citizen whose career, unfavoured by accident or the help of others, is so impressive. He was born in Philadelphia on September 2nd, 1839, the eldest son of twelve children. His father was a publisher, connected with the Episcopal Church. Henry left school when he was thirteen, and began life as an office-boy in a crockery importing house. His grandfather was a sea-captain, and from him he inherited a taste of the sea, which led him after a year's experience as office-boy, to ship at New York on board a sailing-vessel. The voyage lasted over fourteen months. Before he returned he had visited London, Melbourne, and Calcutta. On coming home, he began to learn the business of a compositor; but before long the fascination of the sea snatched him from the desk, and he shipped as an ordinary seaman. In that capacity, he worked his way around the Horn of California, which he reached when he was nineteen. On the Pacific Coast he had various adventures, in the course of which he had occasionally to find lodgings in stables and other out-houses. At last he got work on a weekly paper, and shortly after he attained his majority he formed one of three to start a little evening paper. It was a pretty tough job, keeping body and soul together, and the three adventurous journalists used to write their own copy, set their own matter, and then sleep at night in bunks at the office.

It was in this time of stress and struggle that he got married. His wife, speaking of him at this time, says:—

He was a handsome, self-reliant young man, very independent and would fight for any man, woman or child oppressed or unjustly treated. He was a typical American, ardent in his temperament and always manly and tender. His uncle, with whom he had a misunderstanding which resulted in our elopement, thought he was too poor to marry. This touched Henry's pride and he proposed marriage on the spot; I accepted, he borrowed some clothes and enough money to pay the preacher and get a carriage. I remember he had no clothes to speak of, but carried a very large watch—as large as a man's fist, and he was always on time.

His own account of it is that, in the dispute with his wife's relations, he came to see that he had been altogether in the wrong, but he never regretted the step that he took. He says:—

I was then twenty-two and she eighteen. I was very poor, but when I talked the matter over with the young lady she said she was willing to begin life with me regardless of our poverty. I remember I borrowed some clothes to be married in—a vest and necktie—and went to a lady I knew and got credit for two weeks' board for myself and wife. No licence was required in those days. I think a licence would have delayed the ceremony. I raised five dollars to pay for a carriage, and in this I took my shipmate, Ike Trump, to the house, knocked at the door, and the girl came out with her things in a bag. We bundled her into the carriage, and went off to the preacher's house and got married. He was the Rev. S. D. Simonds, a Methodist. Then we drove to the place where I had arranged for board, where we had one room. I remember we had a good wedding supper at a miner's restaurant. The wedding-ring was my wife's grandmother's.

The first thing he did on the morning after his marriage was to go out and seek for a situation. He got a place as compositor, and worked till two o'clock in the morning, and then began again in the afternoon. He struggled on, his wife helping him, his family living on two shillings a day, and he never got into debt. Two boys were born to him there. They frequently had close shaves with hunger, but something always turned up, and once,

when they were very hard driven, he obtained an order for printing from a man who supplied them with corn meal and potatoes, upon which they lived. They met their milkman's bill in the same way.

When the French were fighting in Mexico he had a narrow escape of being arrested for volunteering to join a filibustering expedition that was being fitted out to help the Mexicans against the French. He told Mr. McEwen, "I will never forget the willingness with which my wife with her two little children agreed to my leaving her on an expedition that I knew would have no possible good end. She was always equal to any emergency and every hardship." So at least Henry George said a fortnight before his death. The common-place, matter-of-fact man will, however, be disposed to question whether his wife would not have shown more regard for her husband's welfare if she had placed a veto upon this wild-goose expedition. Fortunately, Providence was kinder to him than his wife, and the Government interposed in time to prevent the departure of the expedition.

It was not until he was twenty-six years of age that he began to write for the press. He sent his first communication in anonymously. It was published, and from that time he found his vocation. He was appointed as reporter on the *Alta-California*. He combined his functions of a country reporter with peddling clothes wringers. He saved up a little money, and invested it in copper mines, where he lost it all. Then he came back to journalism. After a time he became editorial writer on the *San Francisco Times*, a Republican organ, where he soon became disgusted with the Republican party. He then crossed the Continent by pony express on a mission connected with the *San Francisco Herald*. His visit to New York brought him in contact with Mr. J. R. Young, the managing editor of the *Tribune*, and, what was much more important, brought him into close contact with the extremes of misery and wealth which existed side by side in New York City. On returning to the Californian coast in 1869, the *Herald* failed, and he became editor of a small paper in Oakland. Shortly afterwards he accepted the position of editor of the *Sacramento Recorder*, the principal organ in the city. He had not held it long before the Central Pacific Railway bought up the paper, and Mr. George retired.

#### VII.—THE GENESIS OF "PROGRESS AND POVERTY."

He was this time profoundly exercised in mind over the social question, and his articles in the various newspapers to which he contributed bore eloquent reference to the persistence with which his mind continually returned to the problem of poverty. It was to this period of perpetual change and harassing vicissitudes that he traces the formation of the ideas which were afterwards destined in his name to make the tour of the world. The first proclamation of his distinctive views is to be found in a pamphlet which he published in 1871, entitled "Our Land and Land Policy, National and State." Of this pamphlet he sold about one thousand copies, very few of which are extant now. In it will be found propounded the idea of the Single Tax on Land Values. He had been in correspondence with John Stuart Mill on the question of forbidding the emigration of the Chinese into the United States, and the English philosopher's ideas as to the unearned increment may have had somewhat to do with the Genesis of the Single Tax. George himself did not attribute the idea of the Single Tax to John Stuart Mill. It came to him about 1870, the year

following his return from the Atlantic coast. He says:—

While editing a paper in Oakland, and after long thought, the reason of it all came upon me like a revelation. I had taken a horse and gone for a ride, and absorbed in my own thoughts had driven him into the hills until he panted for breath. Stopping for rest, I asked a passing teamster, for want of something else to say, what land was worth there. He pointed to some cows grazing off so far that they looked like mice, and said: "I don't know exactly, but there is a man over there who will sell some land for a thousand dollars an acre."

Like a flash it came upon me that there was the reason. With the growth of population land grows in value, and the men who work it must pay more for the privilege. I turned back, amid quiet thought. The perception that then came to me has been with me ever since.

His conversion to Free Trade, which was brought about a few months later, he thus described:—

One night in Sacramento I went with a friend to a debating society and there heard a young fellow of great ability, William H. Mills, the present land agent of the Central Pacific Railroad. He delivered a speech in favour of protection. I was a protectionist when he began, but when he got through I was a free trader. When they asked me what I thought of it I told them that if what he said was true, it seemed to me that the country which was the hardest to get at must be the best country to live in; and that, instead of merely putting duties on things brought from abroad, we ought to put them on things brought from anywhere, and that fires and wars and impediments to trade and navigation were the very best things to levy on. After that I became a free trader and have been one ever since. I am an absolute free trader, believing in no tariff at all.

In 1872 he started with two partners the *San Francisco Evening Post*. It achieved sufficient success to be bought up by another journalist, who dispensed with George. Thereupon the circulation of the paper fell off so rapidly that he was glad to sell it back to its former owner at a nominal price. In 1875 he started a morning paper, a small daily, with an illustrated Sunday edition, called the *Ledger*. Financial difficulties, however, compelled him to give it up, and he lived for a time upon the salary he was earning as an inspector of gas meters in San Francisco. He started another paper, called the *State*, a weekly, the contents of which he wrote himself.

All this while he was busy with the book with which his name will always be associated. In his own words:—

My book, finally entitled "Progress and Poverty," was finished about August, 1879, and I sent the manuscript copy East, asking a friend, Mr. Hallidie, an associate director in the Free Public Library that had been started in San Francisco, to see about its publication. He submitted it, but no one would touch it. My old partner, Mr. Hinton, who had got himself a printing office, thereupon said that he had faith enough in anything I should do to make the plates, and I put the manuscript into his hands, and the first plates were printed in the fall of that year, I closely supervising it and doing some little composition myself. I then brought it out in an author's edition of which I sold to friends at the rate of three dollars a copy, enough to pay for the cost of printing. I then sent some copies without binding to publishers both in America and in England, offering to put the plates at their disposal for printing. I received but one acceptance, that of Appleton and Co., who had been previously seen by Mr. Hallidie. They offered to take it and bring it out in January, 1880. I acceded to this, and Appleton and Co. published the book in the following year.

In 1880 he left California and settled in New York, but although he sold about a thousand copies of his book, it had made no mark on the public mind until the next

year, when Mr. Patrick Ford sent him to Ireland as a special correspondent of the *World*. When there he had the good luck to be arrested as a suspect at Loughrea in Ireland. He was released the next day; but his arrest served as a magnificent advertisement for his book. Acting on Michael Davitt's advice, a cheap edition of "Progress and Poverty" had been brought out in England. The *Times* devoted a page to the examination of its doctrine, and the whole edition was sold out the next day. Thus Mr. George's position was made, as often happens, by those who were most opposed to his principles. But for Mr. Forster's Coercion Act, and the *Times* newspaper, it is possible he would never have been recognised to be anything more than a bright, brainy journalist, with a bee in his bonnet on the subject of land. As it was, he became famous. He made several tours throughout the United Kingdom, and was always received with great acceptance. In 1884, when he visited Scotland, he had a great reception. He said to me at the time:—

I was at Greenock last week and entered the town as if I had been a hero fresh from the Egyptian campaign. The standard with the ancient Scotch lion was borne aloft over my head, and the bagpipers were skirling and the brass bands were playing as they escorted me through the streets. As it was in Greenock so it was more or less in all the large towns of Scotland.

Michael Davitt tells the story of his devotion to the cause which is very characteristic:—

An English admirer, knowing he was a poor man with a wife and family to support, handed him a cheque one day in my hotel here in London. The late Mr. William Saunders was present. George looked at the cheque, and without a moment's hesitation handed it to Mr. Saunders with the remark, "This will help to 'spread the light' here in Great Britain." The cheque was for £1,000.

Always and everywhere Henry George put his cause first, himself second. Not that he ever hesitated to put himself second, for, as was natural to a man who had struggled upwards against such odds to the position which he held, Henry George was not without a good conceit of himself, which, however, was in no way in excess of his deserts.

I am not writing his biography, but merely running rapidly through the leading dates in his career. After his election in 1886, he started the *Standard* in New York, which he conducted for some time, and succeeded, among other things, in embroiling Father McGlynn with his ecclesiastical superiors for his connection with what appeared to be a somewhat revolutionary or socialistic newspaper. In 1890 he visited Australia, where he met with a very enthusiastic reception. As he said to me in 1884:—

I have sowed the good seed far and wide through the length and breadth of the land, and it will spring up and bring forth fruit, in some cases twenty, in some thirty, and some a hundredfold.

Mr. Moreton Frewen, who has also travelled a good deal, and spoken in many Australian towns and cities, told me that he had never addressed a meeting in Australia, no matter in what out of the way place it might be, but there was a Single Tax section of the audience who lost no opportunity of preaching the gospel according to Henry George. His influence has been felt in the impetus which was given to socialistic labour legislation, which forms so conspicuous a feature in the recent history of New Zealand:—

"Progress and Poverty" has been translated into French, German, Spanish, Italian, Dutch, Swedish, Russian, Japanese and Chinese. Mr. George's other books are "The

Land Question," "Protection or Free Trade," "The Condition of Labour," "An Open Letter to Pope Leo XIII.," "A Perplexed Philosopher," being an examination of Mr. Herbert Spencer's various utterances on the land question, with some incidental reference to his synthetic philosophy. "Property in Land" a passage at arms between the Duke of Argyll and Henry George.

Mr. McEwen, who first met him in California, and who has ever since been a fast friend, thus describes the work he had on hand at the last:—

For some years he has been living in retirement, giving the leisure and the matured thought of his ripened life to the composition of an elaborate work on the "Science of Political Economy." It is to be his *magnum opus*. Some of the chapters I have seen, and am acquainted with the book's scheme. It shows no decline in power, but there is in it what there is in George himself—a milder tone.

#### VIII.—HIS LAST COMBAT.

From this task he was summoned to take the field as candidate for the Mayoralty of Greater New York. His motive for doing so was, as always, a desire to serve the cause to which he devoted his life. He said:—

This candidacy of mine for Mayor of Greater New York is a message to the men everywhere who think with me, which tells them that our cause is not receding but advancing, and that we may hope to see at least the beginning of the better time before we die.

He worked hard, addressing four meetings a day—a remarkable contrast to Mr. Van Wyck, the Tammany candidate, who, so far from emulating Mr. George's exploits, hardly made a speech in the course of the campaign. Tammany, however, relies far more upon organisation than upon the stump.

George being an idealist was much derided by practical politicians as a dreamer whose intrusion into practical affairs sensible men had a right to resent; but the experience of those who knew most of him is that he was a very long-headed man—quite long-headed enough to have been a Scotchman. A politically experienced member of his campaign committee said:—

"How it is I don't know, but every move we have made in politics against George's advice we have been wrong, and every time we have followed his advice we have come out right. We all think we know more about the ins and outs of the game than he does, but he has a sort of instinct that guides him straight. I don't pretend to understand it."

It is not necessary now to dwell at much length upon the specific issues raised at the last election. Mr. George stood as Mr. George, and everything that he said went. Many of his followers were enthusiastic supporters of Free Silver, but they made no objection to Mr. George because he would have demonetised both silver and gold. Mr. McEwen tells an interesting story of one instance, at least, in which Mr. George had an opportunity of putting to the test his favourite theories as to paper currency which he maintained should be universal:—

The panic year of 1893 gave him an opportunity to apply in practice his financial theories, and to illustrate happily for his friends the iniquity of private ownership of land and public franchises. The proprietors of some large manufacturing in a small town were about to shut down, as money was not to be had. This would have thrown many men out of employment and lost to a proportion of them their homes, partly paid for. On the advice of Mr. George the employers deposited Government bonds, securities resting on the good faith of the Government, with a New York trust company. The latter then issued certificates against these bonds in denominations of from 1 dol. to 20 dols. The men accepted the certificates as notes for their wages, the merchants of the place took them as notes for their goods. Six 20,000-dollar blocks of these

certificates were issued and went into circulation, the factories were kept going, nobody lost, and Mr. George claimed a triumph for fiat money.

His followers, however, tolerated all differences of opinion in return for the value of his support. They even left him to nominate his own ticket. He was selected as candidate for a party calling itself the United Democracy, which adopted the Liberty Bell as its emblem. The speaker who moved the nomination of Mr. George in the Convention, spoke of him as "the great, the immortal Henry George, the man who had shown the working people the way out of their difficulties. When George is mayor, the problems which vexed the municipality will cease. Corruption and bribery will keep away from the City Hall if George is there. They fear him as the inhabitants of the lower regions do the angels of heaven." When he accepted the nomination, he declared that he stood not as a Silver Democrat or a Gold Democrat, but as one who believed in the cardinal principles of Jeffersonian Democracy. The defeat of Bryan, he declared, was the defeat of everything for which our fathers had stood, and it looked to him as though the United States were fast verging into a virtual aristocracy and despotism. He stood, therefore, upon the doctrine of the equality of men, and in the democracy that believed that all men were created equal, lay the power that would vivify not merely New York but the world.

The platform of the United Democracy, after denouncing unscrupulous corporations and corrupt combinations, whose influence is felt alike in local and national courts, proceeds to define the aims and aspirations of its supporters in a manifesto, of which the following is a summary:—

It reaffirms the Chicago platform, demands home rule in municipal affairs, denounces the Excise laws, demands not only municipal ownership of franchises but their operation by the municipal government, three cent (or less) car fares on surface and "L" roads, dollar gas, the abolition of contract work for the city, enforcement of the eight-hour law on city work, the representation of labour in the Administration, increase of school accommodation and the introduction into the schools of industrial training: the designation of public places for free exercise of the right of free speech, the opening of court houses and schools for the free use of the people in the evening: it denounces the abuse of injunctions by the courts, and demands the abolition of property qualifications for grand and petit jurors.

Mr. George was a magnetic man—a man of intense enthusiasm and tireless energy. He spoke night after night, and as the contest waxed hotter and hotter his discourses rose in temperature, until, before the contest came to a close, he pledged himself to send Richard Croker to the Penitentiary as a thief; and he left his hearers in very little doubt that if he could have his way, the Republican Boss would occupy the adjacent cell. To Mr. Seth Low, Mr. George was a great speculative writer and a dreamer. To General Tracy, he was a man who went in for Free License and Free Everything excepting Free Silver. To Tammany he was a most dangerous foe.

It was a magnificent spectacle to see this man, who was nothing but an incarnation of an idea, standing in the arena without a penny to his back, and with no organisation at his command, making so magnificent a fight against the party organisations which had their representatives in every ward, and had campaign funds at their disposal, the magnitude of which are, to our old-fashioned ideas, almost incredible. It was stated during the election in the most positive manner that the Republican party having begun the campaign by an expenditure of one million dollars,

which they raised in Greater New York, before the campaign was over, had appealed for and received subscriptions to the extent of two million dollars from the Republican organisation throughout the country. This statement was printed prominently in the most widely circulated New York papers without, apparently, eliciting any contradiction. If it be true, the Republican party must have spent three million dollars, or £600,000, in contesting a constituency which had not 600,000 voters all told.

#### IX.—THE FALLEN CHIEF.

When Henry George founded the *Standard*, he proclaimed that he would "wage unceasing war against the lip worship of a just God, and the heart worship of the Golden Calf." That has been a war which he has waged ever since he could wield a pen. Michael Davitt says:—

I have never met a man more absolutely devoted to principle than George. He resembled Kossuth in his steadfast and unflinching loyalty to one great idea. This idea was the pole star of his action.

Like the Apostle Paul, his personal appearance if not mean and contemptible, was by no means imposing. Here are two pen and ink sketches of Henry George, The first by Mr. Meltzer, which appears in the *Criterion* for October:—

A short, spare figure, topped by a large intellectual head. A lofty forehead, bald save for a fringe of what was once bright reddish hair, now streaked with paler tints. A long, strong, slightly curved nose, sure index to a vigorous and determined character. Blue, earnest, and abstracted eyes, which now and then flash with observant interest through the projecting spectacles. A bushy beard, a heavy, thick moustache; not wholly hiding the firm outline of a mouth that tells of will and resolute force. Below the eyes, and bordering the nose, deep, patient furrows, lines of care and thought and suffering. The ears are ugly—large and long, and oddly shaped. And they are set at an unusually wide angle, as though straining to catch every faintest sound of the great human tragedy.

The second by Mr. McEwon, upon whose articles in the *American Review of Reviews* and *New York Journal* I have largely based the latter part of this sketch:—

The Henry George of the past decade is the Henry George of New York. The diminutive figure—he is under five and a half feet, and of less weight and smaller girth than many a boy of sixteen—is familiar to the people of Fort Hamilton, where he lives and has taken his walks, constitutionals without destination, and heedless in the choice of roadway or sidewalk, ambles for fresh air and thought that excluded observation of external things. The fine head, the graying-reddish beard, the blue eyes looking absently out from under the thicket of brows and through large spectacles, the soft hat set on any way—when these have appeared at the door of an editorial-room to inquire for a friend or bring an article, the stranger-journalist, unaware of the visitor's identity, has mistaken him for a colporteur, a retired schoolmaster, an unrecognised poet, or anything meek and unworldly.

Henry George on the platform was ready of wit, swift in repartee, and full of unquenchable ardour, and the passion of a noble enthusiasm, which enabled him to lead the great audiences captive at his will. This magnetic power of a great personality was one great secret of his power. Men felt at least that here was a man who believed absolutely in what he said, and who was able to express it with a simplicity and directness which carried them away captive.

He has fallen in the thick of the fight, beneath the banner which he nailed to the mast nearly thirty years ago. After a life of storm and struggle, he has indeed been happy in the opportunity of his death.

*Evangelina Bossa y Casanova*

# THE TOPIC OF THE MONTH.

## A ROMANCE OF THE PEARL OF THE ANTILLES.

### A CUBAN HEROINE AND HER RESCUER.

**F**EW things that happened last month are more worthy of chronicling than the brilliantly successful achievement of Karl Decker in rescuing the Cuban heroine, Miss Evangelina Cisneros, from the State prison of Havana.

#### I.—THE JOURNALISM THAT ACTS.

Apart altogether from the interest which belongs to it as an episode which recalls the daring enterprises of the adventurers of the Middle Ages, the incident marks a significant phase in the evolution of the journalistic profession. Newspaper reporters have had many assignments of various kinds, but since Stanley was commissioned to go and find Livingstone, who was lost in the centre of the Dark Continent, there has been nothing quite so sensational as the commission which Mr. Hearst of the *New York Journal* gave to Mr. Karl Decker to go and rescue Evangelina Cisneros from the Spanish prison in which she had been confined for many months. Stanley's commission after all was one of exploration, and came easily within what had always been regarded as a legitimate field of journalistic enterprise; but a commission to break into a gaol, and carry off a captive who was under arrest by the orders of the Government of a city with which the Americans were at peace, marks a development fraught with many possibilities, some of which are by no means calculated to minister to the repose of nations.

On the whole, I am disposed to regard the chief importance of the story as lying in the magnificent advertisement

which it has afforded the *New York Journal* and its spirited proprietor, Mr. W. R. Hearst. I say this in no spirit of sarcasm. There are great possibilities latent in that young man, and nothing is more important than to

take note sometimes of a personality which may be a decisive factor in the determining of many great issues, both internal and international. Whether this is so or not, depends upon a factor upon which we have as yet no trustworthy data to pronounce judgment.

What is visible to all men is that a young man of enormous energy and great journalistic instinct has dedicated a fortune as great as that of Monte Christo to the creation of a newspaper which, instead of confining itself to the function of chronicling other men's deeds, boldly asserts its determination to supersede the journalism that chronicles by

W. R. HEARST.

Editor and Proprietor of the *New York Journal*.

the journalism that acts. Other newspapers may write about things. The *Journal* is determined to do them. It has been doing a good many things—some of them extremely well, others not so well. I cannot for a moment profess to feel any unqualified admiration for many of the manifestations of the exuberant vitality of this phenomenal editor. But that is neither here nor there. The important fact is that here is a man with one great newspaper in San Francisco and another greater newspaper in New York, who only failed by a mere fluke from having another great newspaper in Chicago; who has ample means to give effect to the most extravagant journalistic ambitions; who is in the very prime of man-

hood, and who, so far, is entirely untrammelled by any allegiance to any party or sect or faction in the world.

In his ambition to be a journalist who does things, the release of Evangelina Cisneros may be counted as his first great international success. It deserves due recognition as a hint foreshadowing what this newest of new journalists may feel compelled to do hereafter. I am naturally a very sympathetic observer of this evolution. What Mr. Hearst is doing reminds me at every turn of what we tried to do in the old *Pall Mall* days, when our ambitions were quite as vast, but our means, alas! were much more limited. I was no multi-millionaire like Mr. Hearst, neither did I bstride a continent like a colossus, with one foot on the Pacific and the other on the Atlantic. But I realised, and in some fashion succeeded in impressing upon the public mind, a conception of what Matthew Arnold called "The New Journalism" which has never been entirely effaced—not even by the gross and unworthy caricatures of some new journalists of these latter days. Having said so much by way of preamble, I will now proceed to tell as briefly as possible the story of this new Evangeline.

## II.—THE FAIR CAPTIVE.

Evangelina Cisneros is a young and beautiful girl, of Spanish descent, of Cuban birth, whose father took part in the attempt made by the Cuban patriots to throw off the Spanish yoke, and whose uncle was at one time President of the nascent Republic of Cuba. Like many another revolutionist he fell into the hands of the Government he was trying to upset, and by them was promptly consigned to gaol. There he remained for some time, suffering the usual indignities meted out to captive revolutionists by this Spanish Government. His daughter, full of distress at the sufferings of her father, and fear that the rigours of the confinement from which he was suffering might endanger his life, made her way to the officer, Colonel Berriz, and implored him to consent to her father's release. It has been the fate of Spain at crises in her destiny to have the course of her fate decided by the lawless passions of her rulers. One of the most familiar stories in European history tells how the Moors were brought into Spain as the result of Don Roderick's lawless passion for the daughter of Count Julian, and it will not be at all surprising if, at the close of the nineteenth century, the Pearl of the Antilles should be wrenched from the heirs of Ferdinand and Isabella because her representative in Cuba cast wanton eyes upon a girl as beautiful but more fortunate than Don Roderick's mistress. Berriz was a soldier and a Spaniard. He was dealing with the daughter of a rebel, and he made to her one of those proposals which tradition associates with the worst period of English history, when the bloody assizes followed in the wake of Monmouth's rebellion.

Miss Cisneros wrote her own story of her life in her own simple language after her rescue. It appeared—in translation of course—in the *Sunday Journal* of October 17. She begins:—

It is not good that the people say I am a girl. I am not a girl; I am a woman. I am nineteen years old.

Her mother died before she can remember, and from childhood she kept house for her father. One day her father came home from the sugar plantation, and sat a long time at the table and did not speak—

All in a moment he pushed away his plate, jumped up from the table, and he took me by the shoulder, he looked me

straight in the eyes, and he said, "My little girl, I am going to fight for Cuba." And then I cried, and I think he cried a little too, and I kissed him and told him that I was glad. I said, "Father, I will go with you." Well, I went with him.

"I saw many things," she says, "that make me feel sick now when I dream of them at night. Once I sat half the night by a wounded man who prayed me to kill him, and I could not kill him, and I must wait for daylight, and when the sun rose he died alone while I was gone to get him a drink of water." Her father was betrayed by a spy and taken prisoner. He was very ill when confined in the Cabanas, and after much petitioning on her part General Campos removed him to the Isle of Pines, where the prisoners have the freedom of the island and can be joined by their relatives. Evangelina with her little sister Carmen followed her father to the island. It was there where she met the brute Berriz. She tells her painful story very delicately:—

One day my sister and I went out for a walk along the shore of the island. We saw five or six men coming on horseback. They were soldiers. The one who seemed to be the chief among them, from the clothes he wore, stopped his horse a little and looked at me. My sister and I were afraid, and we hurried home.

The next time I went out again we met the same man. Again he stopped his horse, and again I was afraid. From that day I could never go out but that this man followed me. It was Jose Berriz, the Military Governor of the island. He tried to speak to me many times, but I was always afraid and did not listen. He was a little yellow man with green eyes, green like the tide water when it is not clean and when the sun shines on it. He had a wife and children in Spain.

One day the soldiers came to our house and took my father away. My father had done nothing that he should be arrested, and we were very much afraid. We did not know what they were going to do with him. They would not let him speak, and they would not answer us when we spoke to them. I took my sister and went up to the Governor and asked him to tell me what they were going to do to my father. He was very kind. He made me to sit down, and he told me to have no fear, that my father should come to no harm, and that in a few days I should come again, and he would tell me that my father was free. I went again in a few days, when he did not tell me that my father was free. He told me that he would set him free if I wished it.

I cannot write all that he said to me. I went home and I cried all night, but I did not go again to the Governor's house to ask for my father's freedom.

One night when she was alone in the house, Berriz came and knocked at the door. She lay still terrified and did not move. He went away. Next day she received a warning that the Governor intended to return at night:—

That night there were friends of mine watching the house. The Governor came. He attempted to force his way into the house; I screamed, and my friends rushed out and caught him. Then the soldiers came and we were all arrested.

They took me to the Recojidas (a prison in Havana). The Recojidas is a prison for women. I would rather be dead and in my grave, with the cross at my head and a stone at my feet, than to be for one day in that place again. The day, it was not the day, that made me wish to die.

Her account of her experiences in the public prison, where she was for some time the only white woman amidst the raffra of the negro prostitutes in gaol, is very vivid and very fearful. The women were huddled together like wild animals in a pen. The roughs from the streets would come and mock them and chaff the unfortunate, blowing their tobacco smoke through the bars, and gloating over the prospect of her execution. Being

in prison, she remarks simply, does not make one feel like being good:—

But the day I could get through somehow. I was angry sometimes, and that helped me to live; but at night, when everything was still and I was shut up in that pen, with those awful women, something used to rise up in my throat and choke me, and I had to say my prayers over and over again to keep from tearing my throat open.

At last Mrs. Lee, the American Consul's wife, came to see her:—

She could not speak Spanish to me, and I could not speak English to her, but we held each other by the hands, and after that my throat did not feel so tight at night.

improbable, the United States should be involved in war with Spain, this result will probably be due more to the story of Evangelina Cisneros than to all the unnumbered tragedies of a smaller nature which found no chronicler. When every one was cursing the butchers of the Antilles, it occurred to Mr. Hearst, or to some of the staff imbued with his spirit, that it would be a thousand pities if this widespread indignation were to be allowed to evaporate in execration. He set to work to get up a memorial to the Queen of Spain, pleading for the release of the Cuban heroine. The idea, once mooted, was taken up with vigour. All the leading women in America signed

MISS CISNEROS BEFORE AND AFTER THIRTEEN MONTHS' INCARCERATION.

After this her lot was not so hideously intolerable. Another white woman was imprisoned in the same cell, and she learnt to sympathise even with the poor degraded creatures who surrounded her:—

I used to write letters for some of the women in the prison: most of them could not read and write. I did not like any of those women at first, and I never could bear to hear them talk, but when I had written the letters for them I began to feel a little different. Every one of them had some one that she loved and prayed for.

### III.—THE PETITION TO THE QUEEN.

The story of Miss Cisneros, eloquently told in the columns of the newspaper press of America, naturally excited widespread sympathy. Nothing that the Spaniards had done, not even the merciless massacres of Weyler, did so much to inflame the popular indignation. If, as seems not

it, beginning with the President's mother, whose example was followed by most of the wives of the Ministers and all the women who took an intelligent interest in public affairs. Day after day the *Journal* published long lists of the names of the foremost citizens, and when at last the memorial was ready for presentation there were fifteen thousand names in that roll call of honour. There was lacking hardly one of the women who had distinguished themselves in any branch of public service, or who were the mothers, wives, or sisters of any distinguished American public man.

But Mr. Hearst was not satisfied with merely organising the protest of American womanhood. His ambition crossed the Atlantic, and he directed his representative in London, Mr. Murphy, to make the *Journal* offices in 80, Fleet Street, E.C., the centre of an organisation for

collecting the signatures of the representative British women to the following memorial:—

HUMBLE MEMORIAL.

*Her Most Gracious Majesty the Queen Regent of Spain.*

We, the undersigned Englishwomen, humbly petition Your Majesty on behalf of

EVANGELINA CISNEROS,

upon whom we learn that sentence of twenty years' penal servitude may be passed by Your Majesty's General in Cuba.

We would add our prayers to those which have already reached you that you will graciously exercise your royal power to prevent this sentence from being confirmed.

We would recall to Your Majesty's mind the extreme youth and inexperience of this unhappy girl.

We would venture to remind Your Majesty that such a sentence carried out on a young lady of culture and refinement means her utter ruin, physically, socially, and morally. We do not believe that Your Majesty's clemency will be misplaced in saving this girl only eighteen years of age from such a fate.

We ask you, Gracious Lady, to consider favourably our petition, which is entirely unbiassed by any political considerations.

And your petitioners will ever pray, etc.

It was not desired to obtain signatures in great numbers, but rather to obtain the names of those who were connected in an official capacity with religious and philanthropic societies. Although the number of the names appended to this memorial did not exceed two hundred, they represent organisations which have a total membership of more than two hundred thousand. The Duchess of Westminster, Lady Henry Somerset, Lady Rothschild, the Countess of Carlisle and others, took the keenest interest in the memorial. Lady Henry Somerset's signature was the first affixed to it. Mrs. Chant's the last. The memorial was a very elaborate affair, three feet long by two feet wide, illuminated in gold, silver, blue and orange, on the thickest vellum, with lettering in English church text. It was sent to our ambassador

at Madrid, but was returned in order that it might be forwarded in due course by the Spanish Ambassador in London. Mrs. Ormiston Chant and Marie Corelli—a curious combination—seem to have divided between them the task of rousing public opinion on the subject. Mrs. Chant especially impressed the *Journal's* representative with the energy, industry and skill with which she co-operated with him in securing this expression of British opinion on behalf of the imprisoned girl. The petition was notable as being the first time in which

English women ever memorialised a foreign potentate as women. There have been memorials before signed by both men and women, but this was the first exclusive female memorial—an appeal by women to a woman on behalf of a woman.

The restless energy of the *Journal* next approached the Pope, and succeeded in securing from his Holiness an expression of sympathy with the imprisoned girl. The Queen of Spain received the memorial, and was understood to have expressed herself as being desirous that no harm should come to Evangelina. She suggested her removal to a convent. To undo the prison bars and let the captive go free was an exercise of the royal prerogative which her Majesty or her Majesty's advisers did not feel was justified under the circumstances.

KARL DECKER.

Days passed, weeks rolled by, and still Evangelina remained in gaol, herded with coloured prostitutes, exposed daily to the taunts and menaces of the vile creatures who daily gloated over the prospect of seeing the fair young creature taken out and shot, a fate which has befallen many another Cuban who had given much less cause for offence to the Spanish tyrant. Then Mr. Hearst lost patience. The American memorial had failed, the English memorial had failed, the Pope's benevolent desires were equally inoperative. He determined that something must be

done. He therefore told off a young married man, on his staff, of the name of Karl Decker, and instructed him to go to Havana and liberate Miss Cisneros. Decker had *carte blanche* as to the means which he was to employ, and the unlimited money with which he had to execute orders.

#### IV.—THE RESCUE.

How he executed his instructions, and how he snatched Evangelina Cisneros from the dungeon of her gaoler in the very midst of a city crowded with Spanish troops, and conveyed her safely to New York, must be told in his own language, into which I have interwoven the account given by Miss Cisneros herself.

I came here three weeks ago, having been told by the editor of the *Journal* to go to Cuba and rescue from her prison Miss Cisneros, the niece of the former President of the Cuban Republic, a tenderly reared girl, descended from one of the best families in the island, and herself a martyr to the unsatisfied desires of a beast in Spanish uniform.

I arrived at Cienfuegos late in September, telegraphed to a known and tried man in Santiago de Cuba to meet me in Havana, and then went to Santa Clara, where I picked up a second man, known to be as gritty as Sahara, and then proceeded to Havana. Here I remained in almost absolute concealment, so as to avoid the spies that dog one's steps wherever one may go and make impossible any clever work of this kind. Both the men who accompanied me, Joseph Hernandon and Harrison Mallory, pursued the same course, and remained quiet until all plans had been completed.

The fact that Miss Cisneros was *incomunicado* made the attempt seem at first beyond the possibility of success, but we finally, through Hernandon, who was born on the island and speaks Spanish like a native, succeeded in sending a note to her through an old negress, who called upon one of her friends in the prison.

#### A NOTE TO THE PRISONER.

A centen got this note through two hands to Miss Cisneros, and three centens later got to her a package of drugged sweets. Having established communication with her, we began work without losing a day.

The rest of the escape has already been told, and the *Journal* has kept its word to the one hundred and fifty thousand women of America who had urged the poor girl's liberation.

The Casa de Recojidas is located in the lowest quarters of Havana, and is surrounded by a huddle of squalid huts occupied by negroes and Chinamen and reeking to heaven by day and night. A single alley, perhaps twenty feet in length, zigzags around two sides of the building, opening off in front of the main entrance.

Compostela Street runs along the rear of the building north and south, and from this leads off westwardly Sigua Street, by which dignified name is known the alley running along the south side of Recojidas. Turning at right angles to the north, the alley tipily forgets its name and loses record on the map of Havana. At the north end of the building and just in front of the big door of the prison the filthy lane right angles again, becomes O'Farrill Street and strikes straight forward, as though anxious to leave the gaol as soon as possible. It ends at Egido Street, opposite the Havana arsenal.

This was the scene of our operations. There are single rows of houses in the alley facing the side and front of the gaol, and a double row on both sides of O'Farrill Street.

#### A DIFFICULT PROBLEM.

A dozen times in half as many hours I passed through this crooked alley trying to find the solution of a problem that would not be solved. Recojidas was apparently inaccessible; its huge, thick walls towered far in the air, topped by a high, thick parapet. The only windows to be seen from the alley were about thirty-five feet from the ground, and were protected, as are all windows in Cuba, by massive iron bars.

Although not known to any of us at that time, as it was invisible from the street, there was a window opening from the second story on an azotea, or flat roof, over lower rooms in the front of the building. Through this window the escape of Miss Cisneros was finally effected, but it was not until a week after our survey that any suggestion looking to the use of this window was made.

For the first week we scanned and rescanned the outer walls, suggesting a dozen plans, all equally worthless. A daylight attempt was considered, and plans were made to get Miss Cisneros to the barred door opening into a small court just off the main entrance.

Don Jose, the alcalde, was then to be lured outside the door, lured further, into a state of temporary unconsciousness, and our end accomplished by a wild dash for liberty. This scheme would probably have worked but for the fact that Miss Cisneros was *incomunicado*, and was not permitted to receive visitors, or even to come into the Sala de Justicia on the inner side of the door.

THE MANNER OF THE DARING ESCAPE BY MEANS OF A FRAIL LADDER FROM GAOL TO HOUSE-TOP.

The fact that the Havana arsenal, always under a strong guard, stretched its long front across the end of O'Farrill Street on the other side of Egido Street, and that the barracks of a company of the Orden Publicos was located just back of Recojidas on Compostela Street, made this plan decidedly uncertain as to results. It was abandoned.

As it appeared at this time absolutely impossible to either get into the gaol ourselves or to get Miss Cisneros out, it was considered to have become a case of *unter los manos*, and a sturdy attempt was made to reach some of the guards or keepers with bribes, but nothing was effected. Finally, when it appeared as if the only possible way to secure the escape of the beautiful Cuban would be to dynamite a part of the building, a note was smuggled in to her as a last resort, asking if she could make any suggestion that could help us.

#### MISS CISNEROS'S PLAN.

In answer she sent the following message, in Spanish, of course:—"My plan is the following. To escape by the roof with the aid of a rope, descending by the front of the house at a given hour and signal. For this I require acid, to destroy the bars of the windows, and opium or morphine, so as to set to sleep my companions. The best way to use it is in sweets, and thus I can also set to sleep the vigilants.

"Three of you come and stand at the corners; a lighted cigar will be the signal of alarm, for which I may have to

delay, and a white handkerchief will be the agreed signal by which I can safely descend. I will only bring with me the necessary clothes tied around my waist. This is my plan; let me know if it is convenient."

#### SHE SENT A PLAN, TOO.

Accompanying this was a plan drawn by herself showing the exact location of the window referred to. It was at the end of a second story apartment running along Sigua Street on the side of the prison, but not extending clear to its front. The azotea, or flat roof, on which it opens was about twenty feet wide, and a high parapet along the front of the building hid this window from sight in the street.

No time was lost in acting on her suggestion. The idea of eating through an iron bar with acid was dismissed, and the question then naturally presented itself as to how the bars of the window could be cut so as to permit her to crawl through. The height of the building also precluded the idea of letting her attempt to come down by herself. Her plan was to use the rope on the flag-staff.

Consequently it became absolutely necessary for us to gain access to the azotea if we were to succeed. To do this, it became immediately apparent, would necessitate the use of a house in the crooked little alley running around the gaol. By the rarest good fortune I found on my next visit to the vicinity a vacant house immediately adjoining the gaol on the north side of O'Farrill Street.

#### MORE FAMOUS THAN THE PALACE.

By this time No. 1, O'Farrill Street is better known and more famous in Havana than the palace itself. By the end of the next day the house was in our possession. As La Lucha naively remarks to-day:—"The lessees could find no one to become responsible for them, so paid two months in advance."

Our gold pieces made this O'Farrill palace ours for the space of two months should we care to occupy it that long. Next day the deal was closed. A colored Habanero was sent to the house to whitewash, and besides the lime and brush he carried a light ladder about twelve feet long. The possession of this ladder was all that brought him on the scene. When he went away in the evening he forgot it and it remained in the house.

Last Tuesday night we went into the squalid little den at No. 1, fully prepared, as we believed, for all possible contingencies.

#### HOUSEHOLD NEXT DOOR ALARMED.

Having the key, I went first and reached and entered the house without being noticed. Hernandon and Mallory followed about an hour later, but were so unfortunate as to find the door of No. 3, the adjoining house, standing open, with two of the occupants gazing idly at the moon, waiting for the arrival of the last of their household. As our two men passed

INTERIOR OF RECOJIDAS PRISON, WHERE MISS CISNEROS WAS INCARCERATED.

them and disappeared into the house they became very much alarmed, seeming to imagine the visit of the strange men to the house next door foreboded some pending calamity to themselves.

Although it was now 12.30, the occupants of No. 3 remained awake, busying themselves at first with barricading themselves in. Finally, however, the tardy member of that household arrived and with much noise and clamor they barred themselves in and went to bed.

It was fully 1.30 o'clock before the noises of the neighbourhood quieted down and the evil place fell into a semblance of repose. At this time the moon was high in the heavens, and as bright as the midday sun. Down towards the corner of the front of the Recojidas a large gas-lighted bracket against the side of one of the houses made visible the smallest object in the dirty thoroughfare.

#### PERILOUS TRIP.

Notwithstanding these disadvantages, however, we mounted the roof and proceeded to business. The front of Recojidas lay at right angles to our house, but the prison building ran back of our building so that the walls were together. At this point, however, the guard-wall of the Recojidas rose sheer twenty feet above our heads and was protected on the top by a thick sprinkling of broken glass bottles.

This guard-wall extended out from the front of our wall to a point ten or twelve feet distant, where it joined the azotea. To reach this latter point, therefore, it was necessary to throw the ladder diagonally across the right angle separating our roof from the azotea. This was the most ticklish part of the business, as the ladder was frail and thrillingly short.

Finally the ladder was in position and the trip across began. No man engaged in that enterprise that night will ever forget that twelve foot walk across that sagging, decrepit ladder. At one time it swayed from the wall. Hernandon was only saved from a terrible fall by the promptness with which the two men at the ends of the ladder acted.

As it was, a large piece of the weak cornice on which the ladder was resting went clattering down into the street, waking the alcalde, who came hastily to the door. By this time the ladder had been withdrawn. Two men were left on the azotea of the gaol, while the third was left on the roof of the house to handle our drawbridge and guard our retreat.

#### GAOLER'S NARROW ESCAPE.

A great gap opened in the face of the massive building a old Don Jose looked out into the quiet street. He stood there for a few minutes with an absolutely unnecessary candle in his hand staring out at the moon and apparently greatly pleased with the beautiful aspect of the soft Cuban night. Then, apparently convinced that all was safe, he turned and passed back into Recojidas, and thus passed unharmed through the most dangerous moment of his life, for every second that he remained in the street was a second fraught with death.

Three forty-four calibre revolvers covered him, and his discovery of our position on the roof would have called for his immediate execution. Time was then allowed for the natural quiet to drift back upon the scene, and when finally everything had become normal the work of getting the *Journal's* protégée out of her loathsome dungeon was begun.

We crept softly across the roof to the window she had indicated. As we reached it we saw her standing before it. She was dressed in a dark-coloured dress, and not easily seen in the gloom inside. She gave one glad little cry and clasped our hands through the bars, calling upon us to liberate her at once. She had been standing there for over two hours and a half, but her patience never deserted her, and she knew that aid was coming as she could see us on the roof of No. 1.

Bidding her be quiet, we started at work cutting through the iron bar between her and liberty. We selected the third bar on the left side of the window, and began cutting it near the bottom. Our progress was slow and wearisome, and finally, after an hour's work, we found that we had only cut part of the way through. It was impossible to use the saw quickly, as the bars were not set firmly in the frame, and

rattled and rang like a fire alarm every time the saw passed across the iron.

#### FIRST NIGHT TOO SHORT.

At last a stir in the room she had quitted warned Miss Cisneros that it was best for her to retire again; so, leaving us, she slipped a sheet about her and glided quickly back to her bed at the far end of the dormitory. Before going she begged us to return the following night and complete our work. She was quickly assured we would be on hand again, and she was contented.

#### HOW THE CAPTIVE FELT.

I here interrupt Mr. Decker's narrative in order to let the girl describe what passed inside the gaol.

From the moment she got the letter telling her of the plot to rescue her she became quite calm and self-possessed:—

I was not afraid or excited, or glad, or sorry any more. I just thought and thought and thought. My father has a saying, "Courage is King." I kept saying that over and over to myself, and then I began to draw a plan of the prison and of the window. I sent the letter out that same afternoon.

Miss Cisneros naturally felt an agony of suspense while Decker was filing through the bars. "The saw made a terrible noise." But the laudanum she had obtained from the doctor made the women sleep sound. But when one of them stirred and spoke, Evangelina went back to her bed:—

About ten minutes, I think it could not have been longer, I was fast asleep. I do not see how I could sleep, but I know that I did. In the morning, when I awoke, I was so weak that I could scarcely lift my hand. All that day I sat in the cell and wondered when some one would speak about that bar in the window. I do not see how it was that no one noticed that it was partly sawed through.

I now resume Mr. Decker's story:—

We were bitterly disappointed at our failure. I had selected Tuesday night in view of the fact that the next day afforded an opportunity to catch the steamer to Key West, where we could send a man with the full story of the night's occurrence, as it was well known that no detailed account of the escape could be cabled from Havana.

We trusted to luck, however, to stand by us, hoping only that our anxious neighbours in No. 3 would not give the alarm, and that the cut bar would remain undiscovered. We had no means of knowing the next day whether or not our attempt of the night before had been discovered, but proceeded on the assumption that it had not, and so determined to carry out our plans to the letter.

A lot of cheap second-hand furniture was purchased in one of the outlying suburbs and was placed in our house, and that night when we went there we were surrounded by our own household larks and penates. A huge porron decorated the tinujero, flanked on either side by a bottle of jenever and a big bundle of brevas. Our sideboard was set with plates and other crockery, and a chest of drawers, a folding table and a pair of canvas folding cots had been sent in.

We dragged out the tables and set forth candles until it gleamed like a banquet board. Then we threw open the window so that the neighbours might look upon the newcomers in the neighbourhood and become acquainted with them, and, finally, fell into a game of poker around the table that came near destroying all our strongly cemented friendship.

#### THE GUARDS LOOKED IN.

Until 11 o'clock the game went on. A brace of guards in their striking blue and red uniforms, lounged up to the windows to note whether we played for wind or centens, and, finding the game as innocent as a day in May, wandered off with their swords clanking about their heels. At 11 o'clock we shut the window and barred out the soft, bright moonlight that flooded the room with its silvery glory, and then turned in for a couple of hours' patient waiting.

THE BARRED WINDOW THROUGH WHICH MISS CISNEROS ESCAPED.

It was not easy work, as the stone floor we lay upon was as hard as the heart of Weyler and twice as cold. The bundle of brevas went up in smoke as we lay there talking in whispers, and finally the time for action arrived. The inmates of No. 3 were again awake, and, far from being impressed by our household furniture, seemed to fear us even more than the night before. It was dread of the strangers in the alley that kept them quiet and made Miss Cisneros's release possible.

They sat up talking this night during the entire time we were working on the roof, and were still sputtering Spanish when we left them. This time the fairies seemed to be working with us, and everything moved as smoothly as clockwork. The ladder was raised to the roof without a sound, and as we pattered about in our stocking feet a spell of enchantment seemed to fall upon the city. Far off in the haze of moonlight a jangling chime of bells seemed changed by some magic into sweetest music, and the ugly tile roofs and queer bits of old Moorish architecture, jutting angularly here and there, seemed transformed by some magician's touch into palaces.

#### AGAIN ON THE FRAIL LADDER.

Again the light, frail ladder was thrown across from the roof of the azotea. The trying and perilous journey was made as quickly as possible. The ladder was withdrawn and we were again in front of the window behind which Miss Cisneros was imprisoned.

This time there was no delay. Our outfit consisted of a pair of Stilson wrenches, and, putting one above and one below the cut made the night before, we wrenched the bar asunder with one snap. In a second I had caught the broken bar and had pulled it out enough for a purchase, and then, lipping my knee under, I drew it up till it was horizontal with the roof. I then stooped, slipped the bar across my shoulder, and, grasping the crossbar above, straightened myself, bringing the bar far up in the air. A second later I had twisted myself into a

ESCAPING OVER THE ROOF.

huge V above the crossbar, and, reaching down, caught Miss Cisneros by the shoulders and pulled her through the opening.

Could the women of the United States have seen the smile on that poor girl's face as she realised that at last, after fifteen months of prison life, she was at liberty, they would have felt a happiness as great almost as hers. That one fleeting smile of ineffable happiness was reward enough for both of us there at the window for all our work and risk.

To Miss Cisneros inside the gaol that day seemed an eternity. When night came she again put laudanum in the coffee, and then lay down and pretended to sleep:—

When all was well I got up and put on my dress and stood at the window again, and counted again, and prayed again. The moon was shining very bright; oh! so big and round and white; there were three clouds near the moon, and one of them was shaped like a mountain, and I played to myself that I would climb up that mountain, and I began in my mind to walk up the jagged edges of the cliffs.

It was in some way like a dream, and she was not surprised when the man came back and began to saw at the bar. But when the bar broke, she had to put her hand over her mouth to prevent herself screaming for joy.

When he lifted her he wanted to carry her across the ladder. "I ran across myself. I felt as if I could run miles."

Mr. Decker says:—

To get our little heroine safely away was now the question. The trip across the creaking, swaying ladder was made by Miss Cisneros with the grace and ease of a frightened fawn. The astute detectives who found a knotted rope on the roof

stated that the ends had been held by two men on either roof, affording Miss Cisneros a hand-rail to guide her across.

Nothing of the sort was done. The knotted rope was to be used in case of emergency, in case our return to the roof of No. 1 should be cut off, forcing us to descend from some other part of the building. Miss Cisneros needed no hand-rail in her state of joy and exhilaration.

#### NO DELAY IN MAKING OFF.

No time was lost in getting away from the building. We quickly made our way downstairs, donned our shoes and made off. The neighbours heard the clang of the heavy doors closing, then the sharp, quick rattle of a carriage dashing recklessly off over the cobbles, and then quiet fell upon the neighbourhood of the Recojidas. The beautiful girl prisoner was at liberty and would never again feel the suffocation of the crowding walls.

#### V.—THE ESCAPE FROM CUBA.

When it was known in Havana that the bird had flown the authorities were frantic. They interrogated everybody, searched everywhere, made domiciliary visits in almost every conceivable dwelling-house, but always in vain. It was reported that she had escaped in a small boat, and at once the swiftest cruiser in the port, with all available steamers, were commissioned to steam in hot haste to overtake her before she reached the Florida coast.

The story of her escape is best told in her own words. Miss Cisneros says:—

There was a carriage waiting. We jumped into the carriage, and the horses' feet went clip clap, clip clap, clip clap down the street. I don't think any of us spoke.

Reaching a friend's house, she alighted and found shelter. When she slept, she always found herself climbing up the sides of the steep mountain, with the round moon staring down at her like a sick face. Three days she remained in hiding. Her hair was cut off; she was dressed like a boy, and instructed in the art of walking like a man. "I felt like a little nothing, I was so small, and my feet looked so big, and I did not like it."

At five o'clock on the third day she was driven in a carriage down to the wharf with the two men, Decker and the Cuban, who helped her to escape. Entering a little boat, they were rowed out to the American steamer *Seneca*. "If it had not been for the cigar I should have laughed with happiness." When she reached the deck, she was shown into a little cabin. She went in and crawled under the lowest berth and lay there "like a naughty little boy who is going to get a whipping and was hiding." All at once the door opened and a man entered. She did not breathe. The man struck a match. "It is all over," she thought, "they have caught me." And she resolved to jump overboard and end it all. But it was only the purser of the steamer to tell her they were an hour out from Havana, and that she was free.

"Then I became very, very sick. If it was the escape, or the sea, or perhaps the cigar, I don't know."

What a charming human girl she is!

Next day she was well and her heart sang all the way, and she had only one regret:—

I hate to think of the little woman who wanted to breathe sea air again. I feel guilty to be here, free and happy, and cared for. I wish I could have brought her with me.

And my father—my poor father—how I wish I could have seen him when he heard of my escape.

I do not think he will believe it. Good news is hard to believe in Cuba. I am so grateful for my release, and to the friends who have helped me that I cannot speak of it. I have no words.

She had a false passport, secured in the name of Juan Sole, and no one suspected her identity, nor did any one in Cuba know where she had gone until her arrival was telegraphed from New York.

As for Decker, her rescuer, he was of course extremely suspected owing to the fact that the *New York Journal*, whose representative he was, was known to be the first that published the news of her escape. Nothing, however, could be proved, and he had the audacity to leave the island on board a Spanish steamer, nor was it known until he arrived at New York that the Spaniards had any idea that they had actually conveyed the man for whom they were searching everywhere, under the Spanish flag, in a Spanish ship, to safety in American waters.

It is not necessary here to continue the narrative any further beyond saying that no event has excited as much interest and enthusiasm in the United States for many a long day. Mr. Hearst was inundated with telegrams from all parts of the Union, eulogising the service which he had rendered to humanity. Even Mr. Sherman, the Secretary of State, expressed his sympathy with the *Journal's* enterprise. Mr. Gage, the Secretary of the Treasury, telegraphed his emphatic approval of what the *Journal* had done, while senators and governors vied

with each other in applauding the enterprise and philanthropy of the newspaper. Nor was it only from the United States that he received this unstinted applause. The Pope himself was said to have expressed his gratification at so happy an escape from a hopeless *impasse*, while our own Bishop of London telegraphed to Mr. Hearst in enthusiastic terms.

Similar telegrams, more or less in the same strain, were received from the Duke of Westminster, Lady Rothschild, Lady Henry Somerset, and others. Miss Cisneros, since her arrival in New York, became the heroine of the Continent, and at a great reception held in Madison Square Garden an immense concourse of people, estimated at two hundred thousand, assembled to cheer the brave young girl and her gallant rescuer.

Such is the story that our press has so strangely, or, possibly inadvertently, conspired to suppress. It is full of every element of human interest. Whether it is the description of Mr. Hearst, the millionaire journalist, or of Karl Decker the reporter, to whom the breaking of a Spanish gaol was a mere matter of journalistic assignment in the day's work of a modern newspaper man, or of the central figure of all—the romantic, beautiful Evangelina herself—could there be any narrative more full of good copy?

## THE AUSTRALIAN PREMIERS IN ENGLAND.

BY MR. REID, PREMIER OF NEW SOUTH WALES.

MR. REID contributes to the *Australasian Review of Reviews* an article on the experiences of the Colonial Premiers in England at the Jubilee:—

### OUR WELCOME.

Only when I saw the mass of letters and invitations which awaited me at Dover, did I realise fully the nature of the ordeal through which I should have to pass. The programme of national hospitality prepared for the travelling Premiers surpassed all precedents, even in the entertainment of crowned heads.

Looking back upon those wonderful days and nights, upon the stately procession of magnificent banquets—the dazzling beauty of the London drawing rooms—the bewildering race through breakfast, luncheon, afternoon and evening receptions, varied by changing visits to the country, and crowned by the gracious and repeated hospitalities of the Queen and the Prince of Wales, I can only indulge in one feeling beside that of gratitude for so much kindness, a feeling of thankfulness we all survived, and that, so far as I know, we left upon our generous entertainers no unkind or disagreeable impressions.

### THE BRITAIN OF THE PAST.

The diverse and unsympathetic races inhabiting the British Isles, which inexorable conditions of contiguity and conquest have consolidated, slowly and painfully, until they have become one people, have passed through many phases of shame and of glory. Their path through the centuries has been red with blood, and they have laid violent hands upon the fairest portions of the earth. The triumph of military and naval prowess abroad was accompanied, before the present reign, by a selfish and tyrannical system of government at home. Whilst the soldiers and sailors of Britain performed prodigies of valour abroad, the statesmen of Britain perpetrated prodigies of meanness and chicanery at home. Such was the dark, tempestuous condition of the British Empire within the memory of living Englishmen.

### THE NEW POLICY.

The present reign is the most glorious in our history, because it has witnessed a wonderful transformation in the

power and policy of Great Britain. The ceaseless efforts of silly rulers to assert personal power have disappeared. Ministers of State have become trustees for the whole people. The sovereign, divested of personal responsibility, has become a centre of stability for the constitution, and of reverence to the whole people.

The grand result of the unaided struggle of Great Britain against the world, in trade, shipping, and finance, is simply this, that the enterprise, skill, and industry of her business community have, under Free Trade conditions, won for England at the close of the nineteenth century a position of world-wide supremacy, greater, and far more wonderful, than the glories of her contests by land or sea have ever been.

### WHAT THE PREMIERS DID.

I was in time for the first great function, namely, the Jubilee Banquet of the Imperial Institute, the chair being occupied by the Prince of Wales. I knew, as all men do, about the genial courtesy of the Prince, but I confess that I was scarcely prepared to find him so good a speaker. I may say here, that the fame won for his charming qualities is thoroughly deserved; but he is a much abler man than many in the colonies can have any notion of.

On Sunday morning we attended, with the Speaker and Members of the House of Commons, the Thanksgiving Service at St. Margaret's Church, the sermon being preached by Dean Farrar. The address was a masterpiece of Christian eloquence, and contained the essence of many sermons. I deeply regret that I was unable to accept an invitation from Dr. Farrar to visit Canterbury, as I should have been delighted to make his acquaintance.

### LONDON.

I did not take in a just impression of London for two or three days. Its greatness does not arise from one or two conspicuous sights as in most places, but from so many different attributes not to be mastered at once. But on

Monday, the 21st, when the preparations for the next day were at their height, and the streets were thronged to their utmost capacity, I realised the vastness, the vitality, and the wealth of the world's metropolis. I also saw the marvellous discipline enforced upon the Londoners of all ranks, on foot or driving, by those benevolent and efficient despots, the Metropolitan police. The streets of London are not perfect, but they are greatly superior to those of any other city I was in. Quite the worst streets I have ever seen are those of New York. During the illuminations London was a marvellous spectacle. I wish some of those Australians who are prone to describe England as in process of decay, could have seen those crowds. My opinion, from what I saw, is, that a better, more prosperous race is growing up in England to-day than in any generation before.

#### RURAL ENGLAND.

I had always looked forward to views of the agricultural counties as far more to be desired than views of great cities. I must say the reality was equal to my high expectations. Only actual vision can do justice to the rural scenery of England. It pleased me to see that the dwellings in the newer villages and their surroundings were far more comfortable, and showed more signs of prosperity than those of older date; because that does not point to a declining England. Certainly the great towns do not point to any such decline. Of the country seats near London which I saw, those which most impressed me were Osterley Park, the residence of Lord Jersey, which is within driving distance; Ashridge, the residence of Earl Brownlow, about thirty miles from the city, and near the lovely vale of Aylesbury, in Kent; and Cliveden, on the Thames, sold by the Duke of Westminster to Mr. Astor. Gwydyr, the Welsh estate of Earl Carrington, is a very beautiful place, the house, small and ancient, but most interesting.

#### EXPRESS SPEED!

I fondly hoped, when I left Australia, to hear all the best speakers, actors, and singers of London: but, alas! I only heard one great preacher—Dr. Farrar—during the two or three Sundays I spent in London. As for theatres, I did not get to the special performance given by Mr. Henry Irving at all, and had, at last, to break, I don't know how many engagements, to see him as Napoleon,—not by any means one of his great parts, although deeply interesting. Then I did not hear much of Melba, as I could not reach the State opera performance until late.

#### CONFERENCE WITH MR. CHAMBERLAIN.

The conferences between Mr. Chamberlain and the Colonial Premiers were four in number. On the question of Naval Defence, it was evident that the Chancellor of the Exchequer and First Lord of the Admiralty at first intended, or hoped, that the Australian contribution to Naval Defence would be substantially increased, and that the movements of the Australian squadron would not be restricted as in the existing agreement. I took advantage of a speech made by Mr. Goschen at the banquet of the Royal Colonial Institute, in order to put an end to any such expectations. I ventured to suggest that we could best do our duty to the empire by developing the resources of the Australian continent, and that to cripple our slender finances in order to make a paltry reduction in the cost of the British navy would not be a good thing for the Mother Country or ourselves. At the conference there was no pressing on these matters. As to a change in the political relationship between Great Britain and the colonies, there was much vague expectation, and some visionary suggestions; but matters had to be left as they are, and wisely so, until some one can suggest a scheme which promises better results. Sir Wilfrid Laurier seemed in earnest about colonial representation in the British House of Commons, but he got no backing. Under the head of commercial relations there was a very interesting interchange of ideas. There is, I think, some chance that, in this respect, the Conference will lead to some better state of things in the colonies, with high duties against England. The investment of trust funds in colonial securities was brought up, but I fear it is as far away as ever,

until a commonwealth of some sort be established. The Bills to prohibit the immigration of coloured aliens were the subject of earnest discussion. I do not apprehend any difficulty except as to the inclusion of British subjects. Much of the evil has come from the arrival of British subjects of the coloured races, and unless they are included, or some other way is formed of dealing with them, serious questions must, I fear, arise. The project of the Pacific Cable was discussed, but until Canada can make up her mind about it the project will hang fire. In the meantime, the chances of a line connecting Australia with Great Britain, *viâ* the Cape of Good Hope, are improving, backed as they are, I am told, by the opinions of the military and naval authorities at home.

#### FUTURE MEETINGS.

There was one proposal to which the Conference agreed, namely, that there should be periodical meetings in London of the same kind. Such a proposal may seem like securing for ourselves an agreeable holiday, but in the changes of local politics, it is just as likely that our successors will thus be benefited. In any case, and be the Premiers whom they may, the suggestion is worthy of consideration. The advantage derived from our conference will be great and lasting. The Secretary for the Colonies and his high subordinates must be more fitted for their high posts after the unrestricted intercourse we had, and I am sure we all are.

But, above all minor points, I wish to emphasise the lasting impression made upon the minds of the Colonial Premiers by the enthusiastic kindness of the whole British nation, from the Queen upon the throne down to the humblest of her subjects. The visit has left in the minds of the Australasian people, and in the minds of the British people, a sense of closer kinship and a sense of greater strength. The future may have vast changes and events in store for the human race, but one of the grandest facts of the closing century is the magnificent loyalty and affection of the British people for their illustrious sovereign, and the unprecedented stability of the ties which bind Greater Britain to the Fatherland.

#### The School Board Elections.

THE *University Review*, on the issues before the School Board electors, may be expected to display a sensitive aloofness. Mr. F. J. Gould avers that Progressives are "as forward to support the miserable traditions of orthodoxy as are the Moderates or the clergy." He asks that "Christianity shall yield to ethics and theology to citizenship," and waxes eloquent over the gains to come from the eventual secularisation of the schools. Mr. J. M. Wheeler greatly enjoys himself in dilating on the inconsistency of Nonconformists supporting the compromise:—

While Nonconformists desert their principle that the State has nothing to do with the teaching of religion, they must expect to see Catholics and Churchmen take advantage of this desertion. They say—and with reason—that if religion is taught, it should be definite religion. Every one should know what it is they have to pay for. It is no more unjust to teach the creed ascribed to Saint Athanasius than to teach the creed ascribed to the Apostles, and no more unjust to teach both than to teach the Bible in a version which leaves out books in which the Catholic believes and adds books in which the Jew disbelieves, and which is objected to by Secularists, Agnostics, and Freethinkers of all brands. Not until the Nonconformist nose has been well rubbed into the sectarian dirt wherewith it has fouled its own nest will the Nonconformist conscience go back to the only principle of any worth which it ever had—the principle, namely, that religion is a private affair with which the State has no concern.

He points out that "it is in the most religious districts of Wales that the Board School education is purely secular," and argues that only on that ground can the sincere religionist and freethinker meet.

# LEADING ARTICLES IN THE REVIEWS.

## A VEILED WAR AGAINST ENGLAND.

DR. E. J. DILLON ON OUR FOREIGN OUTLOOK.

DR. E. J. DILLON contributes to the *Contemporary Review* for November one of those thoughtful and well-informed articles which have given him a place in the foremost ranks of the publicists of our time. It is a gloomy paper tinged with Dr. Dillon's characteristic pessimism. It is well to fortify ourselves as we read it by reflecting that the fates have shown a malicious pleasure in falsifying Dr. Dillon's prophecies. No one, for instance, who read his frightful picture of the condition of Russia a few years ago, could have imagined that in a few years' time Russia would, by Dr. Dillon's own estimation, stand at the very head of the European Areopagus, and wield a power and exercise an influence in Europe and Asia superior to that of any modern country. We can only hope that his foreshadowings of England's doom may also be equally interpreted by the rule of contrary. Dr. Dillon, however, is a man who knows his facts, and has better opportunities of ascertaining things at first hand than most people.

DR. DILLON'S RIGHT TO SPEAK.

For instance, he says —

I have left nothing undone to arrive at a knowledge of such facts as are essential elements of this problem. I was present in Cronstadt when President Faure arrived there, and witnessed the reception accorded him in that city, in Peterhof and St. Petersburg. I had several interesting conversations with some of his best friends, French and Russian, and after his return to France I discussed the situation with the chief statesmen of the Great Powers in the principal capitals of Europe, who represent the Triple and the Dual Alliance, and from them I received ample data for a satisfactory solution of the question.

WHAT HE HAS TO SAY.

What, then, is the conclusion at which he arrives? Condensed in the smallest possible compass, it comes to this—that peace is assured in Europe; and as "Satan finds some mischief still for idle hands to do," our good neighbours are one and all taking advantage of their sudden release from the dread of a Continental war, in order to destroy the paramount sea-power of England. A pleasant look-out truly! Dr. Dillon says that there is no doubt that the Imperial, Royal and Presidential visits of this year have considerably modified the situation.

PEACE IN EUROPE—

France has definitely abandoned all idea of the war of revenge; Russia has made peace with Austria. Dr. Dillon says:—

I have excellent grounds for the belief—now shared by all Europe—that a formal alliance has been concluded between France and Russia, and equally good reasons for holding that the only important change effected by this document lies in the implicit but definitive removal from the sphere of practical politics of the fantastic idea of a war of revenge. To this extent Russian diplomacy has scored a brilliant success in the cause of humanity, but not before the Tsar had implicitly abandoned the position taken up by his imperial predecessors that the defence of the monarchical principle takes precedence over all political interests and justifies armed intervention in foreign countries.

The intestine divisions of Austria, where the Germans are being driven into an attitude of almost irreconcilable opposition, has practically paralysed the Austrian

member of the Triple Alliance. The Russians, says Dr. Dillon—

understand full well that Russia has nothing to fear from Austria in the East of Europe, and they have likewise made it clear to the Emperor Franz Josef that the Oriental question, in so far as it has to do with Turkey and the Balkans, will not be opened up by Russia. Herein lay the basis for a *modus vivendi* between the two States. This basis was further enlarged by Russia's deliberate departure from the doctrine which made it incumbent upon the Tsar to undertake the defence of monarchy by the grace of God wherever endangered. Hungary forthwith forgot her grudge against the Russia of 1849, or at least consigned it to the keeping of Dryasdust. On the other hand, the Tsar's conciliatory attitude towards his Polish subjects has had a most excellent effect upon Austria proper, which is now governed by the Poles. In this way an understanding has been brought about between the two countries which leaves Russia free.

—AND VEILED WAR AGAINST ENGLAND.

Thus, the two great burning questions, which for the last twenty-five years have left the statesmen of the Continent little leisure to think of anything but preservation for self-defence, have both been damped down, and therefore, having nothing to do at home, they will seek to combine against England in all parts of the world. He says:—

The history of our foreign policy for the past ten years has been an almost unbroken record of failures, defeats, and humiliations. Now if such were the results of the envy and hatred borne us by a disunited Europe, what may we not apprehend from a coalition of all the Great Powers of the Continent?

This is Dr. Dillon's summing up:—

The new era is destined to be a period of European peace. A war between the Dual and the Triple Alliances is a contingency the improbability of which borders on the impossible. Russia having abandoned the defence of the gospel of monarchy by the grace of God in foreign countries; France having given up her schemes for the revision of the Treaty of Frankfurt; and Austria-Hungary having come to an amicable understanding with the Government of the Tsar, all the probable causes of a European war have lost their force. But the result can hardly be contemplated with pleasure by the statesmen who are responsible for the weal of the British Empire. For if the one negative proposition in which the Great Powers of the Continent are agreed be the paramount necessity of avoiding hostility among themselves, the one positive plan which they all cordially approve consists in the desirability of combining diplomatically against Great Britain. They have already tasted the fruits of these tactics and learnt that they are highly enjoyable, and they are now determined to cultivate them on a larger scale and under more favourable conditions. To the complete success of this scheme a powerful navy of the three Great Powers, France, Russia, and Germany, is needed. Hence the desire of Kaiser Wilhelm to increase the German navy with the least possible delay. One of the most widely circulated and carefully edited German weekly journals, touching upon this question, frankly says: "The one-sided command of the sea by England must be put an end to, and in its place a diplomatic equilibrium of interests established." This is German and Continental policy in a nutshell.

Our policy, if it is to be imperial as distinguished from insular and parochial, should consist of a strenuous effort to break up that combination by making a serious bid for the friendship of Russia, in a steady increase of our navy, in a new commercial policy based upon a retaliatory tariff system, and, if possible, in an inter-British customs union. If these

schemes turn out to be impracticable, and our Foreign Office remains incorrigible, we shall have to console ourselves with the reflection that it is impossible to fight against fate.

#### CRISPI ON THE FRANCO-RUSSIAN ALLIANCE.

Signor Crispi, late Prime Minister of Italy, writes a few pages upon the Dual and Triple Alliances in the *Nineteenth Century*. There is not much in the paper to be quoted, but it is worth while noting what he says as to the futility of the Franco-Russian Alliance. Signor Crispi says:—

It is waste of time now to discuss—as many of the Parisian journals have done—the date of this alliance. The alliance is actually existing; peoples and princes know it: and it is for both the States an unnatural union—for France a *diminutio capitis*, a renunciation of its military hegemony; for Europe a danger. The Dual Alliance affords us no feeling of security, and it is no haphazard judgment of it that we express when we maintain that Europe has a right to be suspicious. France wants the provinces which she lost in 1871; Russia, in return for her co-operation, demands dominion over Constantinople. We must not forget that in 1888 it was not Russia's fault that the peace was not broken in consequence of the election of Prince Ferdinand to the throne of Bulgaria. And we may feel proud to be able to say that in that year the initiative in the amicable compromise came from Italy. Only one hope can arise in our mind, which is that the present alliance between the Tsar and the French Republic may have the same end as that of 1808 between the two Emperors. The alliance arranged at Erfurt was never put into execution. Through various exigencies of government, disputes speedily sprang up, and in less than three years Napoleon and Alexander became enemies again. It is not inopportune to call to mind that the apple of discord between the two was the reconstitution of Poland.

#### MARK TWAIN ON EMPIRE BUILDING.

##### A PHILOSOPHY OF CLOTHES-LINES.

*McClure's* for November opens with pages from Mark Twain's diary of a voyage from Calcutta to Durban by the Mauritius. The paper is bright with any number of odd sayings of the well-known sparkle. There is a dismal lament over the way in which Nature who provides so lavishly for those that fly and those that swim, has cut off man "with the mere odds and ends of the creation." He has but a fifth of the family estate; and "out of it he has to grub hard to get enough to keep him alive and provide kings and soldiers and powder to extend the blessings of civilisation with." Yet man actually thinks himself the favourite in Nature's family! He rejoices in the absence of the Vicar of Wakefield and of Jane Austen's novels from the ship's library. "Just that one omission alone would make a fairly good library out of a library that hadn't a book in it."

##### THE VARIOUS NATIONAL CLOTHES-LINES.

The fate of the Malagasy sets him off on the following quaint epitome of the ethics and exploits of Empire:—

Why did England allow the French to have Madagascar? Did she respect a theft of a couple of centuries ago? Dear me, robbery by European nations of each other's territories has never been a sin, is not a sin to-day. To the several cabinets the several political establishments of the world are clothes-lines; and a large part of the official duty of these cabinets is to keep an eye on each other's wash and grab what they can of it as opportunity offers. All the territorial possessions of all the political establishments in the earth—including America, of course—consist of pilferings from other people's wash. No tribe, however insignificant, and no nation, however mighty, occupies a foot of land that was not stolen. When the English, the French, and the Spaniards reached America, the Indian tribes had been raiding each other's territorial clothes-lines for ages, and every acre of ground in the continent had been stolen and re-stolen five hundred times.

The English, the French, and the Spaniards went to work and stole it all over again; and when that was satisfactorily accomplished they went diligently to work and stole it from each other. In Europe and Asia and Africa every acre of ground has been stolen several millions of times.

##### STEALING NO THEFT.

A crime persevered in a thousand centuries ceases to be a crime, and becomes a virtue. This is the law of custom, and custom supersedes all other forms of law. Christian Governments are as frank to-day, as open and above-board, in discussing projects for raiding each other's clothes-lines as ever they were before the golden rule came smiling into this inhospitable world and couldn't get a night's lodging anywhere. In one hundred and fifty years England has beneficently retired garment after garment from the Indian lines, until there is hardly a rag of the original wash left dangling anywhere. In eight hundred years an obscure tribe of Muscovite savages has risen to the dazzling position of land-robber-in-chief: she found a quarter of the world hanging out to dry on a hundred parallels of latitude, and she scooped in the whole wash. She keeps a sharp eye on a multitude of little lines that stretch along the northern boundaries of India, and every now and then she snatches a hip-rag or a pair of pyjamas. It is England's prospective property, and Russia knows it; but Russia cares nothing for that. In fact, in our day, land-robbery, claim jumping, is become a European governmental frenzy.

##### THE AFRICAN DEN OF THIEVES.

Some have been hard at it in the borders of China, in Burma, in Siam, and the islands of the sea; and *all* have been at it in Africa. Africa has been as coolly divided up and partitioned out among the gang as if they had bought it and paid for it. And now straightway they are beginning the old game again—to steal each other's grabbings. Germany found a vast slice of Central Africa with the English flag and the English missionary and the English trader scattered all over it, but with certain formalities neglected—no signs up, "Keep off the grass," "Trespassers forbidden," etc.—and she stepped in with a cold calm smile, and put up the signs herself, and swept these English pioneers promptly out of the country.

There is a tremendous point there. It can be put into the form of a maxim: Get your formalities right—never mind about the moralities. . . . England should have snatched Madagascar from the French clothes-line. Without an effort she could have saved those harmless natives from the calamity of French civilisation, and she did not do it. Now it is too late.

The signs of the times show plainly enough what is going to happen. All the savage lands in the world are going to be brought under subjection to the Christian governments of Europe. I am not sorry, but glad.

Such is Mark Twain's contribution to the discussion of Machiavelli v. Morley. The excellent portrait of the author which forms the frontispiece bears the autograph apothegm above his signature: "Be good and you will be lonesome."

PROBABLY the most important paper in the *Windsor* for November is Mr. Holt Schooling's pictured statistics of occupations. He rightly calls attention to the absurd classification which ranks 55 per cent. of the population, including the great mass of hard-worked wives and mothers, as "unoccupied." He graphically shows how women are pushing men out of such occupations as clerking, tobacco-workers, boot and shoe making, and bookbinding, while strangely enough men are ousting women, from such pursuits as lace-making and glove-making. There are chatty sketches of London underground railways by G. E. Milton and Wilfrid Klickmann. Maynard Butler describes several philanthropic institutions in the United States under the mysterious title of "The Silent Forces of America." Mr. W. H. Lawrence interviews "Max Pemberton at Home."

## IN PRAISE OF THE GREAT ASSASSIN.

BY AN AMERICAN EX-AMBASSADOR.

MINISTER TERRELL, late United States Minister at Constantinople, contributes to the *Century* for November an article entitled "An Interview with the Sultan." It is certainly an interesting paper both on account of its subject and its author. It is not very edifying, however, to find the representative of the Great Republic of the West standing forth as the solitary apologist for the Great Assassin of the East.

Mr. Terrell, however, has the courage of his convictions, and as the Sultan was nice to him and to his wife, he probably feels he is in turn bound to be nice to the Sultan.

## THE ABLEST SOVEREIGN IN EUROPE.

Here is Minister Terrell's account of the personal appearance of Abdul Hamid :—

The Sultan is over fifty years old, of medium height, with clear olive complexion, dark hair, high forehead, and large dark-brown eyes. The habitual expression of his face is one of extreme sadness. Though the pashas who attend his palace when ministers or ambassadors are entertained are decorated with regal splendour, he always appears in plain garb, wearing a red fez, a frock-coat and trousers of dark-blue stuff, and patent-leather shoes. A broad service-sword with steel scabbard, which he holds sheathed in his hand, completes the costume. Sometimes a single decoration is worn on his breast. No sovereign in Europe is more courtly or refined in entertaining his guests, and few can be more agreeable in conversation. In his personal intercourse with foreign representatives he is alike free from that stilted dignity which repels confidence, and from that absence of real dignity which invites familiarity. I do not hesitate to confirm the opinions of General Lew Wallace and my other predecessors, that the Sultan of Turkey is a ruler of great intellectual ability. I regard him as the ablest sovereign in Europe.

Not only is the Sultan the ablest sovereign in Europe, but if we may believe Mr. Terrell, he is one of the kindest hearted men who has ever lived, one "whose every impulse is good," as Lord Beaconsfield certified long ago. In fact, Mr. Terrell seems to have almost as good an opinion of the Sultan as Mr. Croker has of himself.

## A CROWNED PHILANTHROPIST.

So far from the Sultan deserving to be dubbed Abdul the Damned, Mr. Terrell represents him as quite a philanthropist, consumed by the burning desire to minister to his people's welfare. He says :—

His efforts to encourage manufacturing industries have been marked. Works for the manufacture of fine porcelain-ware, in which he takes much interest, have been erected within the palace grounds, under the supervision of Selim Effendi, a Syrian Christian of much intelligence, who is one of the imperial ministers. An imperial library has also been established at Yildiz, the shelves of which are loaded with the works of standard authors of the United States and the chief nations of Europe. Here are found Arabic manuscripts, written when Arabia was the seat of literature, of art, of science, and of poetry, and at a time when European nations were in dense ignorance.

The Sultan referred with manifest pleasure to the success which had attended the culture of the Southern potato yam in the provinces of Smyrna and Mesopotamia, and which had been introduced by me into the empire. I answered that next to having been instrumental in preventing strained relations between our respective governments, I felt most satisfaction in having been the means of introducing a new food crop for the poor, which would make famine impossible where it flourished well. The sad face assumed a look of much benignity as he made the following answer: "To be good to one's fellow-man is the best religion. The Prophet once said that if a man is

so mean to himself that he gets drunk and like a hog sleeps by the liquor and cannot get away, it shall be forgiven if he repents; but he who wilfully breaks the heart of a fellow-man may never be forgiven."

## THE PROTECTOR OF THE ARMENIANS.

A Sultan who is interested in the culture of the American potato yam in Mesopotamia is a portent indeed; but his devotion to the potato yam can hardly be regarded as a set-off to his share in the Armenian massacres; but on this point Mr. Terrell is prepared to give him a first-class certificate of character. He appears to have been taking sweet counsel with Sir Ashmead Bartlett, with whose views, of course, he entirely agrees. He says :—

I expressed to Sir Ashmead Bartlett the opinion that no Christian sovereign in Europe could have acted more promptly than did the Sultan in the protection of the lives of all American citizens in the Ottoman empire.

## QUITE IMPOSSIBLE

But as if this were not sufficient to prove the excellence of the Sultan's nature, we have the Sultan's own account of his virtues. He told Mr. Terrell :—

"Four books are regarded as sacred by all Mussulmans, namely, the Koran, the book of Confucius, the Talmud of the Jews, and the Bible of the Christians. How could a Mussulman murder Armenians merely on account of their religion, when the Koran prohibits cruelty, and requires that all men who believe in God shall be protected, except during war?"

## A PATRON OF RELIGIOUS LIBERTY.

His Majesty, however, was able to bring forward numerous illustrations of the exceeding kindness with which he had treated these Armenians :—

"You should remember an Armenian bookbinder who bound for you two beautiful albums. After the disturbances of August last in this city, that man became frightened, and fled to America. He wrote back, saying that, being unable to speak the English language, he could find no work, and wished to return. I directed that he should be permitted to return in safety. He then wrote saying that he had no money. Now, Christian people will scarcely believe it when I say that, being convinced that he was a good man, I directed that one thousand francs be sent to enable him to return home."

The Sultan more than once repeated his declaration that no Christians had ever been persecuted by his government or people for their religious faith, and that their churches and monasteries, which have stood from the early ages of Christianity, had been respected, preserved, and worshiped in; that they had always selected their own patriarchs and bishops, and were always protected in the full enjoyment of their religious freedom.

After thus whitewashing the Sultan, Mr. Terrell naturally winds up his article by a eulogy of the Turks :—

The Turks far excel all their subject races in truth, hospitality, fair-dealing, and courage. It is a race full of contradictions, for it is the most gentle and the most cruel; the most hospitable and the most exclusive; the most tolerant and yet the most fanatical that can be found in any land.

He concludes with a significant remark which has more reality about it than is to be found in the rest of his article. Mr. Terrell says :—

The ruler of this strange race has been called the "Sick Man." He has one million of improved magazine rifles, has purchased one million more, and has trained to use them soldiers who are fatalists, and who see heaven through the smoke of battle.

Unfortunately he does not seem to realise how very natural it is for fatalists who see heaven through the smoke of battle to establish a hell on earth.

## THE ALLEGED RHODESIAN HORRORS.

## A BULUWAYO MAGISTRATE'S REJOINDER.

THE terrible indictment against Rhodesian rule which Mr. Blake contributed to the *National Review* for October calls forth a vigorous "rejoinder" in the November number. The writer, Mr. Hugh Marshall Hole, is civil commissioner and magistrate at Salisbury, in Mashonaland. He is very angry with Mr. Blake, and he does well to be angry, although his reply would have distinctly gained in effectiveness if it had contained less vituperation and more rebutting evidence. Let him, however, speak for himself:—

I have resided in Rhodesia for six years, during which period I have been brought into the most intimate contact with the natives, with the colonists, and with the Chartered Company's officials, from the highest to the lowest; and, on the basis of my six years' experience, I unhesitatingly say that Mr. Blake's attack comprises the most glaring example of *suppressio veri*, coupled with *suggestio falsi*, of rash statements, founded—let us hope—on ignorance, and of unfair insinuations, prompted, I strongly suspect, by disappointment, that it has ever been my lot to peruse.

## "IDIOTIC GULLIBILITY."

Mr. Blake quotes the statement of a volunteer that a rescue party massacred eighteen or twenty unarmed and innocent blacks, mostly women and children, who were hoeing mealies. Mr. Hole answers that when rescue parties were being sent out, i.e. during the first few days of the rebellion, "every native woman and child was crouching and trembling in the deepest recesses of the kraals." To come on a score peacefully hoeing mealies was not possible. "Many of us," proceeds Mr. Hole, "have listened to the boasting of Rhodesian volunteers when just returned from the sorties, and if perchance the return journey has been made by way of a canteen, we have heard stories of prowess quite as striking." He requotes this case as a sample of Mr. Blake's "idiotic gullibility." Mr. Hole does not seem to see that volunteers who will "boast" of massacring defenceless women and children raise against themselves no slight presumption of guilt in cases where opportunity is favourable. And men, whether in their cups or not, do not "boast" of deeds condemned by the public opinion of their set. The English type must have undergone strange degradation when it can boast, however untruthfully, of cowardly atrocities like these.

## RHODESIAN PRESS NOT MUZZLED.

Mr. Blake alleges that Rhodesian whites are "tied hand and leg to the Company" and dare not criticise. Mr. Hole rejoins:—

Those who choose to scan the columns of any one of the half-dozen newspapers published in Rhodesia will satisfy themselves that the Chartered Company has no reason to complain of a lack of outspokenness on the part of her subjects, and that the hushing up of disagreeable incidents is not a process which can be easily conducted in Rhodesia.

## THE "SLAVERY" QUESTION.

Mr. Blake's charge is "What contractors, as a general rule, throughout the country, used to engage Kaffirs for a period of three months, and induce them by ill-treatment to run away before the time came for paying them;" and that the native commissioner bound by contract to replace the runaways had to secure substitutes by force. Mr. Hole answers:—

I first frankly admit that cases did occur, prior to the rebellion of 1896, in which a few low and dishonest prospectors ill-used their native employees, towards the end of their contracted terms, with a view of driving them away and so evading payment. These men met with their own reward.

What I do traverse is Mr. Blake's insinuation that the Chartered Company in any way connived at such a practice through its native commissioners, that the custom was in any way widespread, and that the public, or employers of labour generally, employed these means or approved of them. . . .

The facts are that the Matabeles had never been used to work before, that induced by the prospect of gaining money, they entered upon contracts which speedily became irksome to them, and that for breaking these contracts they were, if detected, very properly punished under the Masters and Servants Act of the Cape Colony. The same Act was applied most rigorously towards employers. . . . A native commissioner who drove natives to labour like cattle to the plough would not have retained his position a week.

## READY RESORT OF NATIVES TO OUR COURTS.

Mr. Hole's evidence is distinctly reassuring when he declares:—

As for the reluctance of natives to prosecute white men in the Magistrates' Courts, my experience, which is not inconsiderable, shows that natives were only too ready to rush off to the Magistrates' Court upon the most frivolous ground of complaint. Native prosecutions were of the most frequent occurrence. . . . Cruelty or injustice on the part of an employer towards his boys was punished with as much severity as if the aggrieved parties had been themselves white men.

## CRUELTY "INVARIABLY DUE" TO MATABELE POLICE.

This testimony means a very great deal. Mr. Hole goes on to explain that "as in every native territory in South Africa the native commissioner used to obtain boys for work through the medium of their chiefs":—

The mistake was made by the Government of employing Matabeles as police for the native department, and where cases of cruelty occurred, it was invariably due to these native police. . . . The experiment proved a failure, and will never be repeated.

Is not "invariably" rather a bold word to use in this context? "Almost invariably" would perhaps have been more exact.

## WERE CATTLE AND MEALIES CONFISCATED?

In answer to the charge "that the Company used the Hut Tax as a means of illegally confiscating, first the cattle of the native, and then their mealies," Mr. Hole remarks:—

In the first place the payment of the Hut Tax was never brought into force at all in Matabeleland. . . . What actually occurred was as follows:—After the occupation of the country in 1893, the cattle, which with a few exceptions had belonged to Lobengula, were taken by the Company by right of capture in war. In this way some 80,000 or 90,000 head of cattle became the property of the Company, and were branded with the Company's brand. . . . In December, 1895, that is to say three months before the outbreak of the rebellion, 40,000 head of cattle were given to the natives. Thus the natives became cattle owners, for the first time, in December, 1895.

But the rinderpest came, for which the witch-doctors blamed the white men; and the killing of all infected herds added to the irritation which found vent in the rising. As to the mealies, "thousands upon thousands of starving natives were fed in Bulawayo by the Company upon mealies which were costing from £10 to £15 per bag of 200 lbs." "These two acts of generosity" have been distorted by Mr. Blake into "a monstrous piece of plunder."

## TREATMENT OF NATIVE WOMEN.

Mr. Hole then deals with the gravest of all Mr. Blake's charges:—

I wish I could ignore that part of his article which touches on the relations between white men and native women; but as this portion of his attack is one which is likely to have perhaps

the greatest weight with the public I must lightly touch on it. He says that white men in Rhodesia keep black mistresses. This, I admit, has occurred frequently. The practice is most objectionable, and I do not defend it for an instant; but let Mr. Blake point out a single country where the aborigines have been subdued, and where conquerors and conquered live side by side, which does not afford constant examples of this custom. But he goes further, and in highly-coloured terms he depicts the forcible violation of girls by the Chartered Company's servants; and here he has traversed the limits of fair speech, and it is difficult to restrain oneself in writing a reply. It is a base calumny to assert that the Chartered Company's servants, as a class, or that any other class of our community, carried on these practices. Brutes there have been (and brutes will always be found even in civilised England) who have committed outrages on women; but to saddle so many hundreds of honest, manly colonists in Rhodesia with a horrible slur of this kind because base acts may have been perpetrated by a few of the lowest characters among them, is cowardly and despicable, and Mr. Blake would do well to keep such opinions to himself in the presence of Rhodesians.

As for the shame felt by native women at cohabitation with white men, I can, I am sorry to say, flatly deny its existence. Such girls were well treated as a rule, called themselves "white women," regarded their connection as a perfectly legitimate one, and themselves as having been raised in the social scale.

Mr. Hole concludes by recalling that, from November 20th, 1896, till the end of February, 1897, a local commission sat in Buluwayo to take evidence on the Company's administration for the Parliamentary Committee, and by asking, "How is it that Mr. Blake was not there to tender his evidence?" If all be true that I hear on good authority, the evidence needed to demolish Mr. Blake's testimony is on its way and will leave nothing to be desired in completeness and authority.

### A Norwegian on Edinburgh and its People.

IN *Kringsjaa* (September 15th) there is an illustrated article on Edinburgh by Herr Oscar Julius Tschudi, and Scotch readers may perhaps be interested to know what a Norwegian thinks of their capital, which a couple of years ago by the verdict of a very large majority of the readers of the *REVIEW OF REVIEWS* was declared to be the most beautiful city in the world. Herr Tschudi does not go so far in his admiration as to find this verdict an altogether impartial and indisputable one, but he enthusiastically asserts that no traveller—to whatsoever nation or race he may belong—could possibly deny that Edinburgh is a wonderfully beautiful city. "But it is no smiling beauty. The climate is raw and damp, the atmosphere always grey, and a perpetual mist hangs over the town. One may liken it to a lovely woman, but veiled and sorrow-stricken. And its people are in harmony. There is something hard and cold in their faces, something stiff and ungraceful in their movements. They lack the smile of gladness on their lips and the sun-kiss on their cheeks." Edinburgh, says Herr Tschudi, wears a solemn, earnest look—it is the city, *par excellence*, of church and theology. What the actor is to the youth of Copenhagen, what the lieutenant is to the youth of Berlin, the preacher is to the youth of Edinburgh. He is their ideal, the representative of the career that seems to them most beautiful, most fascinating. Not because, from a pecuniary point of view, it brings in the most, but because it is the shortest way—once you are well upon it—to honour, influence and power, and indirectly therefore to riches. The Scotch parson finds it easy to make what is vulgarly called "a good match"; and so, matrimonially considered, answers to the lieutenant of many other countries besides Prussia.

### MR. SELOUS ON THE VALUE OF RHODESIA.

THE great traveller contributes to the October number of the *Scottish Geographical Magazine* a straightforward account of "the economic value of Rhodesia." The area of the country is larger than France and Germany put together; but of this immense tract Mr. Selous considers only the parts at an altitude of 4,000 feet and upwards are habitable by white men.

#### THE CLIMATE.

The area 4,000 feet high is some 26,500 square miles; between 3,000 and 4,000 are some 72,500 square miles more. The danger in the lower districts is malarial fever. Mr. Selous adds:—

Once beyond the range of fever, however, the climate of this part of Africa is probably one of the finest in the whole world. Even in the hottest weather the heat is not excessive, for the thermometer seldom registers a temperature of over 90° in the shade on the high plateaus of Eastern Mashonaland—and 90° in the shade is not very trying at an altitude of over 5,000 feet—whilst the nights are always cool and bracing the whole year round. During the winter months, namely, in May, June, and July, the nights are cold and frosty, and the days bright and clear—pleasantly warm but not hot. . . . The average rainfall would be probably over 40 inches.

#### OUTLOOK OF AGRICULTURE.

The recent rainfalls have been defective. Locusts and rinderpest have devastated the land:—

Given, however, an abundant water-supply in the way of rain or by means of irrigation, and almost anything can be grown there. . . . Wheat can be grown successfully during the dry season only by means of irrigation, for if sown during the rains it becomes rusted. . . . I have said that fruits and vegetables of all kinds grow well in Rhodesia, and I speak from experience, as I have not only seen them grown in the gardens of missionaries and settlers in many parts of Matabililand, Mashonaland, and Manica, but have grown in my own garden most excellent potatoes, cabbages, cauliflowers, peas, turnips, parsnips, lettuce, vegetable marrows, beetroot, broad beans, scarlet runners, and tomatoes.

#### THE CHANCES OF LIVE STOCK.

Passing to the prospects of live stock, Mr. Selous says that apart from the wholly exceptional rinderpest the country is a healthy one for cattle, also for sheep and goats, likewise pigs and donkeys; but is a bad place for horses. Perhaps in time a race of horses immune from the prevalent horse sickness may be evolved. Native labour in times of peace can be got for 15s. a month per man, and his food costs another 15s.

#### GOLD OR DIAMONDS.

To the prospects of a yield of gold or diamonds there are only these allusions:—

For his market the Rhodesian farmer must look to the local towns, the rapid growth of which must be entirely dependent upon the number of the gold-bearing quartz reefs which eventually prove to be payable. . . . The chances of success for farmers will depend almost entirely upon the richness of its gold deposits, at any rate for some time to come; but with or without large markets for produce, it is at present a country in which a man can choose a pleasant spot for a homestead, enjoy a genial climate in which his wife and children will thrive, and with a few cattle be able to live comfortably, and grow everything he requires in the way of fruit and vegetables in his own garden. . . . I think that the ultimate supremacy of Great Britain in South Africa depends more upon the settlement of her sons upon the land than upon the building of cities upon a gold or diamond mine, which must sooner or later cease to exist.

Are we left to infer that in "the economic value of Rhodesia" Mr. Selous does not feel justified in reckoning gold or diamond mines?

### HOW WE BETRAYED THE BECHUANAS.

It is a very sad story which Mr. H. R. Fox-Bourne tells in the *Fortnightly* for November in his "Case for the Bechuana Rebels." Mr. Mackenzie will regard it as a striking confirmation of his contention that wherever blacks are concerned, their interests and the interests of humanity are far safer in the hands of the Imperial than in those of the Colonial Government.

#### A GREAT CHANCE MISSED.

Thirteen years ago the Bechuana people were, at their own urgent request, taken under British protection. Mr. Bourne recalls a point not to be lost sight of in view of later developments:—

Had it been permitted, Sir Charles Warren and Mr. Mackenzie would and could, in 1885, have extended British dominion not only over all Bechuanaland, but over Matabeleland as well. Khama desired this, and Lobengula was willing. But the Cape Colonists, among whom Mr. Cecil Rhodes was then a rising politician and on better terms than latterly with President Kruger and the Transvaal Boers, were not at that time ready to take charge of the whole of South Africa; nor did they favour the establishment of Imperial rule over regions that they hoped some day to get into their own possession.

Thus peacefully, and with full consent of the natives, might have been secured that "extension of the Empire" which was only obtained later by war and imperilled by revolt. The unfortunate postponement seems to have been dictated not by Imperial but Colonial considerations.

#### A PROPHETIC NATIVE PLEA.

Be that as it may, for eleven years Bechuanaland was governed by the Imperial High Commissioner. For the 60,000 natives some 38 reserves were set apart, with a total area of 4,800 square miles. As the country developed the white men came in in larger numbers. These were "more and more urgent, in demanding wider scope. . . . Especially, they considered, were their energies crippled by such valuable lands as the Taungs and Molopo Reserves contained being left in the natives' possession."

Then the Dutch whites in 1895 petitioned the Crown for incorporation of Bechuanaland in the Cape Colony. Counter-petitions were at once presented by the alarmed natives, in which they said:—

We know that, if this country is annexed to the Cape Colony, instead of being prosperous we shall become ruined, instead of being contented we shall be discontented, instead of being justly and fairly treated we shall be unfairly treated through the indirect, if not direct, influence of the majority of the Cape Parliament, who will frame laws against the welfare of the natives in this country.

The Annexation Act, however, became law in October, 1895; but in the proclamation was contained the assurance, "All native reserves in the said territory . . . shall be and remain inalienable, save with the consent of Her Majesty's principal Secretary of State to the Colonies." Poor Montsioa sent a protest to the Queen, in which he said:—

We are sorry you have taken our land from us and given it to the Cape Government. We do not know their ways and laws. Please make it very just that the Cape shall not have the power to take away the piece of land you gave us in the Land Settlement of 1886. We are many people, and the land is very little. The land is our life. Help us!

#### A MOST CONVENIENT REBELLION.

For the "rebellion" which began last November Mr. Bourne does not lay all the blame on the Cape Government. But he does say:—

However right and necessary it may have been to punish

Galishwe and his accomplices, it is manifest that, either through mismanagement or by design, and perhaps with a mixture of both, what might have been a small and local disturbance was developed into a widespread "rebellion." The occasion was welcomed, according to the boast of some who took part in the sport, as affording opportunity for "nigger-hunting" on a large scale.

Natives, innocent and guilty alike, were driven from their lands, a few hundreds shot down, many hundreds starved to death, and thousands taken prisoners. Most of these, "as the Cape Government admits, were in no way responsible for the rebellion and had no part in it, except in running away from their assailants":—

The principal advantage of this enterprise, if not its chief motive, was avowed by Sir Gordon Sprigg, the Cape Premier, as early as February. "Land which had been occupied by these rebellious people, and from which they had been driven and were being driven," he then announced, "never should be occupied by them again. So soon as authority of Parliament was given, they would establish, instead of rebellious people, an European population, who would be worthy of occupying the country and help forward its prosperity."

#### EVICTON AND ENSLAVEMENT.

The prisoners were, it is said, offered the choice between a trial for high treason and "indentured labour." On accepting the latter, they were sent down to Capetown to be there indentured for five years to farmers and others. This, Mr. Bourne insists, is slavery. "English people, even Cape colonists have, over and over again, fiercely denounced the indenturing of captured natives by the Boers. Will it be sanctioned now that Cape colonists are in favour of it?"

Put side by side with a statement of these facts, there is a bitter irony in the words—

Mr. Chamberlain . . . stipulated that the lands formerly assigned to them should be inalienable, and that all their rights should be maintained "subject to any gradual modifications tending to infuse principles of civilisation and humanity into the native system."

Mr. Bourne concludes:—

We now see what those assurances were worth. By the Cape Government's dealings with the Bechuana entrusted to its care, the honour of our country has been tarnished and, more than that, the interests of these poor black fellow-subjects of ours have been wrecked and ruined. Whatever can yet be done to help them ought, surely, to be done at once and done thoroughly.

### Are Wedding Gifts a Nuisance?

To the giver, of course, not to the receiver—that is the question. It is discussed under the heading "Are Wedding Presents an Unfair Tax?" in the November number of *Woman at Home*. Lady Jeune fails to see why it should be considered a grievance, especially in these days when every sort of knick-knack is so inexpensive, and even the smallest gift is valued for the goodwill it expresses. Mrs. I. F. Mayo urges that wedding gifts should never be given save where there is real regard and intimate knowledge. Otherwise let us expect to see wedding invitations issued with the note "No wedding gifts—by special request." Mrs. Pantton, having never given a single present merely because it was expected, thinks others should do the same. Mrs. Annie Swan has heard of "unprincipled persons who hire wedding gifts to make a show." There should, she holds, be no grudging or unwilling gifts. Gertrude Atherton implores friends to come to the help of the young couple, even if the risk of duplicates is run—as when one lamp that travelled six years finally returned to the original donor's family.

## WHO SHALL BE OVERLORD OF THE PACIFIC?

## THE AMBITIONS OF JAPAN.

GENERALIZERS have divided the course of civilisation into three periods—Mediterranean, Atlantic and Pacific—according to the stretch of water which forms the theatre of principal human interest. We are said to be now on the verge of the Pacific period; but the happy omen of the name is already belied by the speculations and preparations to which the advancing importance of the ocean has given rise. In the *North American Magazine* for October, Mr. Charles H. Cramp writes on the "Coming Sea Power." He calls attention to the cyclonic suddenness with which Japan has swept into naval eminence. He says:—

Japan is not only building more ships than any other Power except England, but she is building better ships in English shipyards than England herself is constructing for her own navy.

## THE NAVAL ACTIVITY OF JAPAN.

She is now building in European and American shipyards: battleships, three of 14,800 tons, and one of 10,000 tons (all in England); cruisers, four, first-class armoured of 9,600 tons, two protected of 5,000 tons, and one protected of 4,300 tons; eight torpedo-boat destroyers, twelve torpedo-boats; and at Yokosuka in Japan, one 9,600 tons cruiser, three 3,000 ton protected cruisers, three torpedo gun-boats, and a dispatch vessel. Mr. Cramp has personally observed all except those building in Japan, and he says:—

Comparison with the current progress of other Powers discloses the fact that Japan is second only to England in naval activity, being ahead of France, much in advance of Germany, and vastly in the lead of Russia and the United States. It must also be borne in mind that the new Japanese fleet comprises throughout the very latest and highest types of naval architecture in every respect of force, economy, and efficiency.

## WHAT JAPAN IS AFTER.

The reason of this tremendous naval effort, Mr. Cramp avers, cannot be hostile intent against Russia, or the United States, or China:—

It must therefore be assumed that Japan's purpose is the general one of predominant sea power in the Orient. . . . But, whatever may be her territorial ambitions for the future, it is as plain as an open book that she intends, before she moves again, to place herself in a position to disregard and defy any external interference.

## THE THREE RIVALS IN THE PACIFIC.

Meantime neither Russia nor the United States is preparing to meet the changed conditions. In the race for naval supremacy in the Pacific they are losing, while Japan is gaining ground. They rely on the output of their own dockyards. Japan's fleet is chiefly building on foreign slips. She has the pick of the world's best shipbuilding talent at her disposal, and is constructing ships superior to the best that are built for any other nation. "The superior quality of Japan's new navy is even more significant than its enormous quantity. She has no useless ships, none obsolete, all up to date":—

Suffice it to say that, taking Russia, Japan, and the United States as the three maritime Powers most directly concerned in the Pacific Ocean, and whose interests are most immediately affected by its command, Japan, at her present rate of naval progress, viewed with relation to the lack of progress of the other two, must in three years be able to dominate the Pacific against either, and, in less than ten years, against both.

The officers of the Japanese navy Mr. Cramp has found equal to the officers of any other navy. Besides they have had an actual experience of warfare.

## ENGLAND AND THE MONROE DOCTRINE.

THERE is something exquisitely funny about the whirligig of diplomatic exigencies. Only a short time ago American statesmen were invoking the Monroe doctrine against Great Britain, and in the name of that doctrine fulminating any number of threats against us. It is still the custom with a certain type of American mind to regard that doctrine as a great rampart against British aggression in the Western Hemisphere. But according to Mr. Wellman, Washington correspondent for the *Chicago Times-Herald*, quoted in the *National Review* for November as "one of the keenest observers of political events," and as one certain not to run counter to Republican doctrine, it is to the British Empire that the United States now look for the world-wide acceptance of the Monroe doctrine! The rumoured resumption of arbitration treaty negotiations leads to this prospect:—

"Great Britain and the United States," declares Mr. Wellman, "ought and probably soon will join hands in an alliance which will strengthen both nations beyond all present estimates." . . . "The future safety of the United States may depend upon the making of an alliance with Great Britain." . . . It is not, however, to be an alliance in the ordinary understanding of the term. All that the United States is to give to the partnership is "eternal peace." She is not to fight for Great Britain to support her diplomacy or quarrel with her other good friends. Peace is the price America has to offer to England.

"What can England give in return for it?" he asks. . . . "This. . . . The Monroe doctrine is not yet fixed in international law, or in the acceptance of nations. England stands ready to fix it for us. . . . As yet no European Power accepts it. None, save England, looks upon it as anything save Yankee buncombe. To-day the Monroe doctrine hangs in the balance. If it is accepted by one great European Power, then it takes on the dignity of an international principle. . . . The meaning of a treaty of arbitration between Great Britain and the United States is the recognition by the greatest Power in the world of the Monroe doctrine."

The American correspondent of the *National Review*, from whose vigorous pages the above passages are taken, points the moral:—

It might perhaps be well for English statesmen to understand that the United States is extremely anxious to have the world recognise the Monroe doctrine, and for that recognition is willing to pay a good price. This will give England something to trade on, which in future diplomatic negotiations might be used to good advantage.

*Blackwood* must have had an extra bout of Conservatism this month, or it is otherwise put seriously out of humour with its environment. Not able to forget the jibe at "musty, crusty Christopher," it does not hesitate to dub the late Lauriat—now in the process of universal beatification—"a bumptious young fellow." It finds its "modern Arcadia" in—Mexico, with "its well-ordered feudalism and its certain results in material gain"—so fondly sketched by E. F. Ames; and it has high praise "for the delights of life in stagnant China. Mr. Ed. A. Irving says, 'In no country in the world is there more actual freedom, less of the meddlesomeness of government than in China;' and is there not 'a true local autonomy of the *laissez faire* school in each small community'?" There is a suggestive study of disobedience in action, as shown by Nelson at Copenhagen, Oudinot at Wagram, Picton at Vittoria, and others. Even the present Commander-in-Chief, when Captain Wolsely, was severely reprimanded by Sir Colin Campbell for exceeding his instructions at Lucknow, when he not only took the messhouse as ordered, but of his own motion drove the enemy out of the Moti Mahal.

### ANDREW CARNEGIE ON THE JUBILEE.

WHAT the author of "Triumphant Democracy" will have to say upon the greatest modern instance of triumphant monarchy is a question to attract the curiosity of the most languid. British, not less than American, readers will turn with interest to "some important results of the Jubilee" as registered by Mr. Carnegie in the October number of the *North American Review*. Nor will they be disappointed.

#### A TRIUMPH OF THE ENGLISH-SPEAKING RACE.

He admits that the world had never seen before such a procession as that of June 22nd:—

Nor has the history of man anything so surprising as that a little island should hold sway over one-fourth of the population, and one-seventh of the entire surface, of the globe, with thirty parliaments scattered throughout the world, all under theegis of her crown. Nothing in fiction seems more incredible; nevertheless, the solid fact is before our eyes.

Mr. Carnegie proceeds to prophecy, "Nor is the world likely to see anything like this again." He does not stop to give the reason why, but goes on to glorify the English-speaking race:—

After viewing such a spectacle, no one can question that our English-speaking race is the spreading, colonising, conquering race of the world, for it is not to be lost sight of that the other branch of that race has not been idle during the sixty years under review. The rapid expansion of the British Empire is paralleled by that of the Republic. The narrow strip along the Atlantic coast occupied by less than fifteen millions of people in 1887 has crept onward to the Pacific, and the fifteen have increased to seventy-two millions.

#### THE AMERICAN REVOLUTION JUSTIFIED.

"The vital difference," he points out with pardonable emphasis, is that "the American commonwealth remains compact and united under one central government," while "the British is scattered over the face of the earth":—

The most weighty feature of the Diamond Jubilee was admittedly the attendance of the eleven premiers from the self-governing colonies. . . . Up to the time when these premiers appeared upon the scene in the old home, the position of the colonies was subordinate; to-day they are on an equality with the home country. . . . The American cannot fail to note how completely the revolution of 1776 is justified by recent events. The British liberties which Washington, Jefferson, Henry, Jay, Adams stood for, their constitutional rights as Britons, and their claim that taxation without representation was tyranny,—all these are the commonplaces of to-day, as the inalienable right of the British colonies under the British Constitution.

#### THE EMPIRE A UNITY, NOMINAL OR REAL?

This step, Mr. Carnegie is careful to explain, though a consequence of American Independence, does not involve Colonial independence or the loosening of ties between Colonies and motherland:—

On the contrary, there is every indication that the bond between them is to grow even stronger in consequence. . . . It is no legal bond now which holds, but bonds of affection. Whether the English-speaking communities divided by vast oceans can permanently exist and retain even a nominal allegiance to Britain is yet to be tested; but it is evident that as the sway becomes more and more merely nominal, it becomes much easier to maintain it than if it were real. It is hard to displace the sentimental. For the future, the allegiance of the free colonies to the parent land is practically similar to the allegiance of the British people to the monarch whose sway is likewise so purely nominal.

This distinction of "nominal" and "real" seems to please the Republican writer, with a written constitution

in his mind's eye; but surely the "bond of affection" is not more "nominal" or less "real" than the "legal bond."

#### AUSTRALIA, CANADA, BRITAIN, ALLIES.

Mr. Carnegie goes on to anticipate, if not a federal compact, a definitive alliance between the principal portions of the Empire:—

After Australia has confederated, an offensive and defensive alliance between Canada and Australia on the one hand, and Britain on the other, would be natural, as they are members of the same race, and especially as they occupy to each other the relation of parent and children. This alliance would leave each an entirely separate nation as to its tariff, naval and military forces and internal policy, and unite them only for certain specific objects bearing upon Imperial safety.

#### CANADIAN "LOYALTY" AND AMERICAN TARIFFS.

With characteristic American patriotism, Mr. Carnegie, having traced our Imperial expansion to the principles of the American Revolution, attributes the prominence of Canada and her premier—who was "the foremost figure in the whole Jubilee proceedings next to the Queen herself"—to the tariff policy of the United States:—

The action of Canada was merely intended to influence the United States to advance in the direction of meeting Canada's needs and desires in the new tariff. . . . As it has hitherto been held impossible for Canada to admit the manufactured articles of the United States upon more favourable terms than those granted to Britain and European countries, President Harrison very justly described the situation by saying that "Canada could offer us nothing to trade with." Thus repulsed, Canada attempted to create a diversion by offering preferential treatment to Great Britain.

Mr. Carnegie is evidently much annoyed by Canada's action, and urges reprisals. He advises Mr. McKinley to "prohibit Canadian imports passing through the United States territory in bond," and would "add to the duties upon Canadian imports into the United States a percentage equal to any preference given by Canada to British manufactures."

#### THE VICTORY OF HOME RULE.

Mr. Carnegie feels himself on less uncomfortable ground when he passes to the second chief result of the Jubilee:—

Next to the equality of the colonies, which this Jubilee sealed, may be placed the triumph of the Home Rule cause for Ireland. Mr. Balfour, the leader of the House of Commons, some time ago intimated that Ireland was at last to have a measure of local government, and his able second, Sir Michael Hicks Beach, since the Jubilee, has gone to much greater lengths in the same direction. The measure will be different in name and form from that of Mr. Gladstone, but the Irish hereafter will have freedom substantially to manage their own affairs. It is safe to prophesy that sixty years hence at any jubilee similar to that which has just passed, Ireland will be found as loyal as Scotland, for she is soon to receive what the far seeing Gladstone saw she must obtain and desired to give her.

#### REPUBLICAN HOMAGE TO THE QUEEN.

The third result was the display of Britain's sea-power. But perhaps the most amusing feature of the paper is the effort Mr. Carnegie makes to explain to American readers the unique position of the Queen:—

It is not possible for any American, however well informed, of British affairs, to quite understand the feelings with which this human being is now regarded. If he can imagine "Old Glory" and old Ironsides, Washington and Lincoln, Bunker Hill, and "My Country, 'Tis of Thee," rolled into one force, and personified in a woman, he may form some conception of the feelings of the average Briton for "The Queen," for she in her own person symbolises to-day the might and majesty of

the land, and its long, varied, and glorious history from the beginning. "The Queen" means everything that touches and thrills the patriotic chord. That both as a woman and a sovereign she has deserved the unique tribute paid her goes without saying; the wildest Radical, or even Republican, will concur in this. . . . Washington, Tell, Wallace, Bruce, Lincoln, Queen Victoria or Margaret are the stuff of which heroes or saints are made, and well it is for the race that the capacity for hero-worship and for saint-worship remains with both Briton and American wholly unimpaired.

Americans may please to call the sway of such a monarch—exercising, as they admit, influence of so vast a magnitude—"merely nominal." The student of the actual facts and forces of human society will adjust the labels differently.

### WILL CANADA REMAIN LOYAL?

"I DOUBT," SAYS MR. CARNEGIE.

IN the *Contemporary Review* for November, Mr. Carnegie writes a paper in answer to his own question, "Does America hate England?" Of course, Mr. Carnegie says all the nice things concerning the unity of race which we hope and believe are to be true. He admits and deplors the culture of anti-British feeling in the common American schools, and points out the causes which, in his opinion, have led to the recent ebullition of anti-English feeling in the United States. He admits that there has been recently a wave of resentment and indignation at our conduct. This sprang from two questions, both of which are in a fair way of being settled. The first is the way in which we have dealt with the Seal Question, and the other the delay that took place about the Venezuelan arbitration. Omitting the latter as ancient history, it is interesting to see what Mr. Carnegie has to say about the seals, and still more interesting to find that this shrewd observer thinks he has discovered a rift in the lute of Canadian loyalty, which ere long will make the music dumb. Here is the passage in which he airs his opinion:—

Ambassador Pauncefoot and Secretary of State Blaine, years ago, agreed upon a settlement of the Behring Sea question, and Lord Salisbury telegraphed his congratulations, through Sir Julian Pauncefoot, to Mr. Blaine. The two nations were jointly to police the seas and stop the barbarous destruction of the female seals. Canada appeared at Washington and demanded to see the President of the United States upon the subject. Audience was denied to the presumptuous colony; nevertheless, her action forced Lord Salisbury to disavow the treaty. No confidence here is violated, as President Harrison referred to the subject in a message to Congress. Britain was informed that if she presumed to make treaties in which Canada was interested without her consent, she would not have Canada very long. It will be remembered that Canada took precisely the same position in regard to international copyright. It is this long-desired treaty-making power which Canada has recently acquired for herself, at least as far as concerns fiscal policy, so that she need no longer even consult her suzerain. She can now appear at Washington, and insist upon being received when new tariff measures are desired, having suddenly become a "free nation," according to her Prime Minister. There are surprises in store here for the indulgent mother.

The indulgent mother is not afraid. Possibly, if Mr. Carnegie's countrymen were to suddenly reverse the whole of their tactics in dealing with Canada, and attempt to win her by kindness rather than coerce her by threats, he might be right; but so long as the Canadians are made to feel, month after month and year after year, that they are regarded by their powerful neighbours in the south with grudging jealousy, that

loses no opportunity of making itself felt, the dangers to which Mr. Carnegie refers will be counteracted by the natural results of the American policy.

In other words, Canada would think much less of the advantages of her connection with London, if she felt that she had real friends at Washington.

### THE DUC D'AUMALE.

M. LAUGEL, who was the Duc d'Aumale's trusted confidant and friend, and who has survived him only to continue the same devotion to his memory, publishes in the *Revue de Paris* an article upon the Duc d'Aumale written last July, only a few weeks after the Duc's death:—

In England (says M. Laugel), he had quickly become a sort of favourite. His natural sociability was wedded to the rarest natural gifts of mind, and of a mind which had nothing narrow or provincial about it. A Frenchman he was in all the force of the term, but he was also a cosmopolitan. Life had led him into many a land; everywhere he managed to gather a harvest. His father had brought him up on Shakespeare. He was at home in Italy, and felt there, stirring in his veins, a little Italian blood. Willingly he became a Genevan in Geneva, for he appreciated the intellectual society of that town. He had understood and penetrated Islam in Algeria. This cosmopolitanism rendered intercourse with him agreeable to cultivated persons of every land. He keenly appreciated the qualities of the English race. There is no aristocracy more intelligent—more attractive, too, in many respects—than the English aristocracy, which has now for so long a time managed to give social pre-eminence the solidity of political pre-eminence. The position of those in exile is everywhere a difficult one. The Orleans Princes, as members of a Royal Family, could not go out much in the world, exposed as they were to meeting their ambassadors, to whom it was sometimes difficult, in spite of their courtesy, to give up their right of precedence. The brothers of the Duc d'Aumale lived in a sort of retirement. As for him, he entered a few houses, where he could, without making any concessions, meet all the most brilliant persons that English society had to show. It pleased him to receive that society at his place at Twickenham. He easily allowed himself to be penetrated by its tastes, its customs, its ideas, and even by some of its passions. There was in him something of Alcibiades—a Greek among the Greeks, a Persian among the Persians. He kept a pack of hounds, and hunted hare and fox, paid visits in country houses, delivered speeches at agricultural meetings and literary reunions, but always avoided political meetings, always avoided mixing himself up directly or indirectly in party strife. As England's guest he considered himself bound to maintain great reserve, even when French interests were at stake. . . .

His ambition had always been less personal than patriotic. How many times have I heard, when seated by him in his box at the Théâtre Français, the famous monologue of Don Carlos before the tomb of Charlemagne! I used to watch the brow of the Prince, and I saw traversing it the shadow of his thought. He too had known those fatal minutes during which the balance of fortune sets itself a-going. He had those visions which may disturb the strongest man. To be, under whatever name, the guide, the arbiter, the saviour of his country—this noble hope had gleamed in his eyes. He had long awaited, as it were, the impulse given by destiny. By degrees a feeling of discouragement had invaded him; he had felt too often I know not what malign power intervening between him and action.

It may be said of him that he lived on the boundary line of two worlds. No one knew better the old France, was prouder of its grandeur, or more capable of doing it justice. No one better understood the needs of modern France, was better aware of its exigencies, or more indulgent of its imperfections and mistakes. Imbued, however, as he was with modern feelings, enamoured—the word is not too strong—as he was of his time, he was yet the survivor of a great past. At his Château of Chantilly he had had put up new towers upon an ancient foundation, and given thus in stone, without knowing it, an image of himself.

## EDISON IN IRON-MINING.

## THE INDUSTRY TO BE REVOLUTIONISED.

EDISON has out-Edisoned himself. It is the tale of a geologic Titan. Yet it all came about so simply and naturally, as Mr. Theo. Waters tells the story in the November *McClure's*. About sixteen years ago Mr. Edison was strolling along Long Island shore, when he noticed a pile of black sand. Black sand he had not seen before; so he took some of it to his laboratory. At last he held an electro-magnet near it, when out jumped toward the magnet a number of fine black grains. The mass of black sand was a bed of finely divided iron-ore cast up by the sea, eaten by it from the magnetite rocks of Connecticut. Mr. Edison set to work to develop a machine to attract the grains of iron from the sand on a huge scale; and a contractor was just about setting the plant in motion on the black sands, when a fearful storm came, and in a single night washed all the black sand away!

## PRICKING OUT MOUNTAINS OF IRONSTONE.

But the idea remained. When later Western ores were beginning to make iron mining in the Eastern States unprofitable, Mr. Edison resolved to investigate the New Jersey mountains to find low-grade ore which might be pulverised into the condition of the black sand he had found on the seashore. He constructed an ore finder in the shape of a sensitive magnetic needle, which would dip to the earth wherever magnetic iron ore was present in large quantities. By this means he found, to his immense surprise, a mountain range underlaid with iron ore. Then he sent out corps of investigators on a magnetic survey of the Eastern States from Canada to Carolina, and found enormous deposits of iron ore. Says Mr. Edison:—

In 3,000 acres immediately surrounding our mills there are over 200,000,000 tons of low-grade ore; and I have 16,000 acres in which the deposit is proportionately as large. The world's annual output of iron ore at the present time does not reach 60,000,000 tons, and the annual output of the United States is about 15,000,000 tons; so that in the paltry two square miles surrounding the village of Edison there is enough iron ore in the rocks to keep the whole world supplied for one year.

## GRINDING A MOUNTAIN RANGE TO DUST.

He took in hand the realisation of this vast estate. His method is simplicity itself:—

Mr. Edison is now doing on a gigantic scale just what he did at first with a hammer and a horse-shoe magnet. He is crushing rocks, and then dropping the resulting powder past powerful electro-magnets. The sand is not affected by the magnetism and passes straight on; the iron ore is attracted to one side and falls in a heap of its own. This is the whole principle. But in the actual working out it becomes one of the most tremendous processes in the world. It is, after all, no small matter to crush the very vitals out of a big mountain and then extract all of the ore from millions of tons of sand.

What Mr. Edison has done has been to subdue to his service three great natural forces—momentum, magnetism, and gravity. The big rocks are not, strictly speaking, crushed by the direct power of an engine or dynamo; momentum alone turns them into dust. No mechanism assists in the separation of the ore from the sand; magnetism does it all. Except for the elevators which raise the ore to the cupolas of the buildings, there is in many of them no machinery; gravity does all the work. In fact the whole plant is a wonderful example of automatic action.

## CREATING ARTIFICIAL CAÑONS.

Edison is quite a geological factor of no slight magnitude. By aid of dynamite and steam shovels, his conveyers lift 100,000 cubic feet of mountain side every day. They are eating out through the rock mountain

a trench 100 feet deep. "We are making a Yosemite of our own here," he says, "we will soon have one of the biggest artificial cañons in the world." When the trench is made, "we can blast off the walls with dynamite," 32,000 tons at a time!

## FROM CRAGS TO IRON FLOUR.

An average of 300 tons of rock per hour is shot down upon the monster crushing rollers, themselves seventy tons in weight and revolving at a surface speed of a mile a minute. The steam-engine only sets them revolving, the crushing force is supplied by their own momentum and the drop of the rocks to be crushed. After successive crushings and liftings, the rocks are finally reduced to dust. This dust is then passed over 480 magnets, which deflect the iron and do not affect the sand. So there is accumulated in the stock-house some 5,000 tons of pure powdered iron, almost fine enough to go through a flour-sieve. But this iron dust is much too fine to be cast into a furnace; the blast would blow out a large part of it. It is therefore made into briquettes by the admixture of an adhesive material and baked into hardness:—

Six thousand tons of crude ore are changed into 1,500 tons of briquettes in each day's run of twenty hours. Twenty-eight hundred briquettes are contained in one ton, and an average freight car will hold twenty tons. This means that seventy-five carloads of pure iron ore are wrested daily from heretofore worthless rock and sent furnaceward to be made into objects which will be useful to all the world.

Even the rejected sand is found to be valuable for building purposes and sent off by the trainload every day. So much dust about the machinery got as grit between the wheels and made mischief that Mr. Edison invented a lubricant which will not work without grit or dust. So he conquers.

## THE MAYORALTY ELECTION AT NEW YORK.

MR. BRYCE writes an article on this subject in the *Contemporary Review* for November, in which he briefly outlines the questions raised by the recent contest, and expresses his opinion that the most important issue of all is that of eliminating the national party politics from municipal elections.

## THE PARTISAN GOVERNMENT OF CITIES.

Mr. Bryce says:—

In the United States the power, action, and spirit of party are wider and more persuasive than anywhere in Europe. That is the reason why the effect which the present contest may have upon the party system constitutes the true interest and deep significance of the election. Momentous as is, to the citizens of New York, the selection of the man who is to rule their enlarged municipality for four years, the question of partisan or non-partisan nominations is of far greater ultimate consequence to the country, for it goes down to the "bed-rock" of the political system of the Republic, of the political ideas and habits of the people. No greater forward step can be taken than to take municipal affairs "out of politics." The evils of the present system are monstrous and palpable; the arguments against it are comprehensible to every one. The existing practice has, however, struck its roots deep. It is this habit of blind deference to party organisation which needs to be broken, and it is easier to break it in the case of municipal elections than in any other, because the distinctive principles of Republicans and Democrats have nothing to do with clean streets or an honest police. Hence the importance of the present contest. To win without the help of the Republican Machine would deal a heavy blow at city Machines everywhere, for it would enable an example to be set in the greatest city of the Union of a municipal government relieved from all obligations to find places or contracts for its party friends, free to think of nothing but securing the best men.

### "INDIA'S CASE FOR SILVER."

BY AN INDIAN PROFESSOR OF ECONOMICS.

THE never-ending torrent of papers on the currency question in American magazines has rarely been diverted, even in the tiniest rills, into these pages. But in the *North American Review* for October there is a statement of "India's Case for Silver," by Mr. A. S. Ghosh, Professor of Economics in Calcutta University, which claims notice here, as the utterance of a representative Indian on a specially Indian question. The writer points out that the Empire has more interest in silver than the Republic, for "the British Empire alone contained more silver than the capitalised value of all American silver mines." There were in India "silver hoards amounting to 1,300,000,000 ounces."

#### ONE-HALF OF INDIA'S SAVINGS DESTROYED.

Mr. Ghosh's reasoning is direct enough. England's persistent devotion to the gold standard is, according to him, the cause of the depreciation of the rupee; and he has, of course, little difficulty in showing how terribly India has suffered from the cheapening of the rupee. The face-value of the rupee is 1s. 3½d., or at the rate of 40½d. per ounce of silver. Owing to the recent rapid fall of silver, the bullion value is only 24d. per ounce. Consequently the hoarded rupee which the people of India, after their custom, have turned into bangles, armlets, and other simple ornaments, and which are put at 1,300,000,000 ounces, have lost value to the extent of 40 per cent., and, indeed, in view of prospective further fall in price, silver dealers charge an extra 10 per cent., making a total loss of fifty per cent. Thus British monometallism by the closing of the mints is declared to have destroyed one-half of the savings of the people of India.

#### WHAT THE RESTORED RUPEE WOULD DO.

From the tremendous inroad upon the private wealth of the Indian people, Mr. Ghosh turns to the losses sustained by their Government. His speculations are interesting if ingenious. If only the rupee were at 2s. instead of 1s. 2½d., the Indian Government would have to send in home charges an amount equal to Rs.115,000,000 less than is sent at present. To the Rs.115,000,000 thus saved add Rs.10,000,000 saved on the payment now made in pounds sterling to the British troops in India, and another Rs.11,000,000 saved similarly on the salary of other Government employees, and you have a total saved — by the supposititious appreciation of the rupee to 2s. — of Rs.136,000,000.

#### WHAT TAXES IT MIGHT REMIT!

Mr. Ghosh obligingly estimates also the total savings, should the rupee only reach 1s. 9d., which he admits has been taken as its maximum value, or even 1s. 8d. At 1s. 9d. the total saved by Government would be Rs.111,000,000; at 1s. 8d., Rs.101,000,000; with this immense saving the salt tax could be abolished, and a partial repeal take place in the income tax and customs. The total remission of taxes held desirable by Mr. Ghosh would amount to Rs.111,085,000 (salt tax, 81,670,000, income tax, 8,000,000, and customs, 21,415,000).

With the rupee at 2s., there would be a surplus after this remission amounting to about 25 million rupees, which Mr. Ghosh would spend on irrigation and other precautions against famine. With the rupee at 1s. 9d. the remission would just be effected. At 1s. 8d. there would be a deficit of 10 million rupees, which customs on luxuries or a graduated income tax for the very wealthy might make up.

#### ALL THAT ENGLAND IS ASKED TO DO.

With these premisses and projects Mr. Ghosh has little difficulty in proving that the proposed restoration in the value of silver is absolutely to the advantage of India. But how effect this restoration? Mr. Ghosh believes that France and the United States are able to restore silver to its former value by joint action, if only they receive some co-operation from other nations. Mr. Ghosh does not ask England to give up her gold standard: "she is only requested in the event of a bimetallic agreement between the United States and France: (1) to offer facilities for a greater use of silver in the British Isles, by making silver legal tender up to 60s. or 80s. instead of 40s., by making silver an alternative basis for notes and lowering the minimum note from £5 to £3 or £1, by compelling the Bank of England to hold one-fifth of its reserve in silver, and by withdrawing the half sovereign; and (2) to re-open the Indian mints to the free coinage of silver.

#### "THE LAST HOPE OF INDIA."

Mr. Ghosh backs up his plea with a forcible allusion to Indian unrest:—

There is general disaffection in India, bursting forth here and there into open hostility. If the famine and the plague had not come, perhaps the people would not have realised to the fullest extent the significance of the closing of the mints. These, however, are the very misfortunes which have compelled them to bring out their hoarded savings to re-convert them into rupees; and for the first time they have realised that, without their knowledge the Government has reduced those savings to half their original value.

The paper closes with a significant reminder of the intimate relation between the internal politics of Britannic and American peoples:—

It is to the interest of England to accept the willing co-operation of her neighbours and to re-open the Indian mints. . . . If she still continue to block the way, if Senator Wolcott's mission fail and the Indian mints remain unopened, then the last hope of India must lie in Mr. Bryan. . . . The three hundred millions of India will wish him God-speed with all the power of their stricken hearts.

#### What Genealogy Is.

IN the October *Genealogical Magazine* the Rev. A. W. Cornelius Hallen has an interesting article on Genealogy as a Science, in which he corrects some of the mistaken notions prevalent on the subject, and endeavours to put forward its "true aim." For those who use it aright, he considers it a fascinating study:—

It is the unfolding of the genesis of a nation. Historians deal with facts, genealogists deal with causes. Nations, like families, are influenced by their composition. Britain has prospered because of, not in spite of, her heterogeneous population. Every fresh infusion of foreign blood has brought with it a fresh and beneficial characteristic. History cannot tell us this as plainly as does genealogy; it often, indeed, obscures the fact and minimises the result.

Genealogy is the study of the human genus under the various subdivisions of nations, clans, and families. It recognises the influence of the individual on his offspring. The more genealogy is valued as a science, the better shall we be able to improve the physical and mental position of our countrymen.

THE *Index Library* now includes a Scottish Series, the Commissariat of Edinburgh, 1514-1600, being completed in the September number. Another interesting series begun this year is the Calendar of Marriage Licences issued by the Faculty Office from 1632 to 1695.

## THE DECLINE OF BRITISH INDUSTRIAL SUPREMACY.

### MORE FACTS AND FIGURES.

THE *Contemporary Review* for November publishes two interesting articles on this subject. One is the elaborate statistical paper by Mr. Mulhall, in which he analyses the figures contained in the recent report published by the Board of Trade as to our trade with the British colonies.

### THE FOREIGNER IN THE COLONIES.

Mr. Mulhall is an optimist, and strenuously does his best to raise the spirits of the somewhat depressed British manufacturer; but all that he can say is that the trade of the British Empire, meaning thereby the Colonies and India, is increasing much faster than that of Great Britain, and that the latter is not diminishing. Of course, everyone will agree with him in recognising that it is foolish to dream of making the commerce of the Colonies subservient to that of the United Kingdom, and only one degree less absurd is it to grudge the expansion of colonial trade in foreign countries; nevertheless, the following facts, which he himself summarises, are anything but reassuring reading:—

That the trade of the Colonies, compared with ten years ago, has risen 8 per cent.

That their trade with Great Britain has increased 2 per cent.; with foreign countries, 30 per cent.

That their consumption of British merchandise has declined six millions sterling, while their imports of foreign goods have increased ten millions.

That colonial exports to Great Britain have risen 12 per cent.; to foreign countries, 32 per cent.

That, taking into account the fall of prices, the consumption of British merchandise in the Colonies appears to have increased in volume 7 per cent., while the weight of colonial exports to Great Britain has grown 30 per cent.

That the weight of colonial exports to foreign countries has grown exactly 50 per cent.

### THE FOREIGNER IN THE FARMYARD.

Another article bearing on the same subject, is the capital paper of Sir Edmund Verney on "The Inhabitants of Milk." After stating what the science of bacteriology has proved concerning the importance of cleanliness and applied science in producing butter and cheese, and in preserving milk, he tells us that the foreigner, who has already made serious inroads on the farmyard, has made perfect arrangements which will soon enable him to place on the English market, at a cheaper price, a better quality of every single product on which the English farmer and landowner now depend. He is, for instance, preparing to send us bottled milk, which will keep for several days, and is far cleaner and safer for use than milk in bulk. It is heated to a temperature of 158 degrees, which destroys most of the germs, without affecting the taste. It is then filtered and rapidly cooled down, stored in sterilised bottles, and cooled. Sir Edmund Verney says:—

The Scandinavian farmer, with a worse climate, poorer pastures, inferior cattle, and much smaller population, is steadily undermining the last resort of the English farmer—his dairy business—for whom there is at present no hope. Their weapons in this commercial war, where, so far, they are winning all along the line, are equally within our own reach; they are not in the main hostile tariffs, or bimetalism, or lavish bounties; they are but two in number—education and combination. These two we persistently refuse to employ. We seek safety in the ignorance of our rural population; we grudge every penny and every hour spent on rural education.

He goes on to labour this point, but I have quoted enough to make the intelligent sad. As for the unin-

telligent classes, who are entrenched in so many of our country houses, and whose one idea is to starve education in order to keep down the rates, nothing short of the pinch of poverty can do them any good. That pinch, however, seems to be coming on apace. It is a hard thing to say, but who can read Sir Edmund Verney's paper and deny that it is our only hope?

From Prince Kropotkin's paper in the *Nineteenth Century* for November we can form some estimate of the trouble that has been taken in Canada for the purpose of improving the agriculture of the country by means of experimental farms, whose operation he describes. He adds:—

It must only be added that while in Europe the work of the experimental farms too often remains little known to those who toil on the soil, in Canada, as in the United States, a whole machinery has been worked out for diffusing the knowledge that has been won from scientific research, down to the remotest village.

### A New Game for Girls.

A SCHOOL at Dartford for teachers of physical culture for girls is described by C. L. M. Stevens in the October *Winsor*. The principal is Madame Österberg, a Swedish lady, who has further developed Ling's system, and yearly gives a scientific outdoor and indoor training in athletics to some thirty or forty girl graduates. The students go without hat or bonnet in all weathers, and wear a special costume of loose-fitting blue cloth tunic above knickers and jersey of the same colour. One of the many sports practised is known as "basket-ball":—

This really splendid game, about which a good deal will probably be heard in England in the near future, is an importation from America, where it has taken its place beside lawn-tennis, and threatens to become, to the typical up-to-date Yankee girl, what football is to her brother. The great beauty of basket-ball consists in its extreme simplicity. No expensive apparatus is required, nor is a smooth shaven lawn a necessity. Where, in fact, a ball, two baskets and a couple of clothes-props are, there can the game be played. The baskets are placed on the tops of poles about sixty yards apart, the players are divided into two numerically equal teams, and the object of the game is to pass the ball from one to the other, landing it eventually into their rivals' basket. Basket-ball is in fact a sort of football played with the hands, and the teams are disposed in much the same manner—goal-keepers, backs, half-backs, etc.

With such healthy open-air development, continued for a few generations, the writer hopes that the English physique may yet rival the ancient Greek.

A STRONG case for reforming the rules concerning lights on ships at sea is made out by Lieutenant J. H. Scott in *Cassier's* for September. The present rules framed for ships going at ten knots an hour are hardly equal to the needs of vessels rushing on at twenty. The side lights, which alone show which side approaching vessels must take to avoid collision, are now required to be visible at only two miles distance. This means that in the case of swift ocean steamers approaching the point of collision at the rate of forty-two miles an hour, officers have only two minutes and twenty-eight seconds to see the danger, decide how to avert it, give orders, turn the helm, and turn the ship. Lieutenant Scott advocates a minimum of ten miles visibility, and as coloured lights will not carry so far, a white light on the foremast covering an arc of twenty points of the compass, a higher white light on the mainmast, and a torch or flare-up light on the side towards which the other vessel is seen to be approaching.

**COMPULSORY ARBITRATION IN TRADE DISPUTES:****HOW IT WORKS IN NEW ZEALAND.**

THE difficulty which the Government has found in inducing industrial disputants to submit to voluntary arbitration, notably in the case of the Penrhyn quarrymen and the Engineers, has led many to sigh after some form of compulsory arbitration. In the *National Review* for November the Hon. W. Pember Reeves, Agent-General for New Zealand, supplies most seasonable information as to the working of the compulsory system in his colony. He recalls the high hopes once cherished of voluntary conciliation, and points out how these have been disappointed. Conciliation Boards have not only failed to increase with growing needs; but several of the best known have ceased to exist. In Great Britain "the strike and lock-out are always with us." In the United States the bloodiest and most disastrous Labour quarrels have taken place during the last five years. In the other Colonies no example of systematic private conciliation is known to the writer. After the Dockers' Strike in 1889 Government conciliation was invoked, and in a dozen countries Act after Act was passed,—"nearly all destined to fail completely." They failed because "they shrank from compulsion."

**THE ARBITRATION LAW.**

Mr. Reeves then describes the New Zealand expedient. The Industrial Conciliation and Arbitration Bill was, as we know from other sources, Mr. Reeves' own legislative offspring, but in this article he modestly conceals its parentage. These are its principal provisions:—

To deal with Union conflicts local Boards of Conciliation were to be set up, composed of equal numbers of masters and men with an impartial chairman. At the request of any party to an "industrial dispute" the District Board could call the other parties before it and hear, examine, and award. It was armed with the fullest powers for taking evidence and compelling attendance. Its award, however, was not to be enforceable by law, but was to be only a friendly recommendation to the disputants. In case, these, or some of them, refused to accept it they might appeal to the Court of Arbitration, a tribunal consisting of a judge of the Supreme Court sitting with two assessors, one selected by Associations of Employers, the other by Federations of Trade Unions. The Court was neither to be fettered by precedent nor appealed from on any pretext. It was to settle its own procedure and hear any sort of evidence that it chose to call for or listen to. If all the parties before it so wished, they might appear by counsel, but not otherwise.

**HOW THE AWARD IS ENFORCED.**

After inquiry into any industrial dispute the Court gives its award. This can be either legally enforceable or not, as it thinks advisable. If it is to have legal force, it is filed in the Supreme Court and then has the weight of an ordinary submission to an award. That is to say, either party to it can, by leave of a judge, get an order exacting a penalty for its breach. The penalty, be it noted, is not to exceed £500 in the case of any individual employer or trade union. Should a union's funds be insufficient, each member is liable to the extent of not more than £10. Costs are in the Arbitration Court's discretion.

A noteworthy feature of the statute is a provision for the filing in the Supreme Courts of contracts embodying working conditions agreed upon by employers and Union. These documents, called Industrial Agreements, are, when filed, binding for the period mentioned in them, provided it does not exceed three years. Of these more anon.

The Bill was drafted in 1891, it was pushed in 1892. It was made law in 1894, after having twice had its compulsory clauses struck out in the Upper Chamber. But Mr. Reeves stuck to his guns and the Upper Chamber

finally succumbed. "The employers were antagonistic throughout." A similar measure was passed a few months afterwards in South Australia.

**HOW IT HAS WORKED.**

Since the New Zealand Act came into operation, sixteen disputes have been referred to it. "The trades concerned have been the bootmakers, seamen, goldminers, tailors, coalminers, bakers, furniture makers, builders, and painters. During that time there have been virtually no strikes or lock-outs." Out of twelve disputes settled, about one-half of the number were settled by the boards without appeal to the Court. On the crucial point of employing non-Union labour, the Court has acted thus:—

Where the practice of an employer in the past has been to work his factory entirely with Union labour it has ordered him to continue to give a preference to competent Unionist applicants for vacant places. When, however, such applicants do not offer themselves the Union is commanded not to object to the engagement of outside men. In other cases, however, where Unionists have failed to prove a past agreement or custom to employ only Union labour the Court has been satisfied to prohibit the employers from discriminating against Unionists when taking on fresh men.

One of the advantages to the employer is that the contract filed in the Court and legally binding for three years, unless terminated by mutual agreement, enables him to make his calculations on an assured basis. If Unions fear incorporation as an invitation to harassing litigation by the employers, Mr. Reeves points out that "Unions can please themselves about becoming corporate bodies for general purposes:" what is not optional is their corporate liability for costs and penalties incurred under the Act.

Mr. Reeves confesses that the Act has been "lucky in a friendly Legislature, a first-rate President, and a general desire on the part of the public to give it a fair trial." Others will say it was still more lucky in the Minister who brought it forward. With strict official decorum Mr. Reeves abstains from reference to the Engineering struggle now in progress. He expresses his faith in the fitness of his measure for any community where the State exercises large powers of control over industry. The employers are always against it; its adoption depends on the will of Trades Unionists.

*Temple Bar* for November contains a very interesting article by the wife of a medical man narrating some of her experiences "among the Boers." She conveys a seriously low impression of the honesty, manners, and cleanliness of the Boer women; and her sketch reminds one of much in "The Story of an African Farm." Mr. A. C. Hillier contributes a study of Crabbe, whom he dubs "Jane Austen's husband."

The *Lady's Realm* for November has many points of attraction. Beside Ouida's tirade on dress, which claims separate notice, there is Mrs. Haweis' description—with excellent pictures—of her visit to the Queen of Italy. Sarah A. Tooley sketches the Women's Liberal Federation, with portraits of leading members. There is also a symposium on the well-worn but inevitable question, "What to Do with Our Daughters." Teach them domestic economy, says the Hon. Mrs. Chetwynd. Marry them off, is Mrs. Rentoul Esler's answer; only do not let them know that this is your purpose. Mrs. Haweis says, Let them work; let them feel their feet and balance their own steps.

## THE WORLD'S BREAD SUPPLY SHRINKING.

### IS UNIVERSAL FAMINE NEAR?

It is a grim alarm which Mr. C. Wood Davis raises in the *Forum* for October. His paper is packed with facts and figures which all point in one ominous direction: the world is filling faster than its breadbasket; the nations are staggering on the brink of general bankruptcy in bread. "Statesmen," pertinently observes the writer, "must soon face more serious problems than those of the tariff and the currency." Hunger will assert itself as the ultimate international problem.

### THE WORLD'S DIET IMPROVING—EXCEPT IN RUSSIA.

Mr. Davis begins by declaring that only the populations of European lineage can be termed bread-eaters. He puts their number at 510 millions now as against 371 millions in 1871, an increase of 37·5 per cent. While the population has thus advanced, the national dietaries have, except in Russia, and perhaps Turkey, notably improved. The unit's consumption of wheat has steadily increased, while the consumption of poorer forms of food has relatively diminished. The multiplication of life in Russia and the sub-division of lands have caused a backward movement, the wheat consumed per unit having declined fourteen per cent. and the rye thirteen per cent. since 1830, while maize and potatoes have increased. Russia's loss has been the world's gain, for her lowered diet has added 1,360 million bushels of her own wheat and rye to the quantity available for other nations since 1880. On the other hand, "Australasian consumption of wheat per unit is the greatest known."

### SHRINKAGE OF THE WORLD'S BREAD-GRAIN FIELD.

Proceeding upon official data for ninety-five per cent of the bread-eating area, and commercial estimates for the rest, Mr. Davis concludes that the area employed in growing wheat, rye, spelt, maslin and buckwheat is now two million acres less than fifteen years ago, and but twenty million acres greater than in 1871. Had the rate of area increase equalled the 37·5 per cent. at which the "bread-eaters" increased, additions to the bread-grain area, since 1871, would have aggregated much more than eighty million acres, instead of the meagre twenty millions.

The wheat area increased 11·2 per cent. between 1871 and 1882, but only 5·3 per cent. between 1882 and 1896: the entire increase in the twenty-five years being no more than 25·6 per cent., while the population advanced 37·5 per cent. The average acreage of bread-making grains per bread-eating unit was 0·695 of an acre in 1871, but only 0·547 in 1896, a reduction of more than one-fifth. The United States added to the wheatfields of the world during 1871-82 no less than seventeen millions out of the world's total increase of twenty-four millions of acres; but in 1897 the wheat area in the United States is positively three million acres less than in 1882. Then—when the United States ceased adding to its wheat-fields, those of the world ceased to keep pace with the increase of the "bread-eating" population, and are now greatly deficient. So great is the deficit, that, with acre-yields no better than the average of 12·7 bushels of the last twenty-six harvests from "contributory areas," the output would be 275,000,000 bushels—or the net product from some 27,000,000 acres—less than present needs.

### RYE AND WHEAT-FIELD 50,000,000 ACRES SHORT.

But for "an unprecedented succession of seasons, over world-wide areas conducive of exceptionally high 'over-average' acre-yields," the contrast would have been greater. Reckoning on an average yield, Mr. Davis concludes that "there exists an acreage deficit of the two principal bread-making grains"—wheat and rye—"of more than fifty million acres, while there is even a

greater relative deficit in the areas employed in growing such bread-making grains as spelt, maslin and buckwheat."

### WHERE CAN FRESH SUPPLIES COME FROM?

The next question is, How or where shall this deficit be made good? Will the world have to follow the example of the Russian peasant and revert to poorer and coarser foods? Or may we look for the requisite expansion of the wheat-growing area?

South America offers some chance of relief; "Argentina and Uruguay alone promise material additions to the world's wheat-bearing area"—but their development must be slow for want of population. The inference from Mr. Davis's forecast would thus seem to be, that encouragement of emigration to these South American States was the first duty of all civilized Governments.

### AFTER FIFTEEN FAT YEARS—

The next portentous fact which this suggestive paper contains is that seasons of dearth as well as seasons of plenty often come in succession. We have just emerged from a period of exceptional plenty. "The over-average product of the fifteen harvests ending with 1896 was more than 1,200 million bushels, although four of the fifteen gave acre-yields somewhat below the average." If, therefore, we are entering on a period which keeps to the average, Mr. Davis's outlook is sufficiently alarming; but should the new period prove to be a succession of seasons of dearth, as in 1799 to 1821, we are left to infer a universal fight with famine.

### —ONLY THREE-FOURTHS OF MANKIND'S NEEDFUL BREAD!

We got along in 1895-96 by consuming 75 million bushels of old wheat (stored from previous years of plenty), and again in 1896-97 by consuming 138 million bushels of old wheat. As our reserves are now at the lowest, and will wholly disappear this year, the deficit of the wheat harvest for 1897-98 is indicated at 400 million bushels!

As the food requirements of the 510,000,000 "bread-eaters" of 1897 aggregate 1,990,000,000 bushels, and as there will, apparently, remain but 1,590,000,000 bushels after setting aside 320,000,000 bushels for seed, it follows that but three-fourths of the required bread can be provided, unless larger drafts than now seem possible can be made upon reserves reduced to the lowest point consistent with the safety of the exporting nations.

### A BLACK LOOK-OUT FOR EUROPE.

The outlook for the world at large is bad enough, but is much worse for Europe. Europe has to feed 392 million mouths, which need 1,490 million bushels. Her harvest "will provide less than 1,200 million bushels." North America may spare her 140 million bushels:—

After Europe shall have exhausted all possible supplies from the harvests of 1897, and such crops as may be harvested prior to July, 1898, there will apparently be a deficit of the equivalent of 700,000,000 bushels of the bread-making grains, with no resource except meagre remainders from former harvests, and with no substitution possible, unless Europeans can be induced to eat corn-bread.

This is a gruesome prospect. Yet not wholly black. For a pinch of world-famine such as Mr. Davis's figures suggest might force on a solution of some of our most clamant social and international problems. The spasm of hunger and possibility of wars for bread would be terrible; but in the end a famishing Europe might, for example, find militarism too costly an indulgence. When humanity, like the prodigal son, is in want, and would fain fill its belly with the husks that the swine do eat, then perhaps it too may come to itself, and eventually arrive at a happier social state.

### THE HORRORS OF "HOME WORK."

MISS MARGARET H. IRWIN contributes much heart-saddening fact to the *Westminster Review* on "the problem of home work." Her investigations for the Royal Commission on Labour provide her with a host of harrowing observations.

#### FIVE FARTHING AN HOUR!

"Shirt-finishing" is an industry, for example, in which the rates of pay are simply intolerable. Miss Irwin reports:—

As nearly as my direct information allows me to form an estimate, I would conclude the work is usually paid at about 1d. or 1½d. an hour, although cases have been met with where the rates were as low as ¾d. an hour.... I met one woman who had finished trousers at ¾d. per pair, each pair taking two hours to finish, and the worker supplying her own thread. Finally, she gave it up, finding, as she said, that "it was easier to starve without the work."

#### "THE BEST FRIEND WE POOR FOLKS HAVE."

Here is a gruesome case:—

Another worker received 7d. a dozen for pressing and putting on buttons on boys' trousers; by working from 6 A.M. to 6 P.M. she could do two dozen, thus earning 1s. 2d. For this, coal (extra being needed for heating iron) cost her 2½d. per day, and sticks ¾d. She also paid 2d. to a girl for carrying the work to and from the workshop to which she was unable to go herself, thus leaving her a net profit of 9d. for her twelve hours of very hard work. This poor woman had buried seven little children, and she said, as she concluded her tale to me, with tears of mingled sorrow and thankfulness, "God took most of my bairns. He's the best friend we poor folks have".... One of the most industrious and intelligent among the shirt-finishers visited told me she could "never make more than 1½d. an hour with the hardest work."

#### "PAYING BLOOD-MONEY."

And prices have been going down. Here is the witness of a small shopkeeper who had a conscience:—

She said that every year, when stock was taken, prices were reduced because of the cheap work coming from England. She had been offered beautifully trimmed and finished cotton chemises by a traveller lately at 7s. 6d. a dozen, and refused to buy them, as she "thought it would be paying blood-money."

#### THE "HOMES" OF THE HOME-WORKERS.

This is Miss Irwin's account of the homes in which "home-work" is carried on:—

Many of the houses of the home workers were found to be in an extremely filthy state, and the work was carried on in them under highly insanitary conditions. Frequently one finds the home worker occupying an attic room at the top of a five-storied building, the ascent to which is by a dark and dilapidated staircase, infested, it may be, by rats, or haunted by that most pitiable of four-footed creatures, the slum cat. At every landing, narrow grimy passages stretch to right and left, and on either side of these, close packed, is a row of "ticketed houses"—i.e. rooms on which the doors have marked on the outside the number of occupants allowed according to police regulations—regulations that are frequently evaded by means of that unknown and highly elastic quantity, the lodger. On every landing there is a water-tap and sink, both the common property of the tenants, and the latter usually emitting frightful effluvia. Probably the sink represents the entire sanitary system of the landing. Armed with a box of matches and a taper, and battling with what seem to be the almost solid smells of the place, one finally reaches the top, and on being admitted finds, perhaps, a room almost destitute of furniture, the work lying in piles on the dirty floor, or doing duty as bed-clothes for a bed-ridden invalid and the members of the family generally. In the case of one home worker, a shawl-fringer, where the extreme of poverty had apparently been

reached, I found the sole furniture of the room was an old chair, a broken cradle, and some empty packing-cases.

The remedies suggested are not drastic. Miss Irwin would prohibit factory workers taking work home. In regard to other home workers she would require them and their employers both to take out a licence, which could be withdrawn by Factory Inspector and Sanitary Inspector if the home were in a state dangerous to public health. By making it troublesome and dangerous for employers to give out work, the State might perhaps gradually bring about the abandonment of home work. Immediate prohibition would inflict cruel hardship.

### NEW LIGHT ON PREHISTORIC MAN.

PROFESSOR JAMES GEIKIE contributes to the *Scottish Geographical Magazine* for September a very interesting account of the discoveries made by Dr. Nüesch in a rock-shelter at Schweizersbild, near Schaffhausen. The entire series of deposits, 240 to 290 centimetres in thickness, are estimated to represent a period of from 21,000 to 29,000 years, from the glacial period to the present time. Dr. Geikie thus sums up what Dr. Nüesch has done:—

His work has demonstrated that Tundra, Steppe, and Forest faunas have succeeded each other, thus establishing the truth of inferences already arrived at by Nehring and others. It has shown, likewise, that this faunal succession followed after the retreat of the great glaciers of the third glacial epoch, and that Palæolithic man was certainly contemporaneous in the Alpine Vorland with the Tundra and the Steppe faunas. Further, it introduces us for the first time to a lost race of Neolithic pygmies. Lastly, we have in the Schweizersbild rock-shelter the most complete section yet discovered, showing the exact succession of the several archaeological epochs, the Palæolithic, Neolithic, Bronze, and Iron ages.

A touching glimpse is given of the home-love of the Neolithic men who lived from four to eight thousand years ago:—

Among the Neolithic interments ten were of children—three of these new-born infants, while the others were respectively three months, two years, four years, and seven years old when they died. Two of the infants had been buried with their mothers, and their graves contained no relics, while those of the other children did, the relics consisting of shells and finely finished flint implements. The great care with which the graves have been constructed, and the presence of the ornaments and other valuable objects placed beside his dead little ones, show how strong was Neolithic man's family affection. The new-born infants were laid each within the right arm of its mother, while with the left arm stretched across her breast the latter seemed to hold the little one fast.

The same generation which learned through Mr. H. M. Stanley of the actual existence of pygmies in the forests of Central Africa now discovers from these Swiss remains that a race of pygmies flourished in Europe thousands of years ago:—

The examination of the skeletons of fourteen adults shows that during Neolithic times the Schweizersbild was frequented by two distinctly different races. One of these was of fair stature (1600 mm. and more), while the other was much smaller—a true pygmy race. Professor Kollmann, who has described the remains, is quite certain that the dwarf-like proportions of the latter have nothing in common with diseased conditions. This, from many points of view, is a highly interesting discovery. It is possible, as Dr. Nüesch suggests, that the widely-spread legend as to the former existence of little men, dwarfs, and gnomes, who were supposed to haunt caves and retired places in the mountains, may be a reminiscence of these Neolithic pygmies.

Our fairy tales seem on the way to partial verification, then. Novelists in search of a plot might surely find in these Schaffhausen discoveries abundant suggestion for a new order of fiction.

## THE CATHOLIC REVIVAL IN BELGIUM.

### HOW SOCIALISM HAS HELPED THE CHURCH.

Mrs. VIRGINIA CRAWFORD contributes to the *Month* of November an interesting account of the way in which the Socialist agitation in Belgium has given new life and vigour to the Catholic Church. Of course Mrs. Crawford, being an enthusiastic convert and a *protégée* of Cardinal Manning to boot, sees things in Belgium from her own standpoint. But she has at least the gift of writing lucidly and intelligibly upon a subject which is too often obscured rather than elucidated by those who take it in hand.

### THE POSITION OF PARTIES.

Mrs. Crawford says:—

Few people in England have realised how completely the condition of parties in Belgium has changed within the last few years. To-day, the old Liberalism, individualist and free-thinking, which since 1830 has supplied the country with so many Administrations, is for practical political purposes almost extinct. It had no solution to offer for those deep-rooted industrial problems upon which men's minds have become centred, and it had ceased to possess an effective policy to serve as a rallying-ground for its adherents. Hence to-day the Liberal party consists of little more than mere drifting fragments, without cohesion and without influence. Its place has been taken by Socialism, which, in proportion to the population, is numerically stronger in Belgium than in any other country of Europe, and it is in the main to combat Socialism that the new Christian Democratic party has arisen, with its definite programme of social and economic reform, founded on clearly defined principles of Christian justice. Behind the Democrats lies the vast mass of the Catholic population, at one with them in their hatred of Socialism, but differing fundamentally from them as to the means by which Socialism should be combatted. It is to this conservative Catholic majority, all-powerful in the middle classes, that the present ministry owes its advent to power; but its tenure of office, putting aside questions of foreign and colonial policy, depends in great measure upon the extent to which it carries out the programme of the Catholic Democratic minority.

### THE STRENGTH OF THE SOCIALISTS.

Socialism, she says, is a much greater power in Belgium than it is in this country. We have not at present one Socialist member in the House of Commons, whereas in Belgium the Catholics have a much more powerful foe to face:—

It is a case of fighting a powerful, numerous, and well-organised political party, occupying thirty seats in the Chamber of Deputies, wielding a preponderating power in many municipal bodies, owning widely circulated newspapers, and carrying on an active and ceaseless propaganda. It is no exaggeration to say that an actual majority of the industrial—as distinct from the agricultural—population is imbued with Socialist doctrines.

### WHAT THE CATHOLICS ARE DOING.

As usual it is your enemy who renders you your best service, and the fact that the Socialists are so strong has driven the thoughtful Catholics in Belgium to realise that if they have to hold their own they must work out a remedy on the lines, not of charity, but of justice. They have therefore set themselves in Abbé Pottier to enfranchise the workers by the establishment of guilds and professional syndicates adapted to the needs of modern progress. In other words the Catholics are confronting Socialism by co-operation. The professional Unions are framed on the lines of English Trade Unions which are also Friendly Societies. These Unions are grouped together into Guilds which in some towns possess splendid premises with restaurants, meeting halls and committee rooms. In the country there is another good

Abbé called the Abbé Mellaerts, who has taken in hand a work among the Belgian peasants similar to that which Mr. Horace Plunkett is carrying on in Ireland; that is to say, he is founding co-operative creameries, village banks and co-operative supply associations. The Catholics are opposed to the employment of married women in factories, and advocate more stringent Factory Laws for the protection of girls. The priests under Abbé Pottier have founded a society of the *Aumoniers du Travail* for the purpose of studying social problems in their practical aspect, and of sharing, as far as possible, the actual condition of existence among the working classes. It is a kind of Toynbee Hall on a democratic basis. At Seraing they have established a great hostelry, where the priests sit down to dinner side by side with the workmen from the iron foundries. The Belgian Democratic League is a federation of all the Catholic associations in Belgium for economic, social, or recreative purposes. Over three hundred societies are affiliated to it, and it possesses the membership of 100,000.

### THE PROSPECT IN THE FUTURE.

Mrs. Crawford says:—

I found on the whole a fairly hopeful spirit pervading the ranks of the Catholic Democratic party. Those best able to judge assured me that although Socialism had progressed enormously in the last twenty years, it has progressed very little, if at all, within the last five. And part at least of what the Church has lost in the lower, she has gained in the middle classes, among whom Liberalism and the form of free-thought so prevalent in France are much less widely diffused than some years ago. The most serious feature in the situation is the gradual dissemination of the Socialist teaching in the agricultural villages, once the strongholds of the Church, carried thither for the most part by the army conscripts on their return from their term of compulsory service. But it is anticipated that the *Boerenbond*, with its material advantages and its strong religious spirit, will prove an effective bar to the progress of Socialism, as far, at least, as the eastern provinces are concerned, in which peasant-proprietorship prevails. In the north-western districts, unhappily, where the system of large holdings worked by paid labour is prevalent, and where eightpence a day is still held to be a "living wage" for an adult male labourer, the problem is not so easily solved.

### THE NEXT ELECTIONS.

The elections of next July are being anxiously awaited as affording a test of what Catholic activity has achieved. In accordance with Belgian law, by which one-half of the Chamber of Deputies is re-elected every two years, it is only the Eastern Provinces that go to the poll. The Socialists can hardly gain any seat in the large mining and industrial centres, for these were captured by them four years ago, and it is confidently hoped that the Catholics will go some way towards retrieving their lost fortunes. A few years ago the working-man was dazzled by the profusion and the audacity of Socialist promises. To-day, signs are not wanting that the period of disillusionment is setting in, and that men are awakening to the worthlessness of Socialist pledges. To see, as I saw in every town I visited, a band of eager and devoted Catholic workers, priests and laymen, men and women of every rank in life, giving themselves to the service of the Church; to see on every side Catholic *œuvres* springing up and accomplishing unlooked-for results, was to realise that the Church has a great future before her in Belgium, and that the present conflict with Socialism has borne fresh witness to her inexhaustible vitality.

The widespread irritation caused by the attitude of American diplomacy towards Great Britain appears in *Macmillan's* review of the Behring Sea dispute, which winds up with devout gratitude that we have been saved from a general treaty of arbitration with so unreasonable a Power.

## THE JUNKER AND HIS KAISER.

## A PATHETIC PICTURE.

THE most important article in the *Edinburgh* is one on the internal crisis in Germany. It is marked by interior knowledge and insight, and is written in a picturesque style. The several factors and forces which produce the present situation are passed in instructive review. The struggle of to-day is described as one between mediæval and modern Germany, between military absolutism and industrial democracy. In 1866 Prussia was essentially an agricultural State; now industry, commerce, and finance are the ruling forces. Yet "the State in Prussia" still "begins at the Landrath and the Lieutenant." The commercial and industrial classes stand practically outside of the official oligarchy. The headquarters of German Conservatism are to be found in the agricultural landowners of eastern Prussia, the cradle of the Prussian monarchy. In the impending struggle between royal absolutism and popular freedom it is they who are pressing the monarch towards unconstitutional excesses. The writer recalls the often forgotten fact that, though the King of Prussia wields almost the whole power of Prussia, the Emperor of Germany has very limited—little more than nominal—power, "except in military matters." The sovereign power of the empire is vested, not in him, but in the Federal Council with its fifty-eight votes—only seventeen of which belong to Prussia—and the Imperial Diet has the right of supply. The ten principal parties in the Diet are then outlined, and the following vivid sketch is given of the one body which backs the Kaiser:—

The strength of the Conservative forces, upon whose support the Emperor seems driven to rely more and more exclusively, lies in the fact that they are essentially homogeneous, but their homogeneity is also a source of weakness. Their pride of caste, the narrowness of the material interests which they represent, their aggressive militarism, combine to make them a pre-eminently Prussian party. The Prussian *Junker*, east of the Elbe, nobleman, squire, or yeoman, embodies all the best qualities and worst defects of this form of Conservatism. Without his strong arm neither Prussia nor Germany would have been what they are to-day. His chivalrous devotion to the house of Hohenzollern through the terrible years of Napoleonic persecution and spoliation is, perhaps, unparalleled in history. Rough, angular, overbearing, he has often been a hard master; but, in former times at least, as hard to himself as to others. It was his stern if narrow sense of duty, his rigid discipline, his self-restraint and thrift, his endurance and resolution, his sturdy faith and loyalty, "die preussische Zucht," that conquered for Prussia her position in Germany, and at last translated for Germany into historical reality the scientific theories of her professors and the dreamings of her poets. It was he who, by securing the immunity of Germany from external invasion, opened, however unconsciously, the door to those liberal and democratic forces at home which seem to threaten him now with political extinction. It was he [who, all booted and spurred, laid the foundations of the Imperial Diet, in which his privileges are daily assailed and his prejudices laughed to scorn. It was he who, at the point of his sword, unlocked the treasure-house of France and flooded Germany with a stream of gold which whetted the national appetite for wealth and stimulated the growth of commercial and industrial enterprise, only in turn to blight his own meagre patrimony of unproductive acres. It is to him even now that the country looks to defend in the hour of need all those forms of progress which he despises, and all that prosperity in which he has so small a share. And the sting of it is that he himself has been tainted with the prevailing contagion of luxury; and while his own standard of life and comfort has appreciated with that of the nation generally, his slender salary and modest rent-roll have relatively, if not actually, depreciated. *Noblesse oblige*, he cannot descend to the counting-house or the

factory, and if he has exhausted his powers of mortgage, and will not stoop to a rich *mésalliance*, he stands on the kerbstone while the *nouvelles couches* sweep past him in their carriages and fine clothes, and, drawing himself up to his full height in his closely buttoned military tunic or office coat, curses the times for being out of joint. Threatened in his political privileges by the rising tide of democracy, threatened in his material interests by the rising tide of trade and industry, he calls upon the Crown to flog the waves with the iron rod of anti-revolutionary and agrarian legislation.

Of the Emperor, the writer declares that "he has failed utterly to acquire either general popularity or individual confidence." There is a "flavour of good-natured contempt in the popular riddle: 'What is the difference between the Emperor and God Almighty?' to which the sarcastic answer is: 'Gott weiss Alles, aber der Kaiser weiss Alles besser,' 'God Almighty knows all things, but the Emperor knows all things much better.'" His telegram to Kruger is said to be the most universally popular achievement of his reign; and the strongest hold he has upon the respect of his people is that he has on the whole worked for peace. But if he is bent on carrying out the policy of his Coblenz speeches, a terrible conflict is impending, which must strain the political structure of the Empire and must leave him, even if victorious, too much of a slave to the agrarian Junker.

## How Venezuela is Governed.

A COUPLE of years ago it pleased some of our American brethren to wax very enthusiastic concerning the Venezuelan Republic, because it was a Republic, and was opposing the British Empire. In a recent issue of the *United Service Magazine*, Captain W. C. Bridge gives a description given to him by the American Consul at La Guayra as to the way in which the government is carried on in this precious Republic. At a time when Captain Bridge was in Venezuela, there was a revolution in progress. The Consul rescued the young man from being "potted" by the forces engaged. On accompanying the Consul home, he told Mr. Bridge something about the revolution:—

"We often have them here," he said. "Life in this country is so cruel slow that they are about the only excitement during the year. The way it's done is, a fellow finds out that a sufficient number of his friends to make a show will join him. Then he bribes some of the soldiery at ten cents per head, and there he is at the head of an army. He marches this army out to the farther side of a big valley that we have near the town, and goes into camp there to await the coming of the Government troops. There is some talk of erecting a standing camp there to save the trouble of pitching one afresh every time. Well, when the Government troops come out, they draw up on the other side of the valley, with all the generals in front. They are quite safe, because the two sides of the valley are not within range of each other. Early in the forenoon, before the sun gets too hot, both sides blaze a volley at each other, then turn round and bolt for the town. Whichever side gets in first seizes all the printing presses and publishes an account of a brilliant victory. If the rebels win, the friends of the leader are rewarded with posts in the public service, *viz* their vanquished predecessors, and there is a clear out of the treasury chest. You will remark that the rebels, starting from the farther side of the valley, haven't a fair chance in the race to the town. If it wasn't for that the Government would change more frequently."

SKETCHES of the tombs of the English kings are given with illustrations in the *Sunday at Home* by Mr. H. Walker. There is also an appreciation of the late Bishop of Wakefield by one of his London clergy.

## HOW TO MAKE THE BEST OF OUR ARMY.

## A SCHEME OF REORGANISATION.

THE distinction of the paper on our military requirements which Lieut.-Col. Sir G. S. Clarke contributes to the *Fortnightly* for November, is that the writer does not clamour for numerical increase, but shows how the troops we now possess could be made completely serviceable. The secret of our difficulties with the Army is not lack of men or lack of funds, but lack of system. No clear and authoritative idea has been formed of our requirements. The present system is a dead failure.

## HOW WE MAKE THE WORST OF IT.

The earlier part of the article is a critical and condemnatory narrative of the way in which since Sedan we have been trying to adapt and partly to adopt the Prussian system for our own widely different needs. The resulting failure is expressed in the following passage, containing the "deliberate opinions of the most experienced officers in the Army"—

It is the very essence of the "fatal system" that the home army should be converted into a huge dépôt for the forces abroad. The linked battalion at home, recruited from immature boys, and annually depleted of its grown and trained men, ceased to be a fighting unit. "The line battalion in England which has a linked battalion abroad is unfit in every way to go into the field," and resembles "a lemon when all the juice is squeezed out of it." "Not a single infantry battalion at home is effective." "If we had to send a force on service now we could not send any regiments of the First Army Corps. We have never been able" to do so, "and I do not think we ever shall." ... While there are in this country more than 530,000 armed and drilled men—a total never before equalled in time of peace—we have no available field Army.

The Reserves, when called out, would be so far out of touch of the Army as to need much time to amalgamate with the young soldiers. "The most pressing military requirement is the provision of a field force ready at all times for embarkation." This is a "vital necessity."

## THE FOUR ESSENTIALS.

The writer seeks to define the national needs and supply the constructive idea of the system required:—

Here in brief are the objects which might be placed before our many military reformers:—

1. The maintenance in India and the Colonies of a force consisting, as at present, of cavalry, 12 regiments; artillery, 63 batteries, 64 companies; infantry, 73 battalions.
2. The maintenance at home in immediate readiness for embarkation of a field force of about 40,000 men, including cavalry, 3 regiments; artillery, 20 batteries; infantry, 30 battalions; with a due proportion of engineers and departmental corps. Considering that there are at home, cavalry, 19 regiments; artillery, 59 batteries; infantry, 75 battalions; Engineers, 45 troops and companies, the above provision appears sufficiently moderate.
3. The provision of a field force to reinforce the army abroad and for home defence, capable of being fully mobilized in a week and consisting of twelve divisions, and four cavalry brigades. Of existing establishments there remain, after providing for 1 and 2, regular troops, cavalry, 16 regiments; artillery, 39 batteries; infantry, 45 battalions; reserves, 78,000 men; yeomanry, 11,800 men; militia (infantry) 112,300 men. The only arm deficient is field artillery, which could be made up by militia batteries.

The provision of sedentary garrisons for naval ports and fortified harbours. For this service there are 9,300 regular (garrison) artillery, 18,500 militia artillery, 47,724 volunteer artillery, and 198,000 volunteer infantry. There is, therefore, an available force enormously exceeding the requirements of the sedentary garrisons and capable, after two months' training, of supplementing the field army.

## THE PLEA OF ANOTHER CRITIC.

"Are we Secure?" is the heading of a paper on our land forces by "Vinculum" in the *United Service Magazine* for November. The answer is in the emphatic negative. What is required is not merely forces to defend India and the Colonies which might be invaded, to defend our basis of operation all over the world, and for expeditionary purposes, but to make certain the defeat of any army which might land in the United Kingdom, so freeing the navy for its proper sphere, on the enemy's coast-line and our own trade routes. "France and Germany can now each put 3,000,000 men in the field, Russia 2,500,000, Austria 1,500,000, Italy 1,000,000; whereas the utmost we can manage in the British Isles . . . is at the outside, some 500,000 men, of whom but about 180,000 would be properly trained." Beyond the needs of the home defence of the United Kingdom, India and the Colonies, there is required—according to the writer—"a movable field army of at least three Army Corps, and a cavalry division complete in every detail, which could be despatched from the United Kingdom to any part of the world at ten days' notice."

## HOW TO GET THE MEN.

But how are we to get the number of men required? By voluntary enlistment, or by universal conscription? By neither method, but by the existing laws of Great Britain. "A reinforcement of the now suspended Ballot Act for purely 'home service' in the constitutional force, would meet all our requirements, and at the same time entail neither hardship nor loss on the population of the Empire."

## A Sanitary Officer for every Brigade.

"Whenever British troops are for a few months in the field enteric fever becomes epidemic amongst them." So begins Brigade-Surgeon Lieutenant-Colonel Climo his plea in the November *United Service Magazine* for a reform in the sanitary system of the army. At present the sanitary responsibility rests on the principal medical officer of the army, division, brigade, as the case may be. The writer finds this combination of offices undesirable, both for the medical men and for the health of the troops. In his opinion "every brigade should have its own sanitary officer, who should be relieved of all other duty. He should have the sanitary establishment under his control." He should inspect the site of every camp before it was occupied. "In every instance a sanitary map of the site should be made, which should be in the possession of the station commandant, and no regiment should be without a copy when coming into occupation."

BRET HARTE and Mark Twain are among the authors described by Mr. D. Christie Murray in the October *Canadian* in his concluding paper on "My Contemporaries in Fiction." He remarks of Bret Harte that he "has scarcely troubled himself once to find a new story, or a new type of character, or a new field." "The zest with which he has told the same tale for so many years sets him apart. It is as if, until the age of thirty, he had been gifted with a brilliant faculty of observation, and had then suddenly ceased to observe at all." And yet—"his latest stories are pretty nearly as good as his first." Mark Twain is described as "beyond compare the most distinct and individual of American writers." "More than any man of his own day, excepting Walt Whitman, he expresses the sterling, fearless, manly side of a great democracy."

## OUIDA AS DRESS REFORMER.

THE *Lady's Realm* for November has a characteristic paper by Ouida on Dress.

## OUR "ONLY BEAUTIFUL FORM OF DRESS."

Her opinions are decided and outspoken. She says:—

The only really beautiful form of dress which is our own invention, and which is at once modern yet artistic, and has close affinity to the Greek, is the tea-gown, which has in it many of the best graces of the Greek robe, with a brilliancy and adaptability all its own. There is a regrettable tendency now visible to make the tea-gown too tight; if it loses its ease, and its undulating lines, it loses with them all its individuality, and also all its comfort, in those physical conditions to which Lemaitre rightly considers the Greek gown was so favourable.

## THE LOW-NECKED HORROR.

Moreover, the stupid prejudices which rule society do not allow the tea-gown to be considered otherwise than a *déshabille*, and most unhappily exclude it from the dinner-table and the evening gatherings, whilst the extremely ugly and immodest *décolleté* is still considered as the *ne plus ultra* of elegance and of etiquette. The *décolleté* gown is unbecoming to every woman, however perfect of form and fair of face. The nudity of shoulders and bust is out of keeping with the extreme tightness of the rest of the bodice. No grace is possible to it, and its general acceptance is a forcible proof of how usage and example warp the taste and deaden the susceptibilities.

## THE GORGON OF THE BICYCLE.

Lemaitre in speaking of London evidently—

does not know of, or at least takes no note of, the Gorgon of the bicycle, or the Medusa of the reporters' bench. If he did know them he would certainly become aware of a large number of women who utterly neglect every physical charm of their sex; who are ignorant of repose, of grace, of charm; who have the restless fidgetiness of the blood mare without her beauty or productiveness; and whose sole idea is to copy and worry out of its existence the male sex, which they detest, whilst they servilely imitate it in all its ugliest lines and all its silliest features.

## IN DISPRAISE OF THE TROUSER.

If only woman would begin to dress gracefully, men would, Ouida is certain, copy:—

I do not think that men would long resist a feminine effort on the part of women, to introduce some better male costume than that which at present makes the streets and the drawing-rooms alike hideous; that is, if the effort were general, sustained, and persuasive. The trouser is the culminating point in modern male attire of ugliness, indecency, unsuitability, and anti-hygienic stupidity. To be the least protection against cold its lower regions must be swathed in the gaiter, its upper covered by the ulster or by some other form of great-coat. It is a garment which conceals all symmetry of proportion, yet must impudently suggest nudity. It is certainly a shapeless thing which may be pulled on in a minute or two, but there its sole merit ends.

## WHAT MEN OUGHT TO WEAR.

It is pre-eminently necessary and desirable to see in the streets and in the *salons* some male attire which shall combine utility and ease with laws and lines which do not offend the educated taste. The cut of the George the Second coat should be renewed; and made in black velvet it would be perfect for evening wear. The George the Second waistcoat, gold embroidered, was, if I remember rightly, revived by the late Duke of Clarence, and had he lived, some improvement in male dress would probably have been seen in England.

## OLD ENGLISH COSTUMES BEST.

Ouida hopes the democracy will not be so foolish as to follow the ludicrous and ugly fashions of "the classes."

She seems inclined to reverse the tendency, for she says:—

Turn over any volumes on costume that you will, and you will find that the most suitable to work and weather were the costumes of peasant and artificer in the time of the Plantagenets and Tudors, the Valois. They were not only pleasant to the eye, but they were sensible, adapted to work, and excellent for battle.

## ANDRÉE AND HIS BALLOON.

ALREADY the Norwegian Government has despatched an Andrée Relief Expedition, and a steamer is now on its way to Spitzbergen to ascertain if any trace can be found of the bold aeronaut who started on July 10th, by balloon, for the North Pole.

There is a very good article, with some excellent photographs, in the November number of the *Century*. It is written by J. Stadling, who was present at the time when Andrée's balloon started. When it was cut loose he ran up the side of the mountain behind the balloon house and took a number of photographs of the balloon. At the very moment of starting it seemed as if the balloon was suddenly going to plunge to destruction:—

With its weight of about five tons, the gigantic balloon rose majestically to a height of about six hundred feet; then it suddenly descended until the basket touched the surface of the water. This depression was no doubt caused by the great resistance of the three heavy guide ropes, each measuring more than nine hundred feet.

Those heavy ropes being taken off, the balloon rose again and sailed away out of sight. Before starting, the writer discussed the chances of the voyage with Mr. Andrée. He said:—

"Suppose the balloon should burst," I asked; "what then?"

"We shall be drowned or crushed."

"Suppose you alight on the pack-ice, far away in the desolate polar regions; what will you do?"

"We shall do our best, and work our way back as far as possible. Having during these last years thought, worked, and calculated in preparing for this expedition, we have, so to speak, mentally lived through all possibilities. Now we only desire to start, and have the thing finished some way or other."

While talking about home and the loved ones their faces would assume a more serious expression, and a faint quiver of the voice might be noticed; but there was no wavering of purpose.

"When may we begin to hope to hear from you?" I asked.

"At least not before three months; and one year, perhaps two years, may elapse before you hear from us, and you may one day be surprised by news of our arrival somewhere. And if not,—if you never hear from us—others will follow in our wake until the unknown regions of the north have been surveyed."

In *Chambers's Journal* for October Mr. F. T. Bullen, writing of turtles, describes the haunts and habits of the great reptile. Among other interesting stories, he tells of one gigantic sea turtle, weighing 1,800 lb., which he and his mates captured and disembowelled, taking out no fewer than eight hundred eggs. They removed all the meat, and left only the head and tail attached to the shell. But so tenacious is the turtle of life, that the head bit off the fingers of a young man who rashly introduced them between its teeth. A tortoise has lived twenty-three days after its head has been cut off, and one lived six months after its brain had been entirely removed.

## PRESENT DAY POETS

AS THEY SEEM TO "THE QUARTERLY."

THE ancient saying that a living dog is better than a dead lion may scarcely apply to men of letters, and least of all to men of verse. But even at a time when Lord Tennyson's Life and Mrs. Browning's Letters fill the public mind with memories of the greater dead, the work of living though lesser poets awakens an ever keener interest. There is a brilliant article in the *Quarterly Review* on "Some Minor Poets," in which this tendency of popular opinion is attested and promoted. A few of the reviewer's judgments may be cited here.

## THE AUTHOR OF "MANDALAY."

Mr. Rudyard Kipling is the first singer selected. He is emphatically declared to be a poet; he does "express emotion in musical rhythm":—

His whole utterance vibrates with an audible, if somewhat coarse, pulse of feeling, is quickened by a bold, if somewhat bravado, passion, is instinct with a buccaneer's daring, an Imperialist's idealism, a man's fibre and flesh and blood. And it is resonant with corresponding lilt and rhythm. It swings effects on the reader by its flashing, dashing refrains. Neither sensation nor cadence are ever sustained, and both are seldom delicate. They are earthly, but not earthy; compact of the world, but not of clay. . . . They are gleams and glimpses, not rounded wholes. His romance is weirdness rather than mysticism, respiration more than aspiration. . . . He has gripped life as he has found it; and wherever he has found heroism, or fidelity, or self-sacrifice, or duty, or a seeking after God, he has worthily repeated it. His whole message is informed with a scorn of the petty and sordid, the sickly and the mandarin; as well as with a most signal humour, liquid rather than dry, if we may coin the phrase. His defects are a lack both of conspicuous depth and subtlety, an intemperance, an impatience of "quietness and confidence," an occasional sub-redolence of the tap-room, a want of real culture both of soul and mind. . . . His enormous directness of animal vigour, his absolute sincerity and magic insight, above all his impetuous audacity, are qualities of these defects. He is truly and powerfully himself.

Passages he has written may be "a pugilist's poetry, but none the less poetical to the core." "He reaches the climax of his peculiar method in 'Mandalay.'"

## THE ENGLISH ARISTOPHANES.

Next comes Mr. Gilbert. The reviewer pronounces him to be "the nearest approach to Aristophanes that English literature can boast." The populace think of him as a smart librettist of light opera; they do not recognise his "poetical greatness":—

What they do not know is that his satire of foibles is poetical satire, that his songs are almost the only modern songs inevitably singable, and that, like Aristophanes, while tilting against cant and humbug, unmasking folly and affectation, he lifts his labours into an ideal atmosphere of logical illogicality, and invests the whole with a raiment of madrigal melody and of graceful railery that redeem the bitterness and the scorn. Tennyson himself has not indited sweeter lyrics than Mr. Gilbert, who is the master of catch and glee and roundelay. . . . Mr. Gilbert is capable of kindlier cleverness than this brilliant cynicism, nor is even that, when it is most cynical, steeped in gall. It is not saturnine, like Swift's; we feel that the author smiles, not grins; his softer sentiment rings true; whatever his shortcomings, Mr. Gilbert never minces or simpers. We claim to have proved him a poet, and not merely an ephemeral poet.

## "A SORT OF CHRISTIAN CATULLUS."

Mr. Bridges is declared to "deserve a much wider audience than he has yet found":—

Not that we imagine him to be specially eager for an audience at all. There is about him a shy, pensive strength, a wistful, observant patience, a fastidious expressiveness,

which forbid the thought. We think that a noisy age ought to be grateful for his low, soft music. . . . He is much nearer the peak of classical Parnassus than either of the two we have praised. He is entirely free from the vulgarity alike of intrusiveness and of insolence. He never slaps nature on the back nor superciliously depreciates mankind. He is a sort of Christian Catullus, delicately responsive to the sensuous beauty environing him, scholar-like in his worship of rural indolence, plaintively penetrated with a regret for the transitoriness of bloom and delight.

## "THE TURGID ORATOR OF THE PLATFORM."

After these eulogies the writer indulges in a severer vein:—

In Mr. William Watson, on the other hand, we descry the turgid orator of the platform. He strikes us as a rhapsodical journalist who has taken to rhyme—rhyme often of partisan proclivities and frequently bombastic. His muse is the tenth—that of the Press. It is affluent and effluent; its affluence is that of Boanerges, and its effluence has the ring of Little Bethel; redundant, sonorous passages abound, but there is little daintiness and less discernment. This kind of writer is everlastingly in chase of a grievance. It might have been the unpunctuality of the South Eastern Railway; it is to the honour of Mr. Watson that it was "The Purple East." . . . An absolutely "minor poet" he is fated to remain.

## THE JAPANESE LANTERN OF ASIA.

Sir Edwin Arnold comes in for yet sterner handling:—

His poetical works remind us of a Turkish bazaar, whose wares are aromatic and gorgeous, but cheapen on recurrent acquaintance. Sir Edwin is often effective and insinuating; he is rarely solid or elegant; and his sentiment is generally of the sentimental order. He, too, is inspired by the paper divinity whose glories he has hymned, "Ephemera, Tenth Muse." . . . There is, to be frank, too much tinsel, too little gold about his verse; and there are errors of taste in abundance. . . . We cannot believe that Sir Edwin is of the immortals. Among the ephemerals he ranks; but celebrity is not fame. He is too glib, too officious, too trivial for the future. His real merit is that of an acclimatizer; he has naturalised the East in the West. Otherwise we look in vain for any unity of utterance, any unborrowed light, any leading guidance. He has never eclipsed the level of the Newdigate prizeman.

Mr. Dobson, as a writer of *vers-de-société*, is "a rescuer of the forgotten, the paladin of oblivion." "Character is his forte; whenever he touches child-life he is delicious." His verse is "perfectly sympathetic and malleable." Mr. Andrew Lang is declared to be "the most finished" of the modern professors of "the poet's game of chess."—the use of the intricate measures of the old French school of Villon. "There is a true pleasure in the flawlessness of form which distinguishes Mr. Lang." Yet—

As we read Mr. Lang's "Ballades in Blue China," we seem to behold a boy blowing soap-bubbles; they are crystalline, prismatic drops, *teretes atque rotundæ*; the illusion is perfect; but they are bubbles, and of soap, after all.

## A BROCADER OF HIS INNER LIFE.

The reviewer next enters "the honey fields of the Fantastic, where Mr. Thompson and Mr. Le Gallienne suck their drowsy sweets." Mr. Thompson is "infinitely the superior":—

A sort of spiritual sumptuousness, a kind of scriptural paganism pervade him, while his vocabulary is over-inlaid with "barbaric pearl and gold." . . . Of course his theme is monotonous; Nature is for him a treasury of emblems and love and ecstacy of the soul. Yet no one can deny him emotion, pure, if lackadaisical, and luxuriance, perhaps over-luxuriance, of melody. . . . Robust, in tune with man militant, Mr. Thompson will never be, but neither will he ever be blatant or servile or ignoble.

"His remarkable faculty of, as it were, brocading his own inner life" is referred to.

## "LE GALLIENNITY."

Mr. Le Gallienne is not spared :—

Mr. Le Gallienne apes Keats, and disgraces him by rant and frippery that befit a third-rate actor or a second-hand property-monger; his frenzies are those of a penny-reading reciter; he gushes over a picked blossom; he is a mass of sickly affectations. His erotics are the very worst, and that is saying a great deal; perhaps they find readers on Southend Pier.

Mr. Davidson has about him "a general Le Galliennity"; but "he is much more inventive and virile, less puling and hectic. Still he is one of that brotherhood whose note is constantly maudlin and bizarre."

The reviewer has high praise for Mrs. Meynell and Mr. Henley, neither of whom ought in his judgment to be called minor poets at all. The Poet Laureate is dismissed with the summary verdict: "Mr. Austin has said nothing, though he has said it nicely."

## PREPARING FOR THE NEW EXODUS.

## A SUGGESTED EUROPEAN CONFERENCE ON THE JEWS.

MR. ARNOLD WHITE contributes to the *Contemporary Review* for November a very interesting article entitled "Europe and the Jews." Mr. White is one of the few men in England who is closely connected with such great Jewish financiers as the Rothschilds and the late Baron Hirsch, who has, at the same time, personal acquaintance with the condition of the Jews in Russia.

## MR. ARNOLD WHITE IN RUSSIA.

Unlike most persons who write about the treatment of Russian Jews, Mr. White is candid, honest and well informed enough to recognise the difficulties with which the Russian Government has to deal. He visited Russia last August, and was received with great courtesy by the Russian Ministers, who, he says, tolerated from him the representations with which, if they had been addressed by a Russian to an English Minister on the subject of the government of Ireland, would have led to his being summarily shown to the door. Instead of doing this, the Minister of the Interior, M. Goremykine, so far from resenting the intervention of this foreigner, heard him patiently, and provided him with full facilities for investigating the present condition of the Russian Jews. Mr. White availed himself of the opportunity, and has come to the conclusion that the condition of the Jews in Russia is very serious. He says:—

It is clear that a tragedy is brewing in the cities of the Pale. Already the distress in such places as Homel and Berdicheff is appalling. It is increasing. Sooner or later Europe will be startled by a catastrophe.

## RUSSIA AND THE JEWS.

Mr. White entirely acquits the Russian Government of any desire to treat the Jews harshly, but explains and defends their refusal to admit the Jews to full rights of citizenship. Mr. White says:—

The incontestable intellectual superiority, temperance, and assiduity of the Russian Jew are such, that if all careers were thrown open to him, a decade would not elapse before he had Judaised the whole Russian administration. What Russian Ministry in its senses could permit their country to commit suicide by handing over its control and management to the small Jewish minority? There is no desire or intention to treat the Jews more harshly than circumstances demand; but upon two things the Government are firm. They will not permit the Jews as a body to come into contact with the bulk of the Russian people, and they will not sign their own death warrants by permitting more Jews to cultivate their intellects than are required as dentists, architects, doctors, and a few other useful professions. Outside the four corners of those

conditions the welfare of the Jewish population is the object of genuine concern.

## A PROPOSED INTERNATIONAL CONFERENCE.

This being so, Mr. Arnold White has conceived the extraordinary idea that the best way of promoting a *rapprochement* between the English and Russian Governments would be for the English Government to take the initiative, which fell from the hands of the great Napoleon, and invite Europe to settle the Jewish question. Mr. White says:—

Were England to take the lead in issuing an invitation to the Great Powers to send representatives to a European Conference, the path would lie open to an understanding with Russia. Such a Conference would pour a fierce light on the strength and resources of the Jewish community, and would inspire them with an adequate sense of their irresistible power if they chose to exert it. They would see the dawn of Jewish regeneration, of which Isaiah prophesied and Napoleon dreamed. An impartial English Commissioner, competent to weigh and sift evidence, thoroughly versed in the conditions of Russian administration, and comprehending, if not wholly in sympathy with, the resolve of Russian statesmen to preserve Russia for the Russians, would be able to report during the coming winter a state of things in the cities of the Pale which would stir the pulse of Europe, and not least of those Englishmen who are of the Hebrew faith. I know of such a man. Unless the spectre of anti-Semitism raised by Bismarck be laid by international agreement, revolution in the near or distant future seems to be unavoidable. It is for England to take the lead.

## IS RUSSIA BEHIND THIS?

Mr. White may know a great deal more than he permits himself to print, but unless he has the clearest possible assurances from the Russian Government that they wish such a Conference to be summoned, I can conceive of few more insensate proposals than this, for to the ordinary student of international affairs, it would seem difficult to conceive of a suggestion more certain to set England and Russia by the ears than that England should act upon Mr. Arnold White's suggestion. Knowing Mr. White fairly well for many years, and being unwilling to admit the hypothesis that he has suddenly lost his reason, I am willing to admit the almost incredible theory that he may have been told in St. Petersburg that the Russian Government would welcome such a proposal. I cannot believe it; but to make this suggestion without such an assurance in his pocket, would imply that Mr. White has suddenly become as mad as a March hare. If, on the other hand, he has such an assurance, there can only be one opinion as to the importance of giving effect to his proposal, for there is reason to believe that he is right in maintaining that—the Jewish question has entered the arena of international politics never to quit until the suffering Jews are freed or secured by public rights in the possession of a home

THE *Canadian Magazine* promises a series, beginning with its November issue, of illustrated articles describing the chief historical events and persons of Canadian history from the Norse voyagers onwards. Its October number sketches the premiers of Prince Edward Island since confederation, the universities of Nova Scotia, and the Royal Society of Canada. Mr. Haliburton writes on Days of Rest of Prehistoric Man to show how early races kept days like our Sabbath. Mr. Charlton, M.P., discusses Tariff questions between Canada and the States. The editor urges that in Canada "every able-bodied male between twenty-one and twenty-six years of age should be compelled to drill in a militia corps for at least twelve days in every year."

### THAT BLESSED MICROBE !

THE PRAISES OF DISEASE, BY MR. AUBERON HERBERT.

THE protest which Mr. Grant Allen's confession of Socialism has evoked from Mr. Auberon Herbert is continued in the November *Humanitarian*. From the Socialist he transfers his polemic to the Sanitarian. Both, he laments, hold the same heresy—of salvation by machinery. Mr. Herbert is always entertaining and fresh in his writings; we always expect him to amuse us. But there is quite an unusual flavour of novelty about this eulogy of sickness. The poor hunted microbe of disease must feel grateful for such generous championship. It has been so long and so shamefully abused as enemy to the whole human race. And yet, all the time it was being chieved and chased, by doctor and housewife and engineer, it has really been one of the very best of friends to that Ingrate Man. This is how the knightly Auberon comes to the rescue of the persecuted philanthropist:—

#### THE USES OF THE MICROBE.

Just as the Socialist does not perceive that the consequences of our faults are remedial, that we must play the fool, and therefore be free to play the fool, before we can possibly get rid of the fool that is within us, so the compulsory sanitarian does not perceive that disease is the result of some precedent evil, that it is remedial in its nature, and cannot be fought either by anti-toxins or by exclusion. If we could stamp out the germ of every infectious disease to-morrow, the physical health of the race would presently be lowered, not raised. . . . Unless the germ finds its feeding ground richly manured and deprived of its normal healthy defences, it does not develop disease or it develops it ineffectually. The germ, therefore, only plays a secondary part in our human troubles. The preparation for disease is a more important factor than the disease itself. It is true that the germ comes in to precipitate the catastrophe; but the evil and the danger exist before the germ appears, and whether the germ appears or not, they are bound, in some form or another, to work out their own mischief. Indeed, if the germ were never to appear, the latter state of men would be worse than the earlier state, for the general health would fall continuously to lower and lower levels, owing to the greater accumulation of impurities within the system, which had taken place in the absence of the germ, with a certain amount of apparent impunity.

#### DISEASE A "SAFEGUARD TO HEALTH"

In truth the presence of infectious disease in the world is a safeguard to the general health. It records for us, like a statistical office, the amount of preparation for disease that is going on within us; and whenever that preparation reaches a certain point, when the germ's feeding ground has been duly prepared and manured, it steps in, so to speak, and prevents the state of preparation being indefinitely carried further—prevents the state of health in the race being indefinitely lowered. It acts as the overflow pipe of the cistern. But for this rude and painful interference of infectious disease, which we may look on as a rough scavenging process, where filth in the system has been improperly allowed to accumulate, there is no saying to what point health might not be lowered, and in that case to what point the increase of ultimate human pain might be carried.

The preparation for disease is the result of physical sins and mistakes, and to get rid of infectious disease without getting rid of these sins and mistakes, which lead up to it, is to miss the goal of physical reform, is to go further from it, not to come nearer to it.

These paradoxes are run back to Mr. Herbert's fundamental thesis:—

For the human race there is no vicarious salvation; no salvation by machinery; no salvation by great external safeguards; no salvation in masses, but only by individual change and improvement.

### KLONDIKE AND THE WAY THERE.

THE Secretary of the Government of British Columbia has sent me a courteous letter, regretting that in my account of the Klondike goldfield I had treated the subject so much from the point of view of the United States. He says:—

Much disappointment is felt here in consequence of your article "The Rush to the Klondike Goldfields" being a strictly United States view of the situation. No doubt it will be read by some who contemplate making the trip there next spring, and will, it is feared, be the means of diverting such travel and outfitting into United States channels.

The goldfields are in Canada. Every requisite of the miner and prospector is manufactured or produced in Canada, and sold at lower prices than those prevailing in the United States. Besides, there is the Canadian duty to be paid when the argonauts reach the boundary line with outfits purchased outside the Dominion.

It is believed that your attention has only to be directed to these facts to bring forth a timely word of warning to readers of your valuable magazine.

There is another very important matter—that is, the best route to the goldfields.

All accounts from the routes via Lynn Canal impress one with the hardships endured on the mountain passes, and dangers of the rapids met thereafter. Tons of outfits were lately packed over the White Pass and Chilcot Pass at the rate of 700.00 dollars (£140) per ton for a distance of only thirty-eight miles, until the routes became so bad that no one could be found to pack at the rate named.

The Canadian and British Columbia Governments have been alive to this state of affairs, and have had surveyors out searching for a practicable route. This has been found, and is as follows:—

Ocean steamer to Wrangell, mouth of Stikkeen River, where a change is made into smaller river steamers which run up the river 150 miles to Glenora or Telegraph Creek, according to the state of the water. Between the places last named and Teslin Lake there is a portage of 120 miles over an open country, almost flat, which produces an abundance of fodder for pack animals, and over which it is likely that a railway will be built next year. Steamers will convey freight and passengers on Teslin Lake and Rivers to the goldfields.

There is no doubt about this becoming the principal line of travel next year, as all hardship and dangers are thus avoided. The Board of Trade, of which I am Secretary, has now in the hands of the lithographers a map showing all the routes to the goldfields. I shall have much pleasure in sending you copies in the course of a few days.

### How "the Stigmata" may be Explained.

CERTAIN extraordinary phenomena of skin-writing are described by Jeremy Broome in the October *Strand*. Some skins have a peculiar sensitiveness which retain for a little time marks made by any blunt instrument. A smart slap on the back under hypnotic conditions will produce the mark of a hand such as in the old sorcery days was declared to be the work of the devil. In the same cool way the writer goes on to explain the mystic process by which St. Francis of Assisi and St. Catharine of Sienna ("who was subject to hystero-epileptic attacks") received in their bodies the marks of the wounds of Christ:—

Since her time, more than ninety cases of stigmatisation have been reported, the indispensable condition of such phenomena being, it seems, a profound penetration into the sufferings of Christ. These stigmatisations are now explained by hypnotic suggestion. Charcot and others in Paris have obtained by means of suggestion the effect of burning on the skin of hypnotic subjects, and it is no longer open to doubt that the severe mental sufferings which the devotees of religion passed through in olden days brought about these "miraculous" skin phenomena.

## DWELLERS IN THE PLANET MARS?

FACTS, GUESSES, AND FICTION.

M. CAMILLE FLAMMARION supplies the *Humanitarian* for November with a discussion of the old question, "Is Mars Inhabited?"

## THE FACTS.

First, he proceeds to state the facts revealed by the telescope:—

Thus, regarded in its entirety, the planet Mars shows us on its surface, first, dark spots which have received the name of seas; secondly, white glittering spots at the poles (and sometimes in other parts) which represent snows, and which vary with the seasons; thirdly, long straight lines which spread, as it were, a geometrical network over the whole surface; and fourthly, the lakes or oases at the points of intersection in the canals.

## GUESSES.

Recent observations tend to show that the vast plains formerly called seas are "expanses of vegetable life watered by the canal;" and the network of straight lines, of so geometrical regularity, are the fertile bottoms or Nile Valleys through which the canal runs. Water is scarce in Mars (since it never rains); vegetation would probably be dependent on the melting of the snows at the poles; the tints of the green bands vary with the seasons; and the hypothesis is that these geometric canals are the work of intelligent beings. The astronomer proceeds:—

That Mars is inhabited is a purely logical deduction from its actual condition of habitability. It would be so, even though we had not before our eyes this enigmatical network of canals which seem to be in no respect "natural." We have there before us a world fully alive and very agreeable. The temperature there appears to be virtually the same as here, or rather in proportion somewhat warmer, since there the Polar snows are almost entirely melted. Almost perpetual fine weather prevails there. The atmosphere there is much less heavy and less dense than ours, somewhat resembling that of our highest mountains. . . . The barometer in Mars would beyond doubt stand at 286 millimètres instead of 760; this atmosphere is arranged so as to conserve, like a hot-house, the heat received from the sun. Then let it be remarked that weight is well-nigh annihilated there. A mass of 1,000 kilogrammes if transported to Mars and tested by a dynamometer would weigh only 376 grammes. . . . This world is smaller than ours, and its materials possess far inferior density.

## WHAT MARTIANS MAY BE LIKE.

The inhabitants of Mars cannot be like ourselves. We should picture them as larger, lighter, and of a different shape. They may be much more beautiful than ourselves, better and incomparably more elevated in the intellectual scale. The climatology of this little world shows us, as we have stated above, a condition of habitability which may be accepted even by the most rigorous logic; and the geometrical aspect of the canals seems to suggest studied constructions made by intellectual beings more advanced than ourselves in their conquest of the physical world. It is no departure, therefore, from the rules of induction and deduction to admit as a strong probability the actual habitation of this planet by highly intelligent beings.

On the question of opening communications with them, the writer says it is not impossible they have been trying to signal to us. Some have asked if the luminous points sometimes visible are not signals. More probably these are clouds high in the Martian atmosphere gilded by the setting sun. Intermittent lights thrown on Mars by powerful reflectors would be visible there by aid of optical instruments akin to our own.

## MARTIANS IN FICTION.

Turning from the astronomer to the novelist, we find that Mr. H. G. Wells, who is recounting "The War of the

Worlds" in *Pearson's*, has no such exalted estimate of the Martians. This is his portrait of their invading troops:—

The actual Martians . . . had, huge round bodies—or rather heads—about four feet in diameter, with a peculiar face in the front of these. The face had no nostrils . . . but it had a pair of very large dark-coloured eyes, and just beneath this a kind of fleshy beak. In the back of the body was the ear . . . In a crescent round the mouth were sixteen slender, almost whip-like, tentacles. . . . The greater part of the structure is the brain, sending enormous nerves to the eyes, ears, and tactile tentacles. Besides this are the complex lungs, into which the mouth opens, and the heart and its vessels. . . . The complex apparatus of digestion . . . does not exist in the Martians. They do not eat, much less digest. Instead they take the fresh living blood of other creatures and inject it into their own veins.

The way they sucked the veins of human beings is left to be inferred. Not that they were cruel. They were less cruel to men than men are to rabbits, pigeons and other birds. But by getting their food ready digested for them they were spared all the troubles of indigestion and consequent fluctuations of mood. The Martians are further described as never sleeping and as without sex. Birth is simply budding off, as young lily bulbs bud off. On Mars the microbe is absent. Martians wear no clothes. The devastation wrought by these celestial bloodsuckers and heat-ray-wielders is gruesomely described.

## A MARTIAN'S ACCOUNT OF MARS.

*Borderland* for October publishes what professes to be a description of Mars communicated by a Martian through a medium. Here are a few extracts:—

Mars has two satellites, the inner one of which revolves round Mars with immense rapidity, doing the circuit in seven and a half hours. As it is so close to the planet, and revolves with such enormous velocity, it marks a zone round Mars known as the stormy zone, which is perpetually scourged by storms, wind, hail, thunder, and lightning. No one lives in this zone, and those who approach its borders take special precautions to avoid being swept away. Mars with its inner satellite forms a huge dynamo which charges its atmosphere with electricity, so densely as to give the planet when seen from outside its peculiar red colour. To the Martians the atmosphere is not red, but bright blue.

Of the inhabitants of Mars, it is said that they never eat animal food, but they use the mammoth as a beast of burden. The horses are like our cobs, but are of a slate-violet colour. Their cattle are small, with only one horn. Their wool is taken from the fleece of an animal that resembles the cross between a sheep and a goat. The inhabitants eat fish, and kill animals for the sake of their skin and gelatine, but the carcass is consumed by the flashes of electricity. They eat very little bread, which is made of a grain like wheat, which grows in rows like peas in a pod, but without the pod. Rain-makers flourish, and the population is given up to something resembling our Spiritualism. Everything is on a smaller scale on Mars, excepting the length of life, which lasts for about 160 years of our reckoning. They are clairvoyant naturally, and have learned to fly, although not for very long distances. They also glide over water as if it were dry land. All war has been abolished in Mars. The Government is a Theocracy. The planets are divided into twelve states, each ruled by a leader, who in return receives instruction from the angelic world. No Martian owns any personal property, nor is there any money in circulation, excepting between State and State. Cities and towns are known as families and brotherhoods. All necessities and luxuries of life are distributed according to the needs of the individual, just as in a family. They have factories and manufactories, of which the motors are driven by the tides, of which there are very many more than on our planet.

## AN EARTHQUAKEGRAM.

HERE is a sketch of the instrument which has been adopted by the Seismological Investigation Committee. It is being established at a number of widely separated stations like the Cape of Good Hope, Madras, and New Zealand, for the purpose of recording the unfelt breathings which from time to time disturb the surface of our earth. It may be compared to the mast of a ship with

an untethered boom. When the vessel rolls to port, the boom swings in the same direction, and when she rolls to starboard the motion is reversed. In the instrument the mast is represented by an iron stand and the boom by a light aluminium tube, the image of the outer end of which is continuously photographed upon a strip of bromide paper moved by clockwork. So long as the boom is at rest the impression on the paper is that of a straight line, the regularity of which is however broken directly there is any movement of the ground.

JAPAN EARTHQUAKE: CARISBROOKE CASTLE RECORD.

August 31, 1896.

In this seismogram we see that up to about twenty hours, or 8 A.M., the photographic trace was a line of uniform thickness, but from this point, which is marked A, and up to B, the line is irregularly broadened. These slight movements, known as preliminary tremors, have in this case a duration of about thirty-four minutes. As the result of experience, this indicates that the origin of the disturbance was at a distance of about six thousand miles, and therefore, at the Liverpool Meeting of the British Association, Mr. Milne, when exhibiting this seismogram, suggested that it referred to an earthquake about which we were then without information, which had happened

in Japan on August 31st, at 5.7 P.M. Japanese time. A month later the surmise was confirmed by mail.

Why an earthquake has, so to speak, the postmark of its origin impressed upon it, which mark is evidently dependent upon the distance it has travelled, is as yet a mystery.

After the preliminary tremors come movements of irregular amplitude, the whole disturbance lasting two or three hours. Every year in any part of Great Britain or the world about one hundred of these unfelt earthquakes may be recorded; but it is seldom that more than twenty-five can be traced to their origin, the remaining seventy-five having originated far from land beneath deep oceans. The reason that they are not felt is, that the movements are so slow, the period of the "ground" swell often being as much as twenty seconds, and the waves which compose it extremely long and flat.

## THE CAUCASUS CROSSED ON CYCLE.

COASTING EXTRAORDINARY.

MR. J. F. FRASER tells the readers of the November *Cassell's* how he and Lunn and Lowe cycled over the Caucasus in two days. They had passed over many dreary steppes; and their way East lay over the Caucasus range. The prospect would have been tenable only by a madman, but for the fact that the Russian Government had been before them and made a good military road over the Kasbec Pass from Vladikavkas on the one side to Tiflis on the other: fifty up and eighty miles down. The climb may be taken for granted. But the spin down! As Mr. Fraser remarks, "It is only in dreams that most cyclists have such a spin with their legs on the rests." The highest point is at the junction of Europe and Asia:—

From that altitude, on the roof of the world as it were, began the descent. And such a descent! It was like tumbling down a house-side. One's nerves were obliged to be steady, or instead of twirling round sharp corners we might have flown off into space. . . . Twisting like a corkscrew, the road dropped and we flew like the wind, a fine fascination seizing us and leading us to brave sudden dips and hasty bends that perhaps at another time we should have hesitated to face.

Through the villages of Pasanour, Mleti, and Ananour we swept. The affrighted inhabitants scattered themselves over the road sides to give us room. A single day had carried us from one world to another. . . . After the first long, hasty drop the road fell away to an incline. The snow and the ice we had forsaken and come to a sunny land, with variegated woods and ripe pastures and luxuriant landscapes revelling in brilliant pastoral beauty.

Evening fell; the sun threw his last shadow upon the hills, the stars sparkled with infinite radiance, and we were still riding on. Like Dick Turpin, we flashed through the dark villages, halting seldom, and then only to drink tea or eat a few grapes. There were the blazing lights of camp fires by the way, with the caravans ranged around. Sometimes we rushed into a herd of oxen, which necessitated sudden dismounts. But our destination was Tiflis, and we were determined to reach it that night. A soft, hazy light in the black distance put energy into us by indicating the city. In another couple of hours that light had changed to a thousand lamps, and soon we were jogging over the rough cobbled streets of the capital of Trans-Caucasia.

That day we had been on the saddle sixteen hours. But we had conquered the Caucasus Mountains. And let those go cycle to the North Pole who like! We are content.

ARNOLD BÖCKLIN, the painter of the "Plains of the Blest," has just attained his seventieth birthday, and the occasion is marked by several articles in the German reviews on the life and work of the artist.

## ACQUIRED TRAITS HEREDITARY.

STRIKING PROOFS BY PROFESSOR LOMBROSO.

THE great Italian student of crime joins in the joust between Herbert Spencer and Weissmann with a paper in the October *Forum* on "the heredity of acquired characteristics;" and it is significant of the difference between the Latin and the Teuton styles, that while only a few experts can follow Spencer, any English reader can understand Lombroso. The Italian backs up the Englishman's contention that acquired traits are transmitted.

HOW THE CAMEL "ACQUIRED" HIS HUMP.

He adduces an almost humorous instance from his study of the camel—which is identical with the llama, except in stature and the hump:—

The camel differs strikingly from the llama in that it possesses the hump,—that fatty mass, with a special development of some of the spinal processes. For a long time I could not explain this hump. One day, however, a poor porter, having a complaint in his chest, came to consult me; and, on examination, I found, half-way down his back, precisely where he was wont to rest his burdens, a tumor larger than a man's fist, formed almost wholly of adipose tissue. It suddenly occurred to me that this lump—which not only caused the porter no inconvenience, but even aided him in his work—might perhaps serve as a clue to my mystery of the camel's hump. . . . I succeeded in examining seventy porters of various occupations, and I was able to find four more examples of this fatty tumor.

What was of even greater value in our inquiry was the fact that 50 per cent. of the porters examined, although having no real hump, yet presented an unusual protuberance of the spinal processes. . . . Two veterans of the art presented formations still more singular, namely, curvatures of the spine, or true acquired humps; while the breast was puffed up.

The camel, acting as four-footed porter to man for untold ages, had similarly acquired its hump. Furthermore, this hump is atrophied in the racing camel as well as in the camel in a wild state. Yet it is found well-formed in the new-born camel. The single hump of the dromedary, again, is but "the fusion of the double hump." The Turcomans changed the form of the trapping, amputated the second hump, and bred from beasts with the second hump less developed, and the camel evolved into the dromedary. By these discoveries the Professor thinks himself now able to explain "that sort of adipose appendage attached to the buttocks and the flanks of our Hottentot sisters on which their infants are supported."

THE JEW AND THE ABYSSINIAN: A CONTRAST.

The Professor proceeds to trace the transmission of acquired psychical traits. From the study of ancient Hebrew skulls and Egyptian monuments he finds the persistence of "dolichocephalism, prognathism, thickness of eyebrow and fulness of lips" in the Jewish type, and he notes also "tenacity of purpose, religious credulity, clannishness, intolerance, a spirit of rebellion." But the physical traits alter, English Hebrews becoming blond and Italian Hebrews developing rounded skulls. Once they possessed heroic courage and contempt of life:—

The Abyssinian is the true heir and the nearest relation of the Hebrew, having emigrated in ancient times from Judea in several expeditions. The latter began, under Solomon, with an expedition of 120,000 men—warriors and priests—who established a son of Solomon upon the throne. Then followed, in the times of Nebuchadnezzar and Shalmaneser, a second and a third emigration. Finally, in the time of Titus, a fourth took place, which established itself in the Valley of Samen, where the artisan's craft was exercised. These pure Hebrews

formed that military aristocracy which governed feudally the people called, with contempt, "mixed" or Abyssinians. This people became converted to Christianity. . . . The Abyssinians manifest not only a cohesion very rare in the African world, but such courage and extraordinary warlike ability, that they have discomfited the best-armed civilised nations. . . . The age-long humiliation, begun at the time of the Roman conquest, so crushed the Hebrews, as to leave surviving only the timid and those who, showing less boldness, were able to avoid or forestall oppression. The result is that, instead of warlike and heroic courage, we find among characteristics of the Hebrews timidity and love of gain. This may be established statistically by the very small number of suicides and of soldiers.

We find among the Hebrews an excessive activity and curiosity, political and scientific; while inertia, apathy and the absence of scientific curiosity are proverbial in the Semite. . . . Here we have then a series of acquired physical characteristics which have become hereditary.

HOW THE ENGLISH EVOLVED INTO AMERICANS.

The Professor draws the next parallel nearer home:—

Moreover, does not the North American offer the best evidence of the heredity of newly-acquired characteristics, both physical and psychical? The skin has become darker, the orbits larger, the neck longer, the head smaller and more rounded, the fingers longer than those of his Anglo-Saxon father. And as to his moral nature, it is well known how much he has changed from the British type. The overwhelming reverence of the English for tradition and historic formalism has been replaced by a true passion for modernity. . . . This . . . happens because a race among the most robust of Europe has been transported to different surroundings; and the struggle for existence—rendered fiercer in the wilderness and among hostile tribes,—if it served to destroy the weaker, gave room for the greater development of the strong. . . . But above all, the American has broken completely all the constraints and bonds of historical traditions that have remained so tenacious in Europe; he has, on the contrary, developed the sense of the new, and of independence. . . . These conditions . . . developed, even to the point of a natural disposition, the sense of the grandiose and the gigantic, which he carries into his buildings, his monuments, and his undertakings generally.

The Professor closes with what appears, to the non-expert, to be strong evidence in favour of his contention:—

Civilised man has acquired in the cerebral cortex,—in a fold of the parietal lobe,—the psychical centre of reading, which in certain maladies, especially in apoplexy, is paralysed, causing the reading power to disappear. Now this centre has positively been acquired within historic time, although the period cannot be definitely fixed; it certainly is not found in men yet savage. The same may be said of the speech-centre —the third left frontal convolution.

**The Wedding-Ring Circular.**—A new and revised list of members is now ready, and contains many new features. The method of working this Wedding-Ring Circular is as follows: (1) Anonymous correspondence between individual members; (2) MSS. journals circulated among groups of members, who elect their own hon. anonymous secretaries to act under the direction of the conductor; (3) Direct correspondence between any two members when each consents to give to and receive from the other their names and addresses. Subscription, 10s. per annum. A list of members will be sent to any reader who forwards to the Conductor, Mowbray House, Norfolk Street, W.C., a stamped addressed envelope. As the Conductor has mislaid the names and addresses of A 92 and A 93, will those gentlemen place themselves in communication with Mowbray House?

### THE LOVE-STORY OF LORD SALISBURY.

ROMANCE is not exactly the idea which nine persons out of ten would connect with the figure of our present Premier and Foreign Secretary; yet, as every man is a poet once in his life, so the aristocratic chief of democratic England has had his romance. It is told afresh in its simplest elements in the sketch of the Marchioness of Salisbury which Sarah Charlotte Lindsay contributes to the November *Woman at Home*.

#### HOW THEY DREW TOGETHER.

The Marchioness was daughter of Baron Alderson of the Court of Exchequer, whose fairness drew thanks from the very Chartists whom he condemned. Miss Lindsay thus describes her and her impecunious suitor:—

In her youth Lady Salisbury, without being an actual beauty, was a fine and striking girl, tall, fair, and of commanding carriage. She had, too, a witty tongue, inherited from her father, a quick intelligence, and was distinctly a young lady to attract attention. So thought Lord Robert Cecil, the second son of the then Marquis of Salisbury, who, after some experience of roughing it in the colonies, had returned home to enter upon a Parliamentary career. In his twenty-third year he took his seat in the House of Commons as member for Stamford, a town which he represented until his removal to the House of Lords. In appearance he was tall and stately, with a mass of black hair surrounding a powerful, if somewhat melancholy, face. His voice was subdued and plaintive in private conversation, although vigorous in the white heat of Parliamentary debate. The Marquis presented an appearance in those days which young ladies might think "interesting." ... Apart from politics, his sympathies were of a literary and scientific kind. The great hobby of his life, as we know, has been chemistry. A young aristocrat with these tastes and proclivities would naturally find congenial society in the home of a man like Baron Alderson, and so it came about that Lord Robert Cecil fell in love with Miss Georgiana Alderson.

#### PARENTAL DISPLEASURE.

Relatively to their station in life the lovers were both poor; but although poverty was within the door, love showed no intention of flying out at the window. On the top of poverty came the greater obstacle of parental displeasure:—

When Lord Robert made known his attachment to his father, the Marquis remonstrated, thinking that the dowerless daughter of a judge, of whatever excellence in personal character and training, was not a suitable bride for one who bore the proud name of Cecil, and who was a younger son to boot, with practically his fortune to make. The Marquis was evidently not well versed in affairs of the heart, for he took the exact course calculated to keep alive his son's passion. He requested him to avoid Miss Alderson's society for the space of one year. Now we know that absence makes the heart grow fonder, and at the end of the period of probation, Lord Robert found his love for Miss Alderson not abated one whit. Furthermore, he was determined to marry her, and at once. "Very well," in effect, said the Marquis, "take your own course and look to yourself. I shall give you no marrying allowance."

#### EARLY STRUGGLES.

And so it came about that for several years Lord Robert Cecil lived in comparative poverty and obscurity in lodgings off the Strand, manfully toiling for the wife of his choice and the children which she bore him. Lady Salisbury proved, as we all know, an excellent wife. She was quite clever enough to act as her husband's amanuensis, and the literary character of her family and her own early surroundings made her an admirable helpmeet to a man who depended largely upon his

pen for his daily bread. The first eight years of her married life were passed in this way, her husband absorbed in his duties in the House of Commons, where he was known as a somewhat audacious though brilliant debater, and in journalistic work. He wrote principally for the *Times*, the *Saturday Review*, and the *Morning Chronicle*.

In 1865, by the death of his brother, he became Viscount Cranborne. Soon afterwards he was Secretary of State for India, and the pecuniary struggles of his life were at an end.

#### COMRADES IN PUBLIC LIFE.

In the great rôles which now became his, his wife took deeply sympathetic share. Until her recent illness, she was generally present during the debates in which he took part. One specimen of the sprightly way she held her own in political badinage may be cited:—

After the resignation of her husband, along with Lord Carnarvon and General Peel, over the Reform Bill of 1867, Lord Derby, the then Prime Minister, asked her if she remained awake all night, like Cranborne, calculating the effect of the Bill, to which she wittily replied: "I was engaged in a sum of subtraction, and I found that if you took three from twelve (the number of the Cabinet) nothing remained."

#### UNRUFFLED SERENITY.

A fitting sequel to the early tribulation: which beset the illustrious pair is the picture Miss Lindsay gives of their tranquil age:—

At the beginning of the present year Lady Salisbury's health began to give way, and she has been unable to mix with the gaieties of the Jubilee season. She has spent most of the summer at Hatfield, where her donkey-chair might be daily seen about those beautiful old gardens and avenues which she loves so well, and although now confined to her room, she has been able to enjoy the usual family gatherings this autumn. Nothing is more beautiful than the devotion of the Prime Minister to his invalid wife, by whose chair he is frequently to be seen walking when able to snatch an hour from the cares of State. Their married life has been one of unruffled serenity, and in no previous family of the Cecils has historic Hatfield shown a more united and beautiful home life than under the rule of the present Marchioness of Salisbury.

#### Ultramontaniam in Germany.

THE article "Germany and Ultramontaniam" in the *Preussische Jahrbücher* of October, by the editor, is based on Count Paul von Hoensbroech's book "Ultramontaniam." The Count, it will be remembered, contributed an account of his experiences among the Jesuits, and gave his reasons for quitting the Order, in Dr. Hans Delbrück's review in May 1893. Since that time he has written several other important articles dealing with the Catholic Church for the *Jahrbücher*, and now we have the editor's criticisms of the Count's book on German Ultramontaniam. According to the Count any union between the Catholic Church of to-day and the State is impossible, owing to the claims for power of the Church. But such desire for temporal power is not a consequence of the Catholic religion; on the contrary, it is an abuse which crept into the Church in the ninth century, and the Church of to-day is not Catholic at all, but Ultramontane. Dr. Delbrück replies that the Ultramontanes are inseparable from the Pope, the hierarchy, and the Catholic Church; there is no Catholic religion without a priesthood, and no priesthood without power; and he who would destroy Ultramontaniam, must inevitably fight Catholicism at the same time. But the centuries prove that the Roman Church is a great fact and a great necessity.

## MORE TENNYSONIANA.

As was to be expected the magazines are simply humming with reviews of the late Laureate's Life. Some of these notices are more than mere echoes and estimates of the book; they contain fresh matter derived from personal knowledge. The *Quarterly Review* article is evidently written by an intimate friend. He selects as the most striking characteristic of the late poet, "his absolutely unimpeachable veracity." He remarks on the "freshness of humility which is so striking a characteristic of all Tennyson's correspondence."

BY A "QUARTERLY" REVIEWER.

Of the poet's attitude towards spiritualism, which the reviewer describes as "assuredly one of the epileptiform links between insane tendency and insane fact," we are told that—

once, to the writer's personal knowledge, he received a communication on the subject which caused him some worry and thought. One for whom he had a great personal affection wrote that it was his duty to surrender poetry, his literary life, all, in order to lend the impulse of his name to an unproven evangel. But his hesitation was soon allayed, as, rallying from his momentary doubt, he stated the destiny of the true poet to be higher than merely to become, as his correspondent had become, credulous by desire and a fervent missionary for the cure of his own mental difficulties and his own indecisions. And that was the only time we ever knew the matter to unsettle or discompose him.

The reviewer complains that "whether purposely or not we cannot say, this memoir seems to evade the question as to the religious views of the late poet"; and quotes from his own personal recollection four sentences of Tennyson towards remedying this lack:—

"A higher form of healing you call some of the miracles of Christ—and so you create a greater miracle than you explain away." "S. once said to me, 'You Protestants have no idea what prayer means.' Thank God, he was wrong—what should we be if we did not know?" "'Religion a drug'—do these people say so? Not true religion or true poetry." "I tell you the nation without faith is doomed; mere intellectual life—however advanced or howsoever perfected—cannot fill the void."

Agnostic he might have become, so the reviewer opines, but for the incomprehensible death of Arthur Hallam. As it was, he "remained always a sincerely religious man, and among the wisest of spiritual seers." A "grand, simple, charity-qualified Puritanism . . . hallowed his mature manhood, and deepened into the simple faith and religious purpose of old age":—

A strong man, with the light that God gave him, he saw and believed, and was steadfast and satisfied. He never wavered from faith; he recanted not from assurance of belief; he repented not of his doubt, for doubt he had none in anything. He was an instance—a living, breathing, palpable instance—of the rock-based human character that fronted the future with faith, and yet murmured no formula of belief whatever.

## TENNYSON'S RELIGION.

Tennyson's niece, Miss Agnes Grace Weld, writes a charming and touching paper upon her uncle in the *Contemporary Review* for November. What is of special interest is the testimony which she gives of the simple, childlike faith of our great poet. Miss Weld says:—

He was pre-eminently a man of prayer, and, as he told me shortly before his death, never had one earnest prayer of his failed to receive an answer. Holding in an intense degree the spirituality of religion, he and his wife attached great value to the partaking together of the Holy Communion, and my uncle would often dwell in his talks with me upon the

special nearness of Christ to him in this sacrament, but the manner thereof, he said, was far too sacred to be expressed in words.

She describes the delightful walks which she used to have with her uncle along the Down of Freshwater. She says:—

Nothing that others ever spoke to me, and nothing I ever read, even in the pages of the Bible, ever made the impression upon me that his words and manner did when he would say to me, in exactly the same natural way as a child would express his delight at his father making him his companion:—"God is with us now on this down as we two are walking together just as truly as Christ was with the two disciples on the way to Emmaus; we cannot see Him, but He, the Father and the Saviour and the Spirit, is nearer, perhaps, now than then to those who are not afraid to believe the words of the Apostles about the actual and real presence of God and His Christ with all who yearn for it." I said I thought such a near, actual presence would be awful to most people. "Surely the love of God takes away and makes us forget all our fear," he answered. "I should be sorely afraid to live my life without God's presence; but to feel that He is by my side now just as much as you are, that is the very joy of my heart." And I looked on Tennyson as he spoke, and the glory of God rested upon his face, and I felt that the presence of the Most High had, indeed, overshadowed him.

## THE POET AS A TALKER.

Mr. Alfred P. Groves contributes to *Cornhill* for November "a personal reminiscence" of Tennyson in Ireland in 1878, when the poet, then in his seventieth year, was staying with Mr. Butcher at Kilkee by the sea. He thus describes the poet as conversationalist:—

His gestures were free and spontaneous, his voice full and musical. . . . His accent and speech both surprised me. I was quite prepared for the fastidious articulation and premeditated hesitation in the choice of words to which so many distinguished English University men are prone. There was a rich burr in his accent, Lincolnshire, I suppose, and a pungent directness in his utterance which were as refreshing as they were unlooked for. Then he evidently possessed the rare knack of getting the very best out of his fellow-talkers at the same time that he gave them much more than he got for it.

Tennyson acknowledged to having taken a very deep interest in spiritualism, but he added that, though he could not account for some of the phenomena he had witnessed, investigation had led him to no valuable results, and he had therefore dropped it.

## MR. LESLIE STEPHEN'S JUDGMENT.

A brilliant and even beautiful critique of the character and work of Tennyson appears in the *National Review* over the signature of Mr. Leslie Stephen. After recalling his old student days, when worship of Tennyson was the fashionable idolatry, Mr. Stephen confesses that from the publication of the "Idylls" in 1859, he was "not quite of the inner circle of true worshippers." "He has obviously seen the Northern farmer with his own eyes; he has only contrived his knights, who never seem to me to be clothed in real flesh and blood." Mr. Stephen would have liked to know more about the twenty years (1831-50), even about the bare pounds, shillings, and pence, than the "Life" reveals. Referring to Hallam's death, he observes, "If we may not call it morbid, it is at least abnormal that the loss of a college friend should cause not only immoderate agony, but such prolonged depression." Yet, "as an embodiment of the purest passion of friendship," the "In Memoriam" is, he takes it, unapproachable.

"Loveableness," as "the dominant note of Tennyson's character, is the impression made by the whole of the biography." Of the poet's religious beliefs, Mr. Stephen remarks:—

Tennyson, like many noble and deep thinkers, was terribly

perplexed by the alternatives apparently offered: by his aversion on one side to certain orthodox dogmas, and by his dread and hatred of some tendencies, which claim at least to be scientific. His ideal hero was the man who faced doubts boldly and attained clear convictions of one kind or other. On the other hand, he is always haunted by the fear of depriving your sister of her "happy views." . . . Tennyson, even in the "In Memoriam," always seems to me to be like a man clinging to a spar-*l*ft floating after a shipwreck, knowing that it will not support him, and yet never able to make up his mind to strike out and take his chance of sinking or swimming. That may be infinitely affecting, but it is not the attitude of the poet who can give a war-cry to his followers, or of the philosopher who really dares to "face the spectres of the mind." He can lay them for the moment; but they are always in the background and suggest, too often, rather a querulous protest against an ever-recurring annoyance than any such mental victory as issues in a coherent and settled conviction on either side.

#### HIS POETIC WORKMANSHIP.

Mr. Harold Spender, writing on the poet's "Life" in the *Fortnightly*, laments that it offers "not a portrait, but an heroic outline." There are many omissions:—

Of his long separation (1839-49) from Emily Selwood: of the depression verging on suicide which followed the death of Hallam: of that despair of success in his calling which nearly led him to emigrate—of these things we shall never know anything more than he has told us himself in his poetry, and, above all, in "Merlin and the Gleam."

The true value of the work Mr. Spender finds "in its contribution to literary appreciation and criticism." It leaves on the mind "the impression of slowness—slowness in development and slowness in composition." He describes Tennyson as "the least opulent of all the Victorian group." Then, too, "common sense—understood as a hatred of extremes, a sort of balance or mean—was Tennyson's ideal both in thought and conduct." His "hatred of extravagance or violence, even in the utterance of a truth, or the remedy of an evil—is what defines Tennyson as a thinker." But the poet is above all an artist. "If he was a slow worker, it was because of his high artistic consciousness. If he lived apart from men, it was because nature was his workshop, nature his study, nature his passion." His absolute accuracy in reproducing nature was the "result of faithful and precise workmanship." The memoir shows him always at work:—

Tennyson's chief claim to fame is that, coming after so many poets who had worked in the same field, the field of nature, he is still himself—not Wordsworth, nor Shelley, nor another. To this he attained mainly by two things—brevity and precision, but mainly by precision.

#### "CRUSTY CHRISTOPHER" AND THE "BUMPTIOUS" POET.

*Blackwood's* review of the "Life" has in it a spicy passage or two. Referring to Mr. Lockhart's *Quarterly* article in 1833, the writer thinks it "proper to point out that that masterpiece of irony—exquisitely calculated as it was to wound the feelings of such a bumptious young fellow as the author of "Vex not thou the poet's mind" might naturally be presumed to be—is malicious rather than malignant. The justice of many of its comments was, at all events, tacitly acknowledged by the poet in the most convincing and flattering manner. . . .

The poet might, nevertheless, have derived substantial consolation and encouragement from "Maga." Christopher North's critique of "Poems, chiefly Lyrical," is characterised by the biographer as "comically aggressive, though not wholly unfriendly" (i., 84); but he must be a superficial reader to whom that description appears at all adequate or exhaustive. No such judicious yet cordial reception was ever, we believe, accorded to young poet by veteran critic. The manner, to be sure, is Christopher's "ownest own"—a manner which to the

present age seems strangely boisterous and exuberant. . . . Disregarding the advice of Arthur Hallam, Tennyson had published his lines on "crusty Christopher."

Mr. Andrew Lang in *Longman's* in several pages of airy gossip on the "Life," remarks that Virgil was of all poets the poet most akin to Tennyson in genius. "His 'Idylls of the King' are his *Æneid*; often exquisite, but not the work of a great dramatic and narrative genius."

#### "Cardinal Manning, the Sceptic."

MR. R. DE VILLIERS, writing in the *University Review* under the above heading, takes exception to our account of his former assault on the reputation of the Cardinal as a believer. He replies, "I have never stated that Cardinal Manning was an infidel, but I positively know, and I can prove it by his own letters, that he was a sceptic. . . . Manning believed in the existence of a deity to the end of his days." It is well to have this admission even thus late. It is also well that Mr. de Villiers goes on to explain what he means by scepticism as ascribed to the Cardinal. The conversation which he reports only shows that the Cardinal recognised the necessary limitations of human thought, and like the most positive of believers was, in certain directions, inevitably agnostic. In this sense it is perfectly true that, as he reports the Cardinal to have said, "We are all sceptics . . . to a degree." The writer explains that he would have followed up his earlier charge before now, but he was waiting for correspondents to disprove his assertion! This novel inversion of the ordinary procedure is on a par with the writer's concluding words that as remarks on the inner life of the Cardinal seem to give offence and pain, he does not feel justified in continuing these articles at present: "my impression is that during the last ten years of his life his will to believe gave way to honest doubt, to that stronger quality which alone leads to knowledge." What began as the most confident assertion now retires from public notice as an apologetic "impression."

#### A New Chance for the Old Whigs?

THE chief point to remember about the November number of the *New Century Review* is the suggestion of "Politician" that the present régime may be succeeded by a Whig rather than a Radical Government, with the Duke of Devonshire at its head. Present-day "official Liberalism" is "but another name for the old Whigs." The process of change will be slow, even sluggish. But at last—

On an issue of which no one could now dream, the public will hear some day that Sir John Gorst has a new chief at the Conneil Office. Then will follow a period crowded with rumour, intrigue, canards of every sort—possibly a General Election that, while not giving the Liberals a victory, will not either be a supreme triumph for the Conservative Whig of the Unionist connection. Then . . . the question will be whispered in well-informed coteries first, and in inspired newspapers afterwards: "Why not give the Whigs a chance?"

THE new series of the *Leisure Hour* begins remarkably well. It introduces its readers to the deeply spiritual art of G. F. Watts by a sketch from the pen of Esther Wood and by several admirable reproductions of his great pictures, two of which form the frontispiece—"Sir Galahad" and "The Happy Warrior." J. J. Fraser describes his tour across Persia on a bicycle. Miss M. A. Taylor gives a most picturesque account of the municipal races at Sienna. Mr. W. J. Gordon sketches Plymouth, old and new. Tighe Hopkins tells the story of the spoon, with many odd and instructive engravings.

## SOME ARTISTS AND THEIR WORK.

## THE LATE SIR JOHN GILBERT.

MR. SPIELMANN contributes to the current *Magazine of Art* a timely appreciation of the work of Sir John Gilbert, especially as an artist in black-and-white:—

From the first, Gilbert was an inveterate illustrator, and the adventures of Don Quixote, Tristram Shandy, and Gil Blas, provided him with many a congenial subject.

His drawings for book-illustrations were always careful and delicate; but it was in his work for the pictorial press, only then springing into real being, that his capacity for initiation and his full freedom and vigour first showed themselves. It has been computed that for the *Illustrated London News* alone he drew not fewer than 80,000 "cuts," and to these must be added the innumerable contributions to ephemeral newspapers, pamphlets, and books, etc. And beyond these are the 400 pictures—in oil and water-colour—contributed to the Royal Academy and other galleries; and the works he has never exhibited at all.

Inspired by the spirit, if not by the example, of Mr. Watts, Sir John Gilbert in 1893 presented to the nation an important collection of his works. With this view he brought together a noble series representing his work from 1838 to 1891, and distributed them among London, Birmingham, Liverpool, Manchester, and Blackburn.

## WILLIAM QUILLER ORCHARDSON.

The Christmas number of the *Art Journal*, which deals with the life and work of Mr. William Q. Orchardson, is written by Mr. James Stanley Little, and it forms an interesting addition to the list of artist monographs or "extras" issued in connection with the *Art Journal*. It is difficult to find suitable quotations, but the following may serve to give some idea of the leading characteristics of the artist:—

It may be safely asserted of the work of William Quiller Orchardson that it does possess, and in a pre-eminent degree, that high virtue of individuality which every work of art must possess if it is to make good its claim to have a permanent value. . . . Mr. Orchardson is always individual in his colour, in his composition, in his choice of subject.

He possesses also that rare quality which, for lack of a better word, must be called taste. It is the possession of this attribute which renders his art pre-eminent over the art of the same class of most of his predecessors, and it may be said unhesitatingly of all his contemporaries.

He has an intimate grasp of situation. His pictures have that peculiarly appelland and convincing quality of inevitableness, a quality resulting from the unity and balance of his designs.

For an interesting account of the career of Mr. Orchardson, our readers are commended to turn to the "Art Annual" itself. Among the illustrations are four full-page plates—"Trouble," a reproduction of the last subject-picture painted by Mr. Orchardson, and not yet exhibited; "Napoleon on board the *Bellerophon*," a line-engraving after the picture in the National Gallery of British Art; "A Social Eddy," a reproduction of a Society-picture in the collection of Provost Orchar; and "Hard Hit."

## THE GUILD OF HANDICRAFT.

In the *Studio* for October there are three articles on applied art. There is an interesting notice of the work of the Guild of Handicraft at Essex House; Mr. George Frampton takes "Wood-Carving" for his subject, and Mr. Gleeson White continues "Glasgow Designers and Their Work." The Guild of Handicraft, it may be well to recall, had its origin in a Ruskin class of three pupils

at Toynbee Hall under Mr. C. R. Ashtoe. The class grew to thirty boys, and the study of design led to a desire for application, and practical work sought to be put to use and made to pay. A school was carried on in connection with a workshop, and the classes increased. Three forms of work for public sale were undertaken—woodwork, metal-work, and decorative painting; but in the classes there were men engaged in almost every trade. By 1896 the pupils numbered over two hundred, but the school had to be closed owing to the competition of the technical schools of the County Council. The guild as a productive workshop still carries on its work at Essex House, and its productions are described and illustrated in the article in the *Studio*. The same number honours Mr. Frank Brangwyn with an article of some eighteen pages from the pen of Mr. James Stanley Little.

## OTHER ARTICLES ON APPLIED ART.

The October *Artist*, which is a double number, contains a special notice of the National Competition of Schools of Science and Art and Art Classes. Over forty pages, with over a hundred illustrations, are devoted to the subject and to the awards. The writer of the report, while regretting the indifference and neglect of the British public in this competition, says that all who have the artistic advance of the country at heart must always be alive to the importance of this annual exhibition. The previous double number of the *Artist* (July) was a "Nature" number by Mr. Aubyn Trevor-Battye, and the pictures, eighteen in number, by Mr. Ruskin, reproduced in it gave it a special interest. The November *Artist* gives an account of Peasant Tapestry and Swedish Pattern-Weaving, two Surrey village industries. With the New Year the magazine is to be enlarged, and the price raised to one shilling.

Mr. F. S. Robinson, continuing the series of articles on the Queen's Art Treasures, notices, in the October *Magazine of Art*, the Boule-Work at Windsor Castle, and Mr. Alfred Lys Baldry has an article in the same magazine on Sir W. B. Richmond's New Decoration of St. Paul's.

Mr. Fred. Miller writes of the work of Mr. George Frampton, an all-round craftsman, in the current number of the *Art Journal*; Barbara Russell takes the Langdale Linen Industry as the subject of her article; and there is a description of the Rookwood Pottery of Cincinnati, by Rose G. Kingsley.

A considerable part of the *Architectural Review* is devoted to decorative art. The October number, for instance, contains articles on Newlyn Repoussé Copper, by Mr. H. D. Lowry; and the London School of Arts and Crafts, by Esther Wood; and the series of articles on Sir Edward J. Poynter's Decorative Work is concluded. Architecture in Poetry and Fiction promises to be an interesting series; and the Town Work of Philip Webb, by Mr. E. A. Rickards, is an appreciation of some of the architect's work in interior decoration and design.

## ARCHITECTURE.

*Architecture* is more architectural in its subject matter than the *Architectural Review*. There are only three articles in the October number—Gloucester Cathedral; Within Range of Worcester City; and Architecture in France, by Mr. Arthur Vye-Parminster and Mr. Charles Saunier; and each is dealt with at considerable length.

The *Architectural Record* of New York has been giving a series of articles on French Cathedrals by Barr Ferree. Part XI. appeared in the last number. Professor Wm. H. Goodyear writes on Mediæval Italian Architecture in the same quarterly.

## LISZT AND HIS PRINCESS.

## THE LOVE-STORY OF A GREAT MUSICIAN.

THE personality of Liszt, the great composer, is still so profoundly attractive, and the story of his eventful life is so touching and romantic, that it is not surprising to find in the September reviews two articles which are closely concerned with him, though from widely different points of view. In the first September number of the *Revue de Paris*, M. Melegari has dealt at extraordinary length with the career of a very dear and intimate friend of Liszt's, while in the second September number of the *Nouvelle Revue* M. de Bertha gives us a study of the composer himself which is partly critical, partly biographical.

## THE HEROINE.

The friend of Liszt's with whom M. Melegari deals, the Princess Carolyne of Sayn Wittgenstein, has only been dead ten years. She was undoubtedly a woman of a very rare nature, who desired moral perfection with her whole soul, and who, by her firm belief in a better future, protested to the utmost of her power against the pessimism and eager pursuit of material pleasure which she saw all round her. Circumstances alone prevented her from exercising a profound influence upon her contemporaries. By race she was Slav, in spirit she belonged to the Latin peoples, and by rank she was a German princess. Not only was she a precursor of that spiritualist movement which is absorbing so much attention in our own day, but she was no less a pioneer in various problems of a political and social nature. She wrote more than twenty volumes of a colossal work, entitled "Of the Internal Causes of the Church's External Weakness." This work, by her own special desire, will not be given to the world until twenty years after her death, but it has been seen by some few friends, one of whom, M. Anatole Leroy-Beaulieu, has mentioned her, after Saint-Simon and Lamennais, as one of those writers who have marked out the first great lines of what is called Christian Socialism. In her later years she always dressed about ten years older than her real age. She was fifty-seven when M. Melegari met her in Rome for the first time, and then, as she laughingly told him, she had come to Rome to have her marriage annulled by the Pope, thinking to stay only a few weeks, and that was fourteen years before!

## MARRIED BUT NOT DIVORCED.

The great love of her life was her father, a wealthy Pole, M. Ivanoffski, who gave her a completely masculine education, even instructing her in all the details of managing a great fortune. The somewhat frivolous influence of a fashionable mother preserved her, however, from that indefinable stiffness and dryness which often characterise women who have been educated as men. Her father committed one capital error. Three times she refused the hand of Prince Nicolas, younger son of the Prince of Sayn Wittgenstein; but at length she allowed her father to overcome her instinctive repulsion, and she married the Prince. It was in every way an unfortunate union, and the only happiness for the Princess was the birth of her daughter. Her husband endeavoured to obtain possession of her large fortune, and a will was actually forged by which she was disinherited in favour of her daughter. The persecutions of her husband and his family grew so intolerable, that she applied to Rome for the annulling of her marriage, which appeared to be in some way unsound, she being Catholic and the Prince being Lutheran. But the proceedings at Rome were suspended by order of the Tsar, her

property was confiscated, her exile was decreed, and she was declared civilly dead. Thus did the Tsar Nicholas satisfy his hatred for Poles and for Catholics.

## HER DEVOTION TO LISZT.

Madame de Wittgenstein's friendship with Liszt dated from 1847, when he spent the winter on her great estates in Podolia. Before very long she determined to marry him as soon as her previous marriage should be annulled. This process, however, was, as we have seen, suspended, and after a great struggle she determined to unite herself to the man she loved. The twelve years which she spent with her daughter at Weimar formed for Liszt the period of his greatest artistic achievement. Her great love for Liszt was even extended to his children by Madame d'Agoult, whose education she superintended. Towards the end of 1859 her own daughter, the Princess Marie, married Prince Hohenlohe Schillingfurst, and the delightful life at Weimar, where the united family had lived under the countenance of the Grand Duchess herself in the Château of Ilm, was broken up. Madame de Wittgenstein went to Rome, whither Liszt followed her a year afterwards. After the death of the Tsar Nicholas, Madame obtained a divorce from the Prince of Sayn Wittgenstein, but as she was Catholic it was necessary for the Church to annul the marriage before she could marry Liszt. At last, after years of delay, Pius IX. consented. The altar for her marriage with Liszt was already prepared, when at the last minute there came a message from the Vatican ordering fresh delay. Who had interfered? That will probably never be known. Gossip talked of secret messengers from Poland, of a Roman princess, of pressure exercised by the Hohenlohe family.

## DISAPPOINTED AT LAST.

The blow was a terrible one for the Princess. Suddenly the death of her husband seemed to make everything clear. It was that moment which Liszt selected for entering one of the minor orders. He became the Abbé Liszt. It was generally believed that, wearied with the long *liaison*, he had been for some time secretly opposing the Princess's suit at the Vatican, and that the sudden death of her husband forced him to the desperate step of taking the fateful vow of celibacy. However that may be, those two gifted souls never revealed the secret history of their strange passion. To the end Liszt remained an attached friend, taking his place among the remarkable and distinguished people whom Madame de Wittgenstein gathered round her in her modest establishment in Rome.

M. de Bertha notes as a curious biological fact that Liszt's paternal grandfather had three wives and twenty-six children, while his mother was one of a family of thirteen, all children of the same parents. Yet Liszt was an only child, and in him seemed to condense and accumulate, so to speak, the terrific vitality of his forbears. Five months before he was born his mother had a marvellous escape. She fell into a well, but suffered no harm, for the water was deep enough to break her fall and yet not deep enough to drown her. M. de Bertha evidently has no opinion of Liszt's Princess, whom he calls "very false," while his explanation of Liszt's action in taking the vows is that the authorities of the Vatican suggested it to him as a necessary preliminary to his being officially intrusted with the revision of Catholic liturgical music.

CASES for Binding any Volume of the REVIEW OF REVIEWS may be obtained on application. Price 1s. 3d., by post 1s. 6d.

## LONGFELLOW AS A FATHER.

MISS ALICE LONGFELLOW imparts to the readers of the *October Strand* suggestive reminiscences of her father. She tells us:—

The delicacy and purity of his thought was manifested in all his habits of life, his surroundings, his personal appearance. There seemed to be no contradictions in his nature, but a complete unity of development. . . . His step was light and elastic, and his carriage perfectly erect, even when an old man. . . . My father's habits of life were very simple and regular. Indeed, order and regularity were essential to him in every way, and anything like hurry and confusion most distasteful. Everything he touched fell into order at once, and he lived in an atmosphere of serenity that was felt by all who approached him.

Even his dress followed the rule of his life:—

He was punctilious and careful about his dress, never appearing at home in anything that was at all untidy or unattractive, nor would he allow this in his family. He was fond of elegance, and very observant and appreciative of the dress and appearance of all women. In his youth, when men also indulged in bright colours, he was very fond of gay waistcoats, and a jaunty hat and cane.

His study was "mercilessly invaded" by his children at all hours:—

In a drawer of one of the bookcases was a collection of little pictures drawn by my father in pencil, which he used with great facility, "The Wonderful Adventures of Mr. Peter Piper." These were a constant source of delight, as new adventures would suddenly appear from time to time, and we never knew what the wonderful Peter Piper would do next. One corner of the study was usurped for marbles, as the pattern of the carpet seemed arranged on purpose for the game. How all this was endured is hard to understand. The summers were always passed at the seaside, where my father went mainly for the children's sake, and he must have passed many dull hours exiled from his large comfortable library and his books.

After all this, one is almost surprised to read:—

In truth, my father was very reserved with his children, in spite of his sympathy and understanding. He preferred to instil certain fundamental principles by habit and the example of his own life, and then leave them free to shape their own course. He believed entirely in self-reliance, and in any uncertainty always said, "You must decide that for yourself." He felt more at home, I think, with little children than with growing youths and girls, where a certain extreme delicacy of reserve interfered; but with the youngest he made friends at once.

It is easier to understand the following trait:—

He never endured any sarcastic word to a child, especially from a teacher, and considered it most dangerous and blighting to any originality or imagination. Sympathy first, and then criticism when needed, but a criticism that cleared away difficulties and showed the right path.

These glimpses will be recognised, for the most part, as in full accord with the character of the poet as it appears in his works.

THE *Engineering Magazine* for September is full of interest even to the untechnical reader. Mr. J. Stephen Jeans gives the employers' version of the engineers' lock-out, and points as "lessons" "the evils of trades unionism" and "piece work as a remedy." Mr. Ridgeley Hunt sets forth in diagram and picture "Fifty Years of Advance in Naval Engineering"—truly "a striking record of growth in tonnage, power, and speed. Mr. H. H. Supplee recounts the experiments made in 1893 by the Austrian Society of Architects and Engineers on arches of various materials, and resulting in clear demonstration of the elastic theory. Mr. F. H. Shelton gives many interesting facts about the extending use of gas in industrial operations.

## THE ORIGINAL "BROTHER JONATHAN."

WHY does the world, when in genial mood, call the United States by the endearing name of "Brother Jonathan"? That is a question which has doubtless roused the curiosity of many. These inquirers will be glad to read Mr. W. E. Griffis' paper on Brother Jonathan and his home in the *New England Magazine* for September. The State of Connecticut, it appears, had as its Governor during the Revolutionary period one Jonathan Trumbull, who was very active in supporting the revolted colonies with men and money and European friends. From the time he and his State came to the help of Washington, after the defeat at Long Island, with nine self-equipped regiments, "Trumbull became the 'guide, philosopher and friend' of Washington, who, as good tradition declares, used a formula in council: 'Let us hear what Brother Jonathan says.'" Elected directly by the citizens of Connecticut, he incarnated their spirit:—

So thoroughly did Jonathan Trumbull do this, that his name, as familiarly used in council by the Father of his Country, has become the American's title of endearment and the world's term of pleasantry for the great nation now numbering over seventy millions of souls.

The license of caricature has indeed enlarged the Yankee governor's beaver hat to that of the Harrisonian epoch and dimensions; has first lengthened the gubernatorial knee-breeches into trousers, and then so shrunk their sufficient length as to require straps both taut and elongated under the boots; has borrowed from the fully-developed national ensign stripes for the legs and stars for the whig coat, which has sufficiently large brass buttons and wind-swept coat-tails, to say nothing of an avalanche-like rolling collar. In making out of the Revolutionary "Brother Jonathan" the "Uncle Sam" required for comic caricature, the artist has also grotesquely attenuated his physical frame, sharpened his features and pointed his chin whiskers, so that the ideal personification of the United States, so useful and necessary for the cartoonist, has drifted away somewhat from the original, and from reality. Indirectly the caricature is a compliment to New England, and especially to Connecticut, as being "distinctive America." Nevertheless, it seems unreasonable to doubt that the original of Brother Jonathan, as an impersonation of the United States, was the Puritan magistrate of Lebanon and the oft-elected Governor of Connecticut. As Americans we may congratulate ourselves that almost as soon as the nation was born a pictorial personification was at hand which, after nearly a century and a quarter, is at once recognised in forty-five States, and, indeed, all over the world.

## The Unequalled Family of Smiths.

MR. HOLT SCHOOLING in *Pearson's* for October turns from the more serious work of pictorialising statistics of importance and tries his hand on a more diverting topic. He heads his paper, "To all Named Smith—Greeting," and proceeds to explain that the word denoted "smiter," not only in metals, as blacksmith, silversmith, and the like, but workers in wood also. In the United Kingdom 1 person in every 79 is a Smith. Scotland of the three kingdoms has the largest proportion of Smiths, 1 in every 70; England and Wales having only 1 in every 72, and Ireland 1 in every 140. In Ireland it stands fourth in frequency, Murphy standing first, Kelly next, then Sullivan and Walsh. There are, in round numbers, half a million Smiths in the United Kingdom, a number equal to twice the personnel of Army and Navy. Every day 42 Smiths are born, 21 marry, 26 die. Mr. Schooling reckons that at this rate of departure it will take the existing family of Smiths 52 years to go to Heaven.

## THE OLDEST RECORD OF JESUS' WORDS.

ONE OF THE FINDERS ON THE FINDING.

McClure's for October contains an account by B. F. Grenfell, M.A., one of the two discoverers of the papyrus-Logia, of the actual finding. After fruitless efforts in the cemetery of the ancient Oxyrhynchus he and his companion resolved to start work on the town itself. So—

On January 11th we sallied forth at sunrise with some seventy workmen and boys, and set them to dig trenches through a mound near a large space covered with piles of limestone chips, which probably denotes the site of an ancient temple, though its walls have been all but entirely dug out for the sake of the stone. The choice proved a very fortunate one, for papyrus scraps at once began to come to light in considerable quantities, varied by occasional complete or nearly complete private and official documents containing letters, contracts, accounts, and so on; and there were also a number of fragments written in uncials, or rounded capital letters, the form of writing used in copying classical or theological manuscripts. Later in the week Mr. Hunt, in sorting the papyri found on the second day, noticed on a crumpled uncial fragment written on both sides the Greek word *kasphos* ("mote"), which at once suggested to him the verse in the Gospels concerning the mote and the beam. A further examination showed that the passage in the papyrus really was the conclusion of the verse; . . . but that the rest of the papyrus differed considerably from the Gospels, and was, in fact, a leaf of a book containing a collection of sayings of Christ, some of which, apparently, were new. More than that could not be determined until we came back to England.

The following day Mr. Hunt identified another fragment as containing most of the first chapter of St. Matthew's Gospel. The evidence both of the handwriting and of the dated papyri with which they were found makes it certain that both the "Logia" and the St. Matthew fragment were written not later than the third century, and they are, therefore, a century older than the earliest manuscripts of the New Testament.

## A "RECORD" FIND.

Mr. Grenfell, encouraged by the fruitfulness of the mounds, increased the number of workmen and boys to one hundred and ten. The quantities of papyri went on increasing until after the middle of March:—

The number of fairly well-preserved documents in these three great finds is very large, especially in the case of the third, which took place on March 18th and 19th, and was, I suppose, a "record" in point of quantity. On the first of these two days we came upon a part of a mound which had a thick layer of almost solid papyrus. There was room for six pairs of men and boys to be working simultaneously at this storehouse, and the difficulty was to find enough baskets in Behnesa to contain all the papyri. At the end of the day's work, no less than thirty-six were brought in, many of them stuffed with fine rolls, three to ten feet long. Fortunately, we had some large packing-cases at hand, in which we had brought our stores from Cairo, and as the baskets were required for the next day's work, Mr. Hunt and I set to work at nine o'clock in the evening to stow away the papyri. The task was only finished at three in the morning; and on the following night we had a repetition of it, for twenty-five more baskets were filled before the place was exhausted.

The article is illustrated with photographs of Behnesa, the diggings, the discoverers, and the inevitable papyrus-sheet.

THERE is much interesting matter for the general reader in the *Geographical Journal* for October. Otto Nordenskjöld, recounting his journey in south-western Patagonia, says that five years ago no single white man was living in the territory in question, except perhaps in summer time, but now the good land is being occupied. Most of the settlers are English-speaking people, from England, Scotland, the Falkland Isles, or Australia.

## AMERICAN "COMMERCIAL JOURNALISM."

MR. J. L. STEFFENS contributes to *Scribner* for October as sixth paper on "the conduct of great businesses" a copious article on "the business of a newspaper." He describes the great "newspaper trust,"—the Associated Press, with its 684 members and its 2,400 newspapers. He then goes on to the organisation of the editorial department in each office, and next to the publishing. There is, it appears, in this latter department a "circulation manager" to push the sale of the paper, besides the advertising manager, and the general business manager who has to keep the balance level among all departments. Journalism is less and less a thing with a mission and more and more a matter of business, pure and simple. This seems a poor outlook for the American Press, but Mr. Steffens kindly assures us that the purely commercial journalist is learning by the solid experience of relative profits that honesty and truth and decency "pay" better than their opposites. "It is acknowledged that the best paying papers are those that are strictest with their advertisers." The least strict hand is kept on advertisements in the Boston papers, but "the other extreme, good taste and high business principles in dealing with advertisers," is to be found in the business offices of the newspapers of Chicago, one of the keenest business centres in the world. Women readers are what advertisers want to reach; and are readily repelled by questionable means to increase circulation. Editorial work is governed by business considerations; yet even so—

the successful men I talked with declared that the best way commercially to make an editorial page was to turn it over to some man with mind and character who would direct its policy independently and in good faith in the interests of the community as a whole, regardless of parties, cliques, advertisers, or any other interests, however powerful. It is a surer ground for optimism regarding the future of journalism that the worst examples of the "new journalism" today are not so fundamentally bad as were the beginnings of some of the papers that are respectable in their later prosperity. The growth of commercialism pure and simple has been toward improvement, and the betterment, though attributed by a most estimable publisher to skill—to the knowledge and use of a greater variety of methods—is instructive to the more unscrupulous and less expert managers or publishers. Success along lines chosen for business reasons appeal to business men.

Russell Lowell once hoped that his countrymen would some day discover that "nothing pays but God." It is pleasant to know that commercial journalists are feeling their way towards this discovery.

THE Shakespeare-Bacon question is revived in the *Canadian Magazine* for September by R. M. Bucke, M.D., who after adducing many arguments advances the anagram "discovered" by Dr. Platt "only the other day" in "Love's Labour Lost." The word "Honorificabilitudinitatibus" spelt backward as directed in the context from b, gives bacifronoh, from which "it is not hard to pick out Fr. Bacon." The remainder of the word ilitudinitatibus yields ludi tuiti nati hi sibi. Add Fr. Bacono, and you have the confession in Latin, "These plays intrusted to themselves proceeded from Fr. Bacon." On the outer leaf of the Northumberland House MSS., which contained two plays of Shakespeare along with avowed works of Bacon, is written the word Honorificabilitudino, which "infolds the words: Iutio hi ludi Fr. Bacono (in the beginning these plays from Fr. Bacon)." There are besides sketches of Manitoban Premiers, by Mr. R. B. C. Montgomery, and of Marie Corelli, by Mr. D. C. Murray.

## THESE UNCONSCIONABLE WOMEN!

"SHE NEVER IS BUT ALWAYS TO BE BLEST."

THE rejection of the Woman's Suffrage Bill by the mean subterfuge of making speeches on verminous persons seems to have excited some women to angry protest. All thought of the innumerable blessings which have been conferred upon them by Parliaments of men they do not seem to remember, and so great is their ingratitude that they appear entirely to have overlooked at least one of the great privileges which were conferred upon them by a Parliament in which they had not any voice. The *Westminster Review* for October devotes its first article to a vehement and angry protest against the misdeeds of the House of Commons; but another article further on in the paper supplies material which ought to make "Ignota" feel that she has not adequately recognised the extent to which the claims of women to equal treatment with men have been recognised by Parliament.

## AN ANCIENT PRIVILEGE OF WOMAN.

We are reminded that down to the year 1790 it was the law of England that when women were convicted of felony or treason, they were denied the equal rights of the gallows to which it might have been thought they could certainly have been admitted. The sentence pronounced upon women down to that date, less than a century ago, was:—

"That she should be carried from thence to the place from whence she came and then be drawn to the place of execution and there to be burnt with fire till she died."

It is true that the tribute which the law thus paid to the superior virtue of women by prescribing so terrible a penalty for their crime so far in excess of that exacted from men, was evaded by the superior humanity of the executioner, who usually strangled the woman before he burnt her. But in 1693 a woman convicted of coining was burnt alive in Bunhill Fields without any preliminary strangling:—

As late as the year 1785 a woman was burnt in front of Newgate. She was first hanged on a low gibbet, and when life was extinct faggots were piled around and above her; the fire burnt furiously, and her body was soon reduced to ashes.

Four years after this, Statute 30 George III., cap. 48, formally abolished this privilege of the stake which women had enjoyed to that time, and permitted them to the gallows, just the same as if they were men. Notwithstanding this generous concession to the claims of woman "Ignota" is still dissatisfied.

## WHAT WOMEN WANT NOW.

She thinks, strangely enough, that women still have much to complain of. She says:—

One woman, deeply indignant at the iniquity of the existing marriage law of England, as declared by thirteen judges in the case of *Queen v. Clarence*, heard in 1888, a law which makes the wife the absolute sexual slave of the husband, has, during the last fourteen years, in vain asked some forty to fifty different Members of Parliament to introduce a Bill, the draft of which was submitted to them, for the abolition of this infamy. Each and all professed great sympathy with the object, found no fault with the draft Bill, attempted no justification of the law, but declined to move in the matter. The plain truth is that no one of them dared face the ridicule and opposition of his male colleagues in the sex-privileged House of Commons; which ridicule and opposition would be drawn upon him by any attempt to remedy this greatest of women's wrongs. It has been found impossible to secure such an amendment of the iniquitous English law of divorce as shall assimilate it to the far juster law of Scotland. No amelioration of the law of inheritance, which deals so unjustly with female heirs to the advantage of males, is likely

to be carried into effect; whilst, on the other hand, perpetual attempts are being made to impose special sex restrictions upon the labour of women and to hamper and harass them in many ways while painfully earning their own livelihood; and, greatest infamy of all, there are schemes for the reimposition in this country of the iniquitous Contagious Diseases Acts.

## WHAT THEY HAVE GOT.

The following facts as to the present legal condition of women in Local Government, whether as electors or elected persons, "Ignota" quotes from a memorial presented to Mr. Balfour by the Women's Emancipation Union:—

"Throughout England and Wales, women, whether married or unmarried, may, if otherwise duly qualified, vote for the purposes of District Council (urban or rural), Board of Guardians, London Vestry, and Parish Council Elections, whilst unmarried women can vote for County Council, School Board, and Municipal Elections:

"In Scotland women, whether married or unmarried, may vote for the purposes of County Council, Municipal, School Board, and Parish Council Elections:

"In Ireland women can vote only in the election of Boards of Guardians; and for Municipal Elections in Belfast, and in the townships of Blackrock and Kingstown, near Dublin:

"In England and Wales women (married or unmarried) may, without any qualification but the free choice of the electors, be elected members of School Boards, and may also, with no further qualification but that of residence, be elected members of London Vestries, Boards of Guardians, District Councils, and Parish Councils—but may not, as at present determined, be elected to Municipal Councils or County Councils:

"In Scotland, women may become members of the School Boards, and, if parochial electors, may be elected members of Parish Councils:

"In Ireland, women, whether married or unmarried, have no place whatever in local administration:

"Up to the passing of the Local Government (England and Wales) Act, 1894, the electoral rights of men and women in matters of Local Government were equal and the same, but the right of voting in all elections under that Act, by it conferred upon male owners, lodgers, and holders of the service franchise, was by it denied to the same classes of women."

The only qualification to be made in the statements of this memorial down to the present time is that, by legislation of the Session of 1896, women may be elected and act as Poor-law guardians in Ireland.

## VENGEANCE!

"Ignota" blows the trumpet to summon the women to avenge their wrongs, and declares that Members of Parliament who have proved recreant on the present occasion have only a short shrift to look for when they come before their constituents:—

Women are filled with burning indignation, an indignation which is likely to grow and spread, since the proceedings of July 7, like all things meanly base, look uglier the further we are removed from them. Multitudes of women who were apathetic before are now determined that, not only will they never again work for any Parliamentary candidate who is opposed to women's suffrage, but will actively work against such a candidate. When once women combine to this end the victory is ours—a larger victory, it may be, than that of the Jubilee year could possibly have been, for, although women would be wise to support any measure which broke down the disabilities of sex and marriage, even though it did not immediately enfranchise as many as could be desired, yet we must one and all look forward to the time when, as in some of our colonies, the woman's vote shall not only be on equal qualifications and conditions with that of man, but shall be in its fair numerical proportion.

Really if this kind of thing is to go on, it will be about time for Mr. Chamberlain or some other staunch defender of male monopoly to reintroduce a Bill repealing that Statute 30 George III., cap. 48, in order to restore to these unconscionable women the privilege of the stake.

## FRENCH WOMEN AND THE TEACHING PROFESSION.

A RECENT number of the *Revue des Deux Mondes* contained an extremely sad article on French women who have adopted the profession of teaching. There is a story which M. Talmeyr, the author of the article, does not vouch for, but which is perfectly possible—that a dancer at the Jardin de Paris, while dancing a character dance, once drew a little paper from her dress, and with infinite skill attached it to the tip of her shoe and waved it about in the air. This eccentric action excited great curiosity, which was turned to laughter when it was discovered that the paper was her Higher Certificate. Of course, not many French women who have obtained this certificate become dancers, but the story is intended to illustrate the commercial uselessness of high educational qualifications. The article gives a terrible picture of the excessive organisation of teaching in France. There are as many as sixty-eight varieties of examinations for women in Paris. It is a wild chaos of examinations, classes, certificates, diplomas, both primary and secondary, baccalaureat, licence, and so on.

Broadly speaking, there are three main classes: the "professors," who have passed the most difficult examinations; the public teachers, who teach in the communal schools, which are maintained by the State; and a third class, more mixed than the others, of private teachers. The economic situation is unfortunately but too clear. There are far more qualified teachers than there are places for them to fill, and there are also a pitiable number of women who have failed to obtain official recognition of their capacity, and who are yet anxious to follow teaching as a profession. Naturally, therefore, the rate of remuneration is extremely low. M. Talmeyr tells a story of a visit which he paid to a night refuge for women in the Saint Jacques quarter of Paris. The manager showed him over the establishment, and told him of a young girl who had recently come to ask for a lodging there, not for the three nights ordinarily allowed, but for a longer period which she could not fix. She was a teacher, she had her certificate, and she earned the magnificent salary of twenty-five francs per month, without board or lodging, in a school where she worked all day. It was not enough to keep her in food. Where, then, could she live? She begged permission to come to the Refuge. The manager verified her statements and allowed her to come, much to her joy. She remained there six weeks, and at the end of that time she obtained a situation in a family at fifteen francs a month, but of course with board and lodging included. She wept for joy.

M. Talmeyr describes a visit which he paid to the Normal School of Sèvres, one of the largest in France. The Protestants are quite as numerous there as Catholics, and Protestantism is rather the "note" of the house. In this establishment, although it is as unclerical as possible, the beliefs of the past are not systematically and ostentatiously insulted. The atmosphere of the place is ancient and respectable, but the training which a girl obtains there is entirely intellectual, and in no sense a moral culture. M. Talmeyr also visited the Normal School at Fontenay-aux-Roses. It is the place where the mistresses of normal primary schools are trained. Here again the atmosphere is one of Protestantism, of a kind which is not so admirable as English Protestantism. It seems almost too ridiculous to be true, but M. Talmeyr vouches for it, that everywhere, on the walls, in the hall,

in all the corridors, you are perpetually confronted with the portrait of M. Jules Ferry. That is the symbol for the pupils of the ideal. When a girl after such a training has obtained her certificate and proceeds to give lessons, she is not really fitted for the great work of education. Her head is full of knowledge of a kind, but she has received no general idea, no notion of moral elevation, of noble taste, no true education of heart and mind.

## ODD STORIES FROM THE MAGAZINES.

WRITING in the November *Cornhill* on "The Humorous Side of Clerical Life," Rev. S. F. L. Bernays relates the following incidents:—

I once asked a man how his mother got her living. He replied, "She goes about, sir, attending encroachments." In reality she was a second Mrs. Gamp.

In the poor districts of our large towns the knowledge of natural history is rather remarkable by its absence. I once heard the Government inspector ask a child what was the difference between the animal and vegetable kingdom. The question elicited the following curious but scarcely exhaustive definition: "Please, sir, tatics grows on trees and cows doesn't."

## TRICKING THE GIANT-FANCIER.

The pet Grenadiers of Frederick William I., and his passion for giants, are the subject of an amusing paper by Mr. J. R. Hutchinson in the *Pall Mall Magazine*. One incident may be given as a specimen:—

Just as every man over six feet high was a predestined Grenadier, so every marriageable woman who exceeded that height was the predestined wife of a Grenadier. Here was a unique application of the divine right of kings. Riding one day in the neighbourhood of Potsdam, he met a well-grown peasant girl. "Where are you going, my dear?" "To the town, please Your Majesty." "Ah! Perhaps then you would deliver a message to the commandant?"

Pencil and paper are produced by General Derschau, who rides with him, and the King writes:—"The bearer is to be given without delay to Macdell, the big Irishman. Don't listen to objections." The girl, suspecting a trick, waited until the King rode off, and then gave the note to an old woman, who, on delivering it to the commandant, was wedded out of hand to the disgusted Hibernian. When the truth came to the King's ears he declared the marriage null and void.

## A DEAR OLD BAILIE.

A. K. H. B., writing in *Longman's* "of odd notions," tells the story of "a dear old Bailie" recently advanced to the bench, before whom a man was accused in the ordinary way:—

Of course the Bailie knew the sinner well. He heard the charge stated. "John, man, I'm sorry to see you here. We'll just fine you half-a-crown." The public prosecutor here intervened. "But, my lord, (even so) the charge is not yet proved: we have not heard the evidence." Then the benignant judge: "Ah well, John, my man, as the charge is not proved, we'll just fine you eighteen-pence."

He also tells of a millionaire—

who was ambitious of literary fame, and going to a popular writer proposed that they should write a book in collaboration: a handsome sum passing. "No," said the author, "it cannot be. Holy Scripture declares that a horse and an ass must not plow together."

Golfers will appreciate this incident:—

Within these few weeks a seemingly educated person came to stay in this grey and ivied place. The links were superciliously looked upon. And the visitor wrote to a friend in London, "It is perfectly wonderful how golf is making its way. I have been quite astonished to find that they play it even in such an out-of-the-way place as St. Andrews!"

## THE BISHOP OF UGANDA.

## AN INTERVIEW WITH BISHOP TUCKER.

THE *Young Man* recently published an interesting article, copiously illustrated, recording the results of an interview with Bishop Tucker of Uganda. Bishop Tucker appears to be a peripatetic apostle of a somewhat primitive type:—

Bishop Tucker's last pastoral visit took eight months to accomplish, of which at least four were spent in actual travelling—the distance covered being about a thousand miles. This long journey was made entirely on foot, and no one but a man of fine physique and much endurance could perform it.

## TESTIMONY FOR TEETOTALERS.

Fortunately, Bishop Tucker has the physical strength necessary, and he told me how he accounted for it. "I have been," he said, "a teetotaler for twenty years. So far from regretting it, I would commence it sooner if I had the chance again. I find that in Africa not only is a teetotaler better fitted to cope with the climate, but he is better fitted for the great physical exercise which he has to undergo. I have marched some ten thousand miles in Africa and have never felt the want of anything like a stimulant. Indeed, I feel sure that if I had not been a teetotaler it would have been impossible to undergo the fatigue involved in some of the marching. I feel very strongly indeed about teetotalism in Africa. I have seen so many who have suffered from indulgence in strong drink there. Apart from this, for example's sake, one should be a teetotaler in Africa."

## A UNIQUE CATHEDRAL.

The Bishop's cathedral is almost as remarkable as himself:—

This Church of St. Paul on Namirembe Hill is one of the most wonderful churches in the world. It is indeed the cathedral of Uganda—but it is unique of its kind. The roof of the church is a framework of the reed-like grass called muli, supported by some three hundred pillars, each pillar being the trunk of a tree. It is thatched with strong grass, and projects in the form of a verandah over the walls, which are of fine white stems of the reed-like grass laced vertically side by side, and fastened longitudinally to bands of reeds. The walls are double, the hollow space between being filled up with grass. The pillars inside run in rows about six feet apart.

The building is some hundred and forty feet in length by seventy broad, and about forty feet high along the ridge, sloping down to some six or seven feet. This wonderful church will hold about four thousand people. There are no pews, and the seats are to be found on the floor. Collections take the shape of shells, sugar-cane, corn, bananas, and fowls, which are more useful than the buttons.

In 1890 the Sunday congregation was about one thousand, now there are congregations throughout the country which aggregate twenty-five thousand. The capital has thirty churches, and two hundred and ninety in other parts echo to the Gospel.

## A READING REVIVAL IN UGANDA.

The people have learned to read in a most marvellous way. They have a great gift in teaching one another, so that in Uganda there are a great many people who know how to read who have never seen a white man. There are now about sixty thousand people who read attached to the various mission stations. Among others who have learned to write is Mwanga, the king, on whose head rests the murder of Bishop of Hannington.

## DEMOCRATIC CHRISTIANITY IN UGANDA.

A very interesting detail is given as to the primitive democratic method in which the native Christians organised themselves when they were left without European missionaries:—

The native Church of Uganda is very democratic. "When

some years ago," said Bishop Tucker, "the missionaries were driven out of the country, the native Christians suggested that twelve senior members of their body should be chosen as a council to govern the Church during the missionaries' absence. That council is still the governing body of the Church." It administers Church funds, it sends out Church teachers, it presents candidates for ordination to the Bishop, and holds itself responsible for their maintenance. It exercises its functions in such a way as to show that the faculty of governing is one of the characteristics of the native Christian Church.

I asked Bishop Tucker if he noticed any great difference between the Christians of Uganda and those at home.

"The chief difference," he replied, "is that the people of Uganda make the Scriptures their constant study. This arises from the fact that the Bible is the only book they have, and also from their appreciation of the contents of the book."

By the aid of his zealous assistants, Bishop Tucker says:—

We have in six years been able to translate the whole of the Bible into Luganda, the language of Uganda, and into Swahili, the language of the people on the coast.

It seems that some one many hundreds of years ago brought into Uganda from the north a great book, but whether it was the Koran or the Old Testament no one knows:—

It is curious, however, to find among these people much in common with the Jews. In the old capital of the country the seventh day was kept; and many of the old Jewish ceremonies are still observed, such as the purification of women and circumcision.

A REALLY good picture-gallery of the Life of Christ in every Sunday School and Mission Hall is a goal which surely cannot be far distant in these days of vastly cheapened and improved colour-printing and kindred arts. It is pleasant that a beginning is being made in this direction by Messrs. W. H. Smith and Son, who certainly have the means of putting the project well before the public. They are bringing out a series of pictures of scenes in the Life of our Lord, intended to be hung on the walls of churches, chapels, and schools, and designed primarily for the instruction of children. They consist of large cartoons, about 54 inches by 43, printed in colours, mounted on linen, and varnished. So far six have been published, depicting respectively the Annunciation, the Nativity, the Baptism, the Crucifixion, the Resurrection, and the Ascension. The selection has been made, we are informed, after careful consultation with clergy specially interested in education. It is characteristic that five out of the six scenes are attempts to portray the supernatural. But "a further series is in contemplation should the present one meet with sufficient support;" and then, possibly, the less transcendent and more picturable events will receive a fairer proportion of attention. The style, too, is conventionally ecclesiastical, of the stained-glass-window pattern, every sainted head being fitted with a very obtrusive halo, and the whole treatment "as far as the poles asunder" from the realistic art of a Verestschagin. But this line having once been chosen—and, doubtless, the ecclesiastical public catered for made the choice inevitable—the work has been well done. The colours are bright but chaste, and within the limits imposed the figures are natural and impressive. The gem of the set is the Annunciation, the angel especially being a striking harmony of tints and contours. The price of the six is £1 17s. 6d., of a single copy, 7s. 6d. The series ought to prove a veritable illumination, visual and mental, to many a dingy school-room, and would at the same time be quite in place on the walls of ornate and venerable churches.

# CHRISTMAS PRESENTS: FROM A PENNY TO FIVE POUNDS.

CHRISTMAS is coming—what shall we get for Christmas presents this year? It is the old, old question, and as usual there is an embarrassing variety of answers. I am not going to attempt to publish a guide for would-be purchasers, but only modestly to dress my own shop window, by setting forth in the compass of a single page what wares I have provided for readers who are in search of something that will give pleasure to their friends. And as a preliminary let me make one suggestion. Before considering what Christmas presents you should buy, make out a list of those to whom you would like to make presents if you could afford it. Christmas presents, if once thought out in the region of the imagination, are much more apt to materialise themselves than if the subject is never dwelt upon. It will be a good exercise and a seasonable one to make out a list, not merely of relatives and friends, but of those who have no relatives or friends—the children and the aged in the workhouse, the bedridden sick, the orphan, and the widow, and then to indulge yourself in fancy with preparing for them, each and all, some simple Christmas gift. If you think it out, even if you have not a penny, your thought, which is in itself a prayer, may materialise into fact. God gives some people ideas and other people cash. And the idea is the more important of the two. But if you don't think out your idea, the other people may never know what to do with their cash.

The following list of what I can supply is not intended in the least to suggest that you should provide yourself with presents exclusively from my publications. If you can get anything better or cheaper or more suitable elsewhere, by all means do so. For, in spending the money available for Christmas presents, it is a duty to make it go as far as ever it will, so as to yield the maximum of enjoyment to all those within your reach.

## AT ONE PENNY.

The Christmas Tree, and other Fairy Stories.  
The Christmas Stocking.  
The Christmas Carol.  
The Poet's Christmas.  
Books for the Bairns. (Illustrated.) (Twenty-one issued.)  
Penny Novels. Old and New. (Abridged.) (Ninety issued.)  
The Penny Poets. (Sixty issued.)  
All these will be sent, post free, 1½d., to any part of the United Kingdom, or 7s. 6d. per 100 for schools, charities, gifts, etc.

## AT TWOPENCE.

Hymns that Have Helped. 100 best hymns with their stories. Post free, 31. In cloth, 6d.

## AT SIXPENCE.

Selected Volumes of Poets and Novels. 180 pp. Bound in cloth. Post free.

## AT ONE SHILLING.

"Satan's Invisible World Displayed." A Story of Despairing Democracy. The Annual of the REVIEW OF REVIEWS. Post free, 1s 3d.  
Lowell's Message, and How it Helped Me. Post free, 1s.

## AT TWO SHILLINGS.

Letters from Julia, or Light from the Borderland. Specially adapted for the bereaved. Post free, 2s. 3d.

## AT ONE SHILLING AND SIXPENCE.

Nursery Rhymes with pictures for painting. Post free.  
Celebrities of 1890. 250 Portraits and Autographs. (Scarce.) Post free.

## AT TWO SHILLINGS AND SIXPENCE.

Character Sketches. Post free.  
The Story that Transformed the World. Post free  
(Both handsomely bound and illustrated.)  
Five volumes of Selected Fiction. In cloth. Post free. 900 pp.

## AT THREE SHILLINGS AND SIXPENCE.

Her Majesty the Queen. Studies of the Sovereign and the Reign. Copiously illustrated. Cloth gilt. The only Jubilee gift-book that sets forth the part the Monarchy has played in the Government of the Empire. Post free, 3s. 9d.

## AT FIVE SHILLINGS.

The Notables of Britain. A Memorial Album of the Jubilee Year. With 150 Portraits and Autographs of the best-known Men and Women in the Empire. Post free.  
The Half-Yearly Volumes of the REVIEW OF REVIEWS from Vol. IV. to XV. A Contemporary History, Portrait Gallery, and Compendium of Periodical Literature. Post free.

Real Ghost Stories. A collection of weird true tales. A republication of the Christmas Number of REVIEW OF REVIEWS, 1891. Post free, 5s. 4d.

## AT SIX SHILLINGS.

Fourteen Volumes of Penny Poets. Bound in cloth. 2,500 pages of the best poetry in the world. Post free. 6s.

## AT EIGHT SHILLINGS AND SIXPENCE.

Annual Subscription for REVIEW OF REVIEWS, 1898. Sent every month, with giver's compliments, post free, to any part of the world. No present is more appreciated by relatives and friends abroad.

## AT TWELVE SHILLINGS AND SIXPENCE.

Borderland. Vols. II., III., and IV. Illustrated. Some of the most curious reading in the world.

## AT ONE POUND.

The Cheapest Library in the World. Consisting of 150 of the Penny Poets and Penny Novels. Containing the best poetry and the best fiction in the world. The whole enclosed in a neat bookcase with folding-doors.

## AT TWO GUINEAS.

Subscription to Free Literature Society, ensuring the supply, carriage paid, of papers, magazines, etc., of the published price of 42s. per month, to any workhouse, hospital, or similar institution in the three kingdoms.

## THREE POUNDS AND UPWARDS.

A Subscription to the REVIEW OF REVIEWS Circulating Library is a splendid present to any village reading-room.

Each box of books in the REVIEW OF REVIEWS Circulating Library contains about twenty standard and new novels, ten bound volumes of the most popular illustrated magazines, as well as books of travel and adventure, biographies, histories, etc.

The cheaper boxes contain about eighty complete works, in sixty volumes. Each box has over forty standard novels, beside other books and magazines.

Boxes of books, containing from forty-five to fifty volumes, are supplied every quarter, at a charge of 30s. per quarter, or £5 a year, paid in advance.

Boxes of books, with the same number of volumes, are supplied half-yearly at a charge of 50s. a half-year, or £4 10s. a year.

Cheaper boxes of books, containing sixty volumes, can be supplied half-yearly at a charge of 30s., or £3 a year.

A New Series of Book Boxes has been prepared, each box containing over forty works of fiction, mostly by well-known contemporary writers. These boxes are supplied quarterly for a subscription of £6 per annum, or half-yearly at £5 per annum.

The REVIEW OF REVIEWS Circulating Library defrays the cost of carriage to and from any Railway Station in England, Wales, and the Lowlands of Scotland. Subscribers in Ireland and the North of Scotland have to pay an extra 2s. 6d. per quarter, in order to cover the extra cost of carriage.

# THE REVIEWS REVIEWED.

For some time past I have been thinking that this section of the *REVIEW OF REVIEWS* should always begin with a review of the numerous *Reviews of Reviews* which have come into existence since this magazine was started. Of these *Reviews*, there are some published in connection with the parent periodical, and others, although avowedly having the same aim, and in one case taking the same name, are quite independent publications.

## AMERICA.

The *American Review of Reviews* for November, which is published at Astor Place, New York, under the editorship of Dr. Albert Shaw, is the only American magazine which attempts to deal with the political, social, and intellectual development of the United States as a whole. It is, therefore, quite invaluable to those who, outside the limits of the United States, wish to keep themselves in touch with the movement of American life. The November number opens with a long article by Dr. Shaw devoted chiefly to the New York elections, and the other political contests which have been decided this month in the various States of the American Republic. It is copiously illustrated, with portraits of the candidates and their leaders. Dr. Shaw treats Van Wyck and General Tracy solely as if they were merely the men of straw put forward by Boss Croker and Boss Platt. Dr. Shaw strongly favours the election of Mr. Seth Low, whom he regards as an almost ideal candidate. A very amusing article is that devoted to the "Caricatures of the Campaign in New York." It is amusing to see how persistently the caricaturist endeavours to work up prejudice against Mr. Croker on the ground of his purely imaginary intimacy with the Prince of Wales. How the legend about the Prince and Croker gained currency does not appear, but there is no doubt that it has been worked for all it is worth, and a little bit more than it is worth, in the campaign.

Mr. Stephen Borsal writes on the "Situation in Spain," an article which is illustrated by a recent photograph of the new Prime Minister, Señor Sagasta. The leading feature of the number, apart from its politics, is the elaborate and copiously illustrated article by Mr. Carl Snyder, entitled "From the Lakes to the Sea." Mr. Snyder describes in a very lucid and interesting fashion the immense improvements that have been made in the construction of canals of late years. Of this the rapidity and the economy with which the Chicago drainage canal is being cut is the most conspicuous illustration. Mr. Snyder thinks that by Mr. Dutton's new pneumatic high-lift lock, it will be possible, with an outlay of not more than £20,000,000 sterling, to enable ocean steamers to make their way to take in and discharge cargo at Chicago. The necessary canals could be cut in four years, and the ships lifted over by pneumatic locks similar to those which are now in use on the Erie Canal at Lockport. By the aid of these lifts it will be possible to hoist great ocean steamers one hundred and sixty feet high at a single lift. If this canal is built, the cargo will be carried from Chicago to Liverpool for little more than its present carriage to Buffalo. The article is well worth the careful perusal of all those who are interested

either in canal construction or in the future development of American competition.

Mr. W. J. Cole has a brief paper describing the great success that has attended the free public organ recitals in Boston. A series of twenty concerts were arranged in the various churches in the city; tea were given in the evening, and ten at noon of Saturday. The average attendance was not far short of 1,100. The total expenses did not exceed 260 dollars. The Church authorities placed their organs and their edifices at the disposal of the committee. The recital lasted forty minutes at noon, and one hour at night. Mr. Cole thinks that the results of the experiments are rich in suggestion for the musical education of the people.

## AUSTRALASIA.

The *Review of Reviews for Australasia*, which is published and edited by the Rev. W. R. Fitchett, at Queen Street, Melbourne, is as valuable to those who wish to keep themselves informed as to the affairs of Australasia as the companion and allied *Review* published at New York is for those who wish to follow the affairs of the United States. The number for September opens with a "History of the Month" within the Colonies, which is an Australasian chronicle written by the editor, on the same general lines as our "Progress of the World." From this we learn that the Colonial Prime Ministers met a reception in Australia on their return as glowing, if not quite as splendid and stately, as that accorded to them in London. The Colonists are said to be very proud of the way in which their Premiers conducted themselves when in London. In remarkable contrast to the welcome accorded to the Prime Ministers appears to have been the reception given to Mr. Ben Tillett. Mr. Fitchett says that Ben Tillett's half-insane speeches have probably done more injury to the cause of labour in Australia than all the machinations of those villains, the capitalists, since Australia was discovered. What finally upset Tillett's apple-cart was the remark which he made at a Melbourne dinner, when the health of the Queen was proposed. Tillett is said to have declared, after an awkward pause, that he was prepared to drink the health of the Queen or that of any other old lady. When this was reported, the Mayor of Ballarat refused to receive Tillett, and the Roman Catholic Bishop formally called upon the Mayor for vindicating loyal sentiment in Australia. When Tillett appeared at a public meeting in the same city of Ballarat, the audience received him by singing "God Save the Queen" over and over again, so that he departed from the Colony complaining Victoria was famous for two things, its loyalty and its sweaters' dens, which may be regarded as a parting kick.

Australian caricatures are not quite so conspicuous in September as they have been, but there are some extremely good. The *Bulletin* picture of the Franco-Russian Alliance, entitled "The Frog Who Would Awooing Go," which represents a colossal bear, sitting on its haunches, hugging a little frog to his breast, so that nothing but the frog's hind legs are seen, is very clever. So also, on a much larger scale, is the *Bulletin's* page of fancy sketches from Klondyke. The Australians, whose gold is mined under a blazing sun, find a free field for

their imagination in picturing the horrors of gold digging in the Arctic circle.

Lord Brassey, who appears to be as keenly interested as ever in the strength of the British navy, supplies a summary of the contents of his Naval Annual. I note that Lord Brassey does not think that the naval aspirations of Japan will affect the balance of power in the Far East in a sense unfavourable to British interests. Mr. Reid, the Prime Minister of New South Wales, contributes a paper on the Australian Premiers in England, which is a very characteristic performance, and from which I quote at some length in another page. Here I will only quote one somewhat characteristic remark:—"The Secretary for the Colonies and his high subordinates must be more fitted for their high posts after the unrestricted intercourse we had, and I am sure we all are." Mr. Reid evidently contemplates the improved Mr. Chamberlain as largely a work of his hands, and it is to be hoped that he will have reason to reflect with equal complacency upon the result.

The article entitled "Where Dead Men Lie" is a review of the Queensland poet, Mr. B. H. Boake. Like all Australian poets, he is great on horses.

Mr. Fitchett contributes another of his famous "Fights for the Flag," which form a sequel to the "Deeds that Won the Empire," the most successful series of historical articles that have appeared in periodical literature for many a long day. The fight described in the September number is the battle of Salamanca. Mr. Fitchett's "Deeds that Won the Empire" will be published by the end of November by Smith, Elder and Co., at 6s., with maps and illustrations.

### FRANCE.

THE *Revue des Revues*, which is published at 13, Avenue de l'Opera, Paris, is edited by M. Jean Finot. It has adopted as its motto the admirable phrase, "*Peu de mots, beaucoup d'idées!*" In the French *Revue* there is the tendency, also visible to some extent in the *Australasian Review*, to diminish the number of pages devoted to Leading Articles from the Reviews and the Reviews Reviewed. In the November number, for instance, these features only occupy twelve out of one hundred pages. The *Revue* which, however, co-operates with me in the promotion of the International Correspondence, preserves many of the features of the magazine upon which it was originally modelled—the Current History in Caricature and the Reviews of Books, and special articles discussing various political, literary, and social questions. The *Chronique*, however, has disappeared. The first place in the November number is given to "Photography and the Science of Clouds," which has illustrations. There is an article on new French novel writers, which deals with six authors, of whom Paul Adam, Leon Daudet, and Hugues Rebelle are naturalists, and Edouard Estaunie, Art Roë, and Samuel Cornut are idealists. The editor writes an essay on the Mysteries of Longevity, and in another section of his magazine advances his suggestion for the founding of a pantheon of journals and journalists by quoting correspondence on the subject, and publishing a letter from Max Nordau strongly in favour of the proposal. Dr. L. Gaze describes the Street Cleaning Department of New York. Dr. de Neville devotes several pages to an eulogy of Mary Wollstonecraft, and Charles Binville reviews "The Christian" under the title of "The English Romance of the Year." It may interest Mr. Hall Caine, Dean Farrar, and others to

know that M. Binville assumes, as a matter of course, that there can be no doubt whatever as to the way in which the famous scene ended between Glory and John Storm. There is another article devoted to English subjects, and that is the one which deals with English Legitimists and their fantastic cult.

### THE ENGINEERING MAGAZINE.

I AM glad to welcome another American magazine to London. The *Engineering Magazine*, of New York, has long held a position of pre-eminence in the periodical literature devoted to its special subjects. How is it, I asked a long time ago, that in England we cannot produce anything approaching such a technical magazine? Its publishers have now helped in one way to remove this reproach by taking offices at 222-225, Strand, where they will in future produce an English edition of the *Engineering Magazine*. Engineering is a subject that is not limited either by national or geographical considerations, and the *Engineering Magazine* has set itself monthly to attempt to cover the whole field. In the prospectus the features are described which are to appear in the magazine in the course of the next twelve months. The publishers say that they cannot more aptly describe the *Engineering Magazine* than by saying that it is a REVIEW OF REVIEWS of current engineering and industrial literature. Its distinctive index aims at being nothing less than a complete monthly digest of everything of permanent value published in the entire technical press of Great Britain, the Continent, and the United States, in all languages, and in every established publication that is devoted to any branch of engineering and mechanical science.

The October number contains several articles that illustrate the universality of their interest. The first is written by Professor G. Forbes, and deals with the application of electrical power to Trunk Line Railways. Mr. Forbes thinks that electricity is bound to supplant steam, especially in underground roads and in desert railways. A much more elaborate paper is devoted to the enormous possibilities of rapid electric travel, from which it appears that two eminent American engineers are quite satisfied that it is possible to run a train from Philadelphia to New York on a specially prepared line at an average speed of 141 miles an hour, which, allowing for loss of time in starting and in slowing up, would give a rate of one hundred and seventy miles on the main track. An article on the "Progress in the Perfection of the Rack Railway" is illustrated by many diagrams and illustrations of the railway that it is proposed to build up the Jungfrau. A brief paper on "The Industrial Awakening of the Russian Empire" tells us that a single American company has taken an order for several hundred locomotives for Russian railways, of which one hundred are to be delivered in the shortest possible time. The Russian empire needs ten thousand locomotives and several hundred thousand railway waggons. Mr. G. L. Fowler describes "Ericsson's First Monitor and the Later Turret Ships."

The *Engineering Magazine* came out last month with a new cover, representing an arch of which the *Engineering Index* is the keystone.

*Badminton* for November contains a pleasantly-written biography of a cock pheasant from the pen of the Hon. John Scott Montagu, M.P.; but the article which is of most general interest is Mr. Clive Philipps-Wolley's description of the Stikine River, and the new route to the Klondike Goldfields.

## THE NINETEENTH CENTURY.

THERE are several very interesting articles in the *Nineteenth Century*. Among the contributors are Signor Crispi, Mr. John Morley, Sir Robert Giffen, Ouida, Sir Joshua Fitch, and Sir John Lubbock.

## MR. JOHN MORLEY ON GUICCIARDINI.

Mr. Morley publishes an essay upon Guicciardini the historian, and contemporary and friend of Machiavelli. It is not an essay which can be noticed in a paragraph or described in a page. The article is interesting as a study of the art of compressing within a very small compass the cream and gist of the criticisms of all those who have written on the subject before, together with many luminous and suggestive observations by Mr. Morley himself. Mr. Morley is not so enthusiastic as an anonymous English critic whom he quotes, who declares that the Italian was "one of the most consummate historians of any nation or of any age," but he praises him very highly. Nobody so aptly satisfied the curiosity of his own age as to motives and characters in the age before it. His estimates of leading actors are excellent for *justesse*, and few men have painted better portraits or have indulged in more subtle appreciations of character than he. Mr. Morley quotes Montaigne with apparent approval when he says:—

"Of all the acts that he describes, however fair they may look in themselves, he always traces back the cause to some vicious source, or to some hope of advantage." Connected with this, is Guicciardini's systematic abstention from definite judgments on the right or wrong of the great actions that he describes. Of him, as of Thiers, it may be said that "he does not trouble himself to judge, but to seize;" the only need of which he is conscious is to see as clearly as he can what men did, and why they did it. If we add to this the great advance that he made in historic conception when he substituted a general for merely local or provincial history, and if we consider his accurate presentation of the political and moral thought of his age, we may understand his place in literature, and the impression that he has made on important minds.

## ON THE ORIGIN OF MOUNTAINS.

Prince Kropotkin, in one of his admirable papers on "Recent Science," describes Professor Willis's experiments, which throw light upon the way in which mountains have come into being:—

Ideas are not yet settled as to the probable structure of the earth in its abysses. Whether it is as rigid as a steel ball, or whether the rocks are in a pasty state determined by their very high temperature and the very high pressures which they are submitted to, remains unsettled. But it may be taken as certain that mountain building does not imply the folding of the whole thickness of the solid earth's crust. The wrinkling of the rocks, to which our mountains owe their origin, is limited to the superficial layers of the crust—to the "super-crust," as Dana says. The idea already expressed by Dana and by Pfaff—that the folding of the strata and mountain building altogether take place in the "super-crust" only—was thus confirmed by the experiments of Professor Willis. The whole series gives an admirable additional support to the "lateral force theory" of the theory of the origin of mountains.

## THE FISCAL GRIEVANCES OF IRELAND.

Sir John Lubbock writes upon this subject, and makes short work of his theme by denying that there are any fiscal grievances in Ireland; in fact, the Irish are only too well off in Sir John's opinion. He says:—

| As regards      | s.                              | d. | Every | s.       | d. |
|-----------------|---------------------------------|----|-------|----------|----|
| Tea             | every one in Great Britain pays | 1  | 9     | Irishman | 2  |
| Tobacco         | " " " "                         | 5  | 3     | "        | 6  |
| Wine            | " " " "                         | 0  | 8     | "        | 0  |
| Spirits         | " " " "                         | 8  | 3     | "        | 9  |
| Beer            | " " " "                         | 5  | 6     | "        | 2  |
| Making together |                                 | 21 | 5     | against  | 20 |

Of course we should all be glad to take off the duty on tea, but that is too small a matter to constitute a serious grievance.

A difference of 4d. a year is rather a small matter to go to war about. The whole complaint, then, rests on the tobacco and spirit duties. We have then, in my judgment, no reason to reproach ourselves, and, on the contrary, Ireland has been not only justly, but even generously, treated by Great Britain.

## MOSCOW TO-DAY.

Sir Wemyss Reid, who spent a month this autumn in visiting St. Petersburg, Moscow, Stockholm, and Copenhagen, gives us his "First Impressions" in a paper which is very readable throughout. His account of the exceeding riches of the Moscow churches, and the excessive devotion of the Russians in the streets of their ancient capital, will probably surprise many readers as much as they surprised Sir Wemyss Reid. He was indeed quite taken aback by what he found in Moscow. He says:—

I had thought of it, as I imagine most of us do, as the decaying capital of that older Russia which is passing into the stage of tradition—a sleepy old-world city where ancient customs and national usages still survived, and little beside was to be met with. I found it a huge city, numbering nearly a million inhabitants, where, side by side with the traditional usages of old Russia, and, above all, its external devoutness of carriage and demeanour, is to be found the most marvellous development of industrial and commercial enterprise and activity. The streets were as crowded, and as full of bustle and life, as those of London or Manchester; the groves of tall factory chimneys enveloping the suburbs reminded me of Birmingham. The markets were filled to overflowing, both with merchandise and men. The shops were certainly not inferior to those of St. Petersburg, and everywhere there was the bustle, the unending activity which bespeaks the existence of a great community engaged in the full work of life. It was only slowly that what I saw enabled me to realise the truth about Moscow—the truth that it is no city of the dead, no relic of mediæval times, but the living capital and centre of a mighty nation, which, though it may wall itself in against Western ideas and manners, has an overflowing life of its own, and an energy which it is expending freely in a thousand different directions. Those who seek to realise what Russia really is, and what enormous potentialities of growth and development she possesses within herself, must go to Moscow.

## NELSON'S ANCESTRY.

Mr. W. Laird Clowes, writing upon "Nelson's Genealogy," is at great pains to explain that Nelson sprang from the lower middle classes rather than from the gentry. He says:—

The popular conception undoubtedly is that Nelson came of a good family, though not an opulent one, and that when Edmund Nelson allied himself with a lady who had in her veins the blood of the Walpoles, he married little if at all out of his own class. The truth is that even in marrying a Suckling he was marrying distinctly above him. His father had been a parson, and his sister had married a parson; but in those days the ordinary country parson, like the ordinary country lawyer and the ordinary country doctor, was a person of very small social consideration, and was, as often as not, a mere son of the soil, a trifle better educated perhaps than most of his brothers.

## FUNCTIONS OF UNIVERSITIES.

Professor Mahaffy publishes the Address on "Modern Education" which he delivered at the Mason College, Birmingham. In the course of his address, speaking of the functions of the Universities, he says:—

The first function, then (at least, in order of time), is to afford a complete and thorough training, especially in those great subjects called useless by the vulgar, but which are the

real salt of any higher culture. And next, these universities should provide the most suitable home for the prosecution of Research, where men who have completed their training can live in the midst of books and laboratories and observatories, prosecuting those studies which enlarge the boundaries of knowledge. As regards the policy to be pursued in these two directions, it seems quite plain that in the former they can hardly be too conservative, in the latter too progressive.

#### OUIDA'S ADVICE TO MARION CRAWFORD.

Ouida is a specialist on Italy, and no one has probably more right to express an opinion upon the novels of Marion Crawford. She subjects them to a critical review, which she concludes with the following advice:—

Let him appreciate more thoroughly his own very admirable powers, and confine himself to painting the men and women of his time and class with all that cosmopolitan knowledge of them which he possesses. I should like to see from him an Italian novel of modern political life.

In the course of her article she speaks appreciative of the poetry and the peasantry of her adopted land. She says:—

Their modern poetry is beautiful, more beautiful than that of any other nation. Their popular songs are poetic and impassioned as those of no other nation are, and one may hear among their peasantry expressions of singular beauty. When a flock of solan geese flew over our lands, going from the marshes to the mountains on their homeward way, and descended to rest, the peasants did not touch them: "They are tired, poor souls," said one of the women; "one must not grudge them the soil for their lodging." What stifles Italian imagination and kills the Italian soul is the passion for money; pure acquisitiveness, or avarice, for the desire is to get, little or no pleasure is taken in spending.

#### THE FUR-PULLERS OF LONDON.

Mrs. Hogg writes a paper which haunts the memory like a nightmare. It is a ghastly description of the way in which numbers of women and girls spend their lives in pulling the fur from rabbit skins in south-east London. It is chiefly devoted to an account of those who do their work at home. They make about eight shillings a week by working twelve hours a day, six days in the week, in an atmosphere that is heavy with the nauseating smell of the skins, and thick with the fluff, which gets into the throat, and is almost choking. Mrs. Hogg says:—

This life of the "home" workers is sufficiently ghastly, though no words can adequately present its utter sickening repulsiveness. It must be seen and breathed in to be realised. Yet any attempt at remedying it by direct means involves enormous difficulties.

#### THE CLERICAL "DOG AND THE SHADOW."

Sir Joshua Fitch warns the clerical agitators who are clamouring for the introduction of the Apostles' Creed into the Board Schools, that they stand in great danger of playing the part of the dog in *Æsop's Fables*, which dropped the bone which he had in his mouth in order to grasp the shadow reflected in the stream below. Speaking of the present system of religious education, Sir Joshua Fitch says:—

It is a system of popular education which, it is true, did not appear to be very logical or symmetrical, but which was generous, was comprehensive and conciliatory, was well adapted to the needs of a divided but in the main a religious people, and gave more encouragement to the teaching of the Holy Scriptures than any other State system in the world.

He thinks it would be a great disaster if this system were sacrificed, and he thinks it is in great danger of going by the board entirely owing to—

the intemperate zeal of those persons who, attaching more importance to Churchmanship than to Christianity, grasped

at the shadow and lost the substance, and who for the sake of achieving a temporary sectarian triumph were willing to impoverish the teaching of the schools, and ultimately to deprive the children of their share in our best national heritage—the English Bible.

#### THE ELEMENTARY PRINCIPLES OF CURRENCY.

Sir Robert Giffen, writing on the "Monetary Chaos," lays down at the beginning of his paper what he regards as the foundation principles upon which all currency ought to be based:—

The monetary chaos of the present time, to sum up the situation in a sentence, results entirely from the determination of one or two Governments—the United States and India—to depart from elementary principles in establishing their standard money. These principles are, that the standard which is to be the sole measure of value and unlimited legal tender in a country should consist of one metal only, because there cannot and ought not to be two or more; that the coinage of this metal should be automatic—that is, at the pleasure of those who bring it to the mint, Government meddling no further with the business than by stamping the metal so as to indicate its weight and fineness; and that Governments should refrain from any measures directly intended to alter or affect the value of the standard, or to make money abundant or the reverse, or to attain a stable par of exchange with other moneys, or between gold and silver themselves, because this is to embark on a course where there is no goal, and which will create an endless monetary discussion, and so produce discredit and unrest.

#### THE LIQUOR TRAFFIC IN AFRICA.

Captain Lugard writes another of his weighty and fact-cramped articles on the subject of the liquor traffic, which is creating such mischief among the people of Africa. He recalls to those who argue that it is doing little or no harm, the fact that African administrators, missionaries and travellers, with very few exceptions, are unanimous in its condemnation. The importation of liquor is bad, but the establishment of distilleries for manufacturing liquor in Africa is worse. This evil has not yet made its appearance in the British possessions. Captain Lugard says:—

Even were it to be granted that the demoralisation of the natives is a chimera, I should still stigmatise the liquor traffic as a bar to civilisation and progress in Africa, a short-sighted and perilous commercial venture, and as destructive of that legitimate expansion of trade and creation of new markets which is the ostensible reason of our presence in Africa. The ideal which all who think as I do wish to achieve is the total abolition of the spirit traffic in Africa. So far as South Africa is concerned, I hold that this course is immediately feasible, for the machinery for enforcing the law is in existence, and the experiment has already been made with success in various districts. In West Africa, however, I fear that immediate and summary prohibition is a "counsel of perfection," and I advocate therefore that the duties in all British possessions should be at once equalised to the level of the highest (3s. per gallon), and that this uniform duty should be raised periodically, until it equals and exceeds that levied on high-class whiskies and brandies of British manufacture, at present imported for European consumption only.

*THE English Illustrated* for November is somewhat slighter than usual. The girl who drove a hansom cab tells how she drove an omnibus; but her adventures prove to have been of no very thrilling kind. Mary S. Warren sketches the childhood and girlhood of the Dutch Queen, and the transatlantic craze for the First Napoleon lifts its head in English mazedom in studies of "The Great Adventurer." E. D. Cuming gives a pleasantly illustrated paper on "The Much Maligned Moke."

## THE QUARTERLY REVIEW.

THE prevailing cast of the October number is literary rather than social or political or scientific. Notice has been taken elsewhere of the most brilliant paper in the series—that on some minor poets—and of the fresh matter brought to the Life of Lord Tennyson.

## A DECENTRALISING POLICY FOR INDIA.

Indian discontent and frontier risings form the occasion of a quest after causes and remedies, which issues in the following summary of suggestions:—

We may abstain from over-government; England may more unreservedly support the Government of India, which in turn may grant a freer hand to local governments, and they will wisely entrust district officers with enlarged powers less subject to appeal, and encourage them, as far as may be, to revert to the out-of-door under-tree administration and patriarchal rule which proved so successful in the hands of men like the Lawrences, Edwardes, Nicholson, or James Abbott. Combined with this economy is essential.

In foreign policy our attitude to the Ameer, it is urged, should be courteous but absolutely firm. "We should give up writing letters to one who is a master of that art, and manage him otherwise." "He is at our mercy in more ways than one, and the sooner he realises that we know this the better." It is pointed out that, if Russia were ever to acquire Afghanistan, "she would have taken a material step towards establishing her naval power in the Persian Gulf, and this might be most serious for our colonies."

## WOMEN AT OXFORD AND CAMBRIDGE.

The question of women at our older Universities is investigated with more thoroughness and fairness than are usually to be found with advocates of a conservative policy. The simple alternative of co-education or making universities sexless is first considered. The experiment in Scotland, Wales, and the North of England is declared to be too recent to yield decisive results. American experience is next appealed to, as of longer duration; and it is alleged that the Universities of the Eastern States "have at least as strong an objection to 'co-education' as ourselves"; while in the Western States there is a growing dissatisfaction with it, especially among the higher teachers. "In America a most notable sequence of the system is, that the teaching in schools for both sexes is very largely in the hands of women, and is passing into their hands more and more year by year." Women under-bid men, who move off to more lucrative pursuits. German universities only admit, as a favour, exceptional women. The reviewer, however, grants that Oxford and Cambridge must adopt some principle in place of the anomalous devices which now make the position of women at these universities all but intolerable. He leans to the German precedent, and a new federal university consisting of existing women's colleges, or in his own words:—

Our programme is to allow to very exceptional women exceptional facilities at Oxford and Cambridge, but to place ordinary women under the direction of a new university, which shall consider their special needs, and the good of women as a whole.

## ARCHBISHOP BENSON'S CHIEF SERVICE.

The life of the late Primate is passed under review. The points in his life-work which are thrown into strongest relief are his victorious emphasis on the historic continuity of the Church of England before and after the Reformation, and his influence in bringing about the remarkable subsidence in party feeling within the Church which has marked the last few years. Prior

to the Lincoln Judgment English lawyers and courts had proceeded on the principle "We ought not to go behind the Reformation":—

But the Archbishop's judgment silently ignored the cramping but convenient canon of the lawyers of thirty years ago, and on a review of ancient practice in England and elsewhere, cancelled the former decisions; and in doing so actually won the almost submissive approval of the Privy Council, who readily admitted as "new light" what their predecessors regarded as irrelevant. From the date of the Lincoln Judgment the English Church has, as it were, resumed legal possession of much that she had been supposed to have lost.

## THE BASTILLE NOT SO BAD AFTER ALL.

The recent publication of the archives of the Bastille leads the reviewer to revise certain popular views of that ancient prison. He says:—

Instances of individual oppression, cases of prisoners overlooked, victims of harsh discipline and unrelenting despotism, will meet us. Torture here as elsewhere was resorted to in the effort to wring out the truth from atrocious criminals. But such examples of severity and oppression are not proportionately more numerous in the Bastille than in other prisons. . . . Alike for the sufficiency of its provision for the prisoners' wants and for the humanity of its gaolers, the Bastille merits an honourable mention amongst the French king's houses.

But public sentiment, the writer admits, was right in regarding the gaol as "the citadel of despotism."

## SIR WALTER SCOTT HIS OWN BEST HERO.

An interesting study of Sir Walter Scott's methods and originals finds in the novelist's own personality the chief contribution to his works:—

As Scott owned that his heroes were tame, conventional, and common-place, he confessed that his maidens were insipid. . . . We suspect that the explanation of that must be sought in the influence exercised on the finest work by the writer's own sensations and personality. He never approaches his best, psychologically, save when he is drawing something from himself and his own experiences. . . . Neither in courtship nor in wedlock had he ever enjoyed the close and sacred communion with a sympathetic woman, in the intimate interchange of the thoughts and emotions. . . . But in all his sterling and heroic characters, without exception, we see that the chivalry and the backbone came from himself.

## THE BRUTE ANCESTOR OF MAN.

A somewhat singular paper on monkeys concludes with the following remarks on the origin of man:—

It is clear that the human body cannot have been evolved from any existing anthropoid form of ape. . . . We should, in spite of the various human characteristics of the gorilla and chimpanzee, be disposed to look for the brute ancestor of our species in some form of ape from which both the orang and the gibbons have also been derived, and therefore to regard as the original home of our species some South Asiatic region.

## OTHER ARTICLES.

A review of Sir Henry Craik's English prose selections comments on "Macaulay's glaring sins against literary taste and judgment," and observes that in his writings "nowhere do we wholly escape from the influence most fatal of all to artistic sense and imagination, from the bondage of prosperous middle-class Nonconformity." A sketch of provincial life in the days of St. Basil includes a remark from Mommsen that if he were beginning a new life of scholarship he would take up the period between Diocletian and Justinian; and for that period ambitious young scholars are advised to study the writings of the great Cappadocians. The Letters of Lady Mary Wortley Montagu are introduced with the statement that she was "the most remarkable English-woman of the eighteenth century."

## THE EDINBURGH REVIEW.

THE contents of the October number are widely varied and are served up on the whole in excellent style, but only one article—that on the internal crisis in Germany—calls for notice elsewhere.

## THE IRISH LAND PROBLEM.

An historical survey of the Irish land question brings the writer to the following practical conclusions:—

No solution can be found by further elaboration of the procedure of 1881 or by patching up such a stopgap. Something more durable must be sought, and two courses only seem open, both ending in occupying ownership. One is by universal compulsory purchase of the landlord's interest, the other is by a more gradual process, which would start by recognising dual ownership as a practically existent fact, compensating the landlords for any valuable rights of which they have been deprived, and would eliminate by some means its most mischievous incident, the unsound system of periodical revaluation, and thus give the tenant the security of virtual ownership and prepare the way for the more complete and general transfer to the tenants as absolute owners. The longest way round is the shortest way home, and the difficulties in the way of a short cut by compulsory purchase seem insuperable at present, at all events.

## FAITH COMMON TO THEIST, MATERIALIST, AGNOSTIC.

The warfare of science with theology is made the historical ground of a plea for the acceptance of the post-Biblical revelation which has come to us by the expansion of knowledge. We are reminded that Dr. Lightfoot, Vice-Chancellor of Cambridge, actually declared that "man was created by the Trinity on October 23, 4004 B.C., at 9 o'clock in the morning," and Luther fixed the hour of Eve's eating the apple at 2 in the afternoon. With fine comprehensiveness the reviewer tries to make out that Theist, Materialist, believers in Moral Order, and Agnostic are "all much nearer one another than their names and their professed opinions indicate":—

All recognise a Power which they cannot explain, a Law which they cannot trace to its origin. The Materialist calls that Power force or motion; the Theist worships it as God. But both Materialist and Theist are agreed that this unseen and incomprehensible Power can be partially seen and comprehended through its laws.

## ANCIENT EGYPT NO LAND OF GLOOM.

Explorations in the plain of Thebes lead another writer to a more cheerful view of ancient Egyptian life:—

There is a fullness of life and youth about the Egyptians which renders even ludicrous the conception of them as a monotonous people under the shadow of the grave. The prominence of the idea of death appears to come rather from the love of life; so intense a desire for life cannot be bounded by the grave; even comedy has its place in the paintings on the walls of the tombs. . . . With all its careless cruelty, its hard bondage, its severe discipline, we have still to remember that we are dealing with a nation which upholds a standard of equal justice and a standard of mercy, which believes in the duty of the rich towards the poor, the helpless, the slave; whose religion teaches that each man must appear before the judgment-seat of a righteous God.

## OTHER ARTICLES.

The inevitable review of Tennyson's life pronounces him to have been throughout the second half of this century "foremost among English men of letters; and it is his proud distinction to have maintained the apostolic succession of our national poets in a manner not unworthy of those famous men who went immediately before." Nansen's most unexpected discovery is said to be the increasing depth of the soundings as the Pole was approached, which shows the Polar basin to be a true

oceanic area. An interesting paper on precious stones cites a statement to the effect that in 1880, 100,000 dollars was an unusual outlay for even the wealthiest in America to make in diamonds, but in 1890 numbers of families each owned diamonds worth half a million dollars. More than a third of the French crown jewels came to the United States. The manufactured ruby, it seems, has the same appearance, weight, hardness, effect on light as the natural Oriental ruby; the only difference being that its tiny cavities are round like air-bubbles and not angular as in the natural stone. The Oxford authors of *Essays in Liberalism* are dismissed as behind their time, slaves of old watchwords, unable yet to mark the new line of cleavage. A suggestive study of the Ideals of Romance finds the common note of Northern and Southern Romance in the glorification of valour, but their contrast in the treatment of love. In the South love is a science, and women die of love's sorrow and despair. In the North heroines are "women strong to love, strong to suffer, and above all strong to avenge."

## Cornhill.

THE November number has much readable matter, but falls below the standard set by earlier issues. Mr. Grave's personal reminiscence of Tennyson claims separate mention. Mr. C. L. Falkiner's paper on Sir Boyle Roche does not supply the fund of funny stories which the name of the great Irish humorist at once suggests. "The Humorous Side of Clerical Life" is a title inviting hopes of merriment which Rev. S. F. L. Bernays' pages fail to realise. The historical studies are interesting. Mr. Walter Wood tells of the recapture from the French crew of the *Friend's Adventure* in 1689 by an English man and boy who were prisoners on board. Sir Charles Murray's adventures among the Pawnee Indians in 1835 are vividly retold. The subject of the anniversary study is the great storm of November 26th and 27th, 1703, the course of which Mr. Henry Harries describes. Colonel Vibart brings to a close his thrilling personal narrative of the Sepoy Revolt at Delhi in 1857. Perhaps the most important article, in view of Klondyke developments, is Rolf Boldrewood's "Genesis of Goldfield Law in Australia." He has the highest praise for Mr. Hardy and Mr. King, the first goldfield commissioners. It is pleasant to know that, as it is in the Canadian Northwest, so it was in Australia: British law and order reigned unbroken from the first:—

It should never be forgotten that to the early Goldfields Commissioners of New South Wales is due the glory of having, under innumerable difficulties, administered justice, preserved law and order, and distributed treasure almost incalculable, the whole without suspicion of unfairness, and for more than ten years without disorder or distrust. Throughout their whole term of office the executive power of the law of the land, with but one exception, was never imperilled or weakened. No mob-law, no hasty executions, dishonoured a British community. Evil-doers were punished, justice was done, crime was expiated, but strictly in accordance with British jurisprudence and procedure.

ST. GEORGE'S CHAPEL, Windsor, the Trinity Almshouses, Exeter Cathedral, and the Black Country are severally subjects of topographical articles in the November *Sunday Magazine*.

In the *Quiver* for November Dr. Barnardo gives an account of his life work. There are sketches of the chapels of the public schools of England, and of the gods of China, with extraordinarily repellent pictures of the latter.

## THE NATIONAL REVIEW.

THE November number is characteristically alive and up to date. The Hon. W. P. Reeves's paper on Compulsory Arbitration in New Zealand, Mr. H. M. Hole's rejoinder to Mr. Blake's indictment of Rhodesian rule, and Mr. Leslie Stephen's review of Tennyson's *Life*, as well as the American chronicle, require separate treatment.

## A BIMETALLIC BROADSIDE.

The present crisis in the bimetallic movement elicits five strenuous appeals to the British Government to respond to the silver overtures of the French and American Republics. "Great Britain's duty" in this respect is enforced by the Radical Mr. R. L. Everett, who declares that "the weight of silver known or believed to be in possession of mankind is almost exactly fifteen and-a-half times that of gold." Mr. J. P. Heseltine absolutely denies all danger of panic in the event of the remonetisation of silver by international agreement. The rise in prices would preclude panic, nor would the countries be flooded with silver which opened their mints to it freely: Mr. Heseltine instances "free-silver" Mexico as a proof of this statement. Mr. Ghosh, professor of political economy in Calcutta University, urges that the famine in India was not a famine of food, which was there in abundance, but a famine in money. He points out what fuel for sedition is presented by the fact that by closing the mints the Government has practically confiscated half the savings of the Indian people. Mr. Donald Reid, of Dunedin, in voicing Greater Britain, pleads for the inclusion of the colonies in any Bimetallic Union formed, and the coinage of a colonial dollar or rupee with a currency throughout all these colonies. The preponderance of the United States and France would thus be counteracted. Mr. J. L. Maxse fiercely retorts on critics of the "Bimetallic intrigue," that Parliament has committed the nation to do all in its power to secure by international agreement a stable monetary par of exchange between gold and silver, and that those who oppose that decision are the discreditable cabal.

## WHAT'S THE USE OF OUR VOLUNTEERS?

This is the question Lieut.-Col. Eustace Balfour essays to answer. The adverse argument is that if our navy holds command of the sea, the militia are sufficient for garrison duty, and the volunteers are superfluous; but if we lost command of the sea, our two hundred and fifty thousand volunteers would be practically of no avail against the enormous hosts of trained soldiers which an invader would fling into the island. The writer admits the truth of both alternatives, but points a third course. The navy might be only temporarily defeated; and, if time were gained, could be reinforced and resume command of the sea: or an alliance with other Powers, which would have equal effect. The volunteer force would be of great service in "the intermediate stage." The writer reckons that from the declaration of war and calling out of the volunteers to the landing of an invading force (in the event of naval defeat), some two months must elapse; and in that period, by constant drilling, volunteers ought to be brought up to the level of the continental soldier, if the officers would only qualify themselves in time of peace as instructors in drill and minor tactics.

## OTHER ARTICLES.

The Colonial Chronicle is concerned with the Report of the Royal Commission on the sugar-growing West Indies. It puts the alternative shortly thus: Either we impose

countervailing duties, which need only amount to raising the price of sugar one halfpenny a pound, or we practically lose the West Indies. The American correspondent avows that personally he would sooner put his money on the green cloth of Monte Carlo than invest it in the average American railroad stock. Miss Catherine Dodd describes anew the oft-described school journey in Germany.

## THE CONTEMPORARY REVIEW.

THE *Contemporary Review* for November is an extremely good number, so good that I have not got anything like the space to do justice to it. I notice elsewhere most of the articles, and those that are reserved for notice are Mr. Stoddart's review of the "House of Blackwood," Miss Caillard's "The Limits of Nature," and Mr. Grenfell's "Bimetalism and the Bank."

## THE INHABITANTS OF MILK.

Sir Edmund Verney has written a capital article under this head. It is luminous, lucid, and crammed with interesting facts and sensible suggestions. I quote what he says about foreign competition elsewhere, but here I will limit myself to noticing, especially for the benefit of my agricultural readers, the figures which he gives as to the number of bacteria in milk which has been properly treated and the milk which is collected in the ordinary way. There are five precautions which he says should be taken in order to minimise the number of bacteria in milk, and he describes an experiment in which they were adopted:—

(1) The milk was received in steamed pails. (2) The udder of the animal was thoroughly cleaned. (3) The udder was moistened with water. (4) The barn air was fairly free from dust. (5) The first few streams of milk were rejected. In summer the milk taken from a cow treated in this way contained 330 bacteria, instead of 15 000 taken under the usual conditions. In winter there were 7,600 bacteria in ordinary milk, as against 210 in the carefully protected milk; and this latter remained sweet for twenty-four hours longer than the former.

## MR. LYULPH STANLEY'S CONSOLATIONS.

Writing on the position of the Education Question, Mr. Stanley is in a more genial mood than usual. He is, of course, overflowing with wrath against the iniquities of the Unionist Government and their clerical backers, but he consoles himself by reflecting that—bad as the recent (educational) legislation is, there are ample opportunities within the four corners of the law for a Liberal Administration and a Liberal House of Commons to remedy many of its mischiefs.

I have not space to follow Mr. Stanley through his vigorous exposition of the present position of affairs, but note that he is disposed to believe the ultimate settlement of the religious difficulty will be found on the lines which have been adopted in Manitoba:—

That settlement would secure that all the State-aided schools should be under public management, which management will include the appointment of teachers. But where a special religious denomination is strongly represented in a school, and that denomination would be reassured by the presence of some teachers who are their co-religionists there, a certain proportion of teachers of that denomination should be appointed; further, that facilities should be given, outside the regular school hours, for the distinctive teaching of those children by teachers chosen and appointed and, if necessary, paid by the denomination.

The chief feature in the November *Good Words* is a vivid account by Daniel Kearns, "What I saw of the Matabele Outbreak."

## THE FORTNIGHTLY REVIEW.

THERE is plenty of solid and suggestive reading in the November number. Sir G. S. Clarke's scheme of army reorganisation, Mr. Fox-Bourne's case for the Bechuana rebels, and Mr. Spender's study of Tennyson's workmanship, require separate notice.

## THE BITTER CRY OF THE WEST INDIES.

The lamentable plight to which sugar bounties have reduced our West Indian possessions is set forth by Mr. Hugh Chisholm in his "Choice for the Sugar Consumer." With the collapse of the sugar industries, the islands can support neither Government nor people. They might go over to the United States, which are steadily Americanising them. The Imperial Government must take one of four courses, which Mr. Chisholm thus formulates:—

- (1) Abandoning the West Indies to their fate.
- (2) Weaning them from sugar to other industries, at a probable cost to us of between £6,000,000 and £7,000,000, and with a very doubtful prospect of success.
- (3) Bribing Germany and France, by some unknown "sacrifice," to stop hurting our traders by artificially under-selling them, and so restoring a natural and profitable market for sugar, at some cost, of course, to the consumer.
- (4) Making our German and French assailants pay, by means of a countervailing duty, for the expense to which they put us.

A duty of 30s. a ton would raise sugar only half a farthing a pound and save the West Indies.

## OUR TRUMP CARD AGAINST FRANCE WASTED.

"Diplomaticus" traces Lord Salisbury's dealings with France since the Berlin Congress. Our difficulties began when we took over Cyprus. To reassure France we had to promise her a free hand in Tunis. But since her abstention from the Egyptian War and our sole occupation "France has carried on in all parts of the globe a thinly veiled war" against us. In defiance of public law and treaty rights, the French have overrun British hinterlands in West Africa, and in the East are marching armed bands into the Khedive's territory. We ought to have pressed for redress of these grievances before conceding French demands in Tunis. But Lord Salisbury has meekly yielded in the treaty just made:—

While it remained with us to say whether the French Protectorate in Tunis should be a reality or not, we could always point to West Africa or the Upper Nile, and suggest that the road to our acquiescence lay in those regions. With that card in our hands we could have sat still, confident that whatever occurred, the odd trick was ours. Now what resources have we? . . . For the moment it is notorious that the restraining influence of the Tsar is the chief guarantee of peace between England and France.

## "THE SPIRIT OF TORIISM."

Mr. Walt r Sichel, in objecting to Mr. Baumann's demand for a Tory creed, extols as against any "letter" the "spirit" of Toryism, which he defines by saying:—

Toryism breathes a traditional spirit (for I prefer this word to "principle"), a spirit which is no set dogma, but an expansive and adaptable outlook on the phantasmagoria of events, a spirit resolute to advance the country within the limits of its native Constitution, to educate the mob and benefit the people; which seeks to aggrandize no one class at the expense of another under the specious pretext of equality; but which upholds the unity of those reciprocal functions which bind and build up that Constitution while it preserves its inheritance abroad and the league which has cemented our archipelago of islands.

## MEREDITH A DECADENT!

Mr. Arthur Symonds supplies a note on George Meredith, who writes novels with the brain of a poet, and therefore violates every rule of the novelist and yet fascinates—with the charm of poetry coming to us disguised as prose. Of his style, he says:—

Like Carlyle, but even more than Carlyle, Mr. Meredith is in the true, wide sense, as no other English writer of the present time can be said to be, a Decadent. . . . What Decadence, in literature, really means is that learned corruption of language by which style ceases to be organic, and becomes, in the pursuit of some new expressiveness or beauty, deliberately abnormal.

## "FREE TRADE WITHIN THE EMPIRE."

The future of British trade exercises Mr. J. B. O. Kershaw, F.I.C. He argues that for the United Kingdom to maintain its present level of prosperity its exports must increase in value £2.6 millions annually. This is a prospect not to be counted on in face of German and American competition, and of the development of Eastern industries, as well as of Trade Unionism at home. Mr. Kershaw sees salvation only in an Imperial Customs Union, which would be Free Trade within the Empire—an Empire embracing most diverse races, and climates, and soils, and offering thus a convenient model of universal Free Trade. So far as manufactured goods go, the total exports of the United Kingdom and the total imports of the Empire are nearing equilibrium. In breadstuffs there is an enormous disparity, but 55,000 farmers settled on 100-acre farms in Canada could make up the lack in wheat.

## OTHER ARTICLES.

Mr. H. W. Wilson passes in indignant review the course of American diplomacy over the Behring Sea dispute, and finds plenty of occasion for censure. Mr. W. H. Mallock reviews Dr. Crozier's "History of Intellectual Development," which he calls rather "a new study of natural religion." Dr. Crozier, recognising evolution as "the reasonable sequence of the unintended," feels himself obliged to posit a co-ordinating ruling intelligence, and discerns its influence in the development of the higher religious belief not less than in the development of the higher animals.

## THE WESTMINSTER REVIEW.

THE article of principal importance in the November number is Miss Irwin's on "the problem of home work" and its horrors, which claims separate treatment. Educational questions are decidedly to the fore. Mr. Vernon Gibberd gives a short *résumé* of "Sixty Years of Elementary Education." Mr. Andrew Murphy condemns the existing arrangements for testing intermediate education in Ireland, and suggests that twenty-one inspectors could be appointed to do the needed work for the same amount as is now spent on the examinations which he would abolish. T. M. Hopkins very dogmatically decides the question between classical and modern education. The strength of his arguments may be judged from his contending that because poorly-paid waiters and clerks speak French and German, and "no classical scholars are to be found occupying such positions," therefore the Latin and Greek scholar has the mercenary advantage over the French and German! Mr. Richard Arthur furnishes an interesting study of Joseph Joubert, with some pages of his sparkling apothegms. Mr. F. A. Edwards gives a convenient summary of Italian settlements in Africa. Mr. Oliphant Smeaton describes the progress of Australian federation and of its manifold advantages. Mr. H. Baptist Crofts reviews the course of Victorian medicine.

## THE NORTH AMERICAN REVIEW.

THE October number is full of good matter, perhaps too predominantly political, but actual and alive. Mr. Carnegie's "Results of the Jubilee," Mr. Ghosh's "India's Case for Silver," and Mr. Cramp's "Coming Sea-power," claim separate notice.

## ARE CANADA AND THE STATES TO BE FISCAL FOES?

Britannic and American inter-relations maintain their prominence. Mr. John Charlton, member of the Canadian Parliament, writes on Canada and the Dingley Bill. He adduces statistics to prove that up to June 1896—

the United States furnished Canada more than one-half of her total imports, and enjoyed access for manufactures and other dutiable goods into her market at a low average rate of duty, and had entry for a most satisfactory list of free goods. . . . The United States was not discriminated against, but on the contrary it had a standing in the Canadian market more favourable to its interests than either Great Britain or other foreign countries. . . .

During the fiscal year of 1896, while we gave the United States, as before stated, a free list of 29,472,000 dollars, we received from the United States a free list of less than 23,000,000 dollars. This amount the Dingley Bill has cut down by transferring from the free to the dutiable list forest products, hides, wool, and minor articles. The result will be that our free list under the new tariff will, in all probability, fall considerably below 5,000,000 dollars. If it is supposed that Canada will rest content to give a free list of 29,500,000 dollars in exchange for one of 5,000,000 dollars, that anticipation will hardly be realised.

Mr. Charlton deprecates the idea of the United States trying to force Canada into the Union by hostile tariffs, and predicts that such a policy will defeat its own ends. It has already driven Canadian competitors with the States into the English market. Along with the other Liberal leaders of Canada, he believes that "all the commonwealths springing from the English stock" may "act in concert," Republic as well as Empire; and urges a more friendly fiscal attitude on the part of the Washington Government.

## IS THE CLAYTON BULWER TREATY STILL IN FORCE?

Mr. M. W. Hazeltine replies to Mr. Whiteley's crushing exposure of the weakness of Mr. Blaine's attempt to repudiate the Clayton-Bulwer treaty which gave Britain equal rights with the United States in any Central American inter-oceanic canal. Mr. Hazeltine argues that Great Britain by transforming the "settlement" into the "Crown Colony" of British Honduras "flagrantly violated" her treaty promise to forego the exercise of sovereignty in Central America:—

Then it was, however—in 1862—that the Clayton-Bulwer treaty was unequivocally broken by one of the parties, and it follows that from that moment the whole compact was voidable at the option of the United States. That right of option was exercised by Secretary Frelinghuysen when he declared the treaty henceforth void and of no effect.

But subsequently, in 1888 and in 1894, the American Government recognised the Clayton-Bulwer treaty as still binding on both parties. Mr. Hazeltine thinks this awkward fact can be got over by a prompt disavowal from Mr. McKinley of Mr. Cleveland's opinions. These are, however, mere outworks of Mr. Hazeltine's position. His main contention appears in the sentence—"In the history of every nation capable of a superb development, the time has come when it has ruptured the withes imposed upon it by treaty." On these "general principles of national development" the time has, in the writer's judgment, now come to tear up the treaty.

Why, then, does he cant about it, and pretend it does not exist?

## WANTED: "A SOCIETY FOR THE PREVENTION OF NOISE."

Dr. Girdner, encouraged by the success of his first attack on the demon of street noises—an attack which led to the New York aldermen compelling street carriers of iron rails to pack them so as to hinder jarring—returns to the charge. Why should we protect the sense of smell by forbidding foul odours and not protect the sense of hearing by prohibiting objectionable sounds? The doctor is in bold mood. He would put down street whistling and church-bell ringing, and would consign the elevated railroad to underground tunnels. He would make asphalt pavements obligatory, and would coat with asphalt the manhole covers which at present cause such sudden noise when a wheel passes over them. He would compel all carriages used in city streets to have rubber tires. He throws some doubt on his seriousness when he demands the extirpation of the innumerable cats which break our sleep with their caterwaulings! The plague of noise promotes nervous and brain disease, and retards recovery. He pleads for "a society for the prevention of noise."

## OTHER ARTICLES.

Mr. Prescott Hall argues for the enforcement of an educational test to keep out undesirable immigrants. He remarks on the striking parallelism between the percentage of illiteracy and the percentage of crime in the various immigrant nationalities, and concludes that "a reading and writing test will exclude the dangerous and unassimilable elements." Mr. S. H. Nichols objects to Miss Kelly's trade union label on goods as a weapon to boycott employers and to increase the power of trade union, but not to improve the lot of the worker. Mr. B. Micou, late chief clerk of the U.S. Navy Department, extols the worth of the torpedo-boat, and presses for a largely increased number in the U.S. Navy. Rev. Dr. P. Mendes exults in the rejuvenation of the Jew, as attested in Zionism and in the formation of the Maccabees—a young Anglo-Jewish—and the Judeans, a young American Jewish association. "To lift man is the function of the Jew." Dr. Jordan's paper on college discipline is chiefly remarkable for the evidence it carries of American university authorities resolving to punish "excess of zeal for work" along with other excesses.

## BORDERLAND.

THE October issue of this quarterly, which was started four years ago as a REVIEW OF REVIEWS of the literature of psychic study, will be the last to appear for some time. In a year or two I hope to resume its publication in an improved shape. The four volumes of the first series, of which a limited number of copies are still for sale, contain more varied reading on all manner of occult and psychical subjects than any other four volumes in the world. The "Letters from Julia" will be republished in a small shilling volume before Christmas.

Subscribers to *Borderland* will probably find the monthly *Thosophical Review*—late *Lucifer*—which is to be reduced to a shilling, and edited by Mrs. Annie Besant and Mr. G. R. S. Mead, the nearest approach to a substitute among existing periodicals. The October number contains a statement as to some of the reasons why the publication has been suspended. Its suspension is in no way due to any disbelief in the importance of psychic investigation, but rather to the desire to have more time and leisure for the study of subjects which are the most interesting and important of all.

## THE FORUM.

The *Forum* for October is distinguished by the paper of Professor Lombroso on the heredity of acquired traits, and by Mr. Wood Davis's "impending deficiency of bread-stuffs," both of which claim separate notice.

## CRAVING FOR AN AMERICAN MERCHANT NAVY.

The blood of the Vikings, which flows also in American veins, seems to be stirring pulses of desire after an expansion of American shipping. The U. S. Commissioner of Navigation, Mr. E. T. Chamberlain, sets forth his country's need of merchant vessels. When ships were built of wood, American pre-eminence in timber gave growing ascendancy to American shipbuilding. Since ships have come to be built of iron and steel, the States have lagged woefully behind; but the creation of a U. S. Navy has taught the nation how to produce first-class steel vessels. A modern merchant marine thereby became a possibility, which with the launch of the *New York* became a probability, and by the launch of the *St. Louis* became a fact. A more palpable basis of hope is expressed by Dr. Jos. Nimmo, Jun., in a paper on the protective features of section 22 of the Tariff Act of 1897. He objects first of all to the privilege of transporting goods duty free over Canadian lines into the United States which "our grasping Northern neighbour" has enjoyed, to the serious detriment of American railroads and seaports. This was a convenience to the Eastern States, but should never have been granted to the Canadian Pacific Railway on the western side of the continent. The writer hopes that the new Tariff Act will put a stop to it. He goes on to explain that the Act will terminate the policy of free trade in shipping which the United States adopted in 1828. By an Act of that year, the vessels of any foreign Power entering American harbours were accorded the same treatment as American vessels received in the harbours of that Power: i.e., if no discrimination was made against American shipping, the United States made no discrimination against the foreigner. So that when British navigation laws were repealed in 1850, British ships were as free to enter American ports as were American ships. The new Act restricts this reciprocity of freedom to Powers with whom there are specific treaties. Thereby "the ships of Great Britain, our most formidable rival on the seas, are excluded from that benefit."

## THE SEA-FIGHT OF THE FUTURE.

Mr. Fred. T. Jane writes on Naval Warfare, present and future, and after several gruesome forecasts, sums up more reassuringly:—

The naval battle of to-morrow may be a terrible thing; but there is reason to believe that it will be far less dreadful than people are so fond of imagining. Especially is there reason to think that in ironclads it will not be very sanguinary. Science has made close-quarter fighting tantamount to annihilation; but it has only very partially solved the problem how to hit at long range—except at target practice. . . . The real danger of a modern sea-fight at long range lies in the ammunition question. After such a battle, ships, perhaps still quite unsubdued, will be left with empty magazines: the biggest ironclad cannot carry enough for more than a few hours' vigorous cannonade.

The Japanese *Fuji*, with less gun power and more capacity for ammunition, is likely to prove superior to the U. S. *Indiana*, whose gun power has grown at the expense of ammunition room. Mr. Jane has no great dread of the dynamite gun, which must be exposed to the fire of long-range guns long before it can fire, or of the submarine boat, which with its slow speed, and its need

of coming to the surface, holds only "a limited future value." He also considers "nearly all the torpedo boats in existence are practically obsolete," because in the open sea they are too slow. The torpedo-destroyer is, he thinks, nullified by the 12-pounders now used on board the ship to be torpedoed.

## WHY CAMBRIDGE REFUSED WOMEN DEGREES.

Mr. Oscar Browning, lecturer on history at Cambridge, essays the rather difficult task of explaining to American readers the refusal of his University to grant women degrees. He frankly owns that "as generally happens in England, the question at issue was not the question in dispute," and the vote was really cast against the idea of making the education of both sexes the same or of making the University colour-blind to sex. Mr. Browning then goes on to discuss the *pros* and *cons* of these latter questions. He declares, "I have never seen a woman's work which appeared to me equal to a man's," but is careful to premise that he cannot pretend to a varied experience. His chief point is that woman, being diverse from man in nature and function, it would be an injury to insist on her having the same education as man, and her presence would react unfavourably on the education now designed for and given to males. What women need, he finally affirms, is "a system of education confined to women alone."

## PAUL VERLAINE'S HATRED OF "HEALTH."

Mr. C. S. de Soissons' study of the late poet concludes with this appreciation:—

Verlaine never soiled himself with a falsehood; nor did he humiliate himself by seeking the applause of the multitude. His lyre was not for sale. He was a poet always, sincere and proud. He walked alone, sad; and he suffered.

He quotes a fragment from the poet's "memories of an old man," which he thinks "throws more light than any other upon the delicate soul" of Verlaine:—

I hate people full of blood. I despise the whole rank of famous painters and sculptors, notwithstanding my admiration for their works. Noisy voices, rude laughter, shock me beyond expression; in a word, I dislike health. . . . From the same motives I hate the so-called healthy poetry. . . . Tell me about a September afternoon, about a burning, sad afternoon, when the golden ray of melancholy falls upon the dying and over-ripe landscape. In such a frame, show me a quiet, queenlike figure of a woman, weary of suffering, whose youth is past but a few years. Her strength is not great; still, she can walk in the park. Clad in a white dress, she has large, gray eyes, like the sky, unchanging like the horizon. Truth is written in those eyes: a profound, warm passion is hidden in them.

## OTHER ARTICLES.

The two sides of the currency question are stated in two papers. Mr. Edward Tuck proclaims "Bimetallism a necessity," and Mr. W. M. Grinnell declares "a single standard inevitable." Mr. Harris, U. S. Commissioner of Education, thinks Mr. Bellamy's Socialism can be put down by a more liberal dose of statistics, and gives instalments, to show that wealth is being diffused through the community, and that the capitalist gives more to the community than he receives from it. Senator Justin S. Morrill publishes a number of "notable letters from his political friends," written during the war time, including Giddings and Bancroft. Mr. Thomas Gibson Bowles laments the change in Great Britain's policy in the East, from being the friend and protector to being the foe and would-be destroyer of Turkey, and predicts that we shall have to pay for this change in the alienation of our Moslem subjects in India.

## THE REVUE DE PARIS.

WE have noticed elsewhere M. Laugel's admirable account of his old friend and master, the late Duc D'Aumale. Apart from this article, which is of real value from many points of view, there is not much worthy of notice in the October numbers of the *Revue*. The historical element is, however, as usual, especially strong, Commandant Rousset analysing, as has been already done thousands of times, the military genius of Napoleon.

Those concerned with the ecclesiastical dissensions of fifty years ago will find a certain painful interest in Lamennais' eloquent and intimate letters to Montalembert, written, it need hardly be said, long before the break of the famous Churchman with Rome. One asks oneself, however, of what possible interest to any one can be the long-winded apologia of a long forgotten Duc de Richelieu who flourished in the year 1821, when his retirement from public life under the Restoration produced a certain sensation.

Pierre Loti concludes his impressions of Annam, remarkable as is everything else written by the impressionist novelist, in a vivid and picturesque style. Commandant Viaud seems to have been there in his official capacity, and he gives a melancholy, sombre picture of the, on the French side, bloodless assault and taking of Hue. The French writer does not conceal his pity for the dead and wounded enemy, and he notes many kindly and humane traits of character in his sailors.

In the same number a well-known French musical critic discusses the vexed question of the Wagner representations at Bayreuth. Apparently, on the whole, he is not inclined to agree with those who declare that a sad change has come within the last twenty years over not only the orchestration, but also the interpreters of Wagner's music. He defends Siegfried Wagner, and points out that he must be singularly apt for the difficult task he has set himself. The son of Wagner (the grandson of Liszt) is as it were part of Bayreuth, but before playing any active rôle he studied long and seriously both with Humperdinck, the composer, and with many notable conductors. The writer points out that anything in the nature of national music is always best heard in the country which produced the composer. It is obvious, he says, that a stranger coming to Paris had much better go to the opera to hear Gounod than the "Valkyrie." Rossini is never heard to perfection excepting at Milan, and those who wish to know what Wagner really is should make a pilgrimage to Germany, and more especially to Bayreuth.

Under the somewhat, for France, unusual title of "The Lower Chamber," M. Le Duc contributes some amusing pages on the life of a French Member of Parliament. If what he says is true, a *député* is even more the slave of his constituents than is a British M.P. He receives hundreds of letters from them, to which he is obliged to reply as soon as possible; when actually staying in his constituency they each and all expect to be visited by him; when they come to Paris he is obliged to entertain them; and if he represents an agricultural district he is constantly asked to do their errands. Then each deputy has to have at least one local paper in his pay, and this again entails a great deal of correspondence. The unfortunate French M.P. spends much of his time in a railway carriage. He is solemnly invited to every funeral in his constituency, the most of the weddings, to all the banquets—and your French provincial is very fond of banqueting. The fact that the deputies are paid something under £400 a year makes it more difficult for

them to refuse any of these many duties. In fact it is difficult to see when a French representative of the people has time to attend to the sittings of the Chamber. More than one deputy resigns himself to become a kind of market-cart for his constituents, bringing up on every market-day dozens of hampers in order that a few pence may be saved by the intelligent market-gardener who has helped to return him to Parliament. Quite lately a good deal of amusement was caused by the report that the representative of Vaucluse had a wooden arm for sale. He had with infinite trouble procured from some surgical society an artificial arm for the child of one of his poor constituents. Shortly after the child died, and the father brought back the arm, asking that it might be disposed of with advantage. On the other hand, the French Chamber, if not the best, is at any rate one of the most pleasant clubs in Paris. There are large reading-rooms, libraries, and even card tables. There is an excellent restaurant, and nowhere else does one hear more amusing gossip than in the Palais Bourbon. Thus an ex-country doctor—and the medical and legal professions yield a rich crop of deputies—finds that the advantages outweigh the annoyances.

## THE REVUE DES DEUX MONDES.

THERE is less of interest than usual in the *Revue des Deux Mondes* for October. In the first number M. Sully Prudhomme has an article entitled "What is Poetry?" Englishmen mostly resemble M. Jourdain, who discovered that he talked in prose without knowing it. If Frenchmen do not exactly talk in verse without knowing it, yet every young French gentleman learns to turn out very passable verses on any subject under the sun—a graceful accomplishment, the place of which is taken in England by more or less successful attempts to compose in Greek and Latin. This enormously greater interest which is taken in poetry in France explains much that is difficult to understand in M. Prudhomme's article. He shows that poetry is not an art by itself, but it becomes one by its instrument, which is the verse, and he believes that it is intimately connected with the sister art of music. He also enunciates the great truth, which he has not been the first to discover, that even the most deft and clever versification is not enough to make poetry properly so called; the subject of the theme must be beautiful.

M. Mille begins the first part of a description of his visit to Thessaly. He followed the campaign in the Greco-Turkish War as the special correspondent of the *Journal des Débats*, and he tells his experiences in the somewhat unconventional form of a diary. His experiences do not appear to have been any more extraordinary than those of other correspondents, who have shed gallons of ink over events which were perhaps hardly worth so much fuss. His descriptions are lively enough, and are very well written, but the whole affair is too old in one sense, and yet not old enough in another, to be really interesting.

M. de Varigny has industriously accumulated a large amount of information about the gold mines of Alaska and of British Columbia, but his article has not the interest of a narrative written by one who has been to the gold mines; in place of that he has only to offer a more or less ancient history, such as the story of how the United States bought Alaska from Russia. It is rather interesting to note that M. de Varigny is much concerned at the enormous increase in the gold production of the world. He shows that the estimated increase amounts to a

hundred and ninety million francs worth between the year 1896 and 1897, and he anticipates that when the accounts for 1897 are made up the increase will exceed two hundred million francs. Whether this enormous output of gold will mitigate the evils induced by the fall in the price of silver is a matter for specialists to decide, though so far it certainly seems that the world is ready to take and use up in various ways, whether as currency or in the arts and manufactures, all the gold that can be produced.

The lively interest which has been aroused both in France and England by the remarkable book of M. Demolins on the superiority of the Anglo-Saxon race is curiously shown in a review written by that able publicist, M. Valbert, who by no means agrees with his author's conclusions.

The second October number of the *Revue* is perhaps rather more interesting than the first. M. Benoist begins what promises to be a most interesting series of articles on the Austro-Hungarian Monarchy and the balance of power in Europe. This first instalment is concerned with the various nationalities which make up that singular political entity, the Austro-Hungarian Empire, in their relation to the aged Emperor Francis Joseph. M. Benoist has consulted the "Almanach de Gotha," and he rehearses the long list of titles possessed by his Majesty—Emperor of Austria, Apostolic King of Hungary, King of Bohemia, Dalmatia, Croatia, Slavonia, Galicia, and so on, and so on. All these are, as he justly points out, not at all empty titles, but representative of the ascendancy which his Imperial Majesty enjoys over a strangely inconsistent mixture of peoples and races. Jurists will tell us that the union of Austro-Hungary is real, and not only personal, but the truth is that the Austro-Hungary of to-day only holds together by means of the personal influence of the Emperor-King. The time will perhaps come when Francis Joseph will be regarded, without exception, as the great ruler of the nineteenth century.

M. Paul Leroy-Beaulieu deals with the important subject of population in France. He has nothing particularly new to say. It has long been known that the stationary position of the population in France is due to the drifting away of the French people from the old region, and that the birth-rate is greatest in those departments which are most Catholic. M. Leroy-Beaulieu points out an influence which also makes against large families, in addition to irreligion, and that is the new democratic conception of the family, which amounts in plain words to social ambition. In every rank nowadays the parents desire ardently to put up their children a peg higher in the social scale, and this can usually only be achieved by having very few children to put up. M. Leroy-Beaulieu has a curious calculation that if the whole of France were religious the birth-rate, instead of oscillating between 850,000 and 880,000 per year, would amount to not less than 1,200,000 every month. It is interesting to note also that M. Leroy-Beaulieu finds in England a similar cause for the falling off in the rate of increase of the population. He thinks that the influence of the trade unions has lessened the birth-rate in that they have induced the working-classes to aim at increase of wages, the reduction of the number of apprentices, and the gradual rise of the working-classes to the position of the *bourgeoisie*.

Among other articles in the two numbers may be mentioned M. Bentzon on the Collectivist ideal as expressed in American fiction, which resolves itself into a review of Edward Bellamy's last book; and M. Bertaux on the great routes of pilgrimages and of emigration.

### NOUVELLE REVUE.

We have noticed elsewhere Madame Juliette Adam's extremely curious account of the part she played in bringing about the Franco-Russian Alliance.

The contents of the October *Nouvelle Revue* are exceptionally interesting. The place of honour is given in both numbers to some dozen letters addressed by Louis Blanc, the famous old Republican, to his publisher Noel Parfait. They run from the beginning of the year 1859, when Blanc was living in exile in London, to the end of 1862, and are dated from 13, George Street, Portman Square. Both writer and publisher were steadfastly opposed to the Napoleonic Dynasty, and the letters show the number of sympathisers Louis Blanc found among British public men. The history of that group of French exiles which comprised, it will be remembered, in addition to Blanc, Ledru Rollin, Blanqui, and the Victor Hugo family, has yet to be written, and should form a very curious chapter of French history. Although many of these people suffered from the acutest poverty, the amnesty was not hailed with great rejoicings, and the text is given in French of a long letter written by Blanc to all the London papers, in which he explains clearly how the law passed in their favour affected the Republican exiles.

The Comte de Chalot describes with considerable spirit a yachting tour made by him in Greek and Turkish waters during the late conflict. He criticises freely both sides, and adds his testimony to the curious state of unpreparedness in which the Greeks found themselves. He quotes the opinion expressed by a number of Greek officers who had taken part in the assault of Prevesa as to the extraordinary impassibility and stoicism of the Turks. The French yachtsman had apparently every facility given him to see all that could be seen, and these extracts from his diary kept from day to day will not be without value to the future historian, the more so that the writer was apparently absolutely impartial, for while praising the Turkish rank and file for its bravery, he gives an amusing account of the cowardice of a highly-placed pasha. The Comte de Chalot evidently considers—and it must be remembered in this connection that every Frenchman is necessarily more or less of an expert on military matters—that had the Greek nation been fully equipped, the struggle might have taken a very different shape. Thus, when going over Prevesa, he noticed that from three to four thousand shells thrown by the enemy fell without bursting. A pathetic account is given of the camp, where twelve thousand refugees had fled from Thessaly, and the writer quotes some anything but complimentary remarks made *à propos* of Turkish methods by some of these unfortunate people. Even more deplorably striking and terrible is the description of that portion of the Greek army seen by the Comte. By that time—the middle of June—all hope was practically lost; discipline had come to an end, and although the soldiers seemed to have preserved to an extraordinary extent their good temper, their complaints against their leaders were loud and unceasing. M. de Chalot goes to some pains to prove that the German officers, who are said to have organised the Turkish army, had nothing to do with the success of the Turkish arms. He declares that they had prepared a most elaborate scheme of invasion, but that it was never carried out, and that accordingly the success obtained by the Turks was entirely owing to a number of causes that were not in any way due to the Teutonic element among their leaders. As to when the Turks will evacuate Thessaly, the writer observes significantly, "When the Powers care to send a fleet to the Bosphorus

and offer the Sultan as an alternative between the bombardment of Yildis the immediate evacuation of Thessaly, the Turks will recross the frontier."

All those interested, either directly or indirectly, in forestry and the preservation of woods, will find profit in reading M. Regelsperger's delightful article on the protection of trees. Time was, he reminds his readers, when France was practically one huge forest. Even now within a very few miles of Paris are bits of wood unique in character and of surpassing beauty, and this in spite of the fact that the terrible war year of 1870-71 was the cause of awful ravages, due partly to nature and partly to the invaders, who seemed to take a positive pleasure in destroying one of the greatest beauties of France.

Forestry has always played a considerable part in France. The Government keep up a whole army of foresters; and at all times, save perhaps during the revolutionary decade, those who have governed the country have been willing to subscribe to the old French saying, "Forests precede peoples, but where the tree is the man will soon be found." Six years ago a number of country gentlemen started an excellent little society, which is now spreading through all the departments, entitled "*Société Française des Amis des Arbres*," and which has for its object, as its curious name implies, that of saving and preserving, as well as planting trees.

There is also a close analysis of what the writer, the Duchess of FitzJames, entitles French Anglomania, and in which she discusses with great bitterness the tendency of French smart society to follow London in the matter of sports, clothes, and club life

#### THE INVESTORS' REVIEW.

PESSIMISM—or shall we say a strong desire to know the worst that can be feared?—seems to be popular in business circles. The *Investors' Review* will, it is announced, be turned into a weekly financial newspaper, price sixpence, on January 7th, the sixth anniversary of its commencement.

#### HOW TO SAVE THE WEST INDIES.

There is a vigorous paper on the West Indian Sugar Commission. Because of signs of self-help awaking in Jamaica, Trinidad, and Demerara, and "because the emancipated slaves have never had decent treatment at our hands," Mr. Wilson thinks

it may be a wise course to acquiesce in the recommendations of this Commission. Let the negroes be settled on the land, cease to pamper the planter who is not able to help himself, who perpetually whines in our ears for money, money. Give the money to established schools of horticulture and nurseries for new kinds of plants, better varieties of sugar canes. Let a good line of coasting steamers be established to maintain communications between the islands, and suffer the necessary money to be risked in the establishment of central sugar factories.

But he would not allow "the hide-bound local governments" to be the spenders of the grants and loans; he would establish a separate administration.

#### BRITISH MERCHANT SHIPPING IN 1896.

There is actually a cheerful view taken of our merchant shipping:—

In the midst of loud and well-justified complaints as to the supersession of British by foreign commodities in the markets of the world, it is gratifying to find that in the matter of merchant shipping we have more than succeeded in holding our own against all rivals. . . . According to some tables recently issued by the Board of Trade, the net capacity of the steam and sailing vessels registered in the United Kingdom last year was 9,020,282 tons, and of the vessels belonging to the whole of

the British Empire, 10,503,307 tons. . . . According to a necessarily rough calculation, the merchant tonnage of the world runs to about 22,500,000 tons, of which 10,503,307 tons is credited to the British empire alone. . . . Especially marked has been the increase in steam as distinguished from sailing vessels. To-day our steam tonnage is 6,720,703—about as much as that of all other nations added together.

Last year we launched merchant ships of a gross aggregate capacity of 1,159,751 tons, of which 324,749 tons (321,000 tons steam) were for foreigners. Germans were our best customers, they took 117,870 tons. The new tonnage launched at foreign and colonial ports in the same year, exclusive of warships of course, aggregated 408,130 tons. If we exclude America's contribution . . . we built in 1896 for other nations 50 per cent. more tonnage than they build themselves.

Mr. Wilson protests vehemently against bi-metallic agitators tampering with the gold value of the banknote: and pronounces "the true source of Indian woes" to be our forward policy and the militarism behind it. He welcomes the demand for a larger army as likely to teach the people what Jingoism means.

#### THE ITALIAN MAGAZINES.

An article by Professor Frassati in the *Nuova Antologia* (Oct. 16th), which has excited considerable attention on the Continent, gives an exceedingly candid account of Italy's reasons for joining the Triple Alliance, and of her ever-diminishing reasons for continuing it, and winds up with a strong bid for an alliance with England. The Franco-Russian alliance, according to our author, "has radically altered the essence" of the Triple Alliance. The latter was originally conceived in the interests of Germany, for while it maintained the *status quo* in Europe, it prolonged the isolation of France. But it also gave to Italy a recognition as a great Power which had not until then been conferred on her by Europe. By the new Franco-Russian alliance both Germany and Austria lose; Italy alone of the three allies profits by the event. It is she in a sense who holds the balance between the other four. "Italy in the new European situation occupies a position of the very first rank. The whole future of Europe may depend upon her being the ally of one side or of the other. Hence we see why Germany and Austria . . . gave to the recent meeting at Homburg a note of such cordial sympathy." The Professor devotes many pages to proving that Italy has now nothing to gain by a renewed adhesion to the *Triple*. Her general position before Europe is assured without it, and it affords her no guarantee of the one thing that is essential to her welfare, i.e., the maintenance of the present equilibrium in the Mediterranean. Yet Italy cannot afford to remain isolated. There is only one other possible combination—an alliance with England. According to our author a first step in this direction was in 1887, when Count di Robilant effected an agreement with England for the protection of Italian interests in the Mediterranean. He cannot affirm that this understanding is still in existence, but he none the less looks to it as the basis of an open alliance. For both countries the present equilibrium in the Mediterranean is essential, and Italy could support England in Egypt. Italy, concludes the Professor, is intended by Nature for a maritime Power; let her unite with the nation possessed of the greatest navy in the world, and together they would exert a maritime supremacy over the whole of Europe.

To the same number Professor P. Villari contributes a sympathetic critique of Mr. John Morley's *Romanes Lecture on Machiavelli*. While pointing out that Mr.

Morley has left unsolved many moral points raised by the Machiavellian attitude, he testifies to the "admirable precision, elegance, and eloquence" of his writing. In Professor Villari's own opinion, "Machiavelli's greatest merit lay in the fact that he was the first and only man to indicate the profound difference that exists between the line of conduct to be held in public and in private life; to have dared to express it openly, even brutally if you will, without caring for the chorus of indignation which he would inevitably excite against himself, because he knew he was speaking the truth, and was performing an act of service to humanity."

The *Civiltà Cattolica* contains, under the title "Unconscious Catholicism," a pleasantly written account of quaint old Christmas customs, faithfully preserved in the Protestant villages of Prussia, which have come down from pre-Reformation times.

### THE CENTURY.

THE *Century* for November is a very good number. I have noticed elsewhere Mr. Stadling's account of "André's Flight into the Unknown," and Mr. Terrell's extraordinary eulogy of Abdul Hamid. Mr. Charles Lowe tells at length, with many illustrations, the story of Chitral. Mr. Scott O'Connor has the first place in this number with the pleasant gossip paper about Mrs. Cameron, her friends and photographs. It is illustrated with portraits of Sir John Herschel, Robert Browning, and Mrs. Cameron. The best pictures in the magazine are those which illustrate the paper on "Strange Creatures of the Past," which follows immediately upon the sketch of Edward Drinker Cope, former editor of the *American Naturalist*, who did a great deal to extend our knowledge of the monsters who lived in the Reptilian Age. On looking over the pictures of these grim giants, we have new reason for gratitude that we were born so late in the history of the world. It is easy to understand, when looking at these illustrations, that the stories of the dragon of early romances may have had historical basis. Two ladies write on historical subjects, one on the "Last Days of Louis XVI. and Marie Antoinette," the other upon the "French Intervention in Mexico." One of the shortest but pleasantest articles in the number to read is Mr. John Burroughs's paper on the re-reading of books. Among the books which he says can be re-read many times are "The Vicar of Wakefield," White's "Natural History," Boswell's "Life of Johnson," Emerson's "Representative Men" and "English Traits," Dana's "Two Years Before the Mast," Eckermann's "Conversation with Goethe," and Carlyle's "Life of Sterling." Among those which he finds it impossible to read over again are Dickens's novels, Carlyle's "Past and Present," Matthew Arnold's "Literature and Dogma," and Wilkie Collins's "Woman in White."

BEYOND the hint of "Politics" that possibly the Duke of Devonshire and a Whig administration may replace the present Government, there is not much calling for remark in the *New Century Review* for November. Demetrius C. Boulger urges that to hold our own against Russia in China we must re-occupy Port Hamilton and push on a railway in the South to Shunningfu. Dr. Bowmaker passes under review six years' work under the Housing of the Poor Act (1890), rejoicing in its widespread acceptance, but regretting the restricted local application—due largely to the very heavy cost of buying up insanitary dwellings.

### THE SCANDINAVIAN MAGAZINES.

IN *Kringsjaa* (September 30) Herr Oscar Julius Tschudi concludes his article on Elinburgh. Referring to the Scotch love of Bible-display, he cites an amusing instance of how a traveller, observing on a shelf in his host's library two most beautifully-bound volumes of the Old and New Testaments, felt a strong desire to examine the handsome books more closely, and, taking them down, found, to his amazement, on opening them—a dozen fine Havannas. The two volumes were only a couple of shells, as it were, joined to form a cigar case! It is due, however, to Herr Tschudi to state that he does not on this account believe all Bibles in Elinburgh to be cigar cases, but is sure that the Scotch piety, though somewhat ostentatious, possesses a sound enough kernel. Concluding, he remarks that Edinburgh, proudly self-styled the "Athens of the North," might rather be termed the "Modern Jerusalem." Granted that, in its more externals, its situation, its plastic monuments, its pillared halls, its statues, it may resemble the art-centre of old Hellas, in life and spirit it more nearly resembles Jerusalem. With its many priests and prophets, its scribes and its pharisees, its rigorous observance of the Sabbath, its temple-and-Bible movements, it seems to Herr Tschudi more like the ancient Jewish capital than gay, art-loving Athens.

*Nordisk Tidskrift* has several good articles—the first, a literary and interestingly written study by Alfred Jensen of the fragmentary and bizarre "Dziady," or "Feast of Death," by Adam Mickiewicz, the greatest of Slavonian bards, and the pioneer of Polish romance. The "Feast of Death" had its birth, it seems, in the wild, half-suicidal melancholy that followed upon the poet's parting from his first real love, Maria Wereszszakowna, whose feelings for him appear, however, to have rather partaken of a merely literary-poetical interest than of any genuine passion, and whose subsequent marriage with the cultured Count Wawrzyniec Puttkamer—a more suitable suitor, according to her wealthy and distinguished mother's ideas, than the poverty-stricken young poet-student—was, though loveless on her side, by no means an unhappy union. Dziady was the name of a Feast of Death celebrated by the people in many parts of Lithuan, Prussia, and Courland, in honour of their forefathers and of the dead generally. It was a heathenish ceremony—a relic of heathenish days—by which the living thought with meats, and fruits, and wines to assuage the sufferings of the souls in purgatory, and was put down as far as was possible by the priesthood, though still in Mickiewicz's day flourishing in secret. Common to the ancient Greeks in Homer's time, to Scandinavia, to Austria, and to the islands of the New World, it was here blended with Christian ideas, and was held on All Souls' Day. The "Feast of Death" is, indeed, a smaller "Divine Comedy," with this difference, that the dead visit instead the living. Paradise is represented by child-angels, Hell by tyrants and vampires, and Purgatory by the agonies of Gustaf and of the nameless girl (who is clearly, however, Maryla) floating 'twixt heaven and earth.

In *Tilskueren* Herr U. Birkedal has a political article on "Danish Patriotism and North Schleswig," in which he asserts that it is of small use for the Prussians to declare that "there is no North Schleswig Question." There is a North Schleswig Question. In North Schleswig there is no likelihood of the Danish element melting into the German, nor any sign that the conquered people will meet their fate without resistance. Quite the reverse.

## ILLUSTRATED MAGAZINES.

**Pall Mall Magazine.**

WHAT perhaps most deserves attention in the *Pall Mall Magazine* for November is a sketch of the late Sir John A. Macdonald as "a builder of the Empire," by his widow, Baroness Macdonald. After telling how the son of a poor Scottish immigrant rose from grammar school and lawyer's office to be barrister and legislator, she observes that with him "it was the Empire and England's precedence always, in things great and small,—from the pattern of a ceremony, or the spelling of a word, to the shaping of laws and the modelling of a constitution." This was his ruling idea. A somewhat grotesque study in natural history is given by Mr. W. H. Bickerton in his account of the Macquarie Islands, "the home of the penguins of the world." Judge O'Connor Morris retells the story of the battle of St. Vincent. The craze of Frederick the Great's father for huge grenadiers is recounted, with many humorous incidents by Mr. Hutchinson. The great house described is Longleat, in Wiltshire, the seat of the Marquis of Bath. The frontispiece is Roybet's "La Sarabande."

**Pearson's.**

*Pearson's* for November keeps up the cult of the whimsical and peculiar. The art of self-disguise is illustrated by many striking contrasts between the real person and his or her artificial exterior. The way in which toy Noah's Arks are made out of rings of specially-grooved wood is amusingly described. "Walking-Stick Wonderland," by Merriden Howard, shows how walking-sticks can be made to conceal surgical instruments and medicine, geologist's hammer, writing instruments, comb and brush, knife and fork, campstool, revolver, paint-box, etc., etc. Mr. Holt Schooling applies his diagrammatic method to the relative statistics of land and sea. Frederick Dolman gives miniatures with pen and portrait of our leading Lady Orators, and actually omits Mrs. Josephine Butler. Mr. J. M. Fraser describes the "Mile of Millionaires" in Fifth Avenue, New York. The property is valued at twenty millions sterling, but the combined wealth of the residents at £500,000,000. He complains of the sameness of architectural design, alleging that "with few exceptions every one of these houses looks as though it had been designed by Geometry, squared by Algebra, and generally put right by Euclid." The beautiful groupings of baby heads and baby bodies, which open the number, lose their flavour somewhat when the prosaic photographic secrets of their combination are told.

**The Woman at Home.**

*The Woman at Home* is a good number. Miss Lindsay's sketch of the Marchioness of Salisbury will open up to many for the first time the romance of the Prime Minister's early life. Ian Maclaren contributes a short story of a minister who breaks his heart over an old man's young widow rather than break his vow to treat her as sister: much to the misery of the willing widow. "The Millionaire at Home" whom Mr. Norman Hurst describes is Mr. J. Lawson-Johnston, the maker of Bovril, whose palace is at Sydenham. In its grounds of forty acres is a model "ruined castle" containing fragments of the marble bath in which Marie Antoinette used to bathe in milk. The symposium on wedding presents amounts to the good moral advice of never giving except cheerfully.

**Harper's.**

*Harper's Magazine* for November opens with a very brightly-written and well-illustrated paper by Richard Harding Davis, describing his experience with the Greek soldiers in the recent war. Mr. Stockton's story of the Great Stone of Sordis is concluded. Dr. H. S. Williams describes the Century's Progress in Biology. There is one very touching page devoted to a poem by Mark Twain in memory of his daughter, Olivia Susan Clemens, who died August 18th, 1895, aged 24 years. It is full of beauty and pathos.

**McClure's.**

*McClure's* for November is a bit of a record number. The two papers—quoted elsewhere—Mark Twain's diary of a voyage from India to South Africa, and Mr. Theo. Waters' account of Edison's electrical revolution in iron mining, are either of them alone sufficient to make the issue famous; and there is much good matter besides. Mr. Dana's recent death lends a pathetic interest to his reminiscences of men and events in the Civil War, the first instalment of which now appears. M. Ferdinand Brunetiere's impressions of America are naïve and readable. One remark may be quoted: "By means of these great universities much of America is in the way of aristocratising itself"; they will "constitute an aristocracy of intelligence in that great democracy."

**Scribner's.**

*Scribner's Magazine* opens with one of the admirable series of "Conduct of Great Businesses." This time the subject is the business of a great wheat farm. It is excellently illustrated and full of facts, which are calculated to open the eyes of our agriculturists. Among other things there is shown a giant harvester used in California. It has a cutting line 52 feet wide; it cuts, threshes, and sacks the grain at the same time. It covers an area of 100 acres a day, and would yield from 1,500 to 1,800 sacks of wheat. There is a novelty in the shape of an article entitled "With Dog and Gun," which is entirely devoted to pictures by Mr. A. B. Frost, without any letterpress at all. There is a brief literary paper on Sainte-Beuve and a country church in America, and an article, gluttled with illustrations, describing unusual uses of photography. The first part is devoted to photography by cameras hoisted high in the air by kites or balloons, and the second part to photography at night.

**The Strand.**

*The Strand* valiantly pursues the quest of the queer and the odd and the eccentric. One wonders what the mental effect on readers must be of a continual diet of abnormalities. Here, for example, in the October number, we have elaborate specimens—and chiefly Jubilee specimens—of the utterly unnatural art of floral carpet-bedding by Mr. Oliver Thorne. Then Jeremy Broome describes the marvels of skin-writing. Dr. G. L. Johnson depicts some most curious optical illusions. Mr. L. S. Lewis tells extraordinary stories of peculiar wills—rhyming wills, punning wills, wills picked up at sea, ending with a will which left to the testator's widow every year her weight in gold! Queer conveyances from various parts of the world are shown; and record is given of the wonderful achievements of an educated monkey. More serious articles are contributed by Mr. Grant Allen in his "Woodland Tragedy," or story of the gruesome performances of the shrike or butcher-bird, and by Mr. FitzGerald's interview with Harry de Windt, one of the heroes of Klondike.

## LEARNING LANGUAGE BY LETTER-WRITING.

THE list of boys is not very large this month, a fact the more to be regretted as next month's list will not bring replies until after the Christmas holidays. Letters in support of the scheme from members of the Headmasters' Association were read at the Council of that body which met early in October, but without result so far. Masters who have tried the plan, and endeavoured to ensure its success, speak with enthusiasm, but teachers as a body look at the evil (which necessarily accompanies every good thing) so closely that they cannot see any good at all. One sad little note came to me. A mother thought that the correspondence might interest a son, who from delicacy had had to give up school life, and study at home. A French correspondent was sought with care; but the boy died, and in his desk was found an unfinished letter to his French friend!

As regards girls, few names have been sent from France, Switzerland or Belgium since the holidays. Will those ladies who have sent in lists excuse, therefore, the delay? I do not advise that lists should not be sent, for, as happened last July, a sudden demand may come for many English girls as correspondents, but speedy answers cannot be promised. The lists are generally published in the *Revue Universitaire*, as are those of the boys. But a mischievous boy, having read the list, wrote to one of the girls—of course without permission. This will probably necessitate a change of plan; lists of girls' names may always have to be sent privately, and a small fee charged, as is the case with adults. At the same time, I am loth to do this. The risk of an occasional intrusion is not great; and any girl who receives a letter she does not like, need not reply to it. It is possible to be too squeamish about these things.

Professor Hartman sends a fresh list of boys from Germany, but he writes that the German Society for the Study of Modern Languages will only allow letters to be exchanged between *schoolboys*; will our applicants please notice therefore that they must send address of school.\* This same rule really holds good as regards French boys also, and, consequently, when applications are made without the consent of the parent or teacher, additional trouble is caused, as I have to write and ask for that consent. Of course, this rule does not include students over twenty. I have the names of several such German students.

The co-operation of the *Revue des Revues* is a great spur to the adult correspondence. M. Finot receives many letters of thanks and fresh applications, but one letter was sent him from a lunatic asylum. The writer says:—

I trust the place from which I send this will arouse your sympathy as well as your curiosity. Condemned by an unscrupulous administration to pass some months in this retreat, I should like to occupy my enforced leisure in the study of Spanish. I have heard of your ingenious scheme for advancing the study of language, and should like to try your method if you will be good enough to find me a correspondent. To enable you to judge of my circumstances and tastes, I may tell you that my age is thirty, and that I was formerly an advocate in the Court of Appeal.

\* This is insisted on by the German professors, who say that, from their point of view, the educational value of the scheme is its only title to consideration: if boys are left alone, they will write nonsense. What matter if it is only nonsense, and not wrong sense; surely talking of the trivialities of daily life give fluency to language!

The letter gives further particulars, and declares that the sole cause of his detention was a letter which was pronounced to be *mad*. The poor man's account of himself was confirmed by the superintendent of the asylum. Truly this is a mad world!

By mistake a few addresses of English correspondents were printed last month in the *Revue des Revues*. Any one receiving a letter from an unauthorised person in consequence, is earnestly asked to forward such letter to me at once. May I add also that no English girl is ever put into communication with a French boy without the written consent of parents or teachers; this not having been understood, some applications have been sent without such written consent.

Friends would save much trouble if they would always mention age and occupation, if any. This is not necessarily communicated, but it is quite impossible to guess rightly such particulars. I have mistaken a woman's letter for a man's, supposed a boy of sixteen to be about twenty-three, and a lady of twenty-four to be a schoolgirl. Adults are asked to send one shilling for expenses when able, but it is impossible for me to assign any definite time for finding a foreign correspondent; this is unfortunately especially the case as regards ladies. Will our English girls remember that the social freedom they enjoy is not shared by their French and German sisters in so great a degree.

English correspondents are desired by—

1. A noble Spanish lady.
2. A Portuguese officer.
3. The Government Secretary in a French colony.
4. A French wine merchant in the East, and an optician.
5. French pupil teachers (male).

Foreign friends are asked to help in finding for Englishmen—

1. A correspondent in the South of Italy acquainted with its physical structure, etc.
2. Two Danish gentlemen, one interested especially in agriculture.

A French gentleman living near Calais would like to receive in his home an English boy wishing to study French in exchange for his own son, who desires to study English for six months.

I have been asked to notice that Université Hall, 95, Boulevard St. Michel, has been opened to supply the various needs of English people staying in Paris for the Christmas and Easter holiday courses. It contains a library, reading-room, etc. Information and special lessons are given. Apply direct for full particulars.

M. Leclerc, who has organised the scholars' correspondence in France, has written a most interesting book, entitled "L'Éducation des Classes moyennes et dirigeantes en Angleterre." Writing of the instruction given to French scholars, its thoroughness and unity of plan, he compares it with the education given to the English boy. This latter is not so well taught, but he has acquired physical power, energy, and the ability to think and act for himself, and is consequently better prepared for the battle of life than the French boy. I expect an exchange of influences would be good here. Our boys might give some of their love of football and cricket to their over-the-Channel comrades, and get some of the latter's industry and steadiness at work, without losing self-reliance and independence.

# THE BOOK OF THE MONTH.

## HOW GOD REVEALED HIMSELF TO MAN.\* BY GRANT ALLEN.

### I.—THE LATEST CHRISTIAN APOLOGIST.

OF all mortal men Mr. Grant Allen would probably be the last who might be expected to figure as the nineteenth century successor of the eighteenth century Paley. Yet it is possible that this new book, to which he has devoted twenty years of thinking and ten years of writing, will hold a place with many readers in the library of Christian Evidence second to none. Mr. Grant Allen's book is thoroughly up-to-date. The fundamental idea of the evolution of religion is as old as the hills, but it supplies in popular form exactly that which a great number of people have hitherto been seeking for in vain.

As no small portion of its value depends upon the character of the writer, it may be well to preface an account of this book with some statement of the credentials which Mr. Grant Allen possesses, which qualify him pre-eminently for the task of Christian Apologist. In the first place, Mr. Grant Allen disclaims the title of Christian. He is an agnostic of a very pronounced type. Secondly, he is not merely in revolt against the Christian creed, and altogether outside the pale of the Christian Church, but he is even in revolt against one of the most fundamental of all the ethical teachings of Christianity. On this point I need not dwell beyond reminding the reader that the author of "The Evolution of the Idea of God" is also the writer of that hill-top romance "The Woman Who Did." Thirdly, Mr. Grant Allen is much more uncompromising than even the most destructive of the higher critics in his rejection of the historical accuracy of the Bible. Fourthly, unlike John Stuart Mill and other eminent agnostics, Mr. Grant Allen never in a single sentence betrays any admiration, much less reverence, for the central figure of the Christian religion. Even regarded as a mythical hero, Jesus of Nazareth has evoked from the most extreme Freethinkers expressions of enthusiasm almost approaching to devotion. Of this there is not a trace in Mr. Grant Allen's writings. Finally, as the supreme credential for a Christian Apologist, Mr. Grant Allen repeatedly and with emphasis declares that morality has nothing whatever to do with religion. This is perhaps stating it a little too broadly. But Mr. Grant Allen's point is, that "What is not at all essential to religion in its wider aspects is the ethical element appropriately so-called." "Religion again," he says, "is not mainly, as the mistaken analogy of Christian usage makes us erroneously call it, Faith or Creed, but simply and solely Ceremony, Custom, or Practice." Again, after noticing the presence of a large element of ethics in the highest religions, he repudiates this as having nothing whatever to do with religion proper. He says, for instance, "we are constantly taught that real religion means many things which have nothing on earth to do with religion proper in any sense, but are merely high morality tinged by emotional devotion to a spiritual being or set of beings."

It must be admitted that the six qualifications of Mr. Grant Allen to be exalted to a high place among the

Christian apologists or writers on Christian Evidence are unique. It may appear to the ordinary reader that this is written in sarcasm. It is nothing of the kind. It is precisely because Mr. Grant Allen is all these things that his volume, although to the expert only the work of a very clever trol in philosophy and theology, is entitled to a high place in the library of Christendom.

### II.—THE GENESIS OF MR. ALLEN'S FAITH.

In this book Mr. Grant Allen endeavours to give us the genesis of God. We are therefore naturally justified in endeavouring, first of all, to ascertain the genesis of Mr. Grant Allen's idea of a God. In his preface he tells us very frankly how it is that he came to his present beliefs. As might be expected from the disciple and friend of Mr. Herbert Spencer, he has adopted as the foundation of his theory as to the origin of Polytheism, the Ghost theory of Herbert Spencer, and he traces the origin of the different gods to primitive ancestor-worship, or rather corpse-worship. To this Spencerian basis he has added the theories of the rise of Monotheism, which are to be found in the writings of Kuenen and other German-Dutch critics, and their disciple in Scotland, the late Professor Robertson Smith. In his ideas as to the origin of Christianity he has been guided to a great extent by Mr. J. G. Frazer, whose book, "The Golden Bough," has exercised great fascination over Mr. Grant Allen's mind. Of course, Dr. Tylor has been one of his teachers, while the three authors who may be said to have given the finishing touch to his theistic education—if Theism may be called where Theos there is none—are Mr. Sidney Hartland, the author of "The Legend of Perseus," Mr. Laurence Gomme and Mr. William Simpson, of the *Illustrated London News*. Under such tutors, and upon such foundations as their works supplied, Mr. Grant Allen has constructed a faith of his own, which it is the object of this book to expound and defend. It is a faith of compromise representing an attempt to reconcile the conflicting schools of the humanists and animists headed by Mr. Spencer and Mr. Frazer, with a strong leaning to Mr. Herbert Spencer. As a result, Mr. Grant Allen has arrived at the conclusion that God is largely a manufactured article, in the manufacture of which the deliberate slaughter of human beings has played a very conspicuous part. This is one of the original ideas upon which Mr. Grant Allen specially prides himself. The doctrine, he tells us, of the manufactured God, "to which nearly half my book is devoted, seems to me a notion of cardinal value," and he certainly sets forth at great length the important share which he thinks has been played in the genesis of most existing religious systems by the deliberate manufacture of gods by killing. It would be unfair to attempt to summarise the conclusions finally arrived at by Mr. Grant Allen excepting in his own words; but in the last sentence in the book he summarises for himself, telling us that "corpse-worship is the protoplasm of religion."

This is Mr. Grant Allen's conclusion, so far as he has got at present; for, as he tells us in the concluding chapter, he has changed his mind far too often in the course of

\* "The Evolution of the Idea of God: an Inquiry into the Origins of Religions." By Grant Allen. Pp. 448. London: Grant Richards. 20s. net.

his personal evolution ever to think that he has reached complete finality. Fifteen or twenty years ago he was rash enough to think he had come to anchor when he read the "Principles of Sociology;" but ten or twelve years since, doubts and difficulties again obtruded themselves. Six years ago, when "The Golden Bough" appeared, he was forced to go back entirely upon many cherished former opinions, and to reconsider many questions which he fondly imagined were closed to him. Hence he only puts forth this rehabilitation of euhemerism as a tentative suggestion, and rough foreshadowing of a hypothesis and summary of probabilities. He is, however, not without hope that, although he knows that he has not by any means fathomed the valley of truth, he may have looked down a little deeper in the profound abyss beneath us than has been the lot of most previous investigators.

### III.—A DANIEL COME TO JUDGMENT!

Having said all this, it is about time to explain why it is I regard Mr. Grant Allen's book as of such value from the point of view of Christian Evidence. It is because he is what he is, and starts from such a standpoint, that the importance of his work appears. Mr. Grant Allen, all unwittingly it may be, has nevertheless to some extent accomplished the task, first, of familiarising the public with one of the answers to a great difficulty which has stood in the way of the Christian conception of the world—about which I shall have more to say presently—and secondly, of basing the claims of Christianity to the regard and respect of the race upon wide and deep foundations. Mr. Grant Allen himself admits that he regards his inquiry, not as destructive, but as reconstructive, and reconstructive undoubtedly it is. The work of destruction has been abundantly accomplished in reflective minds by innumerable writers and thinkers. Mr. Grant Allen, in this history of the "Evolution of the Idea of God," supplies the ordinary intelligent man with a simple and sublime conception of the relation in which Christianity stands to humanity and to the world's progress. If I had to condense the net effect of the review of this book in a sentence, I should say that Mr. Grant Allen succeeds in conveying the familiar idea that Christianity stands in the same relation to all the other faiths of mankind that man does to the brute. In other words, as man is to the ape, so is Christianity to the primitive beliefs of the savage. It is an evolution, a natural evolution, whose existence is justified by the law of the survival of the fittest. Christianity, like man himself, may claim to be the heir of all the ages.

As Mr. Grant Allen phrases it, all other religions contain "innumerable anticipations of Christianity, or to put it conversely, Christianity subsumes them all into itself in a highly concentrated and ethericised solution." This book is but a new application of the law of evolution to the religious faith of the world. Long before Darwin wrote his "Descent of Man," German and other thinkers had voluminously formulated the evolution of the idea of God; Grant Allen has written in this book his version of the process.

As Mr. Grant Allen remarks at the very beginning of his book, there is nothing antagonistic to the Christian faith in such a conception:—

The Christian believer may hold that man arrived by natural stages at the knowledge of the one true God. He is not bound to reject the final conception as false merely because of the steps by which it was slowly evolved.

This surely is to state the case very moderately indeed. Instead of being "not bound to reject," it would be more

accurate to say, "is the more imperatively bound to accept the final conclusion towards which the whole life of the race has steadily tended." This doctrine is indeed a natural corollary to the change in the conception of the creation of the world that came in when the hypothesis of Darwin superseded the traditions preserved in the Pentateuch. Mr. Allen says:—

A creative God, it is true, might prefer to make a sudden revelation of himself to some chosen body of men; but an evolutionary God, we may well believe, might prefer in his inscrutable wisdom to reveal his own existence and qualities to his creatures by means of the same slow and tentative intellectual gropings as those by which he revealed to them the physical truths of nature.

In other words, God has revealed Himself to man as the human father educates his child. He begins with the A B C, and steadily builds up on that foundation. However wise the child may become, he never unlearns his alphabet. And so in Christianity, the final evolution of all creeds, the original deposit of faith is never for a moment obscured.

### IV.—THE INFLUENCE OF HISTORIC PERSPECTIVE.

Now, I come to the second great service which Mr. Grant Allen has rendered the Christian believer. He has popularised and simplified one phase of the answer to the problem raised by the discovery of the numberless years during which man has existed on this planet.

At the beginning of this century, the ordinary idea of the ordinary man was that the world was made four thousand and four years before Christ, and that the life of the race, therefore, was under six thousand years. Further, while it was admitted that there were many heathens, of whom the Greeks and Romans were the most conspicuous representatives, nevertheless the history of the world pivoted upon the life and death of Jesus Christ. Antecedent history was chiefly important in so far as it supplied types and shadows which might be regarded as foreshadowing the advent of the Son of Man. Thus, the light of the Cross spread both backwards and forwards, illuminating not only the Christian centuries, but also the Jewish dispensation and the patriarchal age. There were great difficulties, no doubt, in the way of accepting such a theory; but to ordinary people, by whom the human race as a whole was vaguely realised, and only thought of in the mass, as "the heathen world before Christ," this theory was not unthinkable. But when geology on the one hand, and a whole group of modern sciences on the other, tore down the veil which hid the past, and revealed, both for the world and for man, a history so vast that in the case of the world its duration was reckoned by millions of years, while the life of man was reckoned by hundreds of thousands, the old theory broke down utterly. How could an event which might be said to have occurred only the day before yesterday have had any direct relation to the men of the Stone Age, who perished from the earth thousands of years before the traditional date of the creation of Adam? There is one sense in which, of course, the men of the Stone Age, their faiths and their religions, can be said to have a vital and direct relation to Christianity; but only in the same way that the stone men themselves were related to Plato and Shakespeare, viz., by hereditary succession. But it seemed impossible to hold—as many excellent divines and those who sat at their feet have unquestionably held—that the spiritual life and eternal salvation of all those myriad millions who lived before Bible history began

depended in some direct way upon the retrospective influence of the Incarnation.

What Mr. Grant Allen has done has been to supply to the ordinary intelligent reader, with his notions of the antiquity of the race, just the same kind of argument with which we were all so familiar in the pulpits of fifty years ago as to the importance of the Levitical Law as a type and shadow of that which was to come. The old orthodox Christian apologist went laboriously over all the ritual of sacrifice and worship laid down for ancient Israel to prove that it was a preparation for the full revelation which was to come. Mr. Grant Allen's book is little more than a long and erudite sermon on the same text. For here we have it written out, so that all men may see, how all the religions of the world from the primitive superstitions of the lowest savages have been types and shadows of Him that was to come, and that the old arguments about how the Jewish dispensation prepared the way for the Messiah can be used quite as effectively and with much greater force in relation to all the religions which preceded the coming of Christ.

The bearing of this point upon Christian Evidence is obvious, for the ordinary argument which appeals to the ordinary mind when arguing the question of revealed religion was that if God created man, He would not leave him to grope his way in darkness without some guide as to the existence of his Creator. This is the starting-point of innumerable volumes written to prove the truth of the Christian religion. They start from the *à priori* position that the Divine Father would not, and ought not, and could not in accordance with His character of a Father, leave His children as orphans without affording them any guidance whereby they could even so much as discover the fact of His existence. Therefore, so ran the argument, if the Creator made Himself known to the men whom He had created, a belief in a revealed religion is not only a natural but a necessary corollary from the existence of a Deity. This argument, which passed muster when the horizon of the ordinary man was so circumscribed that it did not extend beyond the history of Christendom and the traditions of the Jews, became hopelessly damaged by the discovery that the life of the race before Abraham left Ur of the Chaldees is to that which has followed that momentous exodus as the mass of the submerged iceberg compared with the pinnacle which juts above the surface of the water. If the old argument were sound, what could be said as to the fate of all the countless generations of men who had slowly, and with infinite labour, struggled up the vast ascent by which men had emerged from the brute? Did the Father then leave all His children without a witness all these thousands of years? Were all our ancestors for thousands of generations left orphaned without hint of their Divine parentage?

These questions, continually recurring to every thoughtful mind, receive in Mr. Grant Allen's book an answer which, although not couched in orthodox terms, is nevertheless extremely helpful. For what Mr. Grant Allen maintains, is that, so far from leaving Himself without a witness, there is no section of the human race now existing on the planet, or which so far as we can ascertain ever existed on the planet, to which God did not impart more or less of the essential principles of the Christian religion. And this, Mr. Grant Allen points out, is equally true of the East as of the West, for he says:—

For we must remember that Buddhism itself did but subsume into its own fabric ideas which were common to Peru and Mexico, to Greece and India, to Syria and Egypt, and which

came out in fresh forms, surging up from below, in the creed of Christendom. If anything is clear from our previous researches it is this—that the world has never really had more than one religion—"of many names, a single central shape," as the poet phrases it.

He maintains that from the earliest ages the vast mass of mankind has always believed in the Fatherhood of God. So far from thinking that, as Mr. Clodd declares, "religion grew out of fear," Mr. Grant Allen maintains that God has always been to the vast mass of mankind a supernatural Being to be revered and worshipped. "He may be angry with them at times, but His anger is temporary and paternal alone. His permanent attitude towards His people is one of friendly concern. He is worshipped as a beneficent and generous Father."

Of this doctrine the "Our Father" of Jesus is the most highly evolved type, but it is here stated to be the universal faith of the whole human race. Mr. Grant Allen attempts in this book to show how inevitable it is that this idea should have been evolved, and "how man's relation with the external universe was certain *à priori* to bring it as of necessity." In other words, the constitution of the world and the laws by which it is governed are such that, inevitably and necessarily, there should be, and there has been, as a matter of fact, a progressive revelation of God to man, a revelation which has gone on purifying itself as generation has followed generation into the abyss, until at last we have arrived at our present conception of the Deity as a—

Being so vast, so abstract, so ubiquitous, and so eternal that He seems to have hardly any points of contact at all with the simple ancestral spirit or sacred stone from which in the last resort he appears to be descended.

Nor is it only the belief in a Father God which is the universal possession of all the sons of men. Quite as widely spread is the belief in the immortality of the soul, which Mr. Grant Allen declares to be "the most persistent and perpetually recurring element of all religious thinking." A belief in immortality or continued life of the dead is, says Mr. Grant Allen, "the core and basis of worship and of Deity." This recalls a passage that I quoted last month from Tennyson's "Moulin," in which Tennyson wrote, "The life after death, Lightfoot and I agreed, is the cardinal point of Christianity." In short, says Mr. Grant Allen, from first to last, religion never gets far away from these its earliest and profoundest associations. God and Immortality—these two are its canons, and those two are one, for the God in the last resort is nothing more than the immortal ghost etherealised and extended. This, of course, is dogmatism on the part of Mr. Grant Allen, so far as the "nothing more." Who is he that by searching can find out a God, or how can Mr. Grant Allen say that He is "nothing more" than this, that, or the other which our finite minds can grasp?

#### V.—THE BEDROCK OF SPIRITUALISM.

There is another reason for welcoming this book, and that is because of the testimony which it renders to the part which a belief in Spirit Return has played in the history of our race. It is indeed hardly too much to say that Mr. Grant Allen makes the ghost the primal mainspring of the religion of the world. Mr. Grant Allen, unfortunately, does not believe in ghosts. He does not know that they exist. Those of us who know that they exist, naturally welcome the testimony of an unbeliever as to the influence of the ghost on the life of man. Religion, says Mr. Grant Allen, "has one element in it still older, more fundamental, and more persistent than any mere belief

in a God or ghost. That element is the conception of the life of the dead. On the primitive belief in such life all religion ultimately bases itself." It is also the latest thing to survive in religion. "For many modern Spiritualists who have ceased to be Theists, or to accept any other form of the supernatural, nevertheless go on believing in the continued existence of the dead, and the possibility of intercommunication between them and the living." This, which is the earliest manifestation of religious thought, and persists throughout as one of its most salient and irrepressible features, is the bedrock of Christianity and of all the other creeds of which Christianity is the sublimated essence.

The Cult of the Dead, says Mr. Grant Allen, which is the earliest origin of all religion, is also the last relic of the religious spirit which survives the gradual decay of faith due to modern scepticism:—

To this cause I refer on the whole the spiritualistic utterances of so many among our leaders of modern science. They have rejected religion, but they cannot reject the inherited and ingrained religious emotions of the race.

That is Mr. Grant Allen's way of putting it; but if instead of taking Mr. Grant Allen's version of why it is that so many of our leaders of modern science believe in Spirit Return, and the persistence of the individual after death, we were to ask the men themselves, we should find that they do not base their faith on "inherited and ingrained religious emotions." Professor Crookes, Alfred R. Wallace, and Camille Flammarion, to name only three among eminent men of science, would each and all tell us that, so far from being dominated by ingrained religious emotions, they have been compelled to admit the truth to which they have borne testimony by the irresistible force of evidence which, as honest men, they could not reject. They know that these things are true, and if Mr. Grant Allen does not know they are true, it is probably because in his lordly way\* he disdains to conduct the inquiries which have led so many of our "leaders of modern science" to make those spiritualistic utterances to which he refers.

As we read chapter after chapter of his book, and see the evidence in almost every page of the influence which the invisible world has had upon the visible, we marvel that so acute and honest an investigator never seems to have asked himself whether after all the practically unanimous testimony of the human race, beginning with the primitive savage and ending with our "leaders of modern science," ought not to count for more than it seems to do with him in considering the factors which contribute to evolve the idea of God in the mind of man. I can only hope that, as his ideas are still in a state of progressive development, he may make yet another stage in his pilgrimage towards truth, and discover that the mainspring of this visible world lies in the invisible realm which surrounds it; and that in accounting for the growth of the beliefs of man on the basis that there is no hereafter in the spiritual world, no persistence in the life of man after death, he is acting about as

rationally as if, after describing the effect of the imports of grain and meat from the United States on English agriculture, he were at the same time to treat the existence of the United States as a myth due to the imagination of man. Of course, you cannot see the United States from our shores, not with the strongest telescope, neither can the most powerful cannon fire a shot that can reach across the Atlantic. Therefore, as the cannon and the telescope cannot obtain evidence as to the existence of the United States, there is no Western Continent. Such, indeed, was the argument of the contemporaries of Columbus—an argument which commanded the assent of the learned world in his day; nor was it until he actually sailed across the Atlantic that the sceptics were silenced. Some day Mr. Grant Allen himself will sail across the great Atlantic which lies between us and the other world, and then for him all scepticism will cease. For the present, however, it is perhaps better that he should be sceptical, for if he realised the fact that the body is but a mere physical mechanism, inhabited for a time by a spirit, which does not even occupy it permanently during its earth-life, and which continues to exist when the body is thrown on one side, his evidence might be regarded as tainted by his convictions as to the reality of the Spirit World. He disbelieves and still he testifies that it is to the belief of mankind in the reality of the life after death that we owe our religion and our civilisation.

The form in which this faith manifested itself was barbarous enough, but, rude though it was, it succeeded in impelling the race upwards. The first idea, Mr. Grant Allen declares, which led to the preservation of the corpse, was the belief that its occupant had only flitted for a time, and would return. The second stage which followed this was a dread of the dead, which led to the burial of the corpse and the heaping up over its grave of stones and earth, in order to prevent the corpse itself from taking its walks abroad. The vast majority of men in all ages, says Mr. Grant Allen, have been foolishly afraid of meeting the spirits of the departed. For this purpose they invented, first of all, burial, and afterwards cremation. Dean Ramsey, in his "Reminiscences of Scottish Life and Character," mentions that an idiot once remarked, after hearing the Burial Service read over a neighbour, and seeing the huge memorial-stone placed over his grave, "If you ettle him to rise again, you're no his freend to pit so big a stane on top o' him." The remark which Dean Ramsey thought only natural to an idiot is absolutely in accord with the general belief of our early ancestors. They piled stones upon the dead in order to prevent them rising again. When they burned the dead, they took a still more effective method of disposing of the peripatetic ghost; but the ghost was not exorcised by fire. The spirit survived cremation, and hence the burning was held to be a liberation and release of the imprisoned soul, which naturally having advanced to a higher stage of existence, was regarded first with reverence, and then often with worship, just as we see it to-day in the saints of the Roman Church.

Mr. Grant Allen maintains that the further we go back in the great historical religions, as well as in the primitive beliefs of savages, we find that all men's gods are the corpses or the ghosts of their ancestors. However imposing the ultimate evolution of the idea, its basis, its root idea, is always to be found in the belief of Spirit Return. Mr. Grant Allen points out the numerous influences by which the primitive mummy or ghost or spirit passes gradually into a deity of unbounded glory and greatness and sanctity.

*Note by Mr. Grant Allen.*

\* Not quite true. I did once for some time inquire into spiritualism, and attended several *séances* in a spirit of pure inquiry; but nothing ever happened; I never saw any of the phenomena described by these men of science. I am perfectly ready to reopen the question, and not in the least disposed dogmatically to reject evidence.—G. A. [I am very glad to hear it, and apologise for my mistake.—W. T. S.]

I have not space to follow Mr. Grant Allen through all the illustrations which he gives of the way in which this belief in the survival of the dead has operated in impelling mankind upward on the road of progress; but I cannot resist the temptation of referring in passing to his ingenious theory as to the origin of agriculture. The early savage, he maintains, never would have conceived the idea of sowing seed had it not been for the experience afforded by the burying of grain in the newly turned soil of a grave. The dead man was supposed to need food. Grain was buried with him, which the savage otherwise would never have wasted in the earth, and on the dead mound the grain sprang up, and bore plentifully. Hence the theory that it was the ghost that made it grow in grateful recognition of the provision made for the dead man in the next world. From thence sprang agriculture. Mr. Allen has accumulated many interesting illustrations tending to prove that the first cornfield was always regarded as a grave mound, for our remote ancestors believed that no grain would sprout unless it was sprinkled with human blood, or some portions of the dead body were buried in the fields. Thus, out of death cometh life, and the inborn and universal belief in the persistence of the individual after death has operated even in this strange unexpected way to promote the arts of peace, and to raise men from savagery to civilisation.

#### VI.—THE SINAI OF SEX.

It might have been expected that Mr. Grant Allen, considering the interest which he has always taken in the subject, would have turned with alacrity to the evidence which tends to show the part played by sex attraction in the evolution of religion. From this, however, he was cut off by the arbitrary manner in which he defined religion. St. James the Apostle once declared that "pure religion and undefiled before God and the Father is this: to visit the fatherless and the widows in their affliction, and to keep oneself unspotted from the world." But these things do not constitute religion—to Mr. Grant Allen they have nothing to do with it, for religion is Custom and Practice and Observance. It is an outward thing, his religion, not an inward thing of the heart. If he had not arbitrarily limited his definition of religion in this fashion, and had endeavoured to ascertain the genesis of religion in the ordinary sense of the term, meaning thereby that which knits together human beings in one family, and has as its aim and ideal the evolution of the divine soul which is concealed within the material body, he would have discovered that sex and the attraction of sex, especially in its secondary form of maternal or parental love, has been the great factor in the evolution of religion.

It may, indeed, be said that these two—the attraction of sex and the belief in spirits—have been as the Moses and Aaron in the evolution of the idea of morality and the conception of God. Mr. Grant Allen has chapters concerning Sacred Stones, Sacred Stakes and Sacred Trees, but he definitely refuses to regard Phallic worship as being in any sense a primitive element in stone worship. He thinks it a later and derivative offshoot of stone worship. The first stones men worshipped were tombstones, into which they believed the ghosts of the corpse below had entered. Afterwards, they worshipped all kinds of stones. Although he thus repudiates the one favourite theory which makes Phallic worship the foundation of primitive religion, he nevertheless holds the theory that the Lord God of Israel, the Jehovah of the Bible, whom Mr. Grant Allen always names Jahweh, was neither more nor less than a Phallic deity. The evidence of this point

may not be very strong, but such as it is, it convinced Mr. Grant Allen. He thinks that in the stone kept in the Ark of the Covenant upon which were inscribed the Ten Commandments, was none other than a cone to which Phallic ideas were attached, and that it was out of this very early rude conception of the Father that the sublime ideas of the later prophets were subsequently evolved. Jahweh, he says, was originally the stone representing an early tribal ancestor. It was a cylindrical stone at first—a gravestone—but probably with Phallic significance, inasmuch as Jahweh was pre-eminently a deity of Generation—a God of Increase, to whom the barren woman prayed for children. The rite of circumcision Mr. Grant Allen regards as a singular ransom exacted by this Phallic deity from every man-child. Circumcision, in fact, he says, appears to be a bloody sacrifice to Jahweh as the God of Generation—a substitute for human sacrifice, which he maintains, on very shadowy evidence, to have been a primitive feature of his worship:—

From this rude ethnical divinity, the more sacred pillar of a barbarous tribe, was gradually developed the Lord God of later Judaism and of Christianity—a power eternal, omniscient, almighty, holy; the most etherealised, the most sublime, the most superhuman deity that the brain of man has ever conceived. By what slow evolutionary process of syncretism and elimination, of spiritual mysticism and national enthusiasm, of ethical effort and imaginative impulse that mighty God was at last projected out of so unpromising an original it will be the task of our succeeding chapters to investigate and to describe.

Having thus established to his own satisfaction that the Lord God of Israel was in his origin a gravestone, and in a secondary form a Phallic cone, he now proceeds to ask how it is that the Jews fabricated out of their early national sacred stone the most sublime, austere, omnipotent Deity that humanity has known? He finds the explanation, first, in the general tendency of the Semitic mind; and, secondly, in the peculiar political and social state of the Israelite tribes of the ninth to the fifth century before the Christian era. Jahweh from the first was regarded as a special God of Israel, a supreme God, even by those who worship Baal and the other idols of Canaan. The common worship of Jahweh was the only solid bond of union between the tribes of Israel. From the first, Jahweh was a jealous God. As the conception of godhead became wider and more sublime, the idea of his jealousy led to the denial of the deity of all other gods.

Thus gradually Jahweh acquired supremacy, and his exclusive worship was regarded as the secret of national welfare. When the Jews were transported to Babylon, when the sacred stone perished, never to reappear in the Temple, this disaster, instead of proving the signal for his utter downfall, was the very making of Jahweh worship as a spiritual Monotheistic and cosmopolitan religion. The conical stone in the Ark gave place to an incorporeal, inscrutable, and Almighty Being. This Monotheism was religion reduced to its single central element, containing nothing save what every votary of all gods already implicitly believes, with every unnecessary complexity or individuality smoothed away or simplified. This conception kept ever broadening until it attained its ultimate evolution in the great cosmopolitan conception of Paul of Tarsus.

#### VII.—THE ORIGIN OF CHRISTIANITY.

Mr. Grant Allen thinks that if Judaism could but have got rid of its national exclusiveness, if it could have made itself less austere, less abstract, and at the same

time less local, there was a chance that it might have risen to be the religion of humanity. But the Jews were local and national: they insisted on circumcision, and lost their chance. It was due to the religion founded on the worship of Jesus of Nazareth that Monotheism overspread the world. Christianity combined in a remarkable degree the main requirements of a new world religion. Anything it lacked in its first beginnings it made up for as it went by absorption and pre-emption:—

It was a Catholic Church; it stood for the world, not for a tribe or a nation. It was a Holy Church; it laid great stress upon the ethical element. It was a Roman Church; it grew and prospered throughout the Roman empire. It made a city what was once a world. Whence it came and how it grew must be our next and final questions.

In the chapter on "The Growth of Christianity," Mr. Grant Allen,\* apparently scared by some friend and critic, who has sneered at him as a "gross and crass euhemerist," goes back upon his remarks in the first chapter, and is careful to explain that he is inclined to "gravely doubt whether Jesus may not be numbered with St. George and St. Catherine, with Perseus and Arthur, among the wholly mythical and imaginative figures of legend and religion." All that he is disposed to admit as possible or even probable is that there really did live in Galilee, at some time about the beginning of our accepted era, a teacher and reformer, bearing a Semitic name, which is finally Hellenised and Latinised for us as Jesus. If so, it seems not unlikely that this person was crucified, or, rather, hanged on a post by the Romans at Jerusalem, under Pontius Pilate, and after his death was worshipped more or less as a God by his immediate followers. That is the only kernel of truth which he thinks may exist in the late Gospel story, in which it is embodied in a mass of unhistorical myth, implicitly identifying him with all the familiar corn gods and wine gods of the Eastern Mediterranean. He finds it hard to separate any element of historical truth from the enormous accretion of myth and legend—all of which we may regard as but an effort on the part of Mr. Grant Allen to free himself from the dreadful charge of being a "gross and crass euhemerist."†

We who travel in railway trains do not care to argue concerning the existence of George Stephenson or of James Watt, and Christendom does not need to embarrass itself at this time of day with discussing whether or not Christ ever existed. He either did or He did not; if He did not, the miracle of Christendom is even greater than

if He did. The triumph of Christianity is indeed a great miracle even if the whole of the Gospel story be accepted as gospel truth; but if there be nothing behind it excepting chance, or what Mr. Grant Allen calls "the play of purely casual circumstance," then, indeed, we are face to face with a still more marvellous miracle than anything which staggers the faith in the Scripture record. The story of Jonah and his fish is more easily credible than the assumption that a handful of obscure fanatics in an insignificant province of Syria were able to achieve that which all the great and wise and gifted had failed to accomplish.

Mr. Grant Allen tells us that Christianity triumphed because it united in itself all the most vital elements of all the religions then current in the world, with little that was local, national, or distasteful, and it added to them a high ethical note and a social doctrine of human brotherhood specially suited to an age of uniform and systematic government. The Church, which was built upon this rock, Christ Jesus, has shown its continuity with earlier religions in a thousand ways and by a thousand analogies. But while it gathered into itself all that was best in all the creeds, it was beyond all other creeds the religion of immortality, of the dead revived. To the new world in an age of doubt and scepticism, of the decay of faith, it gave fresh light, and a totally new basis to the old beliefs—perhaps the old delusions—of the religious nature. It was the cult exactly adapted to the times, above all others, which shows itself capable of thoroughly engaging on its own side the profoundest interests and ambitions of the religious nature.

Now, if Mr. Grant Allen is right in his description of Christianity, if it did all those things, and accomplished what no other religion had ever accomplished, if it is the etherealised and sublimated outcome of all the creeds that have ever been since the beginning of the world, if it corresponds more than any faith to the fundamental conviction upon which all religions rest, surely here we have a declaration from one who is the very High Priest of scepticism, which confirms some of the largest claims that have ever been made for Christianity by Christians, of course on its human side. With the other side we are not dealing. Therefore it is that, notwithstanding all that Mr. Grant Allen says which we may deplore, this book will do good, and tend to re-establish many a shaking faith upon foundations which cannot be shaken, resting as they do upon the general consensus of the religious convictions of the whole family of man.

*Note by Mr. Grant Allen.*

\* No; not so. I have come to hesitate greatly as to the historical Jesus. I do not reject his existence, but I feel sadly shaken about it, especially when I read the circumstantial stories invented later about Joachim and Anna, the reputed father and mother of the Virgin, etc. In fact, on this point, I remain in a state of suspended judgment.—G. A. [All right; only would it not be well in future to date your opinions?—W. T. S.]

*Note by Mr. Grant Allen.*

† The real fact is this: I began, with Renan, by believing in the mass of the Gospel narrative. Strauss shook that belief; Frazer still more gravely undermined it. I have read much on the other side, but remain undecided. The verisimilitude of the *character* portrayed seems to me perhaps the strongest evidence as to the reality of Jesus.—G. A. [Would it not be more correct to say the conception of such a character than its verisimilitude, which is only one feature of the whole?—W. T. S.]

#### VIII.—SOME PARTING OBSERVATIONS.

I am not criticising Mr. Grant Allen's book; I am explaining it. But had I been in a critical mood, there are many points which would challenge attention. There is, for instance, the one extraordinary fact which he frankly admits: that while he founds the whole of religion upon the grave, declaring that the temple is everywhere a tomb, the altar a memorial stone over the body, and the priests the keepers of the shrine, he is compelled to admit that in the typical and supreme religion all those essential elements are absent. As he says, owing to the resurrection "the materials out of which the temple, the altar of sacrifice, the priesthood, are usually evolved, are here to a very large extent necessarily wanting." To those of us who see in all religions the progressive unfolding of the God idea this remarkable differentiation of the Christian Faith from those out of which it sprang would seem to indicate a set design and purpose in order to raise the conception of man-

kind one step higher—away from Matter towards Spirit. It is also another argument in favour of the resurrection. It is true enough that the ancient primitive form of worship surged in upon the more spiritual faith founded by Christ and His Apostles, but the essential fact remains that while it has been largely submerged by these survivals, it remains in its essence as divine, in its ancient documents far more in accord with the latest and most "etherealised and sublimated"—to use Mr. Grant Allen's favourite adjectives—conception of the nature of the Deity than that which is currently accepted by any of the Churches, especially by that Church which I am amused to find Mr. Grant Allen describing as the central, true and main form of Christianity, the Roman Church!

Mr. Grant Allen will have plenty of attention from the scholastic priesthood, who will not neglect to chastise this rude, anthropological inquirer for his reference to the "fanciful lumber of metaphysical dreamers and theologians everywhere." At the same time, they have more reason to thank him than they have to complain, for he has come to their rescue, especially upon those points where they have felt most need of reinforcement. The doctrine of the resurrection, which some have been inclined to regard as unnecessary, he declares to be the corner-stone of the Christian religion. "It was the resurrection that converted the world of Western Europe." "Apart from the elements common to all creeds, the three great motives of primitive Christianity were: one dogmatic, the Resurrection of Jesus; one selfish, the salvation of the individual soul; and one altruistic, the desire for reunion with the dead of one's beloved."

We can afford to ignore what more sensitive souls would regard as impertinence on the part of an author who presumes to speak of the most sacred of things with an assurance and dogmatism which are surely out of place in such an inquiry as this. Nothing, for instance, in this book for a moment justifies the astounding assertion that the Deity is "by origin an offshoot from the mind of man." Most readers will regard the book as tending directly in the opposite direction. Instead of God being merely a figment of the imagination, an offshoot from the mind of man, we seem to see in every chapter a progressive unfolding and revealing of the divine nature, a revelation far wider, more subtle, more constant, and unvarying in its operation than that which was claimed for the old doctrine of a special revelation made to a single race by direct communications from Sinai or elsewhere. The light that lighteth the world is here shown to have shone upon mankind not for the last eighteen hundred years, but from the moment when first "man stood God-conquered with his face to heaven upturned." By slow degrees, and more and more the light has increased in intensity and brilliance, until we find all the scattered rays combined in the radiance of the light that streams from the Cross. As a race we are, as it were, learning the higher mathematics, whereas our remote progenitors of the Bronze and Stone Age were but laboriously plodding their way through the Multiplication Table. But the most learned professor of mathematics is linked by an indissoluble chain to the early rudiments of arithmetic. They form the base of

all his calculations. So, in like manner, no greater service could be conferred upon the Christian world of to-day than this demonstration of its close relationship to all the faiths that have gone before, and the assertion of the substantial unity of all the religions by which in every age man has worshipped his Maker.

The book is not so useful by any means as it might have been had its author not arbitrarily excluded from his survey the examination of that side of religion which deals with morals; but even as it is, he has done good work and rendered good service to the cause of rational religion. "The Evolution of the Idea of God" is not a book which will take its place beside Darwin's "Descent of Man," but it cannot fail to have a wide influence upon many minds, and to accustom the public more and more to recognise that ordered evolution has been as much the divine law in the sphere of religion as it has been shown to be in the natural world.

Finally, and by way of completing this rapid survey of a very remarkable and most useful book, I will quote Mr. Grant Allen's own account of what he regards as most important in his work. I quote from his preface as follows. After pointing out his dependence upon many previous inquirers for large parts of his system, he goes on:—

It would be a great mistake to look upon my book as in any sense a mere eirenicon or compromise. On the contrary, it is in every part a new and personal work, containing, whatever its value, a fresh and original synthesis of the subject. I would venture to point out as especially novel the two following points: the complete demarcation of religion from mythology, as practice from mere explanatory gloss or guesswork, and the important share assigned in the genesis of most existing religious systems to the deliberate manufacture of gods by killing. This doctrine of the manufactured god, to which nearly half my book is devoted, seems to me to be a notion of cardinal value. Among other new ideas of secondary rank, I would be bold enough to enumerate the following: the establishment of three successive stages in the conception of the Life of the Dead, which might be summed up as Corpse-worship, Ghost-worship, and Shade-worship, and which answer to the three stages of preservation or mummification, burial, and cremation; the recognition of the high place to be assigned to the safe-keeping of the oracular head in the growth of idol-worship; the importance attached to the sacred stone, the sacred stake, and the sacred tree, and the provisional proof of their close connection with the graves of the dead; the entirely new conception\* of the development of monotheism among the Jews from the exclusive cult of the jealous god; the hypothesis of the origin of cultivation from tumulus-offerings, and its connection with the growth of gods of cultivation; the wide expansion given to the ancient notion of the divine-human victim; the recognition of the world-wide prevalence of the five-day festival of the corn or wine god, and of the close similarity which marks its rites throughout all the continents, including America; the suggested evolution of the god-eating sacraments of lower religions from the cannibal practice of honorifically eating one's dead relations; and the evidence of the wide survival of primitive corpse-worship down to our own times in civilised Europe.

\* Surely this conception, like some others here enumerated, if new to Mr. Grant Allen, will strike other people as a somewhat ancient discovery.

THE ASPIRATION OF THE SOUL.

(From Miss Rosie M. Pitman's "Undine.")

## SOME NOTABLE BOOKS OF THE MONTH.

### MISS ROSIE PITMAN'S "UNDINE."

THE story of "Undine" has passed through innumerable editions. But Miss Rosie Pitman's illustrations of this classic fairy tale are now published or half published (Macmillan and Co., 6s.) for the first time. I say half published, because some of them, and some of the best of them, have been reduced, Procrustean fashion, so mercilessly that to appreciate their beauty they need to be seen through a magnifying-glass. Even so, however, the illustrations are singularly beautiful, and not beautiful merely. There is in some of them a daring and a courage that could only come from the inspiration of genius, and a genius conscious of its own inspiration. Surely never has the inner soul of the legend been interpreted with such fidelity and insight. There is a mystic charm about some of the pictures which compels us to return again and again, and still you feel that you have not fully mastered the artist's secret thought. There is an exquisite grace about some of the figures which reminds us of Greece. The bold interpretation of the underlying truth of the story is somewhat startling, and now and again there are pictures which recall the mystical marvels of the pencil of Blake. The artist has lived the life of Undine, and her pictures are a spiritual autobiography. The whole life of woman is there from the first fresh dawn of childhood—the idyll and the epic of the life of the race mystically portrayed in spiritual allegory. Readers who collect gems, and who prize first editions, which hereafter will be rare and difficult to procure, will thank me for advising them to lose no time in securing this delightful volume.

I reproduce on a larger scale one of the many mystical pictures, with the artist's explanation—"The Aspiration of the Soul"—showing the effect of human love upon the soul, that though our roots are of the earth, and the flesh chained to earth, yet the true soul for ever thirsts and struggles for what is noblest and best. The two side figures of a maid and youth unconscious of their souls, and incomplete, gaze back to earth as the home of all their pleasure. In focus above are the minute figures of the Knight and Undine. At the extreme heights are two female figures, one in fearful doubt, one in peaceful calm with hands clasped.

### HISTORY OF THE COMMONWEALTH.

PROFESSOR GARDINER's second volume of his "History of the Commonwealth and Protectorate" (Longmans, 21s.) covers the period 1651 to 1654. This is one of the most stirring periods in the history of the Commonwealth, for it saw the subjugation of Ireland, the Dutch war, the dissolution of the Long Parliament, and the establishment of the Protectorate. Professor Gardiner shows clearly the real part played by the great Protector, which is so frequently lost sight of in the results that followed from his actions. He shows him to have been, to use Prof. Gardiner's own phrase, "the most typical Englishman of all time"; not the wild revolutionist, but the careful statesman, always endeavouring to find a *modus vivendi* of some description, but forced against his will to take unconstitutional steps in order to deal with an entirely abnormal situation. A large portion of the volume is devoted to the Dutch War and the winning of the supremacy of the seas by England. Prof. Gardiner does not hold a high opinion of Blake's abilities as a

naval commander. England did not defeat the Dutch by the skill of her admirals, but by being able to throttle the Dutch commerce in the Channel. The Dutch commanders were pinned down to certain trade routes, and their movements could be calculated to a nicety, whereas the English fleet, having no commerce to protect, was extremely mobile. The English fleet was also in better order than the Dutch, and the crews were more enthusiastic than those of the enemy.

### THE RISE OF THE HOUSE OF BLACKWOOD.

THE accumulations of a great publishing house contain many gems amongst a great quantity of rubbish. The sifting process is laborious, but it well repays the labour expended on it. The last work which the late Mrs. Oliphant did was to perform this service for the house of Blackwood. She was well fitted for the task, having been connected with the Blackwoods as a contributor for over forty years. Mrs. Oliphant did not live to finish her labours, but, before her death, was able to compile two portly volumes of some 1,030 pages, which bring the narrative down to the year 1861. She had only time to correct the proofs of the first volume of "The Annals of a Publishing House" (Blackwood, 42s.), the second volume being edited by William Blackwood himself. The Blackwoods—father and sons—have always gathered around them a brilliant band of contributors. These volumes are filled with extracts from letters which throw many interesting sidelights upon men and women whose names have become household words wherever the English tongue is spoken. A publisher sees a very different side of a popular author from that which is visible to the general public. The merciless critic is to him a harmless individual, sensitive to the least sign of displeasure. *Blackwood's Magazine* was for long the sheet-anchor of the house, and it was through it that the Blackwoods secured their most brilliant adherents.

### THE INFLUENCE OF SCOTT.

William Blackwood founded his publishing house in Edinburgh at the time of the great literary awakening in the Northern capital in the commencement of the present century. Sir Walter Scott exercised at that time a true magician's power over literature and literary men. He had shown the immense possibilities that were latent in literature from the publisher's point of view. Every publisher schemed and intrigued to secure the giant of Abbotsford for himself alone, and was continually on the look-out for another Walter Scott in every fresh aspirant for literary honours. Great was the rejoicing when Blackwood secured one of Scott's novels—the "Black Dwarf." His rising hopes were, however, quickly crushed, for Scott very soon transferred his publishing to the rival house of Constable.

### "BLACKWOOD'S MAGAZINE."

In his disappointment Blackwood started his famous magazine. He rallied round him a band of young and brilliant writers who laid the foundation of "Maga's" success. From its earliest numbers the magazine had a troubled existence. It had not been published six months before Blackwood was involved in legal proceedings. Each new writer seemed to bring with him, as a credential of his value, the threat of a libel action. Chief among these adherents were Lockhart, and Professor Wilson, better known as Christopher North. Blackwood had a

very difficult task in keeping his young men within bounds, but on the whole he was fairly successful. For a long time the editorship was in commission, Blackwood, Lockhart and Wilson jointly guiding the course of the magazine.

#### CHRISTOPHER NORTH.

It is interesting to see the way in which the various contributors to "Maga" regarded the interference of the Blackwoods with their contributions. Most of the Lockhart letters included in the volume are hurried notes containing instructions as to what articles should be included in the magazine, or as to the composition of the famous "Noctes." He always remained a good friend to the house of Blackwood, although the friendship was sometimes disturbed by disputes about returned MSS., as to which the author and publisher did not agree. Professor Wilson, at once the prop and the plague of the magazine, was always late with his contributions, and always making solemn declarations to Blackwood of immediate reformation. He was not a ready writer, and complained frequently of sitting for hours, pen in hand, unable to write a syllable. The ruthless critic was excessively sensitive to any sign of disapproval on the part of his publisher. He writes many agonised letters of reproach for what he considers coldness on the part of Blackwood:—

It either is a merit or demerit in me, to dislike any symptom of displeasure shown towards me unnecessarily, or at a time when it can do no good, and when I am endeavouring to do what I can. I lose many more hours and days in trying to fix on what to write, and to bring my mind into capacity to write, than in writing. . . . So far from any good being done by your letting me see your annoyance, the evil is magnified thereby a hundredfold. It amounts, in short, to utter extinction of all form whatever.

#### AUTHORS AS A PUBLISHER SEES THEM.

At one time Coleridge wrote expounding to the editors how the ideal magazine should be conducted, and proposing to make himself editor. Mrs. Oliphant prints many letters which he wrote to Blackwood. From the extracts from De Quincey's letters, he would seem to have been perpetually and vainly endeavouring to discover the latest day for receiving copy. From his lengthy epistles one would believe De Quincey to have been a model of punctuality. In reality he was the reverse. The irregularity of contributions seems to have been the great bone of contention between authors and publisher. The most unpunctual of authors seems to have regarded it necessary to his reputation to elaborately prove that he never was and never could be behind time with his copy. Walter Savage Landor seems to have carried on correspondence in a very fiery style, and the connection did not last long. When William Blackwood died, and the two sons assumed control of the publishing house, the old traditions were maintained, and the contributors were obliged to bow their heads, not without many outcries on the part of the voluble, and proud or aggrieved submission on the part of authors like Alison; to have their articles trimmed and shaped by the young editors. Samuel Warren seems to have been possessed of a very large share of vanity, which he took no pains to conceal, and which is plainly visible in all his letters. He was immensely proud of "Ten Thousand a Year" and writes on one occasion, "I fancy I shall be splendidly successful in this number," and on another occasion gives detailed instructions how he considers one of his books should be reviewed in the magazine. He had great confidence in himself, declaring, "I have never yet failed in anything, and will not fail now." The Blackwoods had a keen eye for genius,

but seem to have failed to recognise that of Thackeray, whose contributions were returned, and who did not owe his reputation, as so many authors did, to "Maga." Lytton published his "Caxtons" and "My Novel" in the pages of *Blackwood*. He very meekly accepted criticism, and his letters in reply to the Blackwoods are in a very different tone from those which they generally received. Lytton writes:—

As our object is precisely the same, viz., to produce an effective work which may do credit to us both, so I have only to repeat that if you see cause to doubt the key in which this is pitched, I am quite ready to lay it aside.

An interesting passage in one of Lytton's letters is that in which he speaks of Palmerston:—

Palmerston must have the statue of Fortune in his room. Any other character who had so embroiled and bedevilled this country with all Powers and parties on the Continent would be swept into limbo. But he is Mamma England's spoiled child, and the more mischief he does the more she admires him. "What a spirit he has!" cries Mamma; and smash goes the crockery.

#### GEORGE ELIOT ON HER NOVELS.

George Eliot was another of the brilliant band. Her first tales were published in *Blackwood*, and had an immediate success. "Adam Bede" also appeared in its pages. George Eliot, unlike Lytton, did not appreciate criticism. On one occasion she reads young Blackwood the following lecture:—

Art must be either real and concrete, or ideal and artistic. Both are good and true in their way; but my stories are of the former kind. I undertake to exhibit nothing as it should be; I only try to exhibit some things as they have been and are, seen through such a medium as my own nature gives me. The moral effect of the stories, of course, depends on my seeing truly and feeling justly, and as I am not conscious of looking at things through the medium of cynicism or irreverence, I can't help hoping that there is no tendency in what I said to produce these miserable mental states.

I have no space to notice the rising fortunes of the house of Blackwood under the guidance of William Blackwood's two sons. The story is an interesting record of industry and perseverance.

#### Tales of Australian Life.

We have had stories of life in all parts of the world, and it is only right and proper that we should now have tales of Australian life. "When the Billy Boils" (Simpkin), by Harry Lawson, is a collection of tales which tell mostly of the life of the Australian swagman. There are some, however, which describe city life at the Antipodes. The stories are distinctly good, compressing many sides of colonial life into the compass of a few pages. There is a pathetic note in most of them, sometimes pronounced, sometimes hidden, but always present. The swagman is a man who tramps from place to place picking up what food or "tucker" he can. The adventures of this community of wanderers supply plenty of material for picturesque stories. The following is a glimpse of the life of a party of swagmen:—

Now and then a man takes his tucker-bags and goes down to the station for a bit of flour, or meat, or tea, or sugar, choosing the time when the manager is likely to be out in the run. The cook here is a "good cook," from a traveller's point of view—too good to keep his place long. Occasionally some one gets some water in an old kerosine tin and washes a shirt or pair of trousers, and a pair or two of socks—or foot-rags (Prince Alfreds they are called). That is, he soaks some of the stiffness out of these articles. Three times a day the blackbills and cloudy nosebags are placed on the table. The men eat in a casual kind of a way, as though it were only a custom of theirs—a matter of form—a habit which could be left off if it were worth while.

### THE MARRIED LIFE OF ELIZABETH BARRETT BROWNING. †

We have all known and admired Mrs. Browning as a poet, we have now an opportunity of knowing her as a woman. The "Letters of Elizabeth Barrett Browning," published by Messrs. Smith, Elder and Co., in two volumes (15s. net), and edited by Frederic G. Kenyon, give us the story of her life told in her own words in letters to her intimate friends. In these letters we see Mrs. Browning as a woman first and foremost—a loving daughter, a devoted wife, and a happy mother. Of Mrs. Browning the poet there is little, and it is seldom we are called upon to share either her joys or sorrows. But the publication of her letters will only add to the pleasure with which we read her poems, for they complete our knowledge of the character of the writer. A greater gain to humanity than the picture of a good and noble life is the view we obtain of the most perfect example of wedded happiness in the history of literature. This, even more than her poems, was the legacy which Mrs. Browning left to her fellow-men. The light which these letters shed on the married life of the Brownings is justification enough for their publication.

#### THE COURTSHIP.

We have long had Mrs. Browning's poetical account of how Robert Browning drew her back to life and hope when she had done with both, in the "Sonnets from the Portuguese." In this collection of letters we have her description of the romantic courtship and marriage in prose. It is the most complete account that has yet been given to the world. I quote here some extracts from the letter written by Mrs. Browning directly after her marriage to her friend Mrs. Martin:—

It is nearly two years since I have known Mr. Browning. Mr. Kenyon wished to bring him to see me five years ago, as one of the lions of London, who roared the gentlest and was best worth my knowing, but I refused then in my blind dislike of seeing strangers. Immediately, however, after the publication of my last volume, he wrote to me, and we had a correspondence which ended in my agreeing to see him as I never had received any other man. I did not know why, but it was utterly impossible for me to refuse to receive him, though I consented against my will. He writes the most exquisite letters possible, and has a way of putting things which I have not, a way of putting aside—so he came. He came and with our personal acquaintance, began his attachment for me, a sort of *infatuation* call it, which resisted the various denials which were my plain duty at the beginning and has persisted past them all. I began with a grave assurance that I was in an exceptional position and saw him just in consequence of it, and that if ever he recurred to that subject again I never could see him again while I lived; and he believed me and was silent. To my mind indeed it was a brave impulse—a generous man of quick sympathies taking up a sudden interest with both hands! So I thought, but in the meantime the letters and visits rained down more and more, and in every one there was something which was too slight to analyse and notice, but too decided not to be understood; so that at last when the "proposed respect" of the silence gave way, it was rather less dangerous. So then I showed him how he was throwing into the ashes his best affections—how the common gifts of youth and cheerfulness were behind me—how I had not strength even of heart, for the ordinary duties of life—everything I told him and showed him. "Look at this—and this and this," throwing down all my disadvantages. To which he did not answer by a single compliment, but simply that he had not then to choose, and that I might be right or he might be right, he was not there to decide; but that he loved me and should to his last hour. He said that the freshness of youth had passed with him also, and that he had studied the world out of books and seen many women, yet had never loved one till he had seen me. That he

knew himself, and knew that, if ever so repulsed, he should love me to his last hour—it should be first and last. At the same time he would not tease me, he would wait twenty years if I pleased, and then, if life lasted so long for both of us, then when it was ending perhaps I might understand him and feel I might have trusted him.

#### THE MARRIAGE.

Mrs. Browning's father had very strong views on parental authority. He was determined that none of his children should marry. Each of them as they married was forbidden to see him again, and he would not even hear their names mentioned in his presence. This severing of the home ties was one of the greatest sorrows of Mrs. Browning's life, for she was deeply attached to her father. She writes:—

I loved him for his courage in adverse circumstances which were yet felt by him more literally than I could feel them. Always he has had the greatest power over my heart, because I am of these weak women who reverence strong men. By a word he might have bound me to him, hand and foot. Never has he spoken a gentle word to me and looked a kind look, which has not made in me large results of gratitude, and throughout my illness the sound of his step on the stairs has had the power of quickening my pulse—I have loved him so and love him.

But Mr. Barrett cared more for his authority than he did for his children, and had refused to let his daughter spend the winter in Italy, which was the only hope of saving her life. Knowing the hopelessness of obtaining her father's consent, she and Robert Browning determined to be married secretly. Mrs. Browning never blamed herself for this act, knowing it was the only possible course before her. "I was *constrained* to act clandestinely," she writes, "and did not choose to do so."

The only time I met R. B. clandestinely was in the parish church, where we were married before two witnesses—it was the first and only time. I looked, he says, more dead than alive, and can well believe, for I all but fainted on the way, and had to stop for sal volatile at a chemist's shop. The support through it was my trust in him, for no woman who ever committed a like act of trust has had stronger motives to hold by. Now may I not tell you that his genius, and all but miraculous attainments, are the best things in him, the moral nature being of the very noblest, as all who ever knew him admit. Then he has had that wide experience of men which ends by throwing the mind back on itself and God; there is nothing incomplete in him, except as all humanity is incompleteness. The only wonder is how such a man, whom any woman could have loved, should have loved me; but men of genius, you know, are apt to love with their imagination. Then there is something in sympathy, the strange, strongest sympathy which unites us on all subjects.

Her father never forgave her, refused to correspond with her, and died without any reconciliation taking place. Five years after her marriage, when Mrs. Browning made a last appeal to him, he replied by an angry note and returned all the letters she had ever sent him unopened and with the seals unbroken.

#### MARRIED LIFE.

All through her letters are scattered passages telling of the happiness of her married life—a perfect union it was indeed. This is her testimony after five years of wedded life:—

So far from regretting my marriage, it has made the happiness and honour of my life, and every unkindness received from my own house makes me press nearer to the tenderest and noblest of human hearts, *proved* by the uninterrupted devotion of nearly five years. Husband, lover, nurse—not one of these has Robert been to me, but all three together. I neither regret my marriage nor the manner of it, because the manner of it was a necessity of the act.

## NOVELS WORTH READING

## "CAPTAINS COURAGEOUS."

"CAPTAINS COURAGEOUS" (Macmillan, 6s.) is the longest story Rudyard Kipling has as yet written. It is the tale of the adventures of a millionaire's only son. When the story opens Harvey Cheyne, a boy in his teens, is crossing the Atlantic with his mother to Europe. He is about as disagreeable a specimen of the idle young plutocrat as can be imagined. When the liner is passing through the fishing fleet to the south of Newfoundland, Harvey falls overboard and is picked up by a fishing smack. He soon has all the nonsense knocked out of him, and is made to work like any other boy on a fishing boat. Having good stuff in him, this rough training proves to be the making of the young millionaire, who in the autumn is restored to his sorrowing parents. Mr. Kipling describes the life on the Banks with his usual force and vividness. There are many passages which for power, vigour and humour are equal to anything he has written. Some of the scenes in the fishing fleet, such as the foundering of the boat of Uncle Abishai and the return of the dead Frenchman to claim his knife, are in Mr. Kipling's best style. The description of the railway race across the American continent is magnificent. The reader feels himself whirled along with the flying locomotive, is conscious of the swaying of the cars and the rattling of the couplings. Notwithstanding this there is an incompleteness about the story which is not usual with Mr. Kipling's tales. The reader lays down the book with the impression of many brilliant passages strung together on a rather slender thread.

## "ST. IVES."

"St. Ives" (Heinemann, 6s.), Robert Louis Stevenson's posthumous romance, will be widely read, although it will hardly rank along with his best works. It is, in brief, the story of a French prisoner in England. The Viscount Anne de Saint-Yves, a soldier of the Empire, is a prisoner in Edinburgh Castle. He escapes from the castle, visits his lady love, a Scotch girl, and then journeys to visit a relation on his death-bed at Amersham Place, near Dunstable. Besides being an escaped prisoner of war, he is accused of the murder of a fellow countryman who had been confined in the same gaol. His adventures are numerous and are related at length. Mr. Stevenson's *St. Ives* is a living person, full of verve and vivacity. He is an adventurer, not very scrupulous about the means he uses to obtain his ends. There is a slight suspicion that he might very easily degenerate into a refined Barry Lyndon. The description of a suicide's burial at midnight at the cross-roads, although only an incident on *St. Ives'* journey to the south, is striking enough to be remembered when most of the Frenchman's adventures are forgotten. Stevenson did not finish the story, laying it aside to take up "*Weir of Hermiston*." The last few chapters have been written by Mr. Quiller-Couch. It was a difficult task for Mr. Quiller-Couch to extricate the hero from the difficulties in which he was involved. The escape by balloon is rather far-fetched, although it seems to have been suggested by Robert Louis Stevenson himself.

## "THE WATER OF THE WONDROUS ISLES."

Another posthumous work of a very different character is Mr. William Morris's "*Water of the Wondrous Isles*" (Longmans, 7s.). Mr. Morris has adopted the quaint phraseology of the "*Morte D'Arthur*," and it lends an added charm to the story. He tells of the life of a beautiful maiden named Birdalene, stolen in her infancy by a

witch, and reared in the forest with no other companions than the wild animals. When she has grown up she is instructed by her wood-mother, a spirit which assumes her own likeness. When she has come to woman's estate, Birdalene must needs fare forth into the world and seek adventures. She visits the Isles of the Wondrous Lake, and at last comes to the Castle of the Quest. Her love for the Black Squire, and all the trouble and misery it brought her, and her final bliss and happiness, are told with a wonderful charm. The tale is as refreshing and as natural as the forest and the water which Mr. Morris describes so well.

## "UNKIST, UNKIND."

"Unkist, Unkind," by Violet Hunt (Chapman and Hall, 6s.) is a peculiar book, worth reading if only as a contrast to the more important works noticed above. The plot is a curious one, a mixture of very modern society and that of at least two hundred years ago. The contrast is not as striking as it might have been made, although many of the characters are well drawn. The scene is laid in an old Peel Tower in Northumberland amid skeletons, graves, and ancient relics of a past age and generation. On the whole it is a rather gruesome tale.

## "PERPETUA."

"Perpetua," by S. Baring-Gould (Isbister, 6s.), is a story of Christian persecution in the second century. The scene of the events narrated is the old city of Nîmes, and the story seems to have been suggested by two churches in that town dedicated to St. Baudille and St. Perpetue. The plot very closely follows the orthodox method of describing Christian persecutions in the first centuries by writers of fiction. That is to say, the heroine is a Christian maiden, the hero a pagan, who is converted to Christianity by the martyrdom of the heroine. The Christians in Mr. Baring-Gould's romance are more human and less heroic than is usually the case in novels of this kind. Mr. Baring-Gould contrives to give a good deal of local colour to his tale.

## "WAYFARING MEN."

Elna Lyall's new book, "*Wayfaring Men*" (Longmans, 6s.), is very much like her other books. In all her works the characters appear to be the same; the only thing that is changed is the background and the setting in which she places them. In this novel she has chosen the stage as the platform on which her characters shall play their appointed rôles. The story is well told in Elna Lyall's accustomed style. The hero is an actor, Macneillie by name, whose life is blighted by the marriage of the woman he loved to a rich though worthless man. The note of the novel is to be found in the following sentence from the last page of "*Wayfaring Men*":—

And yet better, a thousand times better, the wreck of body and mind than the failure to be a law-abiding citizen. Better this cruel absence from the woman he loved than faithlessness to what he knew to be right.

The daintiest and prettiest book of verse that has reached me this year, and indeed for many a year past, is "*A Book of Verses for Children*," compiled by E. V. Lucas. The binding is charming and the general appearance of the book is a perfect treat. The editor, Mr. E. V. Lucas, and the publisher, Mr. Grant Richards, seem to have vied with each other as to which could contribute most to the reader's pleasure. The selection of children's poems is novel, varied and original. No other anthology of poetry for children can be compared to it. It will probably be one of the most popular gift books of the season.

## NEW EDITIONS.

THAT the older writers of fiction still hold their own against their modern competitors is proved by the almost numberless new editions of their works which are being issued at present. There appears to be quite a revival of interest in the writers of fiction of fifty years and more ago. The works of two modern authors, however, are being republished. These authors are George Meredith and Robert Louis Stevenson. The new editions, instead of being cheaper, are more expensive than the original volumes, and are also limited in number.

## SIR WALTER SCOTT.

The Magician of the North still exercises his magic power over the imaginations of his fellow-countrymen. Of all the older authors he appears to be the most popular. No fewer than four separate editions of the *Waverley Novels* are now appearing. First among these must be placed John Nimmo's cheap illustrated edition of the *Large Type Border Waverley Novels*. The first novel of the series is "*Waverley*" (3s. 6d.). It is tastefully bound, the paper and print are all that can be desired, and the illustrations are excellent. Many of the foremost artists of the day have contributed to the illustration of this series. The edition will contain 250 pictures and comprise 24 volumes. Mr. Andrew Lang is the editor. Another very dainty edition of Scott's novels is that issued by J. M. Dent and Co. Like all the books issued by that firm, this series is both artistic and convenient. It is uniform with the *Temple Classics* and is bound in leather. Each volume costs 2s. net. The series will be completed in 48 volumes, the last of which will be published in September, 1899. "*Waverley*," the first novel, is printed on thin paper and issued in two volumes. The series will contain 40 topographical frontispieces by Herbert Railton and eight portraits.

Messrs. Service and Paton are publishing two editions, one of them illustrated. The unillustrated edition is uniform with the *Whitehall Library*, and is published at 1s. 6d. "*Ivanhoe*" is the first volume of the *Waverley Novels* to appear in the series. The other edition forms part of the *Illustrated English Library* (2s. 6d. a volume), an excellent series, well printed and nicely illustrated. The same firm are also publishing a very fine edition of Walter Scott's poems at 6s. "*The Lady of the Lake*" is the first volume. It is cleverly illustrated by C. E. Brock, and is prefaced with an introduction by Andrew Lang, who appears never to weary of writing prefaces and introductions for the edification of the general public. This promises to be one of the neatest editions of Scott's poems that has yet been published. The revival in the interest taken in Sir Walter Scott is ample justification, if any were needed, for Mr. G. G. Napier's book on the "*Homes and Haunts of Sir Walter Scott*" (Maclehose, Glasgow). It is a beautifully printed and illustrated volume which all lovers of Scott should possess. Mr. Napier has been very diligent in tracing Scott to his various homes and haunts and giving us descriptions, both in picture and letterpress, of any locality connected with Sir Walter.

## ILLUSTRATED STANDARD NOVELS.

Both Messrs. Macmillan and Messrs. Service and Paton are issuing illustrated editions of standard English novels. Messrs. Macmillan publish one volume monthly at 3s. 6d. and 5s. The novels included in this series are those of Thomas Love Peacock, Jane Austen, Maria Edgeworth, and Captain Marryat, who, after Scott, seems to be the most popular author, if we may judge by the

number of new editions of his works recently published. J. M. Dent and Co. have also issued an excellently printed and arranged series of Marryat's novels. Messrs. Service and Paton in their *Illustrated English Library* cover much the same ground, although the authors whose works have been selected are more numerous. This edition is cheaper, being issued at 2s. 6d., but paper, printing, and illustrations are excellent. Thackeray, Scott, Kingsley, Lytton, Brontë, and Lever are all included in this useful edition of standard authors.

## POETRY.

Several new editions of favourite poets were published last month. Edmund Spenser's "*Fairie Queen*" seems to be attracting more general attention than it has done for a long time past. Two editions have been recently issued. One an expensive and handsome reproduction of Walter Crane's illustrations, the other and cheaper edition is published by J. M. Dent and Co. This was issued in twelve monthly parts, now completed, at 2s. 6d. net each volume. It is printed on thick paper, with wide margins and clear type, and is pictured and decorated by Louis F. Muckley. To say that it is published by J. M. Dent, is all that need be said in recommendation of the manner in which it is produced. The indefatigable Mr. Andrew Lang is editing a series of selections from the poets for Messrs. Longman, for the benefit of those who have not the leisure or inclination to study and judge for themselves. The first volume of the series is devoted to Wordsworth (6s.). The selections which Mr. Lang makes are all from Wordsworth's shorter poems. The book is finely illustrated by Alfred Parsons, who must have found a congenial occupation in illustrating the poems of the Lake Poet. Messrs. Macmillan republished last month the poems of Tom Hood (10s.) in their *Eversley Series*. The poems occupy two volumes, each of which is prefaced by a portrait of Hood. The edition is edited by Canon Ainger, who contributes an account of the poet's life and works. Messrs. Kegan Paul and Co. have published the collected poems of Austin Dobson in a volume which comprises all the verses written by him during the last thirty years which he considers to be worthy of preservation.

## "HISTORY OF THE INDIAN MUTINY."

Messrs. Longman and Co. have republished Kaye and Malleeson's "*History of the Indian Mutiny*" in their *Silver Library* (3s. 6d. a volume). There are six volumes altogether, the first two by Sir John Kaye, and the remaining four by Colonel Malleeson. This is a new edition of consolidated history prepared by Colonel Malleeson in 1888, when the volumes of the two authors were blended into one continued story. Now that so much attention is being directed to India, it is well to have in a small compass this authentic and detailed account of the Great Mutiny.

**Mr. Aubrey de Vere's Recollections** (Arnold, 18s.).—Mr. Aubrey de Vere's recollections date back to the third decade of the century. While disclaiming any desire to write an autobiography, he wishes to share with his readers his reminiscences of the places he has seen and the people he has met in his lifetime. He has many interesting things to say about Ireland and its woes. A woeful land indeed it is, according to Mr. de Vere. He publishes some interesting letters from Wordsworth, of whom he was an admirer. His recollections of Cardinal Manning and Cardinal Newman are among the most interesting in the book.

*[By Hills and Saunders, Windsor.]*

## HER MAJESTY THE QUEEN

# THE PROGRESS OF THE WORLD.

LONDON, *December 1st, 1897.*

1897.

The closing year has been the Queen's year. Whatever disappointments there may have been at home and aboard, the one subject upon which every one will look back with unalloyed pleasure and gratification is the Jubilee of the Queen. We have had troubles, within and without,—some of our own making on the North-West Frontier, others arising from causes beyond our control; but the one bright spot in the story of the year has been the unequalled opportunity which it afforded for acknowledging an Empire's debt of homage and gratitude to our Gracious and Sovereign Lady the Queen. Her Majesty, I am glad to know, is in famous health and in first-rate spirits. There is no clerk in the Foreign Office, no Secretary of State in Downing Street, who follows with closer interest every movement that affects the welfare of her subjects within and without the frontiers of the Empire. Her perfect memory is absolutely unimpaired by age, her hearing—often the first of the sentinel senses to sound the approach of decay—is as keen as ever; and her vigour is so astonishing that she experiences no fatigue when long after midnight, while most of her subjects sleep, she patiently toils through the ever accumulating mass of papers which require the personal attention of the Queen. No statesman, soldier, ambassador, or pro-consul leaves the Royal presence without feeling that, whether the theme be the Lagos Hinterland, the Thessalian frontier, or the campaign in the hills, there was extremely little he could tell the Queen that she did not know already. Even after all the eulogies of the Jubilee, we feel as if we were only just beginning to appreciate the Queen. Fortunately there seems to be every reason to hope that Her Majesty will long outlive the century. And that hope is perhaps the best gift 1897 has brought.

The result of the School Board election seems to prove that John Bull is at last beginning to wake up to the need for educating his children. He is not thoroughly roused—not by any means. Even now the Government is not half certain that it will bring in the Secondary Education Bill, to which all other measures ought to be made to give way; and the School Board elections themselves, although the results have been good, do not show that increase

in the numbers voting which would indicate a real revival of national interest in national education. Nevertheless, the brilliant victory of the Educationalists or Progressives over the Denominationalists or Reactionists in the School Board election in London is most encouraging. For the first time since 1882, the party pledged to educate the children with a single eye to the children's interest has secured a clear majority of the Board, winning thirty seats; while the party which habitually subordinates the interest of the School to that of the Church has only secured twenty-five. The minority is not united. It has lost its leader, for Mr. Diggle was defeated at Marylebone; and of its twenty-five members, two are Roman Catholics and one an Independent. The Diggleites have nine, Anti-Diggleites five, and the Voluntarists eight. The Educationalists only include one—Mrs. Adams, who stood as a Labour candidate—who is not a member of the Progressive Party. At last, therefore, Mr. Corrie Grant and Dr. Clifford and their able and zealous coadjutors have succeeded in attaining their hearts' desire. They will control the policy of the Board at the dawn of the Twentieth Century. It is an event of good augury for the County Council elections which are still to come.

## The Figures of the Poll.

The fact that the Educationalists won their victory by discipline and organisation is reassuring. It is usually the weakness of the Progressives to think they can capture the enemy's position by adopting a policy of "go-as-you-please, and when you please, and how you please." Of course it would have been better if the poll had risen instead of falling off, but we have at least escaped the disgrace of allowing a minority of the electors to elect a majority of the Board. It is rather difficult to cast up the totals, owing to the fact that there are so many scattered votes. Taking the two great divisions, the *Daily News* gives the figures as follows:—

| Year.    | PROGRESSIVE |     | MODERATE |     | MEMBERS. |    |
|----------|-------------|-----|----------|-----|----------|----|
|          | Votes.      |     | Votes.   |     | P.       | M. |
| 1885 ... | 261,195     | ... | 468,576  | ... | 19       | 36 |
| 1888 ... | 379,520     | ... | 476,817  | ... | 23       | 32 |
| 1891 ... | 388,029     | ... | 474,611  | ... | 22       | 33 |
| 1894 ... | 706,506     | ... | 602,622  | ... | 26       | 29 |
| 1897 ... | 572,664     | ... | 426,893  | ... | 30       | 25 |

But this does not take into account 27,917 Catholic votes, or 71,259 given to Independent candidates, although it includes the two Catholics returned as part of the Moderate minority. Even if all these votes

were added to the Moderate poll the Educationalists would still outnumber them by nearly 50,000 majority. It is satisfactory to see that the women were so successful. There are 8 of them on the Board, of whom 6 are Educationalists, 1 Denominationalist, and 1 Labour. Of course 8 out of 55 is absurdly few. But they are creeping up towards the 27. In the provinces the Educationalists have triumphed in Birmingham, Leeds, and Bradford.

**The London  
County Council  
Election.**

As might be expected, the success of the Educationalists in the School Board election has given fresh heart to the Progressives, and the Chairman of the party on the London County Council has already issued a manifesto summoning the electors to return a decisive majority at the coming election. The Progressives, of course, make the most of Lord Salisbury's sneer at the Council, and endeavour to raise the distinctly municipal issue as to whether or not the County Council is to exist as one strong, central government, capable of dealing with the great questions which affect the city as a whole. The Progressives protest against any scheme to partition London into cities of the rich and parishes of the poor, and they appeal to the electors to return a Council pledged to resist all the temptations to suicide which seem to be so fascinating to outsiders like Lord Salisbury. As a matter of fact, all this is mere electioneering. The L. C. C. is a great deal too strong for any Ministry to dare to attack it; but the Progressives, of course, cannot be blamed for doing their level best to profit as much as possible by Lord Salisbury's bolt from the blue. The Premier probably meant nothing; but what is only idle talk in the mouth of a Prime Minister may fairly be turned to party advantage by his political opponents.

**The Ebb  
of  
the Tory Tide.**

The by-elections last month went even better than I anticipated. In Middleton, Alderman Duckworth, a wonderful Lancashire man who began life by selling a pound of tea in penn'orths, carried off the Tory seat, defeating his opponent by a majority of 300. In the Exchange Division of Liverpool, Mr. McArthur got in by the skin of his teeth, the Tory majority being reduced from 254 to 54. In Deptford, Mr. J. W. Benn pulled down the Tory majority from 1,229 to 324. Thus all the soundings in the troubled waters of politics indicate an ebb of the Unionist tide. According to the *Daily News*, which is always the best paper to consult as to electoral statistics, 21 Tory seats have been vacated since the General Election; of these the Liberals

have captured five. Nineteen Liberals and Home Rule seats have been vacated. Of these the Tories have failed to capture one. 1895 therefore was Liberal low-water mark. The 40 vacancies led to 23 contests. In these constituencies the Liberal poll rose from 91,421 in 1895 to 102,808 in the by-elections, an increase of 11,387, or 12 per cent., while the Unionist vote fell from 98,675 to 96,902, a drop of 1,773, or nearly 2 per cent. The pendulum is swinging as usual.

**Sir W. Harcourt  
in  
High Jinks.**

This, of course, is as a draught of heady wine to the Opposition. Sir W. Harcourt has been mightily elated, and by way of letting off his exuberant exultation he set to work to cudgel Mr. Chamberlain in a letter which will not find its way into "The Polite Letter-Writer." Mr. Chamberlain replied with a letter of which his friends have said as little as possible. The epistolary combat recalls the scene in "Ab," that story of the Stone Age, in which the woolly rhinoceros "savages" the sabre-toothed cave-tiger. Neither hurt the other much, but the display of savagery was immense. Sir W. Harcourt, not content with his letter, followed Mr. Chamberlain to Scotland and rioted and rollicked about on platforms at Dundee and Kirkcaldy. When one sees Sir W. Harcourt thus chortling in his joy over the slight rise in the Liberal barometer, even a Tory must feel that it would be inhumanity on the part of Providence not occasionally to furnish a treat which is so mightily appreciated. For clapping the old party on the back no one beats Sir W. Harcourt.

**The Victim  
of the  
Confidence  
Trick.**

Beyond the mere ramping round and partisan roaring and tail-lashing, Sir W. Harcourt said two things worth remembering. One was a quotation from a soldier who summed up the whole case of the Silver men in this delightful epigram—"You take a shilling, call it half-a-crown, and pay your debts." The other was the significant, almost pathetic, passage in which Sir W. Harcourt referred to the way in which Mr. Chamberlain advertised to all the world the fraud which he had practised on the South Africa Committee, and especially upon Sir W. Harcourt. He said:—

You know that a committee sat to inquire into that wild and criminal attack which was made from British territory upon the South African Republic. That committee passed, I suppose, the severest censure which it was possible to pronounce upon the principal author of that transaction. It found him guilty of having, in a position of highest trust, deliberately deceived every one to whom he was bound by obligation and good faith. There was not one single member

who did not come to that finding. It was therefore with the utmost surprise, and I must say with the greatest condemnation, that I heard the Colonial Secretary declare that there had been nothing proved which affects Mr. Rhodes's personal position as a man of honour. (Laughter.) No doubt every man must be the judge of what he regards as personal honour. At all events, I do not approve—I do not think you approve—of the standard held up in the Colonial Office as one that will be tolerated in the conduct of those who have the administration of the dominions of the Queen. (Cheers.)

This is indeed pathetic. For Sir W. Harcourt seems to have consented to screen Mr. Chamberlain in return for the head of Mr. Rhodes on a charger. He was promised the head, the decapitation was duly declared by the Committee of which Mr. Chamberlain was a member, and then no sooner did the Committee dissolve than Mr. Chamberlain promptly and publicly declares the decapitation null and void, and Sir William is left lamenting. He was swindled, no doubt. But Blastus's conduct throughout the whole business has been a swindle from beginning to end.

The campaign in the North-West has been going on all the month. More good men have been shot down on both sides, more villages burnt, and more millions of rupees flung away, which the Indian Treasury ill can spare. Lord George Hamilton, addressing his constituents at Ealing on November 10th, made an elaborate defence for the forward policy of "Slaughter and Scoot," which was notable chiefly because of three things:—(1) its denial of the fact that the hill tribes had distinctly asserted that the occupation of Chitral and the making of the road thither was at the bottom of their hostility; (2) a curious appeal to Sir Henry Fowler, as if in expectation that he would support the Government against his own colleagues; and (3) the announcement that the territory into which we have penetrated is after all not to be annexed. "Butcher and Bolt" is not a popular policy: but the butchery having been done, we may be grateful that it is not to be followed by annexation. The brave Afridis have not fought in vain. But why Lord George Hamilton should need such a costly and bloody object-lesson to teach him what is as plain as the nose upon his face does not distinctly appear.

Not even the misery and horror of this criminal campaign can blind us to the pluck of the combatants on both sides. The dark-skinned Highlanders have displayed both native chivalry and military capacity, which made them no unworthy foes to the white-skinned Highlanders who were brought from the

hills of Scotland to pierce the passes of the Himalayas. Her Majesty has acted as the fugleman of the applause of the Empire, her telegrams of admiration and of sympathy having been more numerous in this campaign than ever before. The Jubilee has not been without its effect upon the Queen. But Royal plaudits must not be too cheap. It would never do for our soldiers to feel as if they were neglected if there was not a Royal telegram in the papers within twenty-four hours after every skirmish. None of the incidents of the mountain campaign have impressed the public more deeply than the way in which the Gordon Highlanders carried an almost impregnable position at Dargai. One of the bagpipers was shot through both legs as he played his men up to the charge. Like the valiant Widdrington at Chevy Chase, accidents to his nether extremities counted as nothing to the rage of the combat. Sitting down on the hillside, under a pelting hail of bullets, he continued to play "The Cock of the North," determined that his comrades as they stormed the mountain crest should not lose the inspiration which the Highlanders have ever drawn from the bagpipes. For—

With the breath which fills  
Their mountain pipe, so fill the mountaineers  
With the fierce native daring which instils  
The stirring memory of a thousand years.

Sir  
Henry Fowler  
and  
Chitral.

Lord George Hamilton's appeal to Sir Henry Fowler was singularly ill-advised, for it so happens that Sir H. Fowler feels most strongly the breach of honour of which the Indian Government was guilty in not abandoning Chitral. The allegation that this was an after-thought is sheer nonsense. I can speak on that point with personal knowledge. The last day that the Liberal Ministers were in office I made the round of the leading offices, and called in, naturally, in due course at the India Office. I found Sir Henry Fowler busily engaged in the customary burning of private personal memoranda, which every outgoing Minister destroys before his successor enters office. We had a long and most interesting talk, in the course of which Sir Henry Fowler expressed in the strongest terms his intense anxiety lest his successor should reverse his policy of evacuation. He went over point by point the arguments against retention, putting the necessity of keeping our pledged word in the forefront. He was still in hopes that Lord George Hamilton would not consent to the retention of Chitral; but there could be no mistake as to the earnestness of the conviction which he there and then expressed to me as to the impossi-

The  
Valiant  
Highlanders  
at  
Dargai.

bility of staying in Chitral without breaking faith with the tribes. Lord Rosebery, a few days later, spoke to me in terms of almost equal emphasis. It is therefore absurd to try and make out that the Liberals have invented the accusation of a breach of faith after the event. I can bear testimony that on the very day they quitted office this was one of the grounds for their hope that Lord George Hamilton would not retain Chitral.

As so much has been made of this, it may be worth while to complete the proof by quoting here the summary of Sir Henry Fowler's policy which I published in July, 1895. After describing how he

**The Question  
of  
Broken Faith.**

THE RIGHT HON. SIR H. H. FOWLER, M.P.

had been in opposition to Anglo-Indian prejudices on several occasions, I continued :—

The last case in which Sir Henry Fowler was called upon to take a stand in opposition to a very strong drift of official opinion was in the case of Chitral . . . The Government of India, going back upon its public and solemn pledges, insisted upon being allowed to make a road to Chitral, to garrison the fort, and in short to bring all the weltering wilderness of hills within the Indian frontier. Lord Roberts strongly supported this policy of annexation—all pledges to the contrary notwithstanding . . . Sir Henry Fowler's conclusion was clear and unmistakable. At any cost, almost without counting of costs, he would keep the pledges of the Indian Government and clear out of Chitral. The whole of the Cabinet, without even a single exception, endorsed his decision.

I wrote this immediately after leaving the India Office ; I published it before the General Election. It shows conclusively that the question of breach of faith was so paramount in Sir Henry Fowler's mind in 1895, that he felt Chitral must be evacuated at any cost, almost without counting of costs. Alas ! Lord George Hamilton, Lord Elgin, and Lord Roberts have given the nation only too much opportunity for counting the costs of the policy based on a deliberate breach of solemn engagements.

**Is Honesty  
the  
Best Policy ?**

Bad as is the bloodshed on the Indian frontier, it is not without its compensations. It is well to be reminded of the existence of Nemesis, and to know that sometimes the slow-footed avenger is capable of speed. Of all disasters, there is no disaster to men or nations so great as success which encourages them to believe that it pays to deceive. At home, alas ! we have had an object-lesson on the other side which is working infinite mischief. We shall yet have to pay dearly for the policy of deceit which has utterly destroyed the confidence of the Boers in our good faith. The *Daily Mail* interviewer asked Mr. Hofmeyer what he thought of the way in which Mr. Chamberlain had supported Mr. Rhodes. Mr. Hofmeyer replied :—

"It took us all by surprise. Even more so than Jameson and Rhodes. We trusted in English justice and British fair play. What do we see? With all the documents at their disposal, the Committee refused to call for the most important ones. Even then their report condemns him, and the House of Commons by a large majority exonerates him. Where are we? What is going to be the next move? We don't know; we feel suspicious. Can you wonder at it? If this is a specimen of public honour, if Chamberlain's idea of personal honour is to govern British statesmen, what are we to expect next? There can be no trust by the Dutch Community in the Colonial Office so long as these principles prevail there. The man we expected to act as an impartial judge of Rhodes turns round even before the trial and receives him as a friend. You punish the lesser men and commend the guilty principal."

**The Railway  
to  
Bulawayo.**

The opening of the railway which is linking Bulawayo to Cape Town has been the great event of the year in South Africa. Sir Alfred Milner took a leading part in the festivities which celebrated the completion of this highway of empire, but Mr. Rhodes was not present. His absence was more conspicuous than the presence of all those who were gathered together in the Capital of the Province which bears his name, celebrating an achievement which but for him would never have been accomplished. Sir Alfred Milner returned to Cape Town by the Beira route, stopping on his way to discuss the situation

with Mr. Rhodes. Judging from the telegraphed reports of his speeches, Sir Alfred was much impressed with the personal devotion to Mr. Rhodes,

From the Cape Times.]

SIR ALFRED MILNER AT BULAWAYO.

which he found everywhere in Rhodesia. Let us hope, now he has returned to Cape Town, that he will be able to draft proposals which Mr. Chamberlain will obtain credit by adopting.

Lord Salisbury's speech at the Mansion House was sensible, quiet, and, on the whole, reassuring. Its best notes were the last, in which he sounded once more the sonorous chord of the Federation of Europe, and the first, in which he announced that, after much fencing, Mr. Ritchie had at last succeeded in bringing the Engineers and their Employers into Conference. It is possible that, by much iteration and reiteration, the Tory Prime Minister may convince even Radical journalists of the Forward school that in the European Concert — that inchoate Federation of Europe — we have the only hope of the United States of Europe, the establishment of which ought to be

one of the foremost objects of every Progressive. It is true that the European Concert is, as Lord Salisbury admitted, not a record-breaker for speed. But therein it resembles "the mills of God." Ibsen's remark that, whatever might be said of Nature, one thing was obvious — she was not economical — is especially true about time. Nature always takes her time. And the evolution of the United States of Europe is an operation so vast that the goal is not to be attained by a hop, a skip, and a jump. At last some people are beginning to wake up to the discovery that Lord Salisbury, whom it is the fashion to deride as a cynic, has more faith hidden behind his cynical pose than most of the blatant asserters of their belief. Of which fact this constant fidelity to the Federation of Europe is a case in point.

From Der Nebelspalter, Zürich.]

THE CONCERT OF EUROPE.

A monument erected in remembrance of the saving of Crete by the Powers.

Trespassers  
Beware!

"Africa," said Lord Salisbury, "was created to be the plague of Foreign Offices," and his hands are full at present of "negotiations more or less animated, more or less continuous, but always friendly, with France, with Germany, with Portugal, with Italy, and with several non-Christian Powers beside." Of these negotiations the discussion with France as to the Hinterland of Lagos appears to be much the most pressing. "We cannot allow our plain rights to be overridden," said the Premier; and the announcement has been hailed with satisfaction, not only within the British Empire. For, as the *New York Times* remarks, "Since England opens on equal terms to all mankind all the country she occupies, the sympathies of mankind as between England and any European Power are with England." Our

liberal policy secures us the second vote of every other Power in the world, whenever there is any question of the division of unappropriated territory.

**The Case for Coercing Greece.** Lord Salisbury's defence of the conduct of the Government in not coercing Greece was summed up in the witty saying that "you could not kill a man in order to prevent him committing suicide." That depends. The Irishman who wished to kill the cow that had broken its leg in order to save its life acted wisely, and it might have been worth while placing an interdict on suicide, even if it could only be enforced by capital punishment. Mr. Bryce, replying to Lord Salisbury, said that there would have been no murder done, because the Greeks would have been only too glad to have been honourably delivered from the situation into which they had blundered in the honest belief that the Powers would intervene to prevent hostilities. But Mr. Bryce forgets that the foolish friends of Greece in this country would have raised such a commotion at any attempt to coerce Greece by the use of force, that Lord Salisbury might well have shrunk from taking that extreme step. He ought to have taken it, no doubt. But considering the wild yell of execration that burst forth when he sanctioned the firing of the "forty blessed shells" in Crete, it does not lie in the mouths of Liberals to upbraid him for not blockading the Piræus.

**Towards the United States of Europe.** It is a curious phenomenon that nearly every forward step that has been taken of late towards the development of the United States of Europe has been due to the initiative of Russia. The latest Russian proposal was intended to remove the paralysis of Europe. It is stated that Russia proposed for the despatch of business in Crete that the Concert should agree to settle questions by the vote of the majority, instead of insisting as at present upon absolute unanimity. The proposal was supported by Germany, Austria and France, but rejected by the dissentient votes of England and Italy. The latter Powers maintain that as they have done most of the work in maintaining peace in Crete, they ought not to be asked to give the control of the future of Crete into the hands of a majority of the Powers whose views would generally be in opposition to their own. Of course, there is a great deal to be said in favour of insisting upon unanimity in the Concert. Still, the Russian proposal is right in the main, and with a modification will have to be accepted. That modification is that all questions should be decided by a majority, excepting in such cases where any one of the Powers

reserves the right to exercise its right of veto; i.e., the decision of the European Concert will be by a majority of votes, subject to a *Liberum Veto* which each Power would be free to exercise when it deemed the occasion sufficiently grave. The present system of insisting upon actual unanimity upon every trivial detail does more than anything else to bring the Concert into contempt.

**How Austria Coerced the Sultan.** Last month Austria, usually the most long-suffering of all the Powers when the Turks are concerned, lost patience and took the law into her own hands. An Austrian subject in Mersina, in Asia Minor, had been imprisoned, and subjected to other indignities by the local authorities, acting on the direct authority of the Sultan. Demands for redress were met by

COUNT GOLUCHOWSKI.  
Austro-Hungarian Minister for Foreign Affairs.

the usual dilatory tactics, until at last Count Goluchowski put his foot down with emphasis, and launched an ultimatum in which he threatened to bombard the port of Mersina unless the offending officials were punished, and prompt compensation paid. The Sultan, thus threatened,

promptly capitulated. Count Goluchowski has received the congratulation of Europe for the success with which he demonstrated the possibility of coercing the Sultan without upsetting his empire. Count Goluchowski, indeed, has been one of the most conspicuous figures in the history of the month. The speech which he delivered to the delegations on November 20th on the Foreign Policy of Austria-Hungary was an extremely able exposition of a policy which has at least one great merit. It has brought Austria and Russia into line upon the Eastern Question. So long as Vienna and St. Petersburg are at one, they can practically fix things up as they please in the East. That is one strong reason why we should not seriously object to the proposal to introduce the

principle of the majority vote into the European Concert. It would at least saddle the majority with the responsibility of power.

Very satisfactory indeed is the news that came to hand the middle of last month to the effect that Russia has peremptorily vetoed the Sultan's design to spend the Greek indemnity in rebuilding the Turkish fleet. Russia has a little bill against Turkey of over a million sterling, five years' arrears of the war indemnity, fixed in 1878, and this she reminds the Sultan must be met before there is any talk of rebuilding the Turkish navy. This is good news. Russia has no intention of allowing the Assassin to make himself invulnerable by sea or land. The one security for the protection of the subject races in the East is that the Sultan shall never be permitted to become strong enough to dare to defy Russia. No other Power can be relied upon to interfere single-handed, and Russia does well to place a peremptory veto upon the attempt to reorganise the Turkish navy. The one bright spot in all the recent embroglio in the East was the hopeless impotence of the Turkish fleet. If all her old rusty ironclads had been effective engines of war, things would have gone very differently in Crete.

While Vienna has been convulsed by a shindy between the Germans and the Slavs, Paris has been in a state of high fever, the cause in the latter case being that which is known as the Dreyfus case. M. Dreyfus was a Jewish officer in the army who was condemned by a military tribunal, sitting in secret, for selling information to Germany. He was banished to Cayenne, where he remains in close confinement in an iron cage. Ever since his conviction his wife has been wearing the skin off her feet in

order to secure the re-opening of her husband's case. All her efforts, however, were fruitless until this month, when she succeeded in eliciting from M. Scheurer Kestner, Vice-President of the Senate, a public declaration that there was at least a *prima facie* case in favour of reviewing the evidence on the strength of which M. Dreyfus was committed. Thereupon the whole of the excitable Parisian world went into a fever, and for weeks past the French capital has been in a state of frenzy. It is somewhat difficult to understand why they should work themselves up into such a fury. Either M. Dreyfus is guilty or he

is not. If he is not, they should rejoice at the opportunity of doing justice to an injured man. If, on the other hand, he is guilty, what is all the pother about? Why should those who believe that his guilt is as clear as the sun at noonday refuse to allow that fact to be demonstrated beyond all gainsaying by a second and open trial? Newspapers are writing about this question as if it involved the fate of France. Parisians, especially Parisian journalists, seem to suffer from a hereditary predisposition to St. Vitus's Dance.

M. SCHEURER-KESTNER.

#### The Crisis in Austria.

I do not need to deal at any length with the sensational incidents which have made Vienna the centre of European interest for some weeks past. The subject is dealt with at length by an Austrian, who is very competent to speak on the subject. He contemplates the evolution of disintegration in Austria with a certain detachment of mind which is impossible to those who have succeeded in converting the Reichsrath into a bear-garden. But while leaving my contributor to deal with the purely Austrian side of the question, I may say that the spectacle of a Parliamentary majority paralysed by the concerted violence of an obstructionist minority is not one that is grateful

to friends of liberty in any part of the world. We may know nothing, and, if possible, care less, concerning the rights and the wrongs of the Germans and their opponents; but we can all understand the ugly blow which has been dealt at the very principle of Parliamentary government by the temporary triumph of the obstructionist minority in the Austrian Reichsrath. We have had our own troubles at Westminster; but hitherto the world has been spared the spectacle of a Legislative Assembly practically doubled up by organised rowdism. It may be quite true that the obstructives were in the right, and that Count Badeni was hopelessly in the wrong. Nevertheless, the fact that organised obstruction was able to paralyse Parliament and overthrow a Ministry is an event of evil omen.

**The  
Political Value  
of our  
Common  
Language.**

There is another aspect of the Austrian crisis which may well suggest a subject for gratitude on the part of our people. The causes which are threatening Austria-Hungary with dissolution have been brought to a head by the language ordinance which favours the use of the Czech language in official proceedings in Bohemia. This irritated the Germans to madness, and brought on a series of disgraceful scenes which culminated in the fall of the Badeni Ministry. We have difficulties in our own Empire, but, thank Heaven! the possession of our common language delivers us from the greatest danger which threatens the integrity of a polyglot State. As the possession of a common language is the bond of union, so the absence of any such tie exposes an empire to risk of dissolution. It would seem indeed as if nothing would save Austria but the adoption of some system of Volapuk, and for that it is now too late.

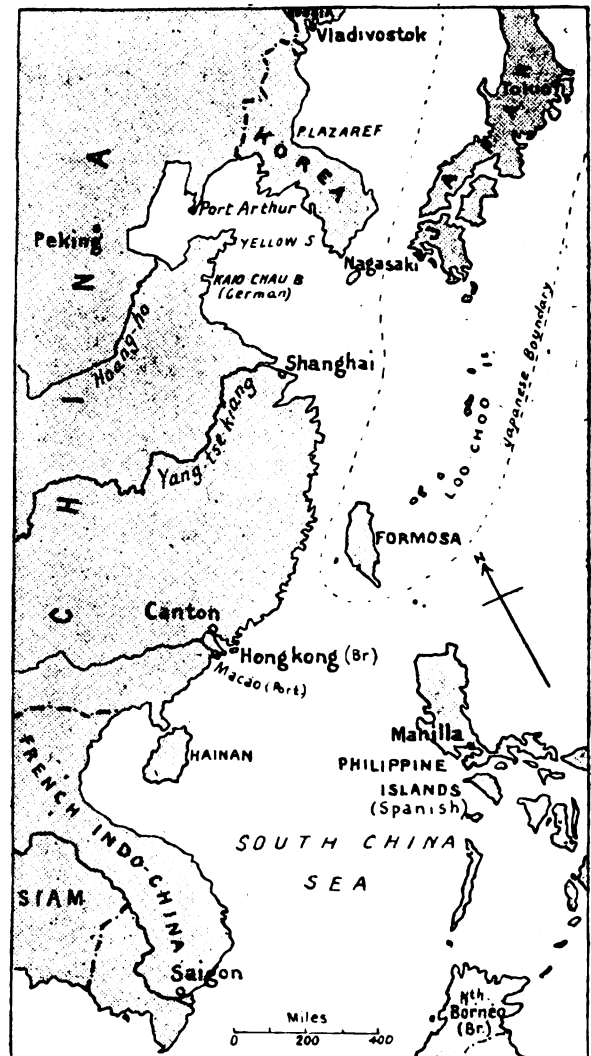

**The German  
Naval  
Programme.**

When the heterogeneous elements in Austria are effervescing like a seidlitz powder, and Paris is fretting itself into a high fever over M. Dreyfus, at Berlin they are steadily preparing to strengthen their fleet. For some time past no effort has been spared to prepare the German public for greatly increased naval estimates, and the time is now considered ripe for launching a big naval policy which will entail the expenditure of £25,000,000 sterling in the course of the next six years. Part of this will be expended in replacing obsolete vessels, but, according to the shipbuilding programme, "7 new battleships, 2 large and 7 small cruisers, will have to be built, the estimated cost of which, including armaments, is set

down as £8,250,000." In 1904, if this programme is carried out, the German Empire will have as its normal fleet "17 battleships, 8 coast-defence vessels, 9 large and 26 smaller cruisers, in addition to a reserve of 2 battleships, 3 large and 4 smaller cruisers." Preparations for the twentieth century are, therefore, well under way at Berlin, but they can hardly be said to augur the dawn of an era of discernment.

**A German  
Gibraltar in  
China.**

It would seem as if the partition of China, long talked of, was really about to take place. The massacre of Yen-Chow-fu in Shantung, in the Bay of Kiao-Chau, has led the Germans to land a force in

EUROPE IN THE CHINESE SEAS.

Kiao-Chau, on Chinese territory, in order to obtain early and complete satisfaction for the murders of the missionaries. The German press frankly discusses the question from the point of view of the Imperial necessity of securing for the German fleet a Chinese Gibraltar, and for German commerce a Chinese Hamburg. The missionaries evidently could not have been murdered in a more convenient spot, for Kiao-Chau has "long been regarded by German commercial circles in China as a worthy object of German ambition."

From *Der Floh*, Vienna.]

A CHINESE VERSION OF "MARY STUART."

LORD BURLEIGH (to the German Leicester): "My Lord, these missionaries have been killed very conveniently for you." . . .

The  
German  
Demands.

The Emperor is sending his brother to Chinese waters with an ironclad, and companion vessels, which will bring up the total number of German fighting men in the Far East to 3,500. It would seem from the terms that have been demanded from China that this force will speedily have to be strengthened. Reuter's telegram thus summarises the terms made by Germany upon China:—

1. A money indemnity of 200,000 taels for the murder of the two German missionaries.
2. The erection of a cathedral.
3. The refunding of the expense incurred in the occupation of Kiao-Chau.
4. The degradation of the Governor of Shantung.
5. The punishment of murderers and minor officials.
6. A railway monopoly in Shantung.
7. The occupation of Kiao-Chau by Germany as a coaling station.

These terms will no doubt be debated, but the Chinese at present refuse to discuss anything until

their territory is evacuated. It is quite probable that Germany will need more than 3,500 men before she overcomes the invincible repugnance of China to surrender one of the gates of her empire to a European Power. The other Powers at present are preserving an attitude of reserve. Germany, however, will have no reason to be surprised if the precedent that was set by the intervention of Russia, France, and Germany at the close of the Japanese war should be invoked in order to justify European intervention before Kiao-Chau finally passes under the German flag.

| The revised figures of the Mayoralty Election in New York give this result:— |          |       |               |
| Lord Salisbury on Tammany's Victory.   | Van Wyck | ..... | 231,724       |
|  | Low      | ..... | 151,076       |
|  | Tracy    | ..... | 101,783       |
|  | George   | ..... | 20,717        |
|  | Gleason  | ..... | 1,089—274,665 |

Majority against Van Wyck ..... 42,941

If the principle of the Second Ballot had prevailed, the victory of Tammany would not have been so conspicuous. Various explanations have been given as to why Mr. Van Wyck was returned, but the most curious is Lord Salisbury's. Speaking at the Albert Hall on November 16th, the Premier said:—

The result at New York, which was watched for with so much interest and which so many people deplore, was adopted after an effort to mend admitted defects of the municipality, by enormously increasing its area and by bringing a much vaster population under its range. It failed lamentably because it could not obtain the assistance, support, and co-operation of the only class of men by whom municipal institutions can thoroughly and satisfactorily be governed.

The explanation has only one disadvantage. It is not true. Mr. Seth Low obtained the assistance, support, and co-operation of the class of men Lord Salisbury referred to. Only there were not enough of them to put him at the head of the poll. Lord Salisbury, of all men, ought not to need to be reminded of the possibility that universal suffrage is not infallible; and that if the majority does not elect the best men, it does not follow that the best men did not run for office.

Mr. Chamberlain last month took a trip to Scotland. He discoursed on Patriotism in the abstract to the students of Glasgow University. He had a good theme, a splendid audience, and a capital quotation from a German newspaper; but somehow he failed to thrill anybody. Even the *Times* sniffed at him—which was unkind. The best passage in his address was the following extract, which, alas! like many other things, was "made in Germany":—

England has interests to defend over the whole earth; her ships cruise in all oceans, and the red coats of her soldiers are to be seen in every continent. She fights in all quarters of the globe, often under the greatest difficulties, and constantly with comparatively insignificant military forces, yet almost invariably holds her ground; and, indeed, not only defends what she has, but is incessantly adding to her possessions. Threatened and fully occupied on the Indian frontier, Great Britain simultaneously conducts a victorious campaign in Egypt against powerful, dangerous, and ruthless foes. This manifestation of universal power, this defence and extension of a world-wide Empire, such as has not been paralleled for nearly twenty centuries, gives fresh proof of the invincible and unbroken vigour and vitality of the Anglo-Saxon race. England is still a distinguished pioneer of civilization, and the best wishes of her people always accompany these enterprises, which are undertaken, not only to extend her power and dominion, but also to promote indirectly the interests of humanity and civilisation. The British sword is always followed by the British plough and ship, and it is this which establishes the success of her forward policy, since it constantly affords to it fresh justification.

It is to be regretted that this rare German editor was left unnamed.

From *Pan.*

[November 9, 1897.]

"OUT OF SIGHT, OUT OF MIND."

OUTLANDER (regretfully): "He seems to have forgot us entirely."

The Cabinet has, it is understood, fixed up its programme for next session at the November Cabinet. It is reported that it is going to do something for the Army, to assimilate the local government of Ireland to that of Great Britain, and

to convert the London vestries into municipalities. If they have time they will bring in the Secondary Education Bill, and it is even rumoured that they may bring in a Reform Bill on the principle of one vote one value, the importance of which, from a Tory point of view, is that it will take many Home Rule seats from Wales and Ireland and give them to the Unionists of London. It is probable that Ministers will be content with their Irish Local Government Bill. No one cares much about reforming the London vestries, and Redistribution is not likely to be pressed till nearer the General Election.

The Liberals, who had twenty-seven articles—or was it twenty-nine?—on their Newcastle Programme, have had

a new programme of nineteen heads drawn up for them by the Political Committee of the National Liberal Club. It is a compilation from suggestions sent in by various Liberal Associations, and contains such pious aspirations as an adjustment of the relations between Capital and Labour as would put an end to antagonism! One additional article appears to have been somewhat unaccountably omitted. The last item should surely have been entered thus—"20. To provide for the immediate establishment of the millennium." Mr. Herbert Gladstone, by way of contributing to the general harmony, has roundly told temperance men, who are the most impracticable and impolitic politicians in the world, that in clamouring for the Local Veto they have been beating the air and ploughing the sands. He believed in the principle of the direct veto, but he was sick of working for it, for he did not believe it would meet the end in view. Therefore he proposed that the Liberal Party should tackle the question on the following lines:—

First, when the disease of drunkenness had reached a certain point he would have a man compulsorily detained by law. That would have a deterrent effect on others, and indirectly it would have a widespread moral effect on the community. In the next place, he would increase the penalty with each offence committed. Thirdly, he would amplify and extend the powers now in the hands of the licensing magistrates to insist on proper buildings where licences were granted. This should be accompanied by a provision by law that public-houses should exist in a certain proportion to the population. In the extermination of surplus licences he would give compensation by the free use of the time limit and out of the proceeds of the enhanced values of the remaining licences.

The question of the condition of the Army is profoundly troubling the minds of Ministers. It is believed that they intend to propose a great increase of the Army estimates. Lord Wolseley, although properly firm against any kind of conscrip-

What is to be Done for the Army?

tion, maintains that more capable men are needed in the ranks. Most of the recruits are mere boys, and rickety at that, for the clearings of the Highlands and the stampede to the towns have destroyed our best sources of supply. Sir W. Harcourt replies that the effective strength of the British Army has gone up from 190,240 in 1878 to 220,000 in 1897; that the Army Reserve has increased from 11,000 to 70,000. We spent 12 millions on the Army in 1870, and 18 millions in 1897, besides a great increase in the Indian Army. On the other hand, Mr. Arnold Forster, in a series of lucid and powerful letters to the *Times*, has depicted a state of unreadiness and general inadequacy that is enough to make one despair. What are we to think of the brain of the nation that cannot give us better results for £18,000,000 a year than that which Mr. Arnold Forster describes? If this is all we get for eighteen millions, is it any use investing any more millions in the same rotten concern? "We are not going to vote millions," says Sir W. Harcourt, "for a War Office which the *Times* describes as having lost the confidence of the country." Perhaps not, but is Sir William prepared to give us a War Office which will command the confidence of the country?

Canada  
Once More  
Ahead!

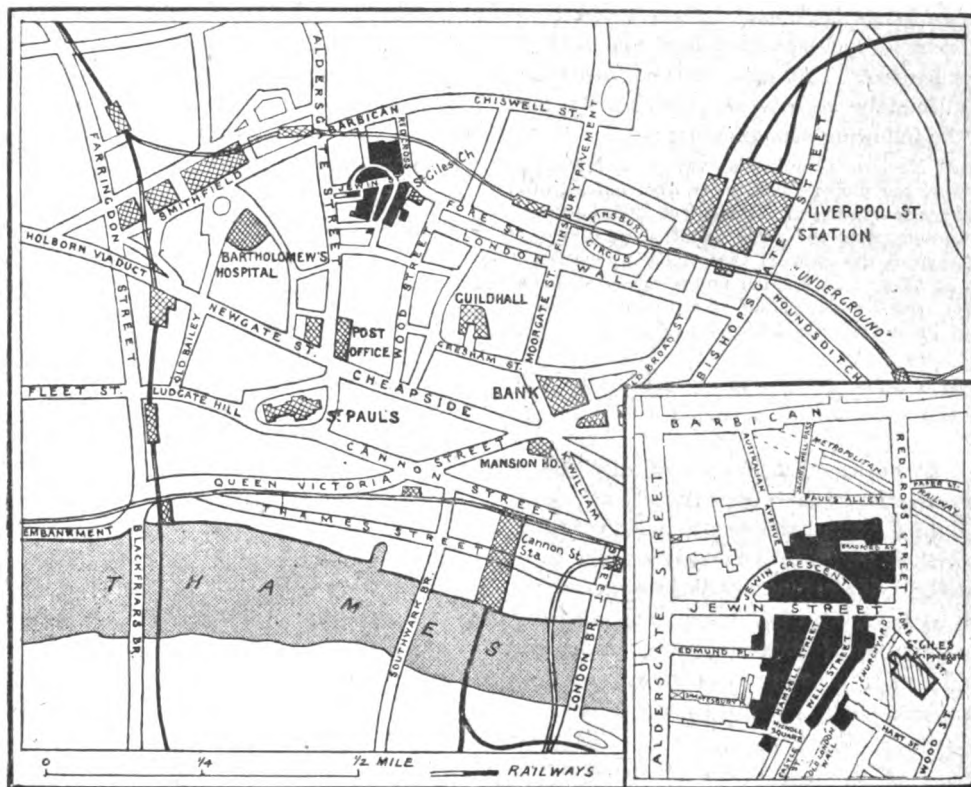

The Jubilee year is rapidly running to a close, and yet our Imperialist Administration has done nothing to commemorate the sixtieth year of the Queen's reign by the establishment of Penny Postage within the Empire. When the subject was brought before the Colonial Premiers, several of them objected on the ground that they had not even Penny Postage within their own colonies, so Mr. Chamberlain dropped the suggestion without apparently making any effort to ascertain how far he could get them along the right road. In the meantime, what Mr. Chamberlain has failed to do, Sir Wilfrid Laurier has suddenly achieved. It is announced that after January 1st the postage from Canada to all parts of the English-speaking world will be reduced from 2½d. the half-ounce to 1½d. the ounce. This change will cost the Canadian Government £10,000 a year. What an example the Dominion has shown the Empire in this public-spirited initiative! A New York paper, in the midst of the discussion at Washington about the seals, asked sarcastically whether London was still the capital of the British Empire. It would seem that in some respects Ottawa is not only willing but worthy to exercise the initiative which ought to have been the prerogative of Westminster.

The Conferences between Sir W. Laurier and the Washington authorities on the subject of the Behring Sea seals, which took place last month at Washington, led to an astonishing crop of rumours. The experts, it was asserted, had agreed that the seals were dwindling in number, and that something ought to be done to arrest their extermination. The Canadians were willing to suspend the exercise of their right to kill seals at sea for a year if the American Government would in return make some arrangements for reciprocity in the matter of customs duties on the staple articles of Canadian export. The Americans refused, but offered monetary compensation. This Sir W. Laurier is said to have refused on the somewhat strange ground that it was undignified to accept money in such a case. The acceptance of cash as compensation for vested interests has never before been refused as unworthy the dignity of the Empire, and what is good enough for the Queen ought to be good enough for Sir Wilfrid Laurier. The Americans offered to suspend seal-killing on land for a year if the Canadians would stop their slaughter on the sea. The reply of the Canadian Government to the American proposal has now been published. It is reasonable and conciliatory. The Canadians point out that they are perfectly willing to discuss the prohibition of seal-catching on the high sea providing that it is dealt with as a part of a general settlement. The Government declines to make any agreement dealing with the question until an International Commission has been appointed to settle other outstanding differences, such as the Alien Labour Law, the Atlantic Fisheries Question, and the oppressive features of the new American Tariff. The reply points out that nothing will be lost by a few months' necessary delay in proclaiming the prohibition of sealing, since the season does not open in Behring Sea until August, 1898, and the coast catch of the early spring will not amount to more than 6,000 skins. Moreover, it continues, the prohibition of the lawful enterprise of pelagic sealing can only be effected by Imperial legislation, which could not possibly be carried until March—if then. As no serious slaughter takes place of the seals until August, it is to be hoped that Ottawa and Washington may be able to arrive at some settlement before that date.

**Great Fires  
in  
Great Cities.**

On November 21st London and Melbourne suffered from conflagrations exceeding in extent any great fires of recent years. An explosion in a basement under a mantle warehouse in Hamsell Street, a narrow lane behind Aldersgate Street, started a fire which raged for hours, baffled the efforts of the Fire Brigade, and was not ultimately got under until seventeen acres of smoking ruins testified to the destruction of £6,000,000 worth

has raised the question whether the London Fire Brigade is up to its work. New York and Chicago, of course, believe they can give points to London; but probably, if the Fire Chiefs of the American cities were given *carte blanche* to do their very best with London, they would find the circumstances so different that most of the criticisms in which they now indulge would be found not to apply. Still, if Mr. Ralph and the *Daily Mail* can convince Londoners that water towers and chemicals should be added

MAP SHOWING THE SITE OF THE FIRE OF NOVEMBER 21ST.

of property. In Melbourne the damage done by the fire, which broke out in Elizabeth Street and spread to Flinders Lane, was estimated at £1,000,000. The heavy losses which these fires inflicted on the insurance companies made Consols droop for a moment. It does seem provoking that a sum equal to the cost of maintaining the whole British Navy for six months should have gone up in smoke in six hours, all because some one had been fooling with a match or a gas-jet. The fire in London was, fortunately, not fatal to life, but it threw thousands out of work and created great suffering. Incidentally it

to the equipment of the force, the County Council Election is coming in a few weeks, when they can get anything done they want.

**Who is Master  
in the  
Engineers'  
Shop?**

After endless manœuvring, the Engineers and their employers actually were prevailed upon to meet at a preliminary conference on November 17th. Both sides were fully and strongly represented, and the Conference met day after day to discuss the questions at issue. They began on the vexed question of the machinery and how it is to be employed. On this point the employers put their foot down with emphasis. The struggle turned on the

question of whether the employers were to be free to level up or level down the conditions of labour to the standard of any workshop in the Federation at which trade unionists were employed. The trade unionists had gained here and there concessions as to the use of machines and the restriction of their use to unionists working under unionist regulations. But they had acquiesced of necessity in other conditions enforced in other workshops where they were less powerful. The masters therefore insisted that any firm in the Federation should be free to go back on any concession (not relating to hours or wages) which had not been of universal application. The men resisted for some days, but ultimately acquiesced provisionally unwillingly in the following memorandum :—

The Federated Employers, while disavowing any intention of interfering with the proper functions of trade unions, will admit no interference with the management of their business, and reserve to themselves the right to introduce into any federated workshop, at the option of the employer concerned, any condition of labour under which any members of trade unions here represented were working at the commencement of the dispute in any of the workshops of the Federated Employers.

The Conference at the moment of writing is still sitting, but the prospect of a pacific settlement is overcast.

It was hoped at first that the decision of the Lancashire operatives to acquiesce in referring the proposed reduction of their wages to arbitration would have averted a strike. Unfortunately their acquiescence was limited to an arbitration based on the state of trade since the notice of wages reduction was given. The masters, by way of meeting this suggestion, offered to limit the basis to the state of trade between September 22nd and the end of the year. This the men refused. The question is not one for outsiders to pass judgment upon, excepting that the public has a right to insist that the industry of two whole counties shall not be paralysed merely because of a difference of opinion as to whether the arbitrators shall look at the state of trade between September 22nd and the end of October, or whether they shall only begin their examination at the latter date. If masters and men cannot agree as to the right date when the state of trade should come under the purview of the arbitrator, the question as to which is the right date might itself be sent to an arbitrator. Unless a readiness to resort to arbitration includes a readiness to arbitrate as to the basis of arbitration, it will not carry us very far.

**Evidence  
for  
the Venezuela  
Arbitration  
Board.**

The subject of arbitration brings up the question of Venezuela, in which it would appear that there is good hope that we shall be able to make out our right to the disputed territory before the Tribunal that will meet next year. The British Commissioners sent out to British Guiana have unearthed in the vaults of the Court-house an old Dutch volume of the seventeenth century, containing copious and consecutive records by the Dutch Commanders of the Colony of the visits which they paid to Dutch depots in the disputed territory which the Venezuelans insisted had never been taken possession of by the Dutch. Of course, if the old Dutch journal is as authentic as it is said to be, and if its contents are correctly described, the British case will be proved, and those who have been abusing the rapacity of John Bull will have to admit that here, as in many another place, all the trouble has arisen not because the good John was too grasping, but because he was too easy-going and did not insist upon his rights. Prompt notice of ejection for trespass is always an unpleasant action to take, but if it is not taken your good nature may entail forfeiture of your property.

**Queensland  
and  
Australian  
Federation.**

When the last Federal Convention of Australia adjourned, it rose with a confident expectation that when it met again Queensland would also be represented. The question of the participation of Queensland in the Federal Convention was submitted to the Legislative Assembly on November 29th, and a demand was made by the Opposition that the Colonies should be divided into three separate sections for the Federal Elections. The Prime Minister, Sir H. M. Nelson, refused to pledge the Government to carry out this proposal, whereupon the Federal Enabling Bill was defeated by an adverse majority of two, nineteen voting for it and twenty-one against it. The narrowness of the majority still justifies a hope that arrangements may be made to surmount the difficulty which at present shuts Queensland out of the Convention ; but even should the Conference meet without Queensland, it is to be hoped that the work of federation will be steadily pressed forward.

**The  
Band of Hope  
Jubilee.**

One of the most excellent institutions in the country celebrated its Jubilee last month. The Band of Hope, a temperance organisation for young folks, began in a very humble way at Leeds, on November 7th, 1847. It has in fifty years over-

spread the whole country, and now numbers no fewer than three million members. Great efforts are being made to whip up another million, but even then half the children would be outside the organisation. Bands of Hope, like all other voluntary institutions which depend upon private initiative, flourish much more in some districts than in others. If only the most backward towns and villages could be levelled up to the standard of those where the temperance cause is well worked among the young, the members of the Bands could be doubled. But this, alas! is the problem everywhere. What is wanted to improve the world is not so much the doing of some new thing better than any one has ever done before, but the doing everywhere of the old things as well as they are already done in patches.

**The Status of Women in France.** In the United States, here and there, are to be found women, duly qualified, regularly occupying a recognised position at the Bar. In the Older World the legal profession continues to be a male monopoly. In France, however, a lady knight has arisen to challenge the continuance of this anomaly. Mademoiselle Jeanne Chanvin, who has duly passed

her examination, applied last month to be allowed to take the oath which is preliminary to enrolment as member of the French Bar. This was contested on the ground that her sex, although not a disqualification by statute, should be regarded as a disqualification by nature. The decision was given against her. Even if it had been given in her favour, her application would still have had to come before the members of the Bar, who are not likely to entertain it with much favour. The French women are going ahead. On December 1st they started a new daily paper, which is edited, owned, and managed entirely by women. *La Fronde* is to be as much a female monopoly as the Bar and the Army are monopolies of the male. Not only are its contents to be entirely written by women, but the mere man is not to be allowed to set up any of the sacred matter in type. Not a man has been employed on it in any way whatever. There is plenty of money at the back of it, and its editor-in-chief is Madame Durand de Valfevre. It is published at 14, Rue St. Georges, Paris. The conductors of *La Fronde* will probably accept as a good omen the fact that last month the French Chamber of Deputies passed a bill to allow women as witnesses to births, marriages, and deaths, and to wills and other legal documents.

MILLE CHANVIN.

The season has been wonderfully mild.

**The Flowers of November.** We have seldom had a more beautiful autumn, and in the gardens of Southern England there were more flowers.

in blossom in November than are often to be found in May. The chrysanthemum—the one great boon which we owe to Japan—has been singularly luxuriant. The *Westminster Gazette* publishes the following list of flowers, which, according to a firm of florists, were blooming in the open air in Surbiton, near London, on November 18th, 1897:—

Hardy Japanese Primula, Tree Lupin, Red Geranium, Phyteuma, Toadflax, Wallflower (double and single), Yellow Yarrow, Perennial Candytuft, Red Valerian, Cape Pond Weed, Dwarf Alpine Phlox, Edelweiss, Oriental Poppy, Common Red Poppy, Iceland Poppy, Jews' Mallow, White Ragged Robin, Heath, Red Hot Poker, Campanula, Pansies, Violas, Double Dahlia, Carnation, Michaelmas Daisy, Mignonette, Blessed Thistle, Yellow Rack Fumitory, Periwinkle, Ox-eyed Daisies, Sweet Rocket, Rock Rose, Yellow Daisies, Alpine Pink, Alpino Toadflax, St. John's Wort, Hardy Ivy-leaved Cyclamen, Crocus, Perennial Flax, Autumn Crocus, Polyanthus, Thrift, Marigolds, Mallow, Clematis, Snapdragon, Clove Pink, Jessamine, Single Potentilla, Perennial Cornflower, Yellow Leopard's Bane, Veronica Shrub, Lenten Rose.

These flowers are something better worth seeing than the usual November fog.

# DIARY FOR NOVEMBER.

## EVENTS OF THE MONTH.

- November 1. Municipal elections throughout England and Wales.  
 Funeral of Mr. Henry George at Brooklyn.  
 Conference of Masters and Men belonging to the Lancashire Cotton Trade.  
 Resolution passed by London Vestries to acquire the Crystal Palace for Public use.  
 Bust of Sir Augustus Harris unveiled in Drury Lane by the Lord Mayor.
2. Judge Van Wyck elected Mayor of New York by 80,000 majority.  
 Defeat of the Government in Newfoundland.  
 Khama met Sir A. Milner at Palapye with 1,000 followers.
3. Nomination of Candidates for the School Board Election in London.  
 Release of 112 prisoners from the fortress-prison of Montjuich.  
 The avowed Assassin of Mr. Rand and Lieutenant Ayerst brought before the Court at Pona.
4. Railway opened from Cape Town to Bulawayo.
5. Spanish War Scare on the New York Exchange.  
 Meeting of the Federation of Engineering Employers at Manchester to consider Mr. Ritchie's latest proposals for a conference with the Amalgamated Society of Engineers.  
 International Arbitration and Peace Association at the Memorial Hall.  
 Attempted assassination of the Brazilian President.
6. Treaty signed between Russia, Japan and the United States regarding the Seal Fisheries.  
 At a meeting in Manchester the executive of the Operative Spinners decided to submit to arbitration the Masters' proposals regarding Wages.  
 Mr. A. A. Kanthanc appointed Professor of Pathology at Cambridge.  
 Opening of Passmore Edwards Convalescent Home at Herne Bay for members of Friendly Societies.
8. Board of Trade received replies from Employers and Employed in the Engineering Dispute.  
 Sir Wilfrid Laurier and Sir Louis Davies, accompanied by Scaling experts, started for Washington.  
 London Bolemmakers passed a resolution to remain out on strike.  
 Meeting of the Royal Geographical Society.  
 Lecture on his Polar Expedition by Mr. F. G. Jackson.  
 Congratulations from the Queen on completion of railway, received at Bulawayo.
9. Lord Mayor's Day in London, H. D. Davies, M.P., new Mayor.  
 Report of the entire loss of a picket in the Indian Frontier War.  
 Conference on the Engineering Dispute agreed to both by Employers and Employed.
10. Bishop of London presided at a meeting of the Christian Social Union in Holborn.  
 Sir H. Harben opened a Public Library at Hampstead, erected at his own cost.
11. Reception of Sir Wilfrid Laurier and Sir Louis Davies at Washington.  
 Scaling Conference again opened at Washington.  
 School Board Finance Committee submitted their estimate for first half of the financial year of 1898-99.  
 At Cambridge, Degree of LL.D. conferred on the Archbishop of Canterbury and Lord Russell of Killowen.  
 First Anniversary of Liberal Forwards held at the Holborn Restaurant.
12. Nomination of Sheriffs for England and Wales.  
 The Queen left Balmoral for Windsor.  
 Bulawayo Festivities ended.  
 List published of the Killed and Wounded at the storming of Sarai Sar.  
 Secret examination of accused persons abolished by the French Chamber.
13. Conference at Durham on Secondary Education.
14. Kiao-Chau Bay seized by the German Fleet, as a reprisal for the murder of two German Missionaries.

15. Bust of Michael Faraday unveiled at Faraday Street Board School.  
 M. Scheurer-Kestner by letter explains his action in regard to the Case of Captain Dreyfus.  
 Dr. Peters found guilty at Berlin of breach of official duty, and dismissed the Colonial Service of Germany.  
 M. Roma elected President of the Greek Parliament.
16. Annual Conference of the National Union of Constitutional and Conservative Associations opened at St. James's Hall, London.  
 The Bolemmakers on Strike resumed work in the Thames repairing yards.
17. Preliminary Conference of Masters and Men at the Westminster Palace Hotel on the Engineering Dispute.  
 Conclusion of the Conference of the N. U. C. and C. A.  
 Heavy fighting on the Indian frontier.  
 Sea Conference at Washington ended.

Photo by Bassano.]

H. D. DAVIES, M.P.  
 The New Lord Mayor of London.

18. Last Meeting of the present London School Board.  
 Deputation from Birmingham to Sir John Gorst on Education Reform.
19. The Privy Council refused the appeal of Mr. Tilla's, Editor and Proprietor of the *Kesari*.  
 Great fire in the City of London.  
 Annual Meeting of the Association of Head Masters of the Society of Arts.  
 Withdrawal of the German marines from Crete.  
 Destructive fire in Melbourne.
22. Royal Commission on London Water Supply held its first sitting at the House of Lords, and adjourned till December 6th.  
 A New Flood Channel opened at Teddington.  
 Manifesto published by the Progressive Party on the London School Board Election.  
 Defeat of the Greek Government on the Motion for a Committee of Inquiry into the Incidents of the War.

22. General Lockhart announced to the Afriids terms of submission.
23. A deputation of the Trades Unions waited on the President of the Board of Trade.  
 Delegates of the Amalgamated Society of Railway Servants met at Birmingham.  
 Sir W. Lockhart and the Fourth Brigade reached Datal.  
 At Bombay, heavy sentences for Sedition in India were reduced on appeal.
24. The Conference of Representatives of the Federated Engineering Employers and representatives of the Affiliated Societies commenced its sittings at the Westminster Palace Hotel.  
 Appointment of Prince Henry to command the German Squadron in China, gazetted.  
 A French expedition occupied Nikki in Africa.  
 Riotous scenes in the Austrian Reichsrath; Herr Wolf seriously wounded.  
 New Public Library opened at Lordship Lane, presented to the parish of Camberwell by Mr. Passmore Edwards.
25. Riotous scenes in Austrian Reichsrath continued.  
 London School Board Election, resulting in defeat of Mr. Diggle and his Party.
26. Continued disturbance in Austrian Reichsrath.  
 Sitting of Committee at Paris of France and England on the Niger questions in Africa.
27. Resignation of the Baden Ministry at Vienna.  
 Prorogation of Austrian Reichsrath.  
 Sir Walter Phillimore appointed Justice of the High Court in room of the late Baron Pollock.
28. A Violent Gale in all parts of the United Kingdom.
29. Germany formulated its demands on the Chinese Government.  
 Adjourned Conference at Manchester on the Cotton Trade Crisis.
30. Resumed Conference on Engineering Dispute at Westminster Palace Hotel.  
 Opening of the Imperial Reichsrath at Berlin by the Emperor.  
 The French Senate passed a Vote of Censure on M. Darlan.  
 The French Court of Appeal gave Judgment against Mdle. Jeanne Chauvin's application to be admitted to the Bar.  
 Ontario Legislature opened by Sir Oliver Mowat.

## BY-ELECTIONS.

November 4. Owing to the death of Mr. Thomas Fielden there was a by-election in the Middleton Division of Lancashire, with the following result:—

|                          |     |       |
|--------------------------|-----|-------|
| Mr. James Duckworth (L.) | ... | 5,964 |
| Mr. Mitchell (C.)        | ... | 5,664 |

Liberal Majority ... 300

Previous Election, 1895: Mr. Fielden (C.) 5,926; Mr. Hopwood (L.) 5,061; Conservative Majority, 865.

On the elevation of Mr. Bingham to the Bench, a vacancy occurred in the Exchange Division of Liverpool, with the following result:—

|                   |     |       |
|-------------------|-----|-------|
| Mr. McArthur (C.) | ... | 2,711 |
| Mr. Rae (L.)      | ... | 2,657 |

Conservative Majority ... 54

Previous Election, 1895: Mr. Bingham (L.) 2,884; Mr. Dowling (L.) 2,637; Liberal Unionist Majority, 254.

Owing to the retirement of Mr. Justice Darling a by-election was held in the borough of Deptford, with the following result:—

|                          |     |       |
|--------------------------|-----|-------|
| Mr. A. H. A. Morton (U.) | ... | 5,317 |
| Mr. J. W. Benn (R.)      | ... | 4,993 |

Unionist Majority ... 324

Previous Election, 1895: Mr. Darling (U.) 5,654; Mr. Macnamara (R.) 4,425; Unionist Majority, 1,229.

Photo by Maull and Fox.]

THE LATE SIR HENRY DOULTON.

## SPEECHES.

- November 1. Lord Rosebery, at Manchester, on the history of the Corn Laws and Free Trade.  
 Mr. Herbert Gladstone, at Maesteg, on the Government's Foreign Policy.  
 2. Address by Mr. T. J. Brynes, at Cannon Street Hotel, on the resources of Queensland.  
 3. Mr. Chamberlain, at Glasgow University, on Patriotism.  
 King Charles of Roumania, at Jassy University, on Intellectual Culture.  
 The Queen of Roumania on National Ballads.  
 4. Mr. Arthur Balfour, at Norwich, on his Education Bill of 1897 and the Eastern Policy of the Government.  
 Sir Michael Hicks-Beach, at Sheffield, on the need for Army reform preceding increase of the Force.  
 Mr. Chamberlain, at Glasgow, on the disorganised condition of the Liberal Party.  
 Mr. Courtney, in London, on the Dangers of an "Imperial Zollverein."  
 Sir A. Milner, at Bulawayo, on the wonderful enterprise of the promoters of the Railway.  
 5. Mr. Chamberlain, in Glasgow, on the Workmen's Compensation Act.  
 6. Sir Augustine Birrell, at Toynbee Hall, on Poetry.  
 7. Mr. Chamberlain, at Glasgow, on Municipal Development during the last sixty years.  
 The Lord Mayor, at the Guildhall, on the Improved Aspect of London.  
 9. Lord Salisbury, at the Guildhall, on the power of the Concert of Europe to prevent war.  
 10. Lord George Hamilton, at Acton, on our past and future Indian Frontier Policy.  
 Mr. Asquith, at Rochdale, on the Disappointment of the Country with the Present Government.  
 The Duke of Devonshire on the need of an efficient Army.

13. Sir Michael Hicks-Beach, at Bristol, on the Engineering Dispute and the powers of the Board of Trade.  
 Lord Reay, at Bristol, on the Government's Frontier Policy.  
 M. Waldeck-Rousseau, at Bordeaux, on Liberal Ideas.  
 Mr. Henry Arthur Jones, at Toynbee Hall, on the Relation of the Drama to Real Life.  
 15. Mr. Bryce, at Aberdeen, on the Foreign Policy of the Government and the Italian Rising.  
 16. Lord Salisbury, at a Mass Meeting of the N. U. C. C. at the Albert Hall, spoke on Unionist Policy and the Municipal Government of London.  
 Mr. James Lowther, Earl Derby, Colonel Brookfield, Major Rasch, and others, spoke at St. James's Hall on Army Reform and the General Policy of the present Government.  
 17. The Emperor of Austria-Hungary, at Vienna, on the work of the European Concert.  
 Sir John Gorst, at Birmingham, on the inability of Parliament to deal with social legislation.  
 Lord Wolseley, at United Service Institution, on How to increase the Army.  
 18. Mr. W. Long, at Bournemouth, defended the Dog Muzzling Order.  
 Sir Charles Dilke, at Bath, on Army Reform.  
 The Emperor of Germany, at Berlin, on the whole duty of the soldier.  
 20. Sir H. H. Fowler, at Wolverhampton, on our duty to India.  
 Sir John Lubbock, at the Memorial Hall, speaking on Education, recommended that the English should be made similar to the Scotch Code.  
 Count Goluchowski on the good understanding between Russia and Austria on the Eastern Question and European Policy.  
 22. Mr. Ritchie, at Croydon.  
 Mr. Herbert Gladstone, at Manchester.  
 24. Mr. Chamberlain, at Birmingham, on the triumph of Unionist policy during two and a half years.  
 Sir Charles Dilke and Mr. Labouchere, at Chelsea, on Parliamentary Reform.  
 25. Sir William Harcourt, at Dundee, on the part played by Liberals in founding the Colonial Empire.  
 Sir Michael Hicks-Beach, at Oxford, in praise of a Second Chamber.  
 Sir M. White Ridley in defence of the Government.  
 26. Sir William Harcourt, at Kirkcaldy, on our unnecessary wars.  
 Sir E. Clarke, at Manchester, on the House of Lords.  
 30. Lord Lansdowne, at Lincoln's Inn, on the Army.  
 The Duke of Devonshire and the United States Minister spoke at the Royal Society's Annual Meeting at Burlington House.

## DEATHS ANNOUNCED.

The deaths are also announced of Mr. Carlos Cooper; Surgeon-General Gilborne; Major-General Adolf von Below; Baron von der Goltz; Lord Berwick; Mr. Thomas Quinn; Herr Goldenberg; Signor José Alameda; Lieutenant-Colonel Hon. R. A. Anderson Ramsey; Rev. Hewitt Poole, D.D.; Captain Watson; Lady Blount; Sir James R. G. Maitland; Mr. J. T. Morton; Sir W. J. Montgomery Cuninghame, Bart.; Captain E. C. Symon, R.N.; Countess of Cranbrook; Sir Charles F. Smythe; Lady Chichester; Major-General Durlton; Mr. James Piccolotto; Captain Lewarne; Rev. Canon Pattenden; General Aitken, R.A.; Captain de Butta, R.A.; Mr. Edward Walford; Countess of Lathom; General Sir A. J. Herbert, K.C.B.; Mrs. Brough; Mr. H. W. L. Billington; Mr. H. C. Baulster; General W. H. Ashworth; Lady Kenzie; Rev. James Legger; Lord Dorchester.

THE LATE BARON POLLOCK.

## OBITUARY.

- Nov. 2. Sir Rutherford Alcock, K.C.B., 89.  
 Colonel Chard, V.C., 49.  
 4. Rev. Samuel Haughton, 75.  
 Rev. Peter Bellinger Brodie, 82.  
 6. Signor G. B. Cavalcaselle, 77.  
 8. Mrs. Parkes Goodtry (Miss Amy Sedgwick), 62.  
 Dr. Heinrich Viener, Berlin, 63.  
 9. Mr. F. Rowland Jackson, 89.  
 11. M. Auguste Boulard, at Paris, 72.  
 12. Mr. J. B. Burgess, R.A., 67.

**ABDUR RAHMAN KHAN, AMEER OF AFGHANISTAN.**

# CHARACTER SKETCHES.

## I.—ABDUR RAHMAN KHAN, AMEER OF AFGHANISTAN.

BY AN EXPERIENCED ORIENTAL AND TRAVELLER WHO KNOWS HIM WELL.

THE character and success of India's policy in respect of her northern and north-western borders must always depend in a great measure upon her relationship with the Mussulman monarch at Kabul. The stirring events on those frontiers of the past three months, the progress, if not the origin, of which was for a long time attributed by many to the encouragement and support supposed to have been rendered by the Ameer, present a fitting occasion for briefly reviewing the character and position of one of the greatest oriental potentates known to history. Abdur Rahman Khan is a son of the late Sardar Muhammad Afzal Khan, who was a son of Ameer Dost Muhammad Khan, and for a short time also an Ameer. Parliamentary papers show that the present Ameer succeeded to all the territories which had passed from his uncle, Sher Ali Khan, to his cousin, Yakub Khan, at whose abdication, after the Kabul massacre of 1879, the Ameer-ship devolved upon Abdur Rahman. Thus the latter has always understood that the tribal territory cut off by the since-accepted Durand line of 1893 was excluded from his domination. The same position must, it is presumed, be maintained after Abdur Rahman's death. Nevertheless, he has throughout his rulership exerted every device and effort to obtain a footing in those territories. In Waziristan, Bajour, and Mohmandistan he has been especially insinuating. The British Government were once on the eve of a rupture with him over the two first-named places, threatening to turn him out by force if he did not leave peaceably and without delay. At his death they may possibly be confronted with an Ameer still more eager and determined than his predecessor to wield the sceptre of authority over his co-religionists on the British border; and should there happen to be a Government in power in London who are disinclined to offer any opposition to this innovation, every section of our frontier fabric, whether of "forward" or "backward" architecture, must necessarily collapse.

Abdur Rahman Khan is now over sixty years of age, and has been two or three times on the brink of the grave with insidious gout. In 1894 the disease took such a serious turn that he was believed and reported to be past recovery—indeed, there was a fear for a time that he had actually succumbed to the attack. The attacks are frequently recurring in less alarming forms, and he has occasionally to leave his *darbar* owing to the pain which they bring him. These threatening facts make it necessary for England to have continually before her the great problem which will have to be solved should the throne suddenly become vacant.

### THE NEXT AMEER.

Had the Ameer died on the last occasion, his eldest son, Habibulla Khan, would, most Indian people believe, have succeeded him. But His Highness is not known to have yet nominated an heir, and he may be awaiting the approach to manhood of the boy Umar Jan, who is the only royal offspring in the present dynasty. This boy is the son of the Ameer's first duly married wife, the "Harem Saheba" or Queen. She, like her husband, is a grandchild of the old monarch Dost

Muhammad Khan. They are therefore cousins, and the child Umar Jan, born in this royal line and in wedlock, is, according to European ideas, the legitimate heir. Habibulla Khan and Nasirulla Khan are the sons of a wife of lower rank.

The mother of Umar Jan has a very strong personality, and some influence over her lord and master. Visitors to Kabul say that were the Ameer to die leaving no heir she would expend every effort to establish her son Umar Jan on the throne. Much would depend on the views of the British Government. If they had determined upon any particular nominee, and found that they could dictate terms to him more successfully than to another, they would, no doubt, support him.

Outside the Ameer's family there is no one who would stand much chance of successfully opposing his three sons. But should Ayub Khan, Sher Ali's son, who defeated Burrow's brigade at Maiwand in 1880, happen to get into Afghanistan at the appropriate moment, there would be a lively scrimmage and some bloodshed. There still remain many adherents of the old dynasty who would rally round the plucky boy-general, who is now a middle-aged man with a good share of common sense.

### EARLY ADVENTURES OF ABDUR RAHMAN.

The hero of this article, Ameer Abdur Rahman Khan, has had a wonderful career. During his early years, before he escaped to Samarcand, he was constantly engaged in fighting for the cause of his father, Afzal Khan, and he won great fame as a general and a leader. His battles, which were often prolonged and always skilfully planned and fought, extended from one end of Afghanistan to the other, and he has repelled overwhelming numbers of factional rebels, some fighting for one royal claimant to the throne and some for another. Abdur Rahman generally gave the full measure of his opposition to his uncles—the brothers of his father and the sons of the Dost Muhammad. Finally, the country became too hot for him, and having been completely overcome and routed by a force very superior to his own, he adopted the course which is traditional with the Afghans—he bolted to Russian territory, where he remained an economically paid pensioner of the Tsar, till summoned in 1880 to take over his ancestral *guddi*.

### HIS ACCESSION TO THE THRONE

The negotiations connected with the high position offered to him were carried on by Sir Lepel Griffin, who was then chief political officer with Sir Donald Stewart's force. After the exchange of several letters, two native officers, who subsequently became A.D.C.'s to the Prince of Wales, were deputed to conduct Abdur Rahman to Zimma, in Afghanistan, where conferences took place between the Ameer-elect and Sir Lepel Griffin. The latter found this astute oriental rather more than a match even for him at first, but Sir Lepel's diplomatic skill was in the end successful, and secured a satisfactory settlement. Once in power the Ameer lost no time in consolidating his authority, though at the outset he had considerable trouble and opposition, which necessitated his often resorting to extreme and drastic measures.

Ayub Khan, who had been Governor of Herat under his father, Sher Ali, and had absconded to Persia after his complete defeat by Lord Roberts, near Kandahar, reappeared on the scene, and succeeded in routing the Ameer's forces from that city, which he at once occupied, following up the expelled with much determination and pluck. Abdur Rahman Khan then perceived that unless he took the field himself there would be insuperable trouble, so he started off with a picked force and met Ayub's so far victorious army in battle array near Kandahar. The matter was quickly decided. Abdur Rahman's skilful generalship was too much for Ayub, who was signally defeated, and had again to bolt precipitately into Persia, where till 1888, when he was removed to India, he was, mainly at our expense, an honoured guest of the Shah.

#### HOW HE CONSOLIDATED HIS POWER.

Abdur Rahman's success on this occasion seemed to inspire awe in the country, which, as his iron rule gradually became more severe and uncompromising, soon grew into fear. With no respect of persons and no sentimental weakness, his rigorous austerity and cool-headed despotism soon gained for him a feeling of distrustfulness and alarm throughout the country. Chief after chief, nobleman after nobleman, were being peremptorily summoned to the capital, and, on some pretext or other, either ruined, imprisoned, or executed. Nor did he rest till he had demolished all those whom he believed either to be his enemies, or too popular and strong to have in his way. We cannot prejudice him from the standpoint of British civilisation; his means to the end which he subsequently attained were rough and, in our eyes perhaps, barbarous; but a gentle Victorian rule would have been no use in that uncivilised country, which requires to be continually "under the iron heel." He now has the country completely at his feet, and a mere whisper of his which may reach even the remotest corner of the kingdom is as effectual as a battery of artillery. One who has travelled in various parts of the principality at different times can personally testify to that.

#### REBELLIONS SUPPRESSED.

But Abdur Rahman has had some trouble in acquiring this unprecedentedly strong position. The Ghilzai rebellion of ten years ago shook his despotic structure to its foundation, and for a long time threatened to throw the whole country into tempestuous anarchy. It was ultimately subdued, though not without much bloodshed and desolation.

The revolt in 1888 of the Ameer's cousin, Ishak Khan, a Sher Ali-ite, who was governor, and one might say autocrat, of Afghan Turkestan, was another provoking menace to the safety of the Kabul throne. Ishak Khan had several times been summoned to the Ameer's presence in a friendly way, but bearing in mind what had happened to so many of his colleagues in other parts of the dominion, he had put off, with many ingenious excuses, compliance with his monarch's invitation. At length the Ameer, incensed at this repeated disobedience, despatched an army against the delinquent, which, however, the latter succeeded in overthrowing and dispersing. Ishak Khan thereupon marched on towards Kabul with the wild idea of capturing the city, but he was met on the way by a more destructive force than his own, commanded by the Ameer in person. Ishak Khan was soon defeated, and on finding that further struggle was hopeless he absconded with a selection of his most faithful followers, crossed the river Oxus, and took refuge in the very Russian city, Samarcand, where

Abdur Rahman had spent so many years of his exile. Ishak Khan and his following are now the guests of Russia, from whom they receive a decent competency. The Ameer continued his march on to Mazar-i-Sharif, and spent about a year or so in Ishak Khan's late domain in settling the affairs of government, and in putting to torture and death those whom he believed to have furthered or favoured his enemy's designs.

#### SOVEREIGN SUPREME.

There have since been several revolts against his authority, principal among which was the great Hazara outbreak, in the hills between Kabul and Herat. This was a Shiah *versus* Sunni contest, and ended, as usual, in the complete success of the Ameer. His Highness is a *Sunni* follower of the Prophet. Most of the Persians are *Shiaks*, and consequently there are a great many of the latter in Afghanistan, especially on its western limits. Another mixed tribe of Hazaras towards Kandahar also broke out, but were likewise crushed in the end. The Mangals, too, occupying territory eastward of Kurram and close upon the province of Kabul, have more than once shown their teeth, which, however, metaphorically speaking, have in the long run been successfully extracted. There is not likely to be another revolt of any magnitude during the life of the present Ameer, who has subjugated the country so completely and unmistakably as to be now able to interlard with his still unbroken rigour a modicum of kingly generosity and condescension; while his supposed exaltation to the very highest attainable position under the Prophet stimulates his subjects to admiration, reverence, and more steady allegiance, both individually and collectively. His name and his doings are criticised in suppressed whispers, and eulogised in loud shouts; and woe betide the monstrous dare-devil who ventures to say or even to remotely hint abroad anything which is not in His Highness's praise.

#### HIS RELATIONS WITH THE BRITISH.

The Ameer evidently does not believe in the relations between England and Afghanistan being conducted through a subordinate Government; this is exemplified by the eagerness he evinced to have an ambassador in London as the only proper intermediary. He must have been disappointed beyond measure at the refusal of his request, for it is clear that he had set his heart upon it.

The Ameer treats his English and other foreign employes with much consideration and hospitality, and pays them all well. He has indeed a great respect for a white face so long as its possessor is "straight," and practical and brave, as he has usually found Englishmen whom he has met. His suspicions with regard to us are in regard only to our diplomacy and our international dealings, and he probably has more real respect for his veterinary surgeon than for a viceroy. His treatment of Sir Salter Pyne has bound the latter to him with the most affectionate ties. Whether Pyne has or ever had much influence with the Ameer is doubtful. He guides him no doubt in engineering questions, but in those affecting the nation or its government the Ameer is very unlikely to be influenced by any one. Pyne would soon come to grief if the Ameer found him dabbling in diplomacy, or offering suggestions under that head. Indeed, Sir Salter Pyne knows better.

#### HIS SUBSIDIES IN GOLD AND STEEL.

The Ameer had not been more than three years on the throne when he complained of his impecunious condition and the impossibility of carrying on the government without assistance. He was granted a subsidy of one

lakh of rupees a month, which the Durand mission of ten years later raised to a lakh and a half. He has been presented with enormous quantities of arms and ammunition, including some valuable and useful field pieces, and under the Durand agreement of November 12th, 1893 (*vide* a recent Blue Book), he is not only permitted to import warlike stores *ad libitum*, but has an engagement from us that we will help him in this respect. His army is now well equipped with the most modern rifles of precision, with a plentiful supply of ammunition; while the accoutrements and appointments which they can display are beyond what could ever have been pictured in any Afghan Ameer's wildest dream. The factories at Kabul, established and developed by that remarkably enterprising and successful Sir Salter Pyne, have for years been producing a vast variety of weapons, machinery, and other stores, which have considerably raised the status of the country and introduced artistic industry which does both the Ameer and his chief engineer the greatest credit. These innovations have also made the Ameer's position more firm; it would be no child's play now for any European Power to attempt an invasion of Kabul.

#### BOUNDARY QUESTIONS SETTLED.

During the first few years of his reign Abdur Rahman evinced much anxiety to have a properly defined boundary all round his dominions, and this led to the appointment, in 1884, of joint British and Russian commissions to delimitate his northern frontier, from the river Hari Rud on the Persian border eastward to the river Amu Daria or Oxus. From the latter point to the Victoria Lake the river itself had, in 1873, been mutually agreed upon between England and Russia as the boundary, though the informality of the agreement had practically turned it into a dead

letter; for both Sher Ali and Abdur Rahman continued to occupy territory trans-Oxus, which was only recently evacuated in accordance with arrangements come to in connection with the demarcation by General Gerard and a Russian delegate in the Pamir district between Victoria Lake and the Chinese border.

The demarcation from Persia eastward, which was carried out by Colonel Sir West Ridgeway and a Russian General, was a complete success, and except for the well-known and unfortunate incident at Panjdeh, in which the Russians seized territory actually at the time in the Ameer's occupation, there was no *contretemps* upon which England need look back with regret. On his way back to India Sir West Ridgeway and his officers visited the Ameer at his capital and were much struck with his strong, arrogant, egotistic and determined character.

#### HIS VISIT TO LORD DUFFERIN.

In the meantime the Ameer had (in the spring of 1885) met Lord Dufferin at Rawal Pindi, where some very important negotiations took place, terminating in the public declaration of the Ameer's loyalty to the Queen-Empress, and his everlasting friendship to the British nation. At a banquet, at which were present, amongst many other high dignitaries, the Viceroy — Lord

Dufferin—the Duke of Connaught, several native chiefs, two Commanders-in-Chief, and a couple of Lieutenant Governors, the Ameer drew from a golden sheath a beautiful sword which had been presented to him by the Viceroy, and in a very animated oration declared that with that sword would he smite to the earth the enemies of the British Government. He was intensely interested and amazed at seeing our splendid display of troops, whose march past and subsequent manoeuvres he watched with the eye of an enthusiastic soldier. On his way back

King's Own Scottish Borderers supporting the Gurkhas.

(From a sketch by Lieutenant-Colonel C. Palley, Gurkha Rifles.)

to Kabul a Peshawar missionary presented him with a Protestant Bible, which, in spite of his religious bigotry, he very graciously accepted.

#### AFGHANISTAN FOR THE AFGHANS.

In the matter of trade and passage through his country the Ameer is irreconcilably obdurate. Here again his inordinately suspicious character comes in, for no trade ring or syndicate has yet been able to move him in this matter, though he must see quite plainly that the opening up of Afghanistan to the benefits of external trade would eventually enrich the country and improve his own revenues. With similar jealousy and want of trustfulness in the motives of others, he closes his country to foreign travellers almost as selfishly as do the Tibetans. It is only to special individuals of rank and importance that he will concede the privilege of a protected passage. Nevertheless there is, comparatively speaking, little danger involved in travelling in Afghanistan. The writer was very recently in what was years ago one of the most uncivilised bazars in the country, and the Afghans were most civil and obliging.

#### AN ORATOR AND A STUDENT.

It is most interesting to listen to the Ameer's public speeches. They are really marvels of eloquence, verbosity, egotism, modesty, logic, exaggeration, plausibility, and affected disingenuousness combined. His *darbaris* and other listeners stand in front of him transfixed, and he plays upon their temporarily hypnotised faculties with greedy avidity, dismissing them after a fiery, but, nevertheless, perfectly self-controlled harangue, sometimes lasting three or four hours, with feelings of awe and wonderment. In addition to being a genius, the Ameer appears a very widely-read man, with almost a supernaturally retentive memory, for he can quote and recite volumes of valuable matter and place interpretations upon what he has read and heard, which a Daniel would be proud of. In a recent speech, for example, he referred to an incident in French history of thirty years ago, and he seems to have followed pretty closely the events connected with the Turco-Greek war.

#### THE HEIR OF ALEXANDER THE GREAT.

He is a singularly interesting man to get into conversation with, provided one can speak either Persian or Pushtu. He does not speak English, and talking to him through an interpreter is not satisfactory. He believes himself a connecting link with Alexander the Great, all other links separating him from that renowned monarch having been rusty and rotten and of no account.

The Ameer's habits are very regular, and, unlike the majority of oriental potentates, he is neither a gourmand nor an excessive drinker. He also has a great antipathy to the opium vice, resorting to this soporific only when his ailment is excruciatingly troublesome.

#### SOME POINTS OF FRICTION AND SUSPICION.

In some phases of his dealings with the Indian Government the Ameer has exhibited not only unfriendliness, but a stubborn blindness to his own good. His encroachments in independent Waziristan; his unlawful occupation of similar territory in Bajour; his endeavours to obtain supremacy over the Mohmands and others, all in violation of the clearest mutual understanding with the British, gave much trouble; while his refusal to send a commissioner to jointly settle the Afghan-Waziristan boundary after he had agreed to do so was anything but a laurel to his honour. The revolt of the Waziris following upon this pointed to grave suspicion of His Highness's

hand being in some way in it, especially when, on the Ameer's recent assumption of the title of "Zia-ul-Mitawiadeen" (or the "Light of Union and Faith"). Mulla Powindah, the leader of the attack on Wano, and of subsequent depredations, was received at Kabul and entertained in the most friendly manner by His Highness. Up to this time, he remembered, the Mulla had been in open enmity with the Ameer, who had offered a reward of Rs.10,000 for his head. Indeed for many years the Ameer's inexplicably strange attitude along the whole border, especially on that portion of it which lies between the Kurram and Kandahar, could not but arouse a suspicion both in England and in India as to his fidelity.

#### THE MISSION OF THE SHAHZADA.

Another instance, which breathed anything but friendly amenities, was the arrogant and rude behaviour of his son the "Shahzad," who visited us here in 1895. Any one could see with half an eye that this bumpkin, whose impudent attitude was too studied to be natural, was acting under precise instructions received from his father. To have deputed such a rustic to pay court to our Queen-Empress and to rub shoulders with royalty and other refined and polished society, constituted in itself almost an outrage upon cultured England. But that the Ameer should have, as he apparently did, coached up the boy before starting to an attitude of perspicuous incivility was insolence to the British nation. How the Ameer could have supposed that an attitude of this character could ensure success in the delicate mission entrusted to the Shahzad of getting Her Majesty's consent to receive an Afghan envoy at the Court of St. James's, it is difficult to conceive. The boy's behaviour, both on his journeys from and to Afghanistan and while in Europe, will be remembered for at least a few decades. A question has been raised somewhere as to why he did not visit Constantinople. It is believed that the Sultan, who reads with his tongue in his cheek the Ameer's assumption of Mussulman headship and prophetic pretensions, did not wish to be bothered with this so-called "Prince" Nasirulla.

#### A CONNOISSEUR IN TORTURE.

The Ameer's methods of punishment are varied and singularly ingenious. Kabul is too far from London to enable us to hear of them all; but a story was told either by a traveller who visited Kabul some years ago, or by the *Civil and Military Gazette's* news agent at Peshawar (the writer forgets), which gave three specimens of his originality in this respect. One old man got his beard pulled out by the roots in public *darbar* for some offence against the tenets of the Ameer's autocracy; another, who was a baker, and had sold short weight, was sentenced to be roasted in his own oven; a third, who had mentioned to his friends (?) that the Russians were advancing on Kabul, was placed on the top of a tall pole, upon which had been fastened a small stool, where he was commanded to shout vociferously "the Russians are coming." Should he lack in his energies or give way to a doze, there was a sentry below who would remind him of his duty by a prod from his fixed bayonet.

There is sufficient evidence now that the Ameer was erroneously suspected of complicity in the disturbances and combined revolt raised against the British by the frontier tribes. He seems neither to have helped nor to have encouraged these misguided factions in their lamentable outbreak; and his straightforward and dignified repudiation of guilt, viewed in the light of his subsequent demeanour and proceedings, has a

PART OF THE SAMANA RANGE SHOWING HEIGHTS WHICH WERE STORMED ON OCTOBER 18TH AND 28TH, VIEWED FROM GENERAL SYMONS' CAMP AT SHINERVRIE.

(From a sketch by Lieutenant-Colonel H. H. Hart, commanding Royal Engineers, 1st Division Tirah Field Force.)

genuineness about it which should satisfy the most sceptical. We can hardly hold him responsible, under the peculiar circumstances of this case, if the acts of certain recalcitrant sections of his people implied their countenance or approval of a religious uprising. Nevertheless, the knowledge that England is prepared to pull him up for any disloyalty of this kind may be a wholesome lesson for him in the future.

The following extracts from the *Allahabad Pioneer* of October 8th will be instructive:—

Further communications from the British agent at Kabul go to show that the Ameer is steadily pursuing his declared policy of condemning the action of the tribes in open hostility to the British Government. His orders to the Governor of Jellalabad to turn back all tribal deputations seeking to visit Kabul in the hope of obtaining assistance, followed close upon his proclamation forbidding his subjects to join in warlike operations, and directing his officials to disperse any gatherings of tribesmen who might be about to move into the disturbed area, show that Abdur Rahman is apparently quite consistent in his policy now, and that no change of front on his part is likely to occur. . . . His Highness is reported to be extremely angry with the Afridis in particular: for by their closing of the Khyber they have not only stopped the caravan trade, but prevented a consignment of arms and stores imported from Europe being sent up from Peshawar. These are lying at the railway station, and there they must remain until the pass is reopened.

In unmistakably strong language the Ameer upbraids

them for their foolish, deceitful, and villainous conduct in taking up arms against a Government (the British) who have always treated them so well. He rejects with some emphasis the pretensions of these tribes in the matter of a *jihad*, pointing out to them in the most significant terms that they have no power under the Koran to declare a *jihad*. He says in a proclamation to his own people, published broadcast: "Why do you call these disturbances *jihad* or *ghaza*? . . . The first condition of a *jihad* is the co-operation of the King of Islam (*i.e.*, himself). It is curious that the king is on friendly terms with the English, and yet you are making a fuss about *jihad*." He then goes on to observe that the tribesmen, in talking among themselves, give the cause of the rising to the British occupation of Chitral and Swat, and continues, "I tell you that in taking possession of Chitral the object of the British Government is not to assess revenue or to tax the people." He then proceeds to tell the revolting tribes that he has nothing to do with their affairs, and has no concern with them, because he has no trust in them. "Do not," he says, "be led to think that, like Shere Ali,\* I am such a fool as to annoy and offend others for your sake. Your real object is to make me fight with the British Government, and if I were to do such a foolish thing I am sure you would assume the position of simple spectators."

\* The Ameer with whom England went to war in 1878.

His proclamations are too fulsome to reproduce at length, but they are most interesting State papers. It is necessary to observe that one of them, which condemns the idea of a *jehad*, is dated August 13th—that is to say, about four days before he received the letter from the Government of India regarding the reported complicity of his people, his troops, and his commander-in-chief in the rebellion. There is one thing noticeable in his proclamations—that is, that he ignores all knowledge of the “mad” mulla. Having dilated upon the past position of the tribes, and shown how they tendered their allegiance to the British Government, accepted allowances and made agreements, he observes that they have now, without any cause, raised disturbances and rebellion at the instance of a *fakir* “whose parentage is not even known to the King of Islam.” So much for the “mad” mulla, who declared—which a good many in India and England believed—that he had the assistance and support of the Ameer. His Highness, with his unique knowledge of mullas and their proclivities, must have thought the British frontier officials very unwary to have allowed the rising so coolly to initiate itself without any check. A very tiny spark may, if not trampled out, be the nucleus of the conflagration of a city. So it was in this instance. Had immediate steps been taken to seize the so-called “mad” mulla (who, by the way, was no more mad than those who so stigmatised him), the outbreak might have been nipped in the bud.

#### A SUMMING UP.

In summing up the Ameer's character, it is difficult to form an opinion as to whether his many and great merits

do not outweigh his strange and inseparably inherent demerits. But we may safely conjecture that so diametrically opposed are his nature and attributes to those qualities which commend themselves to stereotyped Englishmen, that the majority of what they regard in him as *good*, he probably himself considers bad; while many of those palpable demerits of his which are most revolting to their cultured senses, form in his estimation rather the better side of his character. Yet, when he meets an English gentleman he can, in spite of his naturally uncouth and domineering tendencies, be as courteous and deferential as an ancient Athenian. The writer can personally vouch for this. His Highness is, moreover, one of the most hospitable orientals one has had the honour to meet. Nothing is, in his view, too good for any one whom he welcomes as a guest. But Afghans are still Afghans, and it will take some centuries to break through their native idiosyncrasies. One sterling good quality of the Ameer's must be admitted: he is intensely patriotic, and whatever he has done which has appeared opprobrious in our eyes, he has always had at heart the good of his country and of his people.

On the whole, it will be more to England's advantage than otherwise that His Highness should not be cut off for many years; and we may as well end this article by wishing long life and prosperity, in what is really virtuous and noble and progressive, to His Highness the Ameer, Sir Abdur Rahman Khan, G.C.S.I.

## II.—THE CONGO FREE STATE AND ITS CHIEF SECRETARY—BARON VAN ETVELDE.

ON the next page we reproduce a recent and characteristic portrait of the Chief Secretary of the Congo Free State, whose remarkable career and successful administration have attracted general attention on the Continent, and frequently been commented on in the English press.

Edmond Van Etvelde was born at Moll, in the province of Antwerp, on the 21st of April, 1852. After completing his studies at the Liège Atheneum, he went through the Superior Commercial Institute in Antwerp, where he passed in the final examination with much distinction. The budding gifts of the Flemish youth were soon discovered by the authorities; he was sent to China by the Belgian Government to study the commercial capacities of the Far East, and he entered in 1873 the Chinese Maritime Customs Service. On his return to Belgium in 1877 he was appointed Belgian Consul in British India, and was promoted in 1880 to the rank of Consul-General.

His long residence in British possessions accounts in a large measure for his well-known English sympathies, and the liberal spirit in which he has facilitated and recognised the invaluable services, civilising as well as christianising, rendered by the English and American Baptist Missions to the Congo.

In 1885, when the Congo Free State was founded, the King of the Belgians and of the New State entrusted M. Van Etvelde with the direction as Administrator-General of one of the three Departments—Foreign Affairs, Interior and Finance—into which the Congo Government was then divided. In 1889 the King—with

the inborn prescience which has guided all his public actions—placed him at the head of the Interior, and, three years later, of the Financial Department, the whole central government having since then come under his direction as Secretary of State.

The work has been varied and arduous. The new and first Secretary concluded successfully treaties with France, Great Britain and Portugal, extending and defining the boundaries of the State; negotiated with the Holy See the abandonment of the religious patronage of foreign Powers in the Congo territories; and actively encouraged by his moral and material assistance the establishment of the Christian missions of his own country throughout the interior, their number having increased since 1886 from thirty to two hundred and twenty-three in 1896. In 1888 he obtained the sanction of the King to several decrees prohibiting the introduction of spirits and firearms beyond the sea coast; and all these measures were afterwards adopted by the African powers, and embodied in the General Act of the Brussels Anti-Slavery Conference. A complete Congo Postal Service has been extended into the interior as far as Lake Tanganyika. In 1885 a survey of the Lower Congo was ordered, and a pilotage service introduced, the navigable channel being marked by buoys up to Matadi. It may be mentioned that machinery is in operation with a view to having this channel deepened to twenty-four feet so as to allow all the coasting steamers to proceed without difficulty up the river as far as the terminus of the nearly completed Congo railway, in the origin and carrying out of which—backed by the substantial con-

**BARON VAN ETVELDE,**  
**CHIEF SECRETARY OF THE CONGO FREE STATE.**

tributions of the Belgian Government—the State and its Secretary have taken an enlightened and vigorous part—the ever-vigilant Sovereign promptly giving to all his sanction and guidance, and stamping on every measure his strong and stimulating individuality.

M. Van Etvelde has been chiefly instrumental in organising the judicial system of the State. Down to 1896 regular law courts existed only in the Lower Congo; there is now one properly organised court in every district, all the decisions of which are subject to the revision of a higher court, located in the prosperous capital of Boma, and composed of three judges—at the present time one being a Swedish and the second an Italian Professor of Law. It ought to be added that last year a Royal Commission was appointed by the King to make independent and competent investigation into all complaints from natives, traders, or others, consisting of three Catholic dignitaries and three leading Baptist missionaries—a rare and reassuring combination of different, if not, so far as the enforcement of the laws is concerned, conflicting aims and interests.

With a keen outlook to permanent prosperity, systematic attention is given to developing the commercial resources of the Colony. Experimental coffee and cocoa gardens have been created with signal success in every district; and they are extending to such an extent that in a few years the Congo will become one of the largest coffee-producing countries of the world. Caoutchouc, vine, and other productive trees, which exist everywhere in rich abundance over the "State forests," have yielded satisfactory results. The export of indiarubber alone, which scarcely existed five years ago, will exceed 2,000 tons this year; and it may be useful to mention that Europe is annually supplied, chiefly from America, with indiarubber of an estimated value of nearly ten million pounds. The general export trade has increased tenfold, in face of countless transport and other difficulties, since the State was founded; it amounted to a little over £130,000 in 1888, to nearly £656,000 in the first six months of 1897, and it will certainly approach a total value of one million and a half pounds for the whole year. No ordinary revenue was derived from the Colony twelve years ago; this year it will exceed £150,000, and those best able to judge can give the assurance that the revenue will be sufficient before 1900 to cover the whole public expenditure, although money has been and is being freely expended on public works and improvements—such as the laying of telegraph lines, to be carried up as far as Stanley Falls; the erection of stone and brick houses for Europeans in every district; the building of new steamers for public service in the Upper Congo to meet the wants which will arise by the completion of the Congo railway and other internal developments. It ought also to be noted that extensive territories are persistently explored in all directions, and that the native population is in almost every centre quietly accepting the new conditions of peaceful and protected life and industry.

Such are some of the results which have in little more than a decade been achieved by the Free State under the inspiring initiation of King Leopold, and the vigorous direction of its Chief Secretary.

This brief notice would be incomplete without special reference to an event of peculiar significance. Although the one aim of the King has been to create an attractive outlet for the abundant surplus capital and the enterprising inhabitants of his overcrowded kingdom, there has existed a considerable section hostile to colonial

expansion; but the recent progress made in the new State, and the production (in our Diamond Jubilee Year) at the Brussels International Exhibition of the multitudinous products of a fertile country, and the presence there of scores of its stalwart and humanised natives, have wrought a remarkable change in the public sentiment. Recently a banquet was given in Brussels to the Secretary of State by the leaders of "Belgian Commerce and Industry." It was presided over by the Deputy "Lord Mayor," a popular leader and the President of the Executive Committee of the Exhibition, and attended by no fewer than eight hundred men, representative of nearly all classes and shades of opinion. Replying to the congratulatory speech of the President, Van Etvelde said:—

It is my agreeable duty to thank Monsieur de Mot for the feelings he has so eloquently expressed, and to say, in the name of the State which I here represent, how deeply touched I am by the splendour, and the patriotic character, of the manifestation which brings us together. This manifestation is directed to a work which owes its birth and progress to the elevated thoughts and persevering labour of our King; and it is to His Majesty, who impersonates that work, that all desire to render a great and well-deserved homage. I owe the position which I occupy to the privilege of being connected with the great enterprise, and you have associated me with it in such a generous spirit that I cannot but feel deeply moved at the thought. . . . I cannot refrain from naming these eminent men: Baron Lambert, General Strauch, M. Camille Janssen, Colonel Wahis and others who in different capacities have played so brilliant a part in African affairs. I must also pay a tribute of gratitude to all those valiant Belgians who have worked, and still work, far away in the Congo, and who, by their plucky initiative, their unswerving devotion, and their oft-times heroic sacrifices, have been the real founders of the Free State in Africa. The mighty work need not be enlarged upon. A foreign writer was able to say recently that it needed but the distance of centuries to make all appreciate its grandeur.

In recognition of his eminent services the King, in October, 1897, raised the Chief Secretary to what the English press rightly describes as the "well-deserved honour" of Baron.

In his calm, impetuous action, and especially in his masterly dispatches, the newly-created Baron often reminds me of our English Colonial Secretary. Still in life's early prime, profoundly sincere, and possessed by the spirit of devotion and self-sacrifice, there is scarcely any possible position either in the Free State or in Belgium that he may not attain. It may be safely anticipated that Baron Van Etvelde will remain at his post till the purposes of its great founder are fully realised.

It would not be fitting to comment here on all the controversies that have arisen with reference to the Congo Free State. Suffice to say that the King and his colleagues have ever striven to carry out the conditions of free labour, fair wages, equal justice to all sections, and constitutional Government, on which it was established; that over nearly two-thirds of the nine hundred thousand square miles multitudes of natives have been brought under the influence of Christian teaching, inhuman customs abolished, and that the "fall" has been well-nigh completed of the Arab raiders, who for centuries invaded the territory, killing the men, making slaves of the women and children, and stealing the fruits of native industry. It will take time to accomplish all; but the civilising work goes forward with steadily increasing impetus and facility; and it may be confidently predicted that within a short period Belgium will possess a vast and prosperous Colony in Africa.

### I.—I DO NOT UNDERSTAND!

**I**N August, 1885, I attended the great Imperial manœuvres of the Austrian army in Western Bohemia. The supposition was that an army corps had to prevent the enemy, invading Bohemia from Bavaria, from reaching Prague, and if possible throw them back over the frontier. The dawn of the second day found me with the right wing of the army corps, where a light field battery of eight guns and a squadron of dragoons were posted to protect the position against a flank movement; near by, also well covered, was a battalion of sharpshooters. The commander of the battery, a captain of fifteen years' service, was a highly-educated man and well-instructed officer, who spoke French, Italian and English fluently.

#### (1) NEROZUMIM IN CZECH.

Our chat was interrupted by the arrival of a cavalry patrol, and the leader, a sergeant of Bohemian dragoons, reported something to the captain in Czech. The captain, not conversant with the language of Palacky and Svatopluk Czech, questioned him in German, but could get no other answer but "Nerozumim" (I do not understand).

#### (2) NEMTUDOM IN MAGYAR.

While the captain was giving orders to a lieutenant to go reconnoitring with a dozen men, a second patrol—this time five hussars led by a corporal—arrived. The excited leader spoke very rapidly and sonorously in Magyar. Every question of the captain, as to what he had to report, if he had seen something of the enemy, etc., was answered monotonously with "Nemtudom" (I do not understand).

#### (3) NEZNAM IN POLISH.

Then the captain, sure of something worth knowing going on somewhere, mounted, and ordered the battery "ready!" While the men were tightening their saddle-girths and arranging their paraphernalia, half-a-dozen Uhans came *ventre à terre* towards the battery from the right. A panting sergeant, covered with the dust and perspiration of a hard ride, gabbled most furiously in Polish, and to the captain's eager query, "Can you not speak German?" he had but one answer: "Neznam" (I do not understand).

#### RESULT!

Then there was some shouting, bugle-calls from the right, a bugle-call from our cavalry escort, the thundering "Hurrah!" of a long galloping line of the enemy's cavalry, the shrill command of the captain: "Cavalry to the right! Dismount! Eight hundred paces! Grape-shot charge! Fire!" But it was too late. The three squadrons of the enemy's hussars were in

the battery before a shot could be fired; the eight guns and the squadron of dragoons had to surrender—had it been war instead of sham-battle few would have remained to tell the tale. Furthermore, the enemy unmasked a mounted battery of eight guns that opened fire on the battalion of sharpshooters, and they also had to surrender. The enemy was in possession of the commanding hill of our right flank.

His Majesty Emperor Francis Joseph, who had watched the whole affair through his field-glass from afar, frowned; the general in command got very wroth; the brigadier was furious; the colonel used extremely strong language; the captain was severely reprimanded, and a few months afterwards pensioned. But was it really his fault, or not rather the fault of the "nerozumim," "nemtudom" and "neznam"?

#### AN ARMY WITH ELEVEN TONGUES.

This reminiscence would not be worth telling were it not characteristic of the conditions of the Austro-Hungarian army, very characteristic of the political situation of the empire, and eminently characteristic of the crisis that is culminating there at present. The army, although the official language and the words of command are German, is not any more a homogeneous unity, but has become a loosely jointed set of polyglot brigades. The Hungarian "Honved" (second reserve) is drilled and commanded in Magyar, her non-commissioned and even many commissioned officers do not understand German at all. In all "field regiments," with the exception of those recruited from the German provinces, few non-commissioned officers can speak, scarcely any can write or even read the army language, and the percentage of reserve officers who are able to write and speak German fluently is growing smaller every year. Although there are many officers who speak two or three of the different languages of Austria, there can naturally be but few who are able to understand all the tongues: Magyar, Polish, Czech, Ruthenian, Roumanian, Slavonic, Croat, Slovak, Servian, Bosnian and Italian. The "I-do-not-understand" in eleven different languages is met with in the daily army routine more and more frequently, and this fact must lead in case of war to the most disastrous consequences.

### II.—THE MODERN TOWER OF BABEL.

Parliament likewise presents a modern "tower of Babel." The Austrian House of Commons has a few dozen members who cannot speak German, some who even do not understand it, and speeches are delivered in half-a-dozen tongues not understood by the majority of the members. Similar conditions are prevalent in all branches of government. Thousands of law-suits, the

KARL WOLF.

Who fought a duel with Count Badenl.

majority of the cases before the courts of provinces of mixed language, must be carried on in two or three tongues; briefs, pleadings, sentences have to be translated and retranslated, time and money are wasted for interpreters, and the jury system has become a farce and sham on account of nationalistic prejudices, and by reason of the inability of many jurors to understand any other language but their own. The postal, telegraph, and railroad service, the collection of taxes, the execution of law, business, commerce, industry, and last, not least, the education of the people, suffer enormously under this polyglot from lack of a State language. The intercourse of the peoples, their exchange of ideas, the approximation of opposing views, the compromise between differences, intermarriage, assimilation, amalgamation—in short, all and everything that ought to constitute a State or make a homogeneous unity—are wanting.

#### THIS IS THE CRISIS.

"I do not understand" is characteristic also of the feelings, the aims, and ends of the people: the nations of Austria-Hungary do not understand each other any longer. This is the crisis in Austria.

One of the symptoms of this crisis, but only one of many, is the struggle raging in the Austrian Parliament since last spring. The majority of the newspapers and magazines of the world treat this very important affair as if it was merely caused by party differences, as if it aimed solely at the retention or change of the Ministry, and as if it would be ended, sooner or later, like all parliamentary disputes. These erroneous views are chiefly due to the fact that the Austrian press is not permitted by the censors to write frankly about prevalent conditions, and consequently the world at large is not informed of the real issues. Austrian politics, furthermore, are so complicated, so difficult to understand from the outside, that most foreigners grope in the dark. This article aims at showing the situation in its true light, based upon the best information, supported by careful observation and cleared by impartiality. To facilitate a clear understanding, let us throw just a glance upon the constitution of Austria.

#### THE CONSTITUTION OF AUSTRIA-HUNGARY.

The "Austro-Hungarian Monarchy"—thus reads the official name—consists, according to the fundamental

State-law of December 21st, 1867, of Cisleithania, or the Empire of Austria [provinces: Lower Austria, Upper Austria, Salzburg, Styria, Carinthia, Carniola, Coast Districts (Görz, Grad sea, Trieste and Istria), the Tyrol and Vorarlberg, Bohemia, Moravia, Silesia, Galicia, Bukowina and Dalmatia] and Transleithania, or the Kingdom of Hungary [provinces: Hungary, Transylvania, Fiume, Croatia and Slavonia]. The provinces of Bosnia and Herzegovina, occupied after the Treaty of Berlin in 1878, are administered by the Austro-Hungarian Monarchy, but do not belong to it legally. Each province has a "Landtag" (Diet) that legislates in home affairs and fixes the provincial taxes, but has no power to alter State laws. The legislature is centred in a "Reichsrath" (Parliament) in Vienna and one in Budapest, consisting each of a "Herrenhaus" (House of Lords) and an "Abgeordnetenhaus" (House of Commons). The former is composed of princes of the Imperial family [20—20], nobles with hereditary privileges [66—286], ecclesiastical representatives [17—51] and life members nominated by the Emperor and usually "arranged" by the Ministry to create the desired majority [at present 122—102]\*; the latter is formed by members elected partly directly, partly indirectly by the classes of the "Grossgrundbesitz" [large landed proprietors], the towns, the chambers of trade and commerce and the rural districts, 353 in Austria and 453 in Hungary. The Ministers are appointed by the Emperor. They may or may not be members of Parliament, and can be retained in office if they should fail to get a majority for their bills or even if they should receive a "vote of distrust"; they can be removed solely by an impeachment for breach of the Constitution. The common affairs of Cisleithania and Transleithania are managed by a "Minister of Foreign Affairs," a "Minister of Finance," and a "Minister of War," and legislated (subject to approval of both Parliaments) by the "Delegationen," a body of sixty members, elected twenty from

GEORGE SCHÖNERER.

The leader of the Obstruction.

each Upper and forty from each Lower House. These delegations, sitting alternately in Vienna and Budapest, have to vote annually the budget of common affairs.

\* The figures in [ ] indicate the number of representatives in Austria and Hungary respectively.

Towards the common expenses—amounting in 1896 to over £13,000,000—Austria contributes 68·6 per cent., and Hungary 31·4 per cent., according to the "Ausgleich" of 1867.

#### THE AUSGLEICH.

This "Ausgleich"—a technical term that could not be exactly translated, but may be explained as an agreement for sharing or dividing the budget—is at present the stumbling-block of the Austrian Government, and forms one of the causes and, at the same time, consequences of the Austrian crisis. The compact expires on January 1st, 1898, and must be renewed before that date if the common affairs of the monarchy are to run smoothly. The negotiations have had so far a negative result, showing merely that both Parliaments were unwilling to renew the agreement under the old stipulations, and the Government is now endeavouring to bring about a "Provisorium" for one year in order to come to an understanding about the terms of a new agreement. The Hungarian Parliament has granted this provisional

work. This obstruction is carried on not so much out of opposition to the Ausgleich as on account of some administrative measures of Minister Badeni, by which he gained the support of the Czech party, but violated the historical and legal rights of the Germans and even the constitution.

#### THE QUARREL BETWEEN CZECHS AND GERMANS.

The matter, mostly misunderstood outside Austria, is briefly this. Bohemia, Moravia and Silesia have a population mixed of Czechs and Germans, the percentage in Bohemia being about five to three, the Czechs living chiefly in the centre of the province, the Germans occupying the districts of the north-western and north-eastern frontier. The Czechs wish to bring about the re-establishment of the former Bohemian kingdom and a position in the Empire similar to Hungary. The Germans in Bohemia desire a detachment of their districts and a separate administration for this territory, because they claim to be oppressed by the Czech majority of the

DAVID RITTER VON ABRAHAMOWICZ.

President of the Reichsrath.

DR. KAREL KRAMÁŘ.

First Vice-President of the Reichsrath.

measure; the Austrian House of Commons has, up to the time this article goes to press, failed to agree to it.

#### WHY IT IS OBJECTED TO.

The majority of the Cisleithanian population, regardless of nationality and political party, entertain many serious objections to some of the stipulations of the Ausgleich, and particularly a uniform dissatisfaction with the quota of 68·6 per cent. which they have to contribute to the common expenses. Nevertheless, the Ministry might find a majority in both Houses of the Austrian Parliament to grant the provisorium, because the combination of parties forming the present majority would like to use [or abuse] their power to obtain from the Ministry and the Crown some favours or privileges by administrative measures, if possible some new laws that would change radically the prevalent conditions and the Constitution. But the minority of the Lower House does not permit Parliament to pass the bill granting the provisorium; it prevents even the reading and debating of this so pressing and important bill by a systematic obstruction, by a legal dead-lock of all parliamentary

Bohemian diet in matters of administration and public education. Until lately all officials in Bohemia were obliged to know German, and only those in the Czech districts had to prove a knowledge of Czech.

#### THE LANGUAGE ORDINANCE.

Last spring Count Badeni, the Prime Minister of Austria, passed a decree, ordering that law-suits could be entered in the Czech tongue at any court of Bohemia, even in districts where not one per cent. of the population was of Czech nationality, ordering furthermore that no official would be appointed in Bohemia without a full speaking and writing knowledge of Czech, and that all German officials of Bohemia must learn Czech and pass examination within four years. This was obviously done to gain the goodwill of the Radical Czech party and their vote in Parliament for the Ausgleich. The Germans of Bohemia claim—and every impartial judge must agree with them—that this was an arbitrary violation of their rights, that it is a restriction of liberty and unjust to the highest degree from a national and rational point of view to compel their sons and all

officials to waste their time by learning a language which is of very little use in their purely German districts, and of no use whatever outside the limits of little Bohemia. They claim furthermore that if such measures were really necessary, Parliament should pass a law based upon the Constitution and the fundamental State-law, and that such law should be valid for the whole of Cisleithania and not for Bohemia alone. They claim finally—and there cannot be the least doubt about it—that the decree of Minister Badeni constitutes a breach of the Constitution, because it was passed without being signed by the Emperor, and not published in the official gazette. They have appealed to Parliament to impeach the Ministry as a whole, and Count Badeni particularly, of a breach of Constitution, and have declared most emphatically that they will, by all means of legal obstruction, prevent the voting on the "Ausgleich" and any other bills until that decree is revoked. This they accomplished last spring, and again during the past weeks. At present the "Delegations" are in session, and any day may bring the decision in Parliament. What will it be?

### III.—A CONGLOMERATE OF INCOMPATIBLES.

Let us dissect the Austrian House of Commons for the purpose of a correct forecast. The majority and minority of the Lower House are not, as in other Parliaments, of one party or at least of a group of harmonious, homogeneous parties; neither of them represents a principle, or embodies an aim. The majority consists merely of a number of heterogeneous groups of various and differing interests and aims, who are joined solely by the greed for power and the desire to gain as much as possible at each voting.

DR. HARL LUEGER.  
Mayor of Vienna.

#### (1) THE POLES.

The most numerous and at present most influential of all parties is the "Club of the Poles," embracing nearly all the members from Galicia, with the exception of a few Ruthenians and Socialists; they aspire at present to the leadership of the House, with its consequential privileges, but also aim at autonomy for Galicia, and ultimately at the re-establishment of the Polish kingdom.

#### (2) THE CZECHS.

Next in number and importance are the "Czechs" from Bohemia and Moravia, desiring the detachment of these provinces and Silesia from Cisleithania, and as soon as possible their own Parliament, army, etc. They are divided into two groups: the feudal-clerical "Old Czechs," who lean more towards reactionary ideas, and the radical "Young Czechs," who are outspoken Panslavists, Russophiles and Hussites. The real old stock of the majority is formed by the so-called "Conservative Club," composed of the feudal nobility and the Roman Catholic clergy, and aiming chiefly at the regaining of the supervision of the schools by the clergy, the retaining of the privileges of the nobility, and the prevention of the introduction of the popular vote.

#### (3) THE CATHOLICS.

Nearest to them with regard to aims at church and school, but separated in politico-economical questions, stands the "Catholic People's Party," recruited principally from the agricultural districts of the Alps. They form at present the balance of Parliamentary power, but are in great danger of losing their influence and being divided into two powerless groups, because the national feeling is beginning to be aroused amongst their constituents, the German peasants of the Alps.

DR. OTTO LECKER.  
The Man who spoke Twelve Hours.

ADALBERT GRAF DZIEDUFZWECK.  
Leader of the Poles.

DR. JOSEPH HERALD.

Leader of the Radical Czechs.

## (4) THE SOUTH SLAVS.

Then follows the "Club of the Southern Slavs," composed of the Slavonian members from the coastlands and Dalmatia, who are autonomist Pan Slavists and aspire after the establishment of a South Slavish State, comprising Croatia, Slavonia, Bosnia, Herzegovina, Dalmatia, if possible, with Servia and Montenegro.

## (5) THE ANTI-SEMITES.

Finally must be mentioned the small but very energetic and noisy group, who call themselves "Christian Socialists," but are, in fact, anti-Semites, pure and simple, consisting of a few members from Vienna and Lower Austria, under the leadership of Vienna's mayor, Dr. Lueger; they are absolutely colourless with regard to nationality, politics, or anything else, their motto being solely: "Down with the Jews!"

## (6) THE GERMAN PROGRESSIVES.

The minority shows a very similar picture of small disunited fractions. There is, firstly, the "German Progressive Party," the remnant (very little altered) of the former "Liberal" and "Constitutional" parties, recruited chiefly from the industrial centres of the German provinces, and standing for a liberal, constitutional, centralistic monarchy.

## (7) THE GERMAN RADICALS.

Next to them in importance and spirit is the "German People's Party," recruited from the German districts of Bohemia, Moravia, Silesia, and Styria; these are the German Radicals, aiming at the hegemony of German influence, and being driven—through suppression of the Germans by the Government on one hand, and by the pressure of their electors on the other—towards the desire for a union with Germany. This union is the outspoken aspiration of the most Radical wing of the minority, "the German-National Party," created by the famous Schönerer, the leader of the obstruction.

## (8) THE ITALIAN SOCIALISTS, ETC.

Not attached to the minority by any sympathy or similar aims, but voting with it in most questions, are the small groups of the "Italian Club" from the south of Tyrol and Trieste, a number of "Socialists" and "Democrats" from different provinces, and various of nationality, and some "Wilde," unattached to any particular party.

## THE HUNGARIAN PARLIAMENT.

Similar conditions, although not so pronounced as in Austria, prevail in the Parliament across the Leitha. The majority of both Houses is formed, since the last elections, by the "Liberals," who stand by the Ausgleich of 1867, and wish to prolong it under the same conditions, but make—for the sake of patriotic appearances—a show to reduce the unjustly low quota, which they contribute towards the common expenses; they are liberal and progressive in matters of church and school, but use all possible means to Magyarize the Slavs, Germans, and Roumanians of the kingdom. The minority of the House is composed of a clerical Roman Catholic party that wishes the sub-

ordination of the school under the clergy; the radical Magyar or "Independent party," who aim at a mere "Personal Union" with Cisleithania, and finally at the entire detachment and independence of Hungary from Austria; the Germans from Transylvania, who wish to preserve their nationality; the members of Roumanian nationality, who would prefer being a part of the kingdom across the frontier; and the forty members, elected by the Croatian Diet, who are most energetic opponents of the reigning Magyar policy, but have no power whatever because they are not entitled by the Constitution to vote on matters connected with Hungarian laws, educational, and home affairs.

## DEADLOCK.

This sketch, although incomplete on account of the obligatory brevity, must

COUNT BADENI.

JOSEPH FRHR. V. DIPPAULL.

Leader of the Catholic People's Party.

prove to every objective judge of political and national conditions the dangerous want of cohesion of the Austrian and Hungarian Parliaments, their utter inability to accomplish the necessary legislation. The parties and fractions fight incessantly for the interests of their respective nationalities, and neglect State affairs and sadly needed social reforms entirely. There is haggling, scheming and intriguing for every school, every railroad station, and every official post in the monarchy, while the great questions of the day are neglected, postponed or run over without serious consideration. The taxes, coming principally from the rich industrial and agricultural districts of Bohemia, Moravia, Silesia, Lower Austria and Styria, are spent largely on the hopelessly bankrupt province of Galicia and for the development of Magyar industries, and wasted on a lot of red-tape and translations, necessary to humour the different little nations. Both the armament and commissariat of the army are sadly inefficient, the navy is twenty years behind the times, the building of railroads is at a standstill for lack of funds, the consular system is as shamefully neglected as the support of exporting industries, and worse than all, public education in all branches is sinking from the high standard on which it stood so long.

#### WHAT THEY ALL WANT.

The real cause of these conditions—whether they are to be deplored or lauded is a matter of opinion—is the “I do not understand” reigning in Austria-Hungary. Not only the parliamentary representatives of the people, but all the nations of the monarchy have ceased to “understand” each other. In fact they do not want to. No matter what names the Parliament parties bear on their banners, their real aspirations are outside of an Austro-Hungarian State of whatever form. The Czechs want the re-establishment of the Kingdom of Bohemia, and finally the union with Russia. The Ruthenians, oppressed by the Poles and differing in language and religion from them, look longingly forward to an incorporation into the empire of the Tsar. The Poles proclaim secretly if not openly the restoration of the Kingdom of Poland. *Italia irredenta* is ever alive in the Trentina and Trieste, no matter how hard the Slavs, officials and gendarmes try to suppress it. The Southern Slavs of the coastlands, Dalmatia, Croatia, and Slavonia, are clamouring for a unification, and their ultimate aim is the re-establishment of the old Servian kingdom, embracing also Servia, Bosnia, Herzegovina and Montenegro. The Roumanians wish their annexation by the co-national young and vigorous kingdom. And lastly, not least, the Germans of Bohemia, Moravia, Silesia, Lower Austria, Styria and the most advanced and politically educated inhabitants of the Alps, desire a union of the German provinces with Germany in some shape or form.

#### IV.—THE FORCES OF DISRUPTION.

These undercurrents are very little known outside of Austria because the press is muzzled, and very few foreigners are competent to read in the different languages, and still less to read between the lines. But they exist nevertheless, and whoever follows the events in the polyglot monarchy cannot help noticing them.

#### NATIONAL.

The *Národní Listy* (*National Gazette*), the leading daily paper of the Young Czechs, let the cat out of the bag a few weeks ago, when it advocated that “all Slavs ought

to acquire the Russian language preparatory to an understanding of the Slavish world.” And a German member of the Austrian Lower House—if I am not mistaken, the duellist Wolf—spoke the minds of millions of his co-nationalists when he frankly declared in Parliament, “Yes, we wish to be united with Germany, and we do not permit anybody to call us traitors if we say so. Austria was for centuries a part of Germany, and even after it had ceased to be so, it was from 1806 until 1866 united in some form with the ‘German Bund.’ Why should not this be again possible? Why should that which was legal before 1866 be now called treason?” Every visitor to Bohemia must notice in the German districts the ostentatious display of the pan-Germanic banner (black, red, gold) instead of the Austrian colours (black, yellow), and that scarcely a peasant’s hut is without the pictures of Emperor William and Bismarck; while, on the other hand, in the Czech districts he will find likenesses of Huss and the Tsar hanging side by side with a copy of the famous “rescript” of 1871, in which the Emperor Francis Joseph promised his coronation as King of Bohemia—a promise which he never kept.

#### POLITICAL.

But these opposing nationalist currents and tendencies are not the only danger for Austria-Hungary. The two halves of the monarchy are diametrically opposed to each other in their whole internal and foreign policy. The majority of the Austrian Parliament is Panslavist, autonomist, reactionary; the majority of the Hungarian Slavophobe, centralist, and liberal. The first is openly opposing the continuation of the Triple Alliance, the latter is a stout adherent to it. No matter how earnestly the rulers of Germany, Austria and Italy proclaim at every occasion that the Triple Alliance stands as strongly as ever, the hatred of the Austrian Slavs to Germany, and the contempt which the Roman Catholic party entertains for Italy, make this alliance a mere piece of paper. And even the Emperor Francis Joseph’s and Count Goluchowski’s (the Minister of Foreign Affairs) recent speeches cannot convince anybody familiar with the situation of Austria that an *entente cordiale* with Russia could be realised in view of the indelible hatred of the Magyars and Poles for Russia. Austria-Hungary could not enter into any alliance whatever with the consent and good-will of all her peoples.

#### FROM DUALISM TO FEDERATION.

These and many other signs, too numerous to be described in this space, indicate clearly that Austria, having ceased to be a centralist State, has entirely lost her basis, yea, the possibility of existence. The step from centralism to dualism was a dangerous experiment—the beginning of the end. Out of dualism grew the desire of other nations and provinces for autonomy, and that means no more than a loose federation. But a federation is vital only if its parts are held together by common interests, united by mutual respect of rights, bound by one aim. And this *conditio sine qua non* is absolutely missing in the Austro-Hungarian Monarchy. The peoples of the two States are imbued with and possessed of the most outspoken centrifugal tendencies. A century, or even thirty years ago, this could scarcely have happened, and if it had occurred it would not have had such disastrous consequences. Napoleon III. has set the stone of “unification of nationalities” rolling. The seemingly impossible unions of Italy and Germany were accomplished by the

will of the people, the diplomacy of great statesmen and the power of the sword. England, the United States of America, France and Russia, are shining examples of progressive success through uniting centralism, regardless of the form of government. Turkey, Sweden, Norway and Austria-Hungary are discouraging object-lessons of federalism and dualism. To-day more than ever strength without union, union without centralisation, are impossible. A federation of centrifugal fractions, with nothing to hold them together but historical tradition, is not durable. Decaying Austria-Hungary is doomed to dismemberment.

#### V.—WHAT WILL THE ISSUE BE?

It is true the crash must not come immediately, might not come very soon. The Ausgleich and the present fight in the Austrian Parliament are *per se* not sufficiently important to cause the downfall of this three hundred and seventy years old monarchy. The Ausgleich can and will be accomplished by some means. The president of the House of Commons, the Pole Abrahamovicz, might break the obstruction by his utter disregard of the standing orders and the rights of a minority. Count Badeni might buy a majority in both Houses with promises of autonomy to pass the provisorium. Or the energetic partisan Minister might dissolve the House of Commons and arrange the provisorium during the following parliamentary interregnum by an act of the Crown, by the signature of the Emperor. But neither measure would solve the problem: it would only postpone the solution and prolong the fight. New elections would never strengthen the Government, but positively weaken the majority, because the radicals of all parties, Germans, Czechs, Poles and Socialists would certainly gain some seats, and if the Government should try and use repressive measures during elections open revolt is sure to break out either amongst the Germans or the Slavs, and under any circumstances amongst the anti-Semitic and Socialistic labouring-classes.

#### 1848 OVER AGAIN, BUT WORSE.

A revolution, or a half-dozen revolts in different parts of the empire, is not at all an improbability. The events of 1848 may be repeated upon a larger scale, and the result would be still less favourable, because Austria-Hungary cannot rely to-day upon her army either for a civil war or in a war with any foreign Power.

Before the re-organisation in 1867 the regiments of the Austro-Hungarian army recruited themselves from two or three different districts, thus bringing together members of various nationalities, promoting the knowledge of German, eradicating national differences and assimilating the population. The success of the German army in 1870 led to the imitation of the Prussian system of recruiting from one centralised district. When the Austro-German Alliance was formed in 1879 Prince Bismarck insisted upon Austria adopting the German method of mobilisation and the system of regiments being garrisoned in their home districts.

#### NO DEPENDENCE ON THE ARMY.

But—*quod licet Jovi, non licet bovi*—the principle which is one of the chief factors of the strength of the German army, and of her readiness for operations, will prove to be one of most dangerous weakness for Austria. Keeping in mind the "I do not understand" of the manoeuvres of 1885, it is obvious that an Austro-Hungarian army no longer exists. The monarchy possesses merely German, Czech, Polish, Magyar, etc., regiments. The service-regiments are officered chiefly by centralist and German officers, but these would not prove strong enough to stem the tide of national and popular feeling in their men. The commissioned and non-commissioned officers of the reserve and "Landwehr" (second reserve) belong mostly to the better educated classes, who, with few exceptions, will set their political and national principles above their army-rules and would lead the willing bulk of the soldiers even against the will of the commanders. Thus, during a revolution in any province it would be very difficult to find regiments who would be willing to

shoot down their co-nationalists, and in case of war—be it against Germany, Russia, or Italy—some regiments, either the German, Czech, or Italian, would be found utterly unreliable. The Government has sown the wind of national autonomy: it must reap the whirlwind of radical centrifugalism.

#### A GREAT POWER NO MORE.

Should Austria-Hungary be drawn into any war during the next few years, it will cease—even if victorious, although that is scarcely possible—to be a "great Power." Not only will the mobilisation, organisation, armament, and commissariat prove inefficient, and the navy of little

ARCHDUKE FRANCIS FERDINAND OF ESTE.

The Heir-Apparent to the Throne.

value: the first battle must obviously show the defects described in the beginning of this article. Enemy and ally alike will find that the "I do not understand" makes the army worthless, and neither Germany, Russia, England nor France, not even Italy or Turkey, would care for such an unreliable ally. The fate of the empire thrown down from its clay-legged pedestal of a first-class Power into the impotency of a federalist conglomeration of antagonistic nations does not require portrayal. Austria-Hungary *must* be ground up between the two mighty millstones, Germany and Russia.

emergency. If he could free himself from bad influences, then the majority of the nobility, the landed proprietors, the industrial, financial and commercial leaders, the Liberals and the stock of old Parliamentarians from all parties would rally round him if the aim was stabilisation of conditions, preservation of a centralist empire. But, alas! it is too late for Francis Joseph. He is too deeply involved in federalism, and furthermore he is too old. Although only in his sixty-seventh year, and in excellent health, he is a broken-down man—broken down by adverse strokes of

#### FRANCIS JOSEPH.

But even without any war, revolution, or the continuation of the struggle in Parliament the monarchy is doomed to destruction. The cement that holds the centrifugal forces loosely together is Emperor Francis Joseph. He is the heir of an illustrious dynasty, the embodiment of the old Austrian Staats-idee, the symbol of a centralistic, constitutional empire. Although neither a genius, nor a man of initiative, nor a ruler of will and energy, he is liked by the people at large because he is a fairly good and decent man, has tried his best to be a constitutional monarch, and does no harm wilfully. The conservative—or to be precise, the conservant—men of all parties would stand by him in an

fate, principally by lost wars and prestige, the tragical end of his unworthy son, Crown Prince Rudolph, and the insanity of the Empress. I, and everyone who knows how matters stand, would be surprised if the coming jubilee year—the fiftieth anniversary of his accession to the throne—should not be the end of Francis Joseph's reign.

#### THE HEIR TO THE THRONE.

And then? The heir-apparent to the throne is the nephew of the Emperor, Archduke Francis Ferdinand of Este, a weakling in body and mind, whom nobody knows, for whom nobody cares, who has not one single quality to enable him to grasp the reins of the unruly dual team and lead it safely and successfully on its dangerous road.

Most likely Ferdinand will find at his accession to the throne—like his uncle in 1848—the whole country in uproar and revolt, some wisacres advising him to drive the State-carriage as a German-Magyar-Czech troyka, others clamouring for a Czech-Polish-Magyar-German four-in-hand, and the majority of his subjects shouting wildly for a “go-as-you-please” steeplechase. In well-informed Court circles it is whispered already that Ferdinand, who is of delicate health and not able to stand the climate of Vienna, will never sit upon the throne of the Hapsburgs, and even if he should attempt it, would not occupy it long. Since he is a bachelor the reins would pass to his younger brother, Archduke Otto. Then good-bye, Austria! This imperial Prince—if all be true that is currently reported—despised alike by all the people, regardless of nationality, creed, or party, for his principles, morals, and manners, could not find a score of decent men to unfold his banner. Neither could any other member of the Hapsburg family—most of them afflicted with hereditary predispositions to epilepsy, insanity, or debauchery—concentrate upon himself such popular sympathies as would make his accession to the throne a lasting success.

#### THE INEVITABLE PARTITION.

The “I do not understand” of the many different parties of Austria-Hungary, the centrifugal tendencies of the various nations, the lack of any uniting ties, and the absence of a centralist “Staats-idee,” must tear the monarchy to pieces. Sooner or later—most likely very soon—the map of Central Europe must look as shown in the accompanying map.

Will Russia be strong enough to incorporate Bohemia, Moravia, and Silesia into her dominions and thus form a thorn into the heart of future Germany? Will it sooner or later also swallow the whole of the Balkan Peninsula? The answer to these questions lies too far off.

But the sooner Europe familiarises herself with the prospect of a division of the Austro-Hungarian monarchy, the better for the peace of the world. The conditions of the doomed country are such that they need only the spark in the powder-barrel. The powder is there.

E. SEGROB.

[The events which occurred in Austria since this article was in type bear out many predictions of the author. Count Badeni has tried a *coup d'état*, and has utterly failed. With absolute disregard for the Standing Orders, the majority of the House of Commons has passed new Standing Orders by which to break the obstruction and muzzle the minority. The Germans and Socialists, made desperate by this breach of the Constitution, grew violent; some Polish peasant members started a fist fight; police

were called into Parliament; many members of the Opposition bodily ejected, and one—Wolf—arrested. Within very few hours Vienna, Graz, and Prague showed all signs of breaking out in revolt: thousands of working-men, led by students and prominent citizens, surrounded Parliament and official buildings, shouting: “Down with Badeni! Down with the Government!” The police charged the masses, and soldiers were held ready in the barracks. At this critical moment the leaders of the Opposition parties went in a body to Count Badeni and warned him that if he and the Cabinet did not resign at once the consequences would have to be borne by the crown. Dr. Lueger, the Mayor of Vienna, who with his party, the “Christian Socialists,” had joined the Opposition, added that he could not guarantee the peace of Vienna for twelve hours. The Emperor was hastily summoned from the country seat of his daughter, accepted the resignation of the Ministry, and appointed Baron Gautsch von Frankenturn to form a new Cabinet. At present the country seems quiet, but is it not the quiet before the storm?—EDITOR.]

#### What the Crisis may End In.

“GERMANICUS,” writing in the *Fortnightly Review* for December, says:—

This parliamentary crisis may develop and grow into a constitutional crisis between Austria and Hungary, if the difference of opinion of the two Governments with reference to Article 14 of the Austrian Constitution in respect of its applicability to the *Ausgleich* is not amicably settled. It may degenerate into civil war in Bohemia and Moravia: it may kill, for a long time perhaps, constitutional government in Austria; it may disorganise the finances of the Empire, which only yesterday, so to say, were rehabilitated. The very existence of the Dual Monarchy may be at stake through this crisis. And for these reasons the parliamentary crisis in Vienna becomes at the same time a very serious, important question for all other European Powers.

#### A FRENCH VIEW.

M. de Pressensé, writing in the *Nineteenth Century* for December upon the Dual and Triple Alliance, refers to the Austrian crisis as follows:—

This present crisis threatens the very fundamentals of the Austrian State, and, at the same time, the basis of its alliances; and it is further complicated by the strange contradiction which makes the sympathy of the whole Germanic world flow in a broad channel to their fellow-Germans in Austria, while, in fact, the triumph of these so-called brethren would mean either the destruction of the work of 1866 and 1870 and the reappearance of the Austrian Emperor as a member of the Germanic body, or the destruction of Austria and the enclosure of her German provinces in the German Empire.

# LEADING ARTICLES IN THE REVIEWS.

## THE ENGINEERS AND THEIR MACHINES.

### THE AMERICAN MENACE TO BRITISH INDUSTRY.

THE dispute between the engineers and their employers has enabled the latter to call attention to the growth of a heresy in the ranks of the trade unionists which, unless speedily extirpated, will play mischief with British trade. This heresy, which is repudiated more or less half-heartedly by the leaders of the men, is nothing more or less than the revival of the ancient prejudice against the use of machinery for expediting work. There is a story which I have probably referred to before, but which it is worth while repeating again, if only because it so accurately reflects the attitude on the part of the workmen of which the employers make such bitter complaint.

#### A STORY WITH A MORAL.

The story, which is told by Bulstrode Whitelocke, who was employed by Cromwell as Envoy Extraordinary to the Court of Sweden, is as follows:—One day the Tsar of Russia was walking with a Dutchman by the side of the Volga, where they watched for some time heavy barges drawn by teams of five hundred men up the stream. The Dutchman said to the Tsar that it would be perfectly easy to rig up masts and sails which would enable the boats to ascend the stream without any of the waste of human labour. The Tsar listened, but instead of welcoming the suggestion, he flew into a passion. "How dare you," said he, "make such an infamous proposition! If it were carried out, where would all these hundreds of men earn their living? Never dare to speak on the subject again." So for some years to come all the barges on the Volga were navigated without sail, in order to afford a living to the human team. There is probably no workman in this country sufficiently benighted not to recognise that the Tsar was a well-meaning ass, and that the true interests of the community were best served by enabling the wind to render its costless service in the way of river transport. But unless the English employers have entered into a conspiracy of Ananias, many English engineers have been acting very largely upon exactly the same principle as that which inspired the indignation of the Tsar.

## THE QUESTION BEHIND THE EIGHT HOURS' STRIKE.

In the *Engineering Magazine* and in *Cassier's* for last month there were a series of papers written by competent authorities, one of them being Colonel Dyer, the foremost representative of the Employers' Federation, and all of them asserting in the most positive terms that the real trouble that lies at the bottom of the present dispute is not so much the question of the Eight Hours' Day, as the conviction which has gained possession of the Engineers' Society that their true interest lies in limiting the output of machinery, and of putting artificial restrictions upon the liberty of the employers to make the best use of their machines. This question of limiting liberty to use machines was the first subject which came up at the Conference between the engineers and their employers, that was brought about last month with such infinite pains by the Board of Trade. It is, indeed, a matter which demands the most earnest and serious consideration of all, for upon the efficiency of our manufacturers, and their capacity to compete with the markets of the world, we depend for our daily bread.

#### COUNT GOLUCHOWSKI'S WARNING.

We hear a great deal about foreign competition, but what we have not yet realised is that it is not the foreigner, but our American kinsman who is the most formidable competitor, with whom we have to reckon. Upon this subject there have been two very notable

Photo by Ruddock, Newcastle-on-Tyne.]

COLONEL HENRY C. S. DYER.

utterances in the course of last month. The first was Count Goluchowski, who concluded his address on the subject of the Austrian Policy by the significant warning of the coming danger:—

A turning point had been reached in European development. The destructive competition with trans-oceanic countries, which had partly to be carried on at present and was partly to be expected in the immediate future, required prompt and thorough counteracting measures if the vital interests of the peoples of Europe were not to be gravely compromised. They must fight shoulder to shoulder against the common danger, and must arm themselves for the struggle with all the means at their disposal. As the sixteenth and seventeenth centuries have been absorbed by religious wars, and as the eighteenth century was distinguished by the triumph of liberal ideas, and

our own by the appearance of the nationality questions—so the twentieth century would be for Europe a period marked by the struggle for existence in the politico-commercial sphere. European nations must close their ranks in order successfully to defend their existence.

#### MR. RITCHIE'S TESTIMONY.

The other statesman from whom I quote is Mr. Ritchie, who spoke at Croydon last month in very emphatic terms concerning the dangers which are threatening our industry in the shape of American competition. He said:—

Much was said in commercial circles of the serious character of the competition which we met with from Germany. The competition of that great, well-educated, vigorous, and enterprising nation was serious. But he thought we rather overlooked the much more serious competitor—the United States. In his opinion, although we had to fear the competition of Germany, we had tenfold more to fear the competition of the United States. The facts were serious, and called upon us to exercise all the powers we possessed in order to enable us to maintain the position which we occupy in the commercial world. There was no doubt that the United States was executing orders at the present time which ought to have been executed in this country, and as an example he mentioned that an American firm had obtained the contract for the Central Underground Railway, as their bid was lower, and they could make their delivery three months ahead of us. Many important Continental orders had gone to America, and the same could be said of Egypt and Japan, where Americans were doing work which England ought to have done. Reference had been made to the harm this strike was doing. There could be no question of the fact that orders were leaving this country because of this unfortunate dispute. A fact which should weigh with the parties in the dispute was that when once these orders had gone they very seldom came back again to this country. Again and again they read from Consular Reports of orders which had been diverted from this country. That was a matter of the deepest concern for the great industrial population and the manufacturing enterprise of this country. Now, why was it, many people would ask, that the United States was going to be such a strenuous competitor with us, and it was replied, "Wages are higher in the United States. We thought we were safe from competition." It was because of their enterprise, because of the capital they were embarking in their trade, but it was mainly because of the freedom which the manufacturers of the United States had of employing the best machinery, and because they worked that machinery in the most economical way. That being so, how could we compete with them if it was true that we were to be hampered in every corner by restrictions by whosoever set up?

#### OUR DEFEAT IN THE IRON TRADE.

The significance of these warnings is accentuated by the articles to which I refer. In the *Engineering Magazine*, for instance, Mr. J. S. Jeans tells us that the Americans are beating us hollow in the iron trade. This is partly due to natural advantages, but also to the absence of artificial restrictions with which our ironmasters have to deal:—

In one respect, the United States appear to enjoy conditions which are unapproached in Great Britain, but which happen to be at once vital and fundamental. They have the most ample abundance of cheap and high-class ores at an extremely low price. So far as labour is concerned, the achievements and the experience of the United States have completely upset the fallacy that highly-paid work is necessarily dear. On the contrary, it has been made evident that nominally dear labour is the cheapest of all, if its efficiency be guaranteed by proper methods and appliances. There are no works, either at home or abroad, where ores, coal, pig iron, and steel ingots, or steel girders, rails, and beams, are being made at so low labour cost, per ton of product, as in the United States; and yet there is no iron-making country in which the nominal wages paid to labour are so high. The explanation of this

paradox consists in the fact that the American workmen do not, as is but too usual in Europe, and especially in Great Britain, resist mechanical improvements, but rather welcome them, as assisting to get rid of the most irksome and laborious part of their duties. Most of the operations are conducted automatically by machinery of a novel and ingenious character, which British manufacturers, I have reason to believe, hesitate to introduce at home, because of possible difficulties with their workmen.

Another cause of the American superiority is the fact, for which Mr. Jeans vouches, that the average cost of railroad transport in the United States is only one-third of what it is in Great Britain. What with one thing and another, he says that the cost of producing iron in America is now considerably under the average of the European, including the British ironmaking centres producing the same description of iron.

#### WHY THE AMERICANS ARE BEATING US.

The most instructive article under this head, however, is Mr. Hiram S. Maxim's paper upon "The Effects of Trades Unionism upon Skilled Mechanics." Mr. Maxim declares that English trade unions at the present moment, by their prejudice against the efficient use of the best machinery, are the greatest danger to British industrial supremacy. He says:—

The man is considered the most skilful who is able to do the best work in the shortest time. In a large shop like that of Pratt and Whitney, where, say, a thousand hands are employed, it is no exaggeration to say that at least eight hundred of these hands are expecting to rise to the top, each by his own efforts. It is this struggle to excel in work and rapidity of production that produces the incomparable mechanics of New England. If we consider rapidity as well as excellence of workmanship, I think any one must admit that the trade unions have a very detrimental effect upon the development of skilled mechanics. There can be no question but what the value of a mechanic to the country in which he lives depends altogether upon the skill which enables him to do work quickly.

#### TRADES UNIONS AND MACHINES.

But while New England encourages this very competition which enables each man to do his best, the English trades unions, in Mr. Maxim's opinion, are little better than the Luddites, who burnt the mills where machinery was employed. He says:—

It appears to me that trade unions oppose, and always have opposed, the use of machinery which enables work to be turned out quickly and cheaply, and I believe there has never been a machine, apparatus, or system introduced into England which has helped to give her the position which she now occupies as a great manufacturing nation, which has not been opposed tooth and nail by the ignorant and unthinking who make up the rank and file of English trade unions.

#### A CASE IN POINT.

Mr. Maxim gives the following instance of this spirit:—

At the present time the trade unions seek to specialise work and to put every obstacle in the way of learning more than one thing. I remember employing a very skilful Swiss mechanic. He was not only an exceedingly good fitter, but one of the best men on a planing machine I had ever seen. On one occasion, while working as a leading hand in the fitting shop, it became necessary for him to do certain work on a planing machine. As there was no one at hand to do the work, he did it himself, and, in consequence, was warned by the trade union that this would not be allowed. He replied that he was a master of his profession, that he prided himself on being able to work every sort of machine relating to his profession, and that, if the trade union would not allow him to work at his own profession in his own way, or wished to curtail or interfere with his working the tools that he had

learned to work as an apprentice, he would withdraw from the union—which he did.

#### "MAKING WORK."

But this is only one among many other illustrations which are forthcoming as to the restrictive policy of the unionists. Mr. Maxim tells a curious story of the way in which the unionists endeavour to make work. Unionists have, for instance, insisted upon making dies for forgings which left a large margin to be removed by the milling machines. Then, again, they increased work by milling the forgings roughly, so as to make work for the fitters with the files. Of one part of the Maxim gun, he says:—

When this part was very roughly milled and left a great deal too large by the union men, it required more than a day for the fitter to file it into shape. At the present time, however, the milling is so accurate that the fitter is able to do fifteen pieces in one day, or twenty times as much as he did formerly.

#### ANOTHER STORY WITH A MORAL.

Now the tendency in the United States and on the Continent is to produce machines which practically run themselves, involving no doubt, for a time, the displacement of labour, just as the sails on the Volga barges would have thrown the human team out of work. Mr. Maxim tells a story which, indeed, is almost an exact parallel to Bulstrode Whitlocke's anecdote about the Tsar:—

On one occasion, finding one of our leading hands, a strong union man, in Paris, I took him into a French shop to show him the rapidity with which the work was turned out. I pointed out to him that the machines were running with double the speed, and that they were taking at least double the cut that they did at our place, while one girl was working six machines, and, instead of getting from eighteen to twenty-four cents an hour, these girls got only about ten cents an hour. On his return to England he made a most interesting and instructive speech at a trade-union meeting held at Crayford. He pointed out that, whereas the Crayford Works at that time were employing more than three hundred hands, if the men should do as much work as these French women did, only about sixty would be employed. He said he had figured it carefully out, and he asked what in the name of heaven would become of the other two hundred and forty hands. "Shall we allow them to starve?" said he.

Mr. Maxim's practical conclusion is that English skilled workmen will discover, as those in America have already done, that they had much better leave Unionism to unskilled labour, and to go in for each doing his best work and getting the most he can for it.

#### THE REAL ISSUE OF THE STRIKE.

In *Cassier's Magazine* Colonel Dyer deals with the same subject, and treats it from his own point of view. His article, entitled "The Engineering Dispute," covers wider ground than Hiram Maxim's, but part of it touches the same question—the objection of trade unions to labour-saving machinery. This, he maintains, is the real question that lies behind the strike for the eight hours day, and in support of this he quotes—

the letter which Mr. Barnes, the General Secretary of the A.S.E., addressed to the *People's Journal*, Dundee, of August 7th, 1897, in which he says with charming candour, referring to the machine question: "We have so far out-generalled Colonel Dyer as to have averted the fight upon an unpopular issue, and to have shunted it on to a question upon which we ought to get, and I believe will get, the support of our fellow-workmen."

#### THE DEMANDS OF THE A.S.E.

The unpopular issue, of course, is the strike against machines. Colonel Dyer chiefly devotes himself, how-

ever, to pointing out the way in which this prejudice operates to the detriment of the efficiency of the machine. Colonel Dyer maintains that the demand of the Amalgamated Society of Engineers—to which he always refers as the A.S.E.—was in plain terms that the whole of the machines in the workshops should either be placed in charge of members of that Union, or that the men employed upon them should receive the same rate of wages, irrespective of skill. On the heels of this demand came another, which Colonel Dyer considers to be even worse:—

It was nothing more or less than that the employers should permit the Council of the A.S.E. to settle the wages that should be paid for operating every machine in every workshop, and that this rate should be paid, irrespective of the class of work the machine was doing, or the simplicity with which it was operated. Hundreds of instances might be quoted where the most unreasonable, despotic, and tyrannical demands were made, and as a rule granted by the employers, who were besieged by the mighty power of the A.S.E.

Mr. Benjamin Taylor, who writes in *Cassier's Magazine* on the "Machine Question and Eight Hours," makes the same bitter complaint of the interference of the Union. He says:—

The A.S.E. seek to lay down a rule that whenever an A.S.E. man is put to a machine, even temporarily, or under pressure of circumstances, that machine shall for all time coming be regarded as an A.S.E. machine, to pay the rate which the A.S.E. say should be paid for it, whether the operator be an adept or not.

In order to enforce these demands, they employed tyrants of the worst sort, who are called "shop stewards":—

These "shop stewards" are men appointed by the district committees of the A.S.E. to keep watch and ward in every shop, and in every department of every shop. They are themselves paid workmen, but also the paid spies of the Society.

#### MACHINE-CRIPPLING BY UNIONISTS.

Mr. Taylor quotes Colonel Dyer as a witness in support of his assertion that the Unionists deliberately limit the output of the machines entrusted to their care. This is what Colonel Dyer said:—

We have a very large boring-machine at Elswick; this boring-machine is 80 ft. long. We do very rough work on it, i.e., we take the centre out of the shaft by means of a trepanning tool. We took the centre out of a shaft the other day 70 ft. long. The whole centre was trepanned out. We selected a man for working the machine; a man came round, a very intelligent-looking man, and that was all we had to judge by—we cannot ask him what Society he belongs to. We asked him if he could work this machine. He said of course he could. We put him on the machine, and he worked it about six or seven months. We could never get more than four or five inches an hour out of the machine. We pressed him, and begged him to do better; we were very busy at the time, but we could never get above four. At last we could go on no longer; we knew that the machine should do more, and we said the machine was not giving satisfaction, and he was discharged. We then selected a boy, a very intelligent-looking young fellow, but he knew absolutely nothing about machines. We said, "Will you learn this machine?" He said he was most anxious to do so. He buckled to, and the lad in three weeks had increased the production of the machine up to six inches an hour, and the other day I got a note that the machine was doing eleven inches an hour.

#### THE RESULT.

The result is that Colonel Dyer tells us frankly in his paper that we are being beaten very badly by our American competitors:—

It is a remarkable fact that at this moment the Carnegie

Company, of Pittsburg, are delivering rails in Calcutta at a less price than similar rails can be bought in England, and, if the energy and capacity of these gentlemen have been accurately gauged, they will not stop at rails. It must be borne in mind that up to a very recent date the greater part of the rails used in America were supplied from England. The trade has now been reversed, and American rails and pig iron are being delivered here in large quantities, and only recently the Americans have obtained large orders for engines, electrical machinery, and tramcars for London, water mains for the Corporation of Glasgow, while American machine tools are to be found in almost every engineering establishment in the kingdom.

#### IS THE MACHINE THE ENEMY OF LABOUR?

Mr. Taylor ridicules the idea that labour-saving machines are detrimental to the employment of labour. He says:—

The more labour-saving machinery is employed in engine shops, the more increased is the avenue of employment for skilled operatives, because the cheapening to production increases the demand for the joint product; and the more labour-saving machinery is wanted, the more engineers are needed to construct it.

Compared with this question of the man's strike against the machine, and the deliberate attempt to cripple his inanimate competitor, the arguments concerning the exact length of the working day used by the employers are comparatively unimportant.

#### THE EIGHT HOURS' DAY.

Colonel Dyer expresses a very strong opinion against the eight hours day. He says:—

It means nothing more or less than that the employers shall give to their workmen six weeks' holiday every year and pay them full wages for work not performed; that all their machinery and stock-in-trade shall remain idle and unproductive during these six weeks; that their rates and taxes and other outgoings are to be continued as though their workshops were at work, and we are asked gravely to believe that this is one of the most efficient means of competing with our foreign rivals. Wages paid to engineers at Hamburg are 24s. for a week of 59½ hours. For similar work in London the wages are 38s. for a week of 54 hours, and it is now proposed to reduce them to 48 hours. It requires no argument to prove that, assuming the men in Hamburg and the men in London are working similar machines, the production in London cannot possibly compete in price with the production of similar machines at Hamburg. If the working week is reduced to 48 hours, this demand would add from 15 per cent. to 17 per cent. to the cost of production in England; but, important as this advance is, it is a minor consideration, comparatively speaking, to the serious decrease in the volume of work which would ensue.

#### ALL A QUESTION OF OVERTIME.

He maintains also, what is strenuously denied by the men, that the whole question really turns upon the question when the payment for overtime will begin. The very men who are loudest in their demands for the shortened day are the most clamorous for the privilege of working overtime when the shortened eight hours day has been conceded:—

In plain English, the demand is that the employers shall begin to pay for overtime one hour earlier each day than hitherto, for it is well known to all employers that men will not remain in workshops where overtime is not worked, and that they seek those shops in which overtime is more general. To such an extent is this realised by employers that it is one of their greatest difficulties with their foremen to restrain them from employing their friends on continued overtime.

#### MORE LIGHT ON THE SUBJECT.

The *Engineering Magazine* proposes to make a speciality of a series of articles upon this subject of competition

between the engineering trades of England, of Europe and America. They have promised a series of papers by Mr. Orcutt on "Machine Shop Methods in Europe and America." The subject is divided up into the following heads:—

(1) Specialization *versus* Generalization of Products. (2) The Care, Condition and Efficiency of Workmen. (3) Labour-Saving Machinery *versus* Low-Wage Mechanics. (4) Commercial Methods, and the Proper Training of Salesmen. (5) A Comparison of Prices and the Quality of Output. (6) The Elements of a Standard Machine-Shop Equipment.

The editor, speaking of Mr. Orcutt's qualifications for dealing with the subject, informs us that—

Mr. Orcutt's papers will embody the conclusions based upon nine years' professional and practical experience as the expert mechanical adviser of Messrs. Ludwig Loewe and Co., Berlin. Having just completed for that firm the designing, equipment and organisation of new machine shops, involving an outlay of £500,000, we are entirely safe in saying that Mr. Orcutt's papers will be simply priceless to those who are studying the problem of lowering cost by means of improved machinery and advanced shop practice.

There is no doubt that these articles, both in the *Engineering Magazine* and in *Cassier's*, touch the tap-root of English commercial prosperity.

### SHIPBUILDING AND ENGLAND'S GREATNESS.

#### A TRIBUTE BY AN AMERICAN CRITIC.

MR. LEWES NIXON in the *North American Review* for November writes a very interesting article on the commercial value of the shipyard. His object is of course to incite the Americans to devote their energy to the building of ships. He does this by dwelling at considerable length upon the example of England. He says:—

#### THE EXAMPLE OF ENGLAND.

The indisputable predominance of England in the commerce, industry, and finance of the globe is the result of about a century and a half of national endeavour. The existence of the British marine dates much farther back than that, but the systematic effort of England to dominate the ocean may be dated at the beginning of the old French war, in 1755.

England, he points out, was by no means naturally favoured with the materials for shipbuilding greatness:—

At no time after the middle of the eighteenth century did England produce ship timber enough to maintain the material of her navy and merchant marine. At the beginning of the nineteenth century the home supply was practically exhausted. But England bought no ships. She bought ship timber everywhere, carried it to English shipyards, and with it still built her own ships. In the most critical period of her greatest struggle, and at the extreme of her poverty in ship timber, she not only bought no foreign-built ships for her navy, but threw every conceivable obstacle in the way of the purchase of foreign-built ships by her private merchants, and prohibited the East India Company, over which the Government had certain control, from buying or using foreign-built ships at all.

The substitution of iron for wood as to material for shipbuilding enabled England to secure with ease the supremacy which she had struggled so hard to establish. She is now reaping a reward. Mr. Nixon says:—

British ships now carry more than seven-tenths of the ocean-borne commerce of the world. The earnings of her commercial fleet, including the accessories of banking, insurance, and commission, exceed eight hundred millions of dollars a year, net cash. Of this the United States contributes roundly, three hundred millions annually, or an amount equal to about three-fifths of our national revenue.

## BRITISH SUPREMACY ON THE SEA.

The following passage, in which Mr. Nixon bears tribute to the British supremacy on the high seas, is good reading for the Englishman:—

The moment the gang-plank is cleared away, he, an American citizen, becomes a British taxpayer; that, the moment the ship in which he is a passenger crosses the limit of the marine league from any shore, he becomes a British subject, living on British soil and amenable to British laws. I do not by any means intimate that this is necessarily an evil destiny. On the contrary, as things are now, and as things will be until the American people wake up, it is better for a traveller, American or otherwise, to be temporarily a British taxpayer and British subject on the British soil of a British deck on any ocean outside the marine league from any shore than to be on any other deck; because, American or otherwise, any traveller, under such conditions, is always sure of every protection to life and property anywhere on the habitable globe that omnipresent and omnipotent sea power can give; and even if he suffers in remote lands, he can at least have the satisfaction of knowing that the retaliatory vengeance of British sea power upon his tormentors will be swift and terrible as soon as a British man-of-war can reach them! It seems to me that such a picture needs no more colour.

## A PRIZE WORTH TRYING FOR.

But if Mr. Nixon pays us compliments, it is only in order that he may incite his fellow-countrymen to follow our example. He says:—

It has been shown that England, under the direst distress for raw material, never dreamed of resting her sea power on foreign shipyards; that she drew her timber from foreign forests, her hemp from foreign fields, the cotton for her sails from foreign plantations, and her tar and resin from foreign pine woods; but she never drew a ship from a foreign shipyard except by capture in war! Even now she imports nearly all the ore used in making the mild steel of which her modern ships and engines are built.

If England can do all that she has done in spite of such difficulties, how much more easily might the Americans achieve a great success if they would but turn their attention to the building of ships:—

Already many men to whom their neighbours look for guidance have perceived that so long as the English octopus has a tentacle fastened to every one of our seaports, sucking our financial life-blood, so long will legislation on tariffs and currencies be as futile to remedy the prevailing ills as tonics would to build up the system of a patient slowly bleeding to death from an opened artery.

## THE UNITED STATES AND THE WEST INDIES.

## LORD PIRBRIGHT'S WARNING.

In the *National Review* for December, Lord Pirbright, who is better known as Baron De Worms, maintains that we shall lose our West India Colonies as sure as the sun rises, if we do not adopt his policy of retaliation for sugar bounties. The West Indies will gravitate to the United States. Lord Pirbright says:—

Once let the idea get abroad that Great Britain, in deference to the jeers and threats of irresponsible theorists, declines to adopt the only remedy which can save the West Indies from ruin, and tempting offers will not be wanting to induce our colonial trade to follow other flags than ours. It is not long since the United States admitted West Indian sugar free of duty; the arrangement has terminated for the present, but it may be renewed. We cannot strengthen the bonds of loyalty which hold the West Indies to the Mother Country by the promise of eleemosynary doles, which are to compensate them for the loss of their flourishing industry and keep them from bankruptcy. If they were to accept this grant in aid, which must become a permanent grant, they would inevitably degenerate—the loss of independence would certainly beget a feeling of distrust in the Mother Country, to whose inaction they would attribute their dependent position. Geographically

much nearer to America than to Great Britain, they might seek, and would certainly receive, from the United States, not alone the commercial facilities which we deny them, but other inducements of far greater importance. Trade would follow the flag. That flag would no longer be ours, and we might have to deplore not only the ruin, but the loss, of our West Indian possessions.

## CUBA AND JAMAICA.

Dr. Shaw, writing in the *Review of Reviews* of New York for December, makes it quite clear that Uncle Sam has his eye on the West Indies. He says:—

The future of the West Indies must henceforth be observed by the United States with an ever-increasing degree of curiosity and concern. American capital and ingenuity might do something for Cuba, in spite of the permanent victory that beet sugar seems to have won over cane sugar; but Spain can never bring back smiling prosperity to the Gem of the Antilles. As for the great British island of Jamaica, its industrial decline, owing chiefly to the changed economic position of cane sugar, has of late proceeded very rapidly. A royal commission on the serious industrial crisis in the British West Indies has lately reported in the most gloomy and discouraging vein. The great island of Hayti-San Domingo, divided between two retrograde and farcical republics, is fabulously rich in soil and in possibilities of development, but is little above Central Africa in actual advancement. As compared with the West Indies, moreover, the march of improvement all over the continent of Africa is in this decade at a many times greater rate. If any influence and energy can ever be effectively applied to lift the West Indies out of the political, social, and industrial quagmire into which they have sunk such rescue must come from the United States.

## HAYTI AND SAN DOMINGO.

We should not hesitate to bring the republics of Hayti and San Domingo under our moral influence and protection to a far greater extent than heretofore. To that end our Government might well attach greater importance to our representation in those republics by increasing diplomatic and consular salaries, by sending naval vessels more frequently to visit the island, and by pressing to a conclusion our long-continued negotiations for a port and a coaling station. American commercial interests in the island might moreover be increased very considerably under a reasonable amount of encouragement. It was reported in the newspapers last month that the American company which holds the foreign debt of San Domingo, farms the revenues, manages the banking and currency of the republic, and holds various other concessions, had sold out to an English chartered company of some kind. This would be regrettable; but so far as we can ascertain, it is not true. The report would seem to have grown out of the American syndicate's attempt to place its securities on the London money market. It is important for the United States that this company should not yield its political influence to any European syndicate.

## The Triumph of Tammany.

MR. A. J. WILSON, in the *Investor's Review* for December, discusses the triumph of Tammany, and feels that it cannot be wholly attributable to the corruption practised by Tammany. There must have been a better reason for all these votes:—

It is plain that Tammany had justifiably, or otherwise, posed as leader of the revolt against plutocratic domination, and posed with success. The people preferred it with all its degrading associations to the dominion of the men with the millions. Mr. Seth Low may have been a better man than his successful rival—although we see no reason why he should be so—but he stood for the Rockefellers, the Havemeyers, the Vanderbilts, the Bradley-Martins, and the Goulds of New York plutocracy, of men the sum of whose robberies of the nation outweigh all that ever Tammany did in that way ten thousandfold. And if Tammany sway bears hardly on such men, its popularity might be expected to grow beyond all undermining.

## THE VICTORY OF TAMMANY.

DR. ALBERT SHAW ON THE RESULT.

In the *Review of Reviews* of New York for December, Dr. Shaw states his opinion as to the significance and the causes of the election of Mr. Van Wyck. Dr. Shaw is naturally very sore, because he fully reckoned upon the return of Mr. Seth Low.

### THE ESSENTIAL FLIPPANCY OF NEW YORKERS.

After referring to the outburst of popular sympathy occasioned by the death of Henry George, Dr. Shaw proceeds:—

There were those who supposed that the great wave of emotion meant some general and serious respect for the immediate cause to which Henry George had sacrificed his life; but they were destined to be disillusioned in very short order, for Mr. Richard Croker's Tammany Hall ticket was elected by an overwhelming majority, and the essential flippancy of the community was thus more clearly revealed than ever before. It was our remark last month that New York City had a great opportunity to achieve such good government as would mean substantial benefits to all the people, but that, whatever decision the ballots might register, the people would get what they really wanted, and what they wanted would be quite as good as they deserved, and probably better. We have now no hesitation in saying that, in our opinion, it is the sincere intention of Mr. Croker, and of the persons whom he has caused to be placed in the positions of authority in the most important city government in the world, to give to the people a far better administration of their affairs than their own conduct entitles them to have.

### THE ABDICATION OF DEMOCRACY.

The serious thing about the result of the election is not the probable inefficiency or possible mismanagement of the affairs of the city by a Tammany administration, but the irresponsibility of the voters who have voted to abdicate real democratic government and to instal a vulgar boss in supreme authority. It has sometimes been difficult for Americans to comprehend how the French people could have permitted the Second Republic to be broken down, and could have voted their cheerful acquiescence in the usurpation of an adventurer who subjected the whole political fabric to his personal rule. It ought not now to be so difficult for us to understand. The citizens of the great American metropolis have deliberately voted that they do not want government under men selected for public spirit or high character, but that they prefer above all things to be governed by one Richard Croker, for whose life and character not a single voter in New York has a particle of sincere respect.

### WHY MR. CROKER WON.

What Mr. Henry George just before his death was saying every day on public platforms about Mr. Croker did not misrepresent the prevailing opinion among all classes of people in the community. The people who voted to make Mr. Croker master of the city for the next four years were undoubtedly of the same opinion as Mr. Henry George. They rejected enlightened, decent and progressive government because they did not want it; and they did not want it because their motives in the whole matter were selfish ones. It is not more feasible now than it was in the days of Edmund Burke to indict a whole community, and nothing could be farther from our meaning than that the voters of New York are prevalently vicious and depraved. Our assertion simply is that there is an immense body of voters in New York who do not prefer the best things, and who are willing to turn the city over to the tender mercies of Croker and Tammany for some reason personal to themselves.

### THE COMPOSITION OF THE MAJORITY.

This can be better understood with concrete illustration. To begin with, there is in a great city like New York a large element who are positively vicious, belonging to the criminal and semi-criminal classes. These men, for obvious reasons, prefer Tammany government. Next, the Tammany machine itself, which has been built up by a long process, has a great

body of men directly attached to it, who as petty politicians, with little or no other means of support, have a pecuniary interest in Tammany's success. Then comes the liquor interest, which went in a solid body for Tammany this year, as it has usually done heretofore.

There are various other private interests that wish to violate municipal ordinances or break the State laws, and that seek the connivance of public officials. These interests naturally vote for Tammany. The street railroad organisations, gas companies, and other franchise-using or franchise-seeking concerns are in position to control a great many votes, and the reasons why they should favour a Tammany government rather than a Citizens' Union government are too plain to require any explanation.

### THE POLICY OF MR. PLATT.

There has never been the slightest prospect that the Greater New York would fall into the hands of the Republican machine, and the Republican machine has always perfectly understood this. The separate Republican ticket, and the refusal of the machine to support Seth Low, were a part of the plan to make

From the *World*, New York.]

GRACE BEFORE MEAT—"THANK PLATT!"

certain the success of Tammany. The great corporations that are robbing the people of the city and State of New York will be quite amply protected this coming year, although they will have paid more handsomely for their protection than ever before. And the price of that protection will not be monopolised by a single political machine.

### CONSOLATION IN ADVERSITY.

Tammany represents a much greater capacity for a reasonably well-conducted municipal government than is represented by the local Republican machine. There is much reason to believe that Mr. Richard Croker has advanced a good deal in his appreciation of the true requirements of modern municipal progress, and that he would greatly prefer that the next four years of Tammany rule should be marked by some attractive gains in New York's municipal appointments, rather than by a slovenly retrogression. But these things are not Mr. Croker's first consideration, and real progress in modern municipal methods is almost impossible under the class of men that Tammany will certainly select to be heads of the great administrative departments.

## CUBA AND THE UNITED STATES.

BY THE LATE UNITED STATES MINISTER TO SPAIN.

THE Hon. Hannis Taylor contributes to the *North American Review* for November an article which he entitles "A Review of the Cuban Question." Mr. Taylor is at once a pessimist in believing that Spain can do nothing to remedy the evils from which Cuba is suffering, and optimist in maintaining that the United States have only to speak in order to liberate the unfortunate Cubans. During fifteen of the last twenty-nine years Cuba has been at war with Spain. The results have been most disastrous to American interests.

## THE DUTY OF THE UNITED STATES.

Mr. Taylor says:—

Our commerce with Cuba, amounting annually at the beginning of the present war to 100,000,000 dols., has been nearly wiped out. The millions of American capital invested in the island have been either destroyed or rendered unproductive; many of our citizens reduced to absolute want have been forced to appeal to Congress for aid. Since Spain herself has thus resolved by fire and famine to destroy those she cannot conquer, the time has certainly arrived when the Government of the United States must either discharge its duty to itself and to humanity, or it must abdicate the high office with which destiny has clothed it, and frankly declare that it is incapable of protecting its own interests and of guarding the peace of the new world. In its final form the question is for us one of moral dignity.

## THE QUESTION ECONOMIC AT BOTTOM.

Mr. Taylor points out that the real question which lies at the bottom of all the difficulties in Cuba, is the determination of the Spanish Protectionists to preserve the island as a market for Spanish manufacturers, and to shut out their American competitors who would otherwise flood Cuba with their American goods.

The fall in the value of sugar, due to the expiry of the reciprocity arrangements with the United States in 1894, threw so many labourers out of work that they had to take to revolution to keep themselves alive. Thus says Mr. Taylor:—

When we arrive at the final cause that drove the Cubans into the present revolution, we discover that the rising really grew out of a struggle for bread. It is, therefore, plain that if the whole fabric of political and military oppression under which Cuba is now dying could be removed at a blow, the great economic difficulty would still remain, sufficient in itself to make her a desert, unless the power to enact commercial and economic laws is transferred, as in all the great English colonies, from the home parliament to a Cuban legislature.

## NO HOPE FROM SPAIN.

Mr. Taylor has no hope that the Spaniards will ever give Cuba a free government, for the very good reason that they have not a free government at all:—

Spain cannot give to her colonies what she does not herself enjoy—popular government, as that term is now understood throughout the world. The truth is that Spanish statesmen have no clear conception of the real meaning of the term "autonomous colonial government"; and the Spanish people are almost a unit in their resolve to lose Cuba by force of arms rather than permit such a concession to be made.

What, therefore, must be done? Mr. Taylor says:—

I cannot doubt that the simple application by the Government of the United States of moral pressure, provided that such pressure is exerted by the legislative and executive departments acting together in firm and hearty concert, will now be sufficient to accomplish the end in view.

## WHAT CONGRESS SHOULD DO.

He goes on to explain exactly what he thinks should be done. It is somewhat surprising to know that this

ex-Ambassador believes that Spain can be compelled to give up a most cherished possession by the mere passing of a resolution. He says:—

What I hope to see is the prompt adoption by Congress, upon its reassembling, of a joint resolution embodying three clear and definite propositions: The first, asserting our right and duty not only to ourselves but to humanity, by virtue of the universally recognised doctrine of intervention, as well as by virtue of the Monroe doctrine, to put an end to the dreadful conflict so long raging in Cuba.

Number two and three are like the first, and need not be quoted. Mr. Hannis Taylor says:—

The undertone of this resolution should then leave no doubt as to the fact that in the event the application of such moral means fails to produce the necessary result, we reserve to ourselves the right to take such other or further action in the premises as may be made necessary by future events.

He maintains that the mere passing of such a resolution by the majority in both Houses, if adopted and acted upon by the President, would be quite sufficient to terminate the Cuban difficulty. Mr. Hannis Taylor ought to know more of the dogged obstinacy and invincible pride of the Spaniards than to imagine that they would ever agree to clear out of Cuba in obedience to the most unanimous resolution that was ever passed by the American Congress.

## ENGLAND AND THE FAMINE IN INDIA.

BY AN AMERICAN PROFESSOR.

PROFESSOR E. WASHBURN HOPKINS, writing in the *Forum* for November, administers a grave and well-deserved rebuke to those reckless libellers who, in the *Cosmopolitan* and other American magazines, have done their utmost to vilify and calumniate the British Administration in India on the ground of its alleged indifference to the famine-stricken provinces. Professor Washburn Hopkins has been in India and knows what he is talking about; he is therefore naturally amused, and not a little disgusted, that in the United States—

There seems to be an almost unanimous opinion that England has been culpable, that while spending millions on her Jubilee, she begrudged aid to the sufferers in India, giving it so sparingly that, but for the generous contributions of America, Russia, Japan, and other foreign nations, thousands more than actually died would have fallen a prey to starvation.

Professor Hopkins, finding himself confronted with such a monstrous libel, sets himself to work with much pains to expound the true state of things. He describes the relief works, which he himself visited, and is full of admiration for the zeal and generosity displayed by the Administration. He says:—

The relief-works are in operation all over India; and, from a personal inspection of many of them, I can express only admiration for this stupendous charity. Hundreds of thousands of people were employed on these works. The number of those thus dying was much exaggerated; and there was scarcely an instance of real starvation where the fault did not lie with the sufferer himself.

Laughing and chatting as they worked, the company seemed more like a huge picnic-gathering than anything else. If they were starving, they were very jolly about it. But they were not starving; they were saved. And over all India such groups could be found, famine-sufferers suffering no longer—and why? Because English charity had rescued them.

Professor Washburn Hopkins brings his article to a close by the following sentences:—

The British Government has done all that any Government could do; and to revile England or hold her up as a monster because of the effects of the famine in India is an injustice. Such a misrepresentation of the facts is due either to simple ignorance or to a lack of honesty.

## THE BRITISH TAXPAYER AND THE NORTH-WEST FRONTIER.

By SIR AUCKLAND COLVIN.

In the *Nineteenth Century* Sir Auckland Colvin writes a weighty article on "The Problem beyond the Indian Frontier." It is a long article of nearly twenty-four pages, for Sir Auckland Colvin when he wields his pen has somewhat of the ponderosity as well as of the sagacity of the elephant. Sir Auckland is a man who knows what he is talking about. No man's judgment carries greater authority upon all questions on Indian finance, and as all frontier questions are ultimately questions of finance, his article may be accepted as one of the most important contributions that has yet been made to the discussion of our future policy in those regions.

### WHO IS TO PAY THE PIPER?

Sir Auckland Colvin's advice, put in a nutshell, is that if we are to go beyond the frontier and endeavour to establish our authority among the hill tribes, the British taxpayer will have to pay for it, because India cannot. Nothing can be more explicit than Sir Auckland Colvin's declarations on this point. He says that even if India had been prosperous, it would be difficult to meet the immense drain of such a policy from Indian resources:—

But, as matters now are, I should conceive it to be absolutely impossible. Taxation in India has in the last three years reached high-water mark. So far as revenue has been kept abreast of expenditure, it has been only by reimposing taxation which had been taken off, or by the addition of fresh fiscal burdens.

### HOW MUCH WILL ENGLAND CONTRIBUTE?

What he has set himself to prove is that:—

Far as we have gone beyond the frontier we are likely, if experience of the past is a guide to the future, in all probability to be carried further; that to the charges and obligations already incurred we must expect others of greater weight and of increasing volume to be added; that the revenues of India cannot equitably be expected to continue to bear so great and indefinite and increasing a charge; that it is by no means only India, but in an equal, if not greater, degree this country, that is interested in the objects for which that charge is imposed; and that therefore it is incumbent on those whose desire and intention it is to establish and to maintain British authority in the countries beyond the present North-West frontier to furnish a scheme of providing ways and means which shall be proportioned to the relative interests of the two Governments, and shall secure to India a definite prospect of the enjoyment of so much of her own revenues as may not equitably or justly be claimable from her in the prosecution of the common end.

### THE PENALTY OF THE FORWARD FOLLY.

Any attempt to carry out this forward policy at the expense of India will immediately lead to a cessation of all public improvements in India:—

The extension of a system of interference beyond the border is not compatible with strenuous development of material resources within India.

### MORE MONEY, MORE MEN—

Sir Auckland Colvin, like everybody else who considers the subject, scouts the idea that the forward policy can be carried out on the cheap. He says:—

It is not only actual but growing expenditure which must be reckoned with. If, again, more posts are to be occupied and more routes kept open by British troops, the probabilities are, if past experience may guide us, that we are yet only on the threshold of the call on Indian revenues. It is difficult, moreover, to see how the Indian Government can face so large an addition to its responsibilities without some material addition to its army. Great additions have been made of late years to the number of native levies beyond the frontier; and

the efficiency of the Imperial Service troops, numbering some 20,000 men, has been immensely increased. Has equal care been taken to increase the relative strength of the British army in India?

### —AND MORE ENEMIES.

He denies that the tribes beyond our frontier have in any single case acquiesced peaceably and without frequent risings against the extension of our influence, and he brings a great array of facts to prove that any attempt to exercise influence without interference inevitably leads to the exercise of a very direct interference. As for the experiment of influencing without governing, he says:—

The most unfavourable possible conditions in which such an experiment can be tried are those which we find among the Pathan tribes beyond the North-West frontier of India. Their tribal organisation, their fanaticism, faithlessness, and past history—the universal *consensus* of all men of all countries who have ever had to deal with them—combined with the difficulties opposed to intruders by their rugged and impracticable country, forbid us to expect in the future more favourable welcome or more undisturbed possession of our roads and military garrisons, our telegraphs and postal communications, than has been accorded us by the Swatis at Malakand and Chakdara, by the Orakzais on the Samana range, or by the Waziris at Wano.

A pleasant look-out truly! It is, however, well to know that if Lord George Hamilton and the majority which support him at Westminster are prepared to persist in the infatuated policy begun when they reversed the policy of their predecessors, they must be prepared to vote the requisite number of millions for defraying the cost of the scheme with which they are so much enamoured. It is only fit that those who call the tune should pay the piper.

### MAGA'S ADVICE.

*Blackwood*, which has an almost unbroken record of having gone wrong upon every conceivable question that has ever come before the public since the magazine was started, is, of course, on the wrong side of this frontier question. The writer of this article, speaking of the measures that must be taken after the tribes have been defeated, says:—

The general tendency of these, it is to be hoped, will be in the direction of a closer contact and some control over the tribes within the delimited boundary. Those that wished for protection might be assured of it. To overcome the unruly tribes, it might be necessary to choose some sites on the hills, within easy reach of the plains, commanding the country round. These would necessarily be fortified at first, if only to secure due rest for the troops; but they should be looked upon rather as standing camps than as fortresses, and should contain garrisons sufficient to act without reinforcement in case of disturbance. It may reasonably be hoped that in course of time a closer contact with us, the gain to be realised from the presence of large bodies of troops, encouragement and conciliation of their local councils and chiefs, would break down hostility, as has been the case elsewhere. This would lead up to complete disarmament, and to the enrolment of tribal levies, armed and organised by our officers, but left otherwise entirely under their tribal government. The passes would then be safe-guarded by trained troops in our interests, and the people defended from the tribes beyond our sphere of influence. The permanent stations on the hills bordering our present frontier would give us the much-needed summer stations for the British troops now quartered in the deadly climate of the low ground.

No doubt, says *Blackwood*, these measures would cost money at first. Alas! the first cost is the least cost; for heavy as the expenditure would be at first, it would be a mere flea-bite compared with the pressure which would have to be lavished before the mountaineers could be converted into peaceable subjects of the Empress.

## THE ANGLO-FRENCH DISPUTE IN WEST AFRICA.

BLASTUS AS THE PROPHET OF ST. JINGO.

M. FRANCIS DE PRESSENSÉ, writing in the *Nineteenth Century*, says that the dispute in West Africa is a very pretty quarrel which will require very careful handling if

From *Moonshine*.]

[November 13, 1897.

THE FRENCH COCK PICKING UP CRUMBS THAT FALL FROM JOHN BULL'S TABLE IN WEST AFRICA.

it is to be settled peaceably. The chief danger lies in the obstacles raised by the command of two credited politicians. This phrase, being interpreted, means our old friend Blastus.

## "THE PATENTED PROXY OF IMPERIALISM."

M. de Pressensé says:—

It is not my own fancy that the Cabinet of St. James's is divided by the struggle of influences around this Western African question. Everybody in England asserts or believes—some to rejoice and draw the most favourable auguries, others to deplore and foresee funeste consequences—that Lord Salisbury is no more the undisputed master on this ground; that Mr. Chamberlain, as Colonial Secretary and patented proxy of Imperialism, has claimed the right to say his say; that he pulls all the strings of all the puppets, not only of his governors, from Sir William Maxwell to Sir Gilbert Carter, but of the head and of all the agents of the Niger Company, and that he opposes resolutely the acceptance by British diplomacy of a conciliatory solution, where he should see only betrayal and cowardliness. What is perhaps the most to be regretted, is the echo these arrogant doctrines find among the public.

Such, however, is the spirit which has too much prevailed in the preliminary discussions of the West African issue, where the question was of titles, dates, documents, papers and facts—where the best would be to bring to bear mutually a loyal desire to adjust and reconcile together, and with the maintenance of peace, apparently contradictory rights. It has appeared sometimes as if some arch-plotter wanted to break loose a spirit of contentiousness, chicanery, arrogance, and provocation. Fortunately all this has happened far below the sphere where Lord Salisbury sits alone and meditative. It appears more and more every day that this African business is destined to be the touchstone of the true strength of the two rival statesmen in the councils of the Queen.

## A FRENCH VIEW OF MR. CHAMBERLAIN.

Of Mr. Chamberlain, of his *pushfulness*, of his recent jingoism, I shall not speak here. What the public knows or guesses about the Prime Minister of England does not make very probable the enlistment of the heir of the Cecils in the ranks of the army of which St. Jingo is the God and Mr. Chamberlain the Prophet.

The principal guarantee of a successful and friendly settle-

ment is to leave the hands free to the statesman as distinguished from the politician. The fate of the Anglo-French understanding is trembling in the balance. Everything that should give to Mr. Chamberlain a victory would go directly against the restoration of the *entente cordiale*. Let us hope Lord Salisbury has a mind broad enough, and a grip strong enough to dare to defy and to checkmate the profligate Imperialism of his Colonial Secretary.

## A PLEA FOR A GIVE-AND-TAKE POLICY.

The Rev. W. Greswell, who writes on this subject in the *Fortnightly Review*, is very strongly in favour of coming to some amicable arrangement with the French. He says:—

A railway communication connecting Senegal with the Niger is a main point of French West African policy. If a further connection can be made between Bammakou and the forts of Assinie and Grand Bassam on the Ivory Coast, our colonies of the Gambia and Sierra Leone would be effectually isolated and the whole of the Hinterland won over to the French. At the same time this nation would deflect a great deal of the trade to themselves and could play a waiting game with regard to the Timbuctoo, and possibly the Saharan extension.

Sooner or later the question of the various spheres of West African administration will have to be decided on broad lines. The little coast-strips and settlements which colour and diversify the map of West Africa are nothing in themselves if they are not to imply an extension in the Hinterland. Granted that concessions are made to France on the west and that such a position as Gambia was surrendered to her, Great Britain would be justified in asking for compensation in the kingdom of Sokoto and the Hausa States. It is most desirable that all outstanding difficulties with France should be amicably settled, and it is a pity that a basis of a good understanding on the subject of the "French shore" in Newfoundland cannot be found in an adjustment of West African affairs.

The Rev. W. Greswell says:—

A give-and-take spirit should be created, and if England, which has long been a pioneer influence in West Africa from the days of the earliest explorers, is willing to surrender privileges and positions to France, she should be met in a similar mood.

No doubt, no doubt! but how is he to create that give-and-take spirit in France? At present the more we give, the more they take, and when it is all give on one side and all take on the other, there is not much prospect of coming to terms.

## Phil May's School of Art.

THE *Young Man* for December publishes an interview with Phil May. When asked as to what advice he would give to a young man who wished to succeed in black and white, Phil May replied:—

I should certainly say, "Draw from life, and keep drawing from life until you find your work coming right." Black-and-white work has reached a high standard, and unless he is content—as some men are—to copy the work of other men, he may find that he has to work hard for ten or fifteen years before he will turn out work which is original and which will pass criticism.

Speaking of his own experience, Phil May said:—

You see, I have never been through the schools. My first school was at Leeds, when I helped to mix the paints, and drew portraits of people for a shilling a copy, did little posters and anything that came in my way, without having had any lessons, except just those which I had given myself; and my second school was when I found myself possessing the key of the street in this great London of ours. That was my best school, because I was studying character first-hand. Linley Sambourne's work was the only work which ever influenced me—in the sense that I saw how much could be expressed in a line; but I never set about copying any one.

## THE HEADSHIP OF THE ENGLISH RACE.

## WILL IT BE BRITISH OR AMERICAN?

THE question whether the English-speaking race will crystallise into unity around Washington or London is a problem of which we shall hear much more in the twentieth century than we have done in the nineteenth. Neither in Britain nor in the United States has much attention been paid to the question, which underlies the whole future relations of the Empire and the Republic. It is interesting to find the subject mooted by a Frenchman, Baron Pierre de Coubertin, in the *Fortnightly Review* for December.

## THE PROBLEM OF THE BRITISH EMPIRE.

After giving in general terms the result of his survey of the British Empire, he declares that the problem of the British Empire is the question whether England or the United States will take precedence in the English-speaking race. He says:—

The British Empire exists, and exists as a republic, a confederation of States. How long will it probably last? That is the final problem. In order to solve it we must take a still wider sweep and look at the Anglo-Saxon world as a whole. It will then be seen that this world has two poles, one in London, the other in Washington. On reflection it would not seem that unity can be attained by means of an agreement between England and the United States. Such an agreement would have to be absolute. Now an understanding is possible, but absolute agreement will be unattainable for a long time to come. One thing, however, is obvious, that the United States can take "precedence" of the British Empire in default of England, and that they will take it if once she lets it go. The feeling of emulation and jealousy which exists between the Americans and the English wears off as soon as the latter have left England behind them; the Scotch and the Irish have never shared in it. Thus the new-born British nations have no feeling but fraternal sympathy with the Americans.

## THE AMBITION OF THE AMERICAN REPUBLIC.

In Australia their popularity grows greater every day. The experiments which Australians are making in social politics are followed with the liveliest interest in the United States, and their literary and artistic works find ready appreciation there. With South Africa there is far less interchange of ideas, but the electric chain of sympathy is just as strong. The Yankee recognises a kindred spirit in Cecil Rhodes; they have arrived at a common understanding on the Negro question, which later on may lead to common action. The Canadians are a little less on the defensive. They have not forgotten the past, least of all the war of 1812, but they live under the direct influence of American civilisation, and they appreciate the benefits of it. As to annexation, it is not seriously wanted, for everybody would lose by it. The French-Canadians have just seen one of their countrymen raised to the supreme power, and they would certainly not choose this moment to renounce a nationality of which they are so justly proud. Besides, their independence is not threatened; American ambition takes another form. Federation as a rule is not particularly consistent with the policy of annexation, but it agrees very well with the policy of influence. In the future the United States will not be keen on annexation, but their thirst for influence, for moral dominion, will be insatiable. It is so already.

## A PROPHECY.

It may be said that the United States are beginning to be conscious of their future mission and that they are educating themselves to accept it. Certainly they are by no means Anglo-maniacs, but they are becoming more British every day. The Great Republic will be ready to fulfil its imperial functions when its universities have prepared it for the task. As for England, so far from having before her a career of indefinitely increasing prestige and power, if she would fulfil her own functions, she must consent to make many sacrifices

of interest and self-love. She will probably make them out of pure family affection.

However this may be, we ought to be perfectly willing to recognise the fact that, in one way or another, the triumph of Anglo-Saxon civilisation is secure, and that it will leave its mark upon the world of To-morrow.

"Never prophesy unless you know" is an excellent rule, and our French friend might have learned even from his own paper the difficulty of prognosticating what will be from the data supplied from what is. He points out, for instance, how totally the English have been transformed in the course of a few centuries. Even as late as the end of the seventeenth century the English had not acquired what are now regarded as their distinctive national characteristics.

## THE ENGLISH REVOLUTION OF 1837-1897.

Nay, we do not need to go so far as the seventeenth century to discover how immense the transformation can be effected in the character of a nation. Baron Pierre de Coubertin, in a few graphic pages, describes the state of English society and politics at the beginning of the reign, and brings into clear relief the extraordinary changes which have been effected in almost every department of national life. As he says himself, a gigantic transformation has been taking place disguised at first under an apparent fixity of form. The aristocracy has been carried away by the new movement, the motive power of which is the middle class. The influence of the colonies, already great, will, he thinks, continually increase as the colonies are morally far in advance of the mother country. The Baron's paper is a very interesting one, whatever we may think of his conclusions. This French observer has at least an eye to see what too many of his countrymen fail to discern.

## OUR TALISMAN OF EMPIRE.

His way of accounting for the unity of the Empire in the midst of its endless diversity is worth noting. He says:—

We are looking for unity and at the very outset we find contrast. The first thing which strikes us is a complete diversity in the conditions of life, in the solution of economic difficulties, and in all social problems. For, mysterious as it seems, the germ of union is strong—stronger than all the forces that make for disunion. You may be sure that this apparent uniformity would not be so obvious if it did not correspond to some hidden reality. It is in the minds of the people that uniformity is absolute. After all, there is something which is superior to all influences of climate, of heredity, of language even, something in which the whole force of Anglo-Saxon civilisation lies—it is the possession of one and the same conception of social life. The English hold this talisman to-day. They have found an answer to the riddle of existence which has amply satisfied millions of their fellow-men, and a human formula which has amalgamated different races and caused opposed religions to collaborate for a common end.

## THE ANGLO-SAXON IDEAL.

Their ideal can be summed up in one phrase: Free action of the individual for the good of all. This ideal is taught in the numberless schools, colleges, and universities which they have founded all over the world. Consciously or unconsciously every master holds it and makes it the subject of his daily lessons. Anglican clergymen at the head of modest grammar schools in Grahamstown or Kingston, the Catholic Brotherhoods who have established colleges at Ottawa or Freemantle, lay professors who lecture in the Universities of Sydney or Toronto—all use the same language. "Act," they say to their pupils,—"never cease to act. Action in all its forms is the *raison d'être* of humanity."

Probably many of our professors and schoolmasters will learn for the first time what they have been teaching when they have read it here.

## THE FRANCISCANS OF OUR DAY.

SIR WALTER BESANT ON THE SALVATION ARMY.

SIR WALTER BESANT contributes to the *Contemporary Review* an article upon "The Farm and the City," which is one of the most thorough-going and enthusiastic tributes to the work of the Salvation Army that I have read for years.

## WHY HE WROTE THE ARTICLE.

Sir Walter Besant thus states the reasons which led him to write the article:—

For manifest reasons—especially the interest which attaches to any popular movement—it has been my pleasure for many years to watch the Society, or Order, called the Salvation Army. It has recently become a necessary part of my work to study all their documents and to investigate personally the practical results of their Great Endeavour. It will be conceded at the outset that such an investigation—for which I claim no originality—should be at least useful in clearing up doubtful points in one's own mind. It will be also conceded that the man who conceived, created, and organised this vast society must be regarded as a remarkable man; remarkable if the charges brought against him are true—they have been repeated over and over again; remarkable in that case for an unblinking audacity, for a brazen front worthy of Titus Oates, for an audacity in hypocrisy beyond parallel; remarkable, if the charges are false, for his tenacity, his perseverance, his silence under attack; still more remarkable, if it should prove that his efforts are inspired by a genuine desire to raise the fallen and to relieve the unhappy; most remarkable, if it should prove that the machinery invented by him is the most practical and the most promising, and already the most fruitful of results, that has ever been imagined or designed.

I think that it is a plain duty to bear witness to things seen and examined and proved. I think that when one has become firmly impressed with the present importance, the stable character, and the vast possibilities of such a scheme as is now at work in our midst, it becomes his bounden duty to testify as to what he believes, and to show cause for his belief.

## THE SALVATIONISTS AND THE FRANCISCANS.

Sir Walter Besant has examined the working of the Social Scheme in all its bearings, and he is immensely impressed with what is being done. He declares that the Salvationists are the modern Franciscans. He says:—

There is a mission to go down, down, down among the depths where there is ever a lower depth still; theirs is the task to raise the worst and the most hopeless. At present, I am firmly convinced, they are moved one and all by the most sincere pity, the most real and pure passion of pity, for the outcasts of the world. They are ruled by an organisation which seeks to produce its results by personal service, self-denial, enthusiasm, and sympathy. They are controlled and regulated by a system and an order which I cannot find in any other institution in the world. To me it has been for many years an ever-increasing delight to watch this society growing, developing, inventing, and creating, in every direction of humanitarian effort. But they must remain poor. They must always remain poor. That is essential.

## THE SUCCESS OF THE SOCIAL SCHEME.

He is particularly pleased with the Farm Colony, nor is he in the least daunted by the fact that at present the Farm Colony entails a net annual loss of £4,000. That is, in fact, five times recouped by the gain to the Society of the men whom it reclaims and redeems. In sheer money, he reckons the Farm Colony at Hadleigh saves society £22,000 a year, and he says:—

For that alone, without counting the reformation of so many wretches, I maintain that further and wider recognition on our part is due to the man and to his scheme. The farm was an experiment; it is now an achievement. And as soon as one such farm can be shown to succeed there may be dozens.

## THE SHELTERS AND THE PRISON BRIGADE.

Sir Walter Besant, leaving the farm, goes into detail over all the various departments of the Social Scheme. He says:—

I have gone through most of the work attempted and achieved by the Army. There remain the Shelters. These have been much abused, and are continually attacked. The great reason for attacks seems to me jealousy of the great organisation that is spreading over the whole country, dwarfing and swallowing up the efforts of the various Churches to reach the very poor.

General Booth could not wish for a more thorough-going certificate of all the virtues than that which Sir Walter Besant has given him. Incidentally, Sir Walter comments upon the fact that, although a Departmental Committee recommended that the Army should be allowed opportunities to visit prisons:—

Yet in all the countries except our own where the Salvation Army has been received, the officers are allowed to visit the prisons and to hold meetings within the prison, and even to enrol prisoners as members of their society—so-called soldiers of the Army.

## THE JEALOUSY OF THE CLERGY.

If, then, the Army is doing so much good, if it is doing all this excellent work, which Sir Walter Besant describes with so much appreciative enthusiasm, why is it that it is not as universally recognised as it deserves to be? Sir Walter Besant's reply is that it is chiefly owing to the jealousy and suspicion with which it is regarded by the Church of England. The Church is prejudiced against any one who adopts new methods, and who do not conform to its standard, and, further, it dislikes the Salvationists just for the same reason that the secular clergy hated the Friars. The Salvationists, like the Franciscans—

pay no heed to the parish, they ignore the vicar; and the greatest work ever attempted for the relief of the poor, the rescue of criminals, the reformation, elevation, and civilisation of the outcast class, has been organised and is going on, is advancing by leaps and bounds, is covering the whole world, without the help or the advice or the leadership of bishop, priest, or minister. This, I believe, is the chief reason why the social work of the Salvation Army is looked upon by the Church as a body with jealousy and suspicion and dislike. Will the Church ever be able to take over the Salvation Army? Never. It is not possible. The only way, the best way, is for the Church to recognise far more freely than has hitherto been the case, the importance and the reality of the social work undertaken by the most remarkable man that the history of social endeavour has yet presented to the world.

*THE Investors' Review*, which comes out as a weekly in the New Year, closes its monthly career with—positively—several gleams of hopefulness! The cloud of habitual pessimism seems to have lifted a little. Room is actually found for "an optimist on American affairs," who announces improvement all round, and states the significant fact that in thirty years' experience in farm mortgages he has never before had so large a percentage of mortgagors asking to be allowed to pay before maturity. This rather cheering testimony is duly discounted by Mr. A. J. Wilson; but of the victory of Tammany he takes quite a roscate view. The mineral wealth of Mexico is appraised quite generously, and the future of that Spanish-American state as an industrial and commercial concern is painted in almost glowing colours. Mr. Wilson is evidently in good spirits, for, while he must have his knife into the South African Company, he lets off his resentment at its latest achievement in a villainous pun.

## THE LIFE STORY OF SARAH GRAND.

MRS. SARAH TOOLEY contributes to the *Young Woman* an account of her interview with Sarah Grand, whose "Beth Book" is reviewed on another page. If Sarah Grand had ever intended to disguise the autobiographic character of her latest novel, she should not have allowed Mrs. Tooley to publish the story of her life. As, however, the secret is a very open one, possibly she did not care.

## BORN IN IRELAND.

Mrs. Tooley says:—

Madame Sarah Grand, though of English parentage, was born in the north of Ireland, at Donaghadee. She was the daughter of Mr. Bellenden Clarke of Ballycastle, county Mayo, a commander in the navy, who during her early years held a post at a coastguard station, so that she had an interesting life by the sea.

The following extract from Sarah Grand's interview could hardly be more explicit in its avowal of the identity between "Beth" and the author:—

"Although not strictly of Irish birth, I love the country, and indeed think that no one can pass a length of time there without coming under its strangely romantic spell. We had Irish servants, and much of my time was passed in the cottages of the peasantry listening to the legends and folk-lore of the people."

## JUST LIKE BETH.

"I was, I believe," continued Madame Grand, laughing, "a very tiresome child, and not, like my studious elder sister, amenable to rule and discipline. I could not see the fun of reading when I had so many interesting people to talk to, and I was for ever being picked out of the lower regions from amongst the servants, or out of some poor person's hut, where my greatest delight was to sit down and share their meal of potatoes and salt. I am afraid," she continued, "that I exhibit something of the same low tastes to-day, for I would rather sit about with the old women in Provence, listening to their quaint stories and unsophisticated talk, than be in a whirl of social gaieties. Studying life has a greater fascination for me to-day than reading books. Society is the same all over the world, but every town and village furnishes amongst its rural population deeply interesting types."

## BROUGHT UP NEAR SCARBOROUGH.

Madame Sarah Grand's father died while comparatively a young man, and, though only seven years of age at the time, she recalls vividly the sense of desolation which his loss caused her. This event brought to a close her wild free life on the Irish coast. Her mother now removed with her family to England, settling at a small seaport place near Scarborough. Her education for some years was, as she says, "most desultory"; and while her eldest sister was absorbed in the usual studies, Madame Grand was reading anything and everything that came in her way. Her mother was a very accomplished woman, and had an admirable library, and there the future novelist fed her mind liberally on the English classics, being specially devoted to the writings of Scott, Dickens, and Thackeray. She still continued to pass an active outdoor life, riding, rowing, and roaming about the meadows and fields. When I asked her if she made any literary attempts during these early years, she replied that when she was eleven years of age she wrote a song and set it to music, just, as she expressed it, "picking out the notes on the piano without any scientific knowledge of harmony."

## A STORY-TELLER FROM CHILDHOOD.

She was also, at this period, much addicted to spinning yarns, and after she and her sister had retired to bed she told a story which would appear to have been a serial of unlimited continuation, for it went on night after night, week after week, and I believe month after month. "My sister," she laughingly told me, "says that her nerves suffered for years afterwards, and she thinks she has hardly overcome the effects yet of the horrors which I crammed into that story. I certainly went in for dramatic effects in those days in a

manner which I have never done since, and I well remember how I used to ponder during the day over the portion of the story to be related in the evening, and what frantic efforts I made to cram it with horrors."

It was not until she was fourteen years of age that Madame Sarah Grand may be said to have been brought under regular school discipline; and she recalls that she felt the disadvantage of being behind other girls in precise knowledge.

## MARRIED AT SIXTEEN.

It was after only two years of school life, that, at the early age of sixteen years, she married an officer in the army.

Then the girl-wife was carried away to the Far East, where she spent some four years in the experience of matrimony, and in studying medicine. She varied the monotony of these occupations by writing short stories, most of which she burned, much to her regret. And Mrs. Tooley says:—

For the next few years Madame Sarah Grand continued to write stories for the magazines, and when she was about twenty years of age there came a wish to make a career for herself, and with it, no doubt, the consciousness that she had the power to do so. She had been a serious student of medicine and physiology, and this led up to an inquiry into certain social questions affecting women. The outcome of this was the story of "Ideala," which may be considered her first serious effort.

## HER OPINIONS OF CRITICS.

Speaking of her critics, Sarah Grand professes a profound indifference to their remarks. She says:—

Now and again some one writes a really good useful piece of criticism—gives one a helpful word—but such reviews are so rare and the search for them so tedious, that I would advise young authors not to waste the time in seeking for them. Recently, however, said Madame Grand, I have literally banished all newspaper cuttings about myself. I now make no efforts to have them collected, and never read one except by chance. I very much sympathise with Mr. Kipling, who has, I believe, long made it a practice not to read review articles of his books. I had got into a wretched condition at one time; but I have been writing my new book with a delightful sense of freedom, and without any of those jarring notes to remind me of critical carplings. I really think this is the only way in which to attempt good work, for, if you have always the thought of a public and the dread of criticism upon you, it paralyses your thought and hampers your work.

## THE RETORT UNCOURTEOUS.

It is a pity that she did not stick to her good resolutions. Had she done so, she would never have read the review of "The Beth Book," which appeared in the *Daily Telegraph*, and which provoked her to respond "In the Grand manner" as follows:—

My distance from home makes the receipt of papers a somewhat fitful event, and this must be my excuse for the delay in answering your delicate apostrophe to me. That you should insult Scott and Thackeray and Dickens with your approval pains me but little, since they will never hear of it; that you are so much cleverer than I am I must modestly accept your word for; that you strain yourself to be facetious and but prove yourself a dunce, I must attribute to your academic degree, and a course of the blighting wit of the common-room; that you should attack me with base misrepresentation I set down to some rag of chivalry that still clings to you; that you are of ancient lineage I am willing to admit, since your putting into my mouth words and sentiments which are not mine shows you infected with the blood of Ananias; that you should take yourself as a serious judge of art is a crime for which it is painful to think you must one day settle between you and your God; but that you should write yourself down an admirer of mine is the ugliest blow that my art has dealt me, and I take this opportunity to publicly apologise for it.—Believe me, yours in sorrow for your insincerity,

SARAH GRAND.

## THE WOMEN NOVELISTS OF THE DAY.

MRS. SARAH TOOLEY, on whose unwearied industry in the matter of interviewing I have frequently commented, has made a record in the Christmas numbers of this year. She publishes a long interview with Sarah Grand in the *Young Woman*, which is noticed elsewhere; and a character sketch of the Duchess of York in the *Lady's Realm*; but in the Christmas double number of the *Woman at Home* she gives an account, with portraits and autographs, of twenty-three women novelists of the day. The article is a long one, occupying no fewer than fifty pages. The portraits are very well reproduced, and the articles are brightly written. On the next page I collect and reproduce all the autographs with which she has illustrated her article, and add that of Ouida, the only one of the fifteen whose autograph Miss Tooley did not succeed in procuring.

The following table condenses much of the information which Mrs. Sarah Tooley collected:—

| MARRIED OR SINGLE. | NOVELIST.                | BORN.            | NOW LIVING AT  | FIRST NOVEL.                  |
|--------------------|--------------------------|------------------|--|-------------------------------|
| M.                 | Sarah Grand ...          | Ireland ...      | Hotel d'Angleterre, Camb., Basses Pyrenees ...         | Ideala.                       |
| M.                 | Miss Braddon ...         | London ...       | Lichfield House, Richmond ...                          | Lady Audley's Secret.         |
| M.                 | Mrs. Hodgson Burnett ... | Manchester ...   | Washington ...   | That Lass of Lowrie's.        |
| S.                 | Miss R. N. Carey ...     | London ...       | Putney ...   | Nellie's Memories.            |
| M.                 | John Oliver Hobbes ...   | America ...      | Launceston Gate, London ...                            | Some Emotions and a Moral.    |
| M.                 | Mrs. W. K. Clifford ...  | West Indies ...  | London ...   | Mrs. Keith's Secret.          |
| S.                 | Marie Corelli ...        | Italy (?) ...    | Culville Gardens, Longridge Road, Earl's Court, London | The Romance of Two Worlds.    |
| S.                 | Sarah Bondney ...        | Portsmouth ...   | Southsea ...   | Under Grey Walls.             |
| S.                 | Miss Betham Edwards ...  | Ipewich ...      | Villa Julia, Hastings ...                              | The White House by the Sea.   |
| S.                 | Beatrice Harraden ...    | Hampstead ...    | Hampstead ...  | Ships that Pass in the Night. |
| M.                 | Mrs. Lynn Linton ...     | Kewick ...       | Brougham House, Malvern ...                            | Azeth the Egyptian.           |
| S.                 | Edna Lyall ...           | Brighton ...     | St. Peter's, Eastbourne ...                            | Won by Waiting.               |
| M.                 | Mrs. Macquoid ...        | London ...       | The Edge, Tooting Graveney Common, London              | A Bad Beginning.              |
| M.                 | Mrs. Harrison ...        | Eversley ...     | Bullingham Mansions, Kensington ...                    | Mrs. Lorimer.                 |
| M.                 | Florence Marryat ...     | Brighton ...     | London ...   | Love's Conflict.              |
| M.                 | Mrs. Meade ...           | Ireland ...      | London ...   | Great St. Benedict's.         |
| M.                 | Mrs. Molesworth ...      | Holland ...      | Summer Place, Onslow Square ...                        | Lover and Husband.            |
| S.                 | Ouida ...                | (Half French)    | Florence ...   | How It All Happened.          |
| M.                 | Louisa Parr ...          | London ...       | Kensington ...   | The Story of an African Farm. |
| M.                 | Olive Schreiner ...      | South Africa ... | Kimberley ...  |                               |
| S.                 | Adeline Sergeant ...     | Derby ...        | London ...   |                               |
| M.                 | F. A. Steel ...          | Harrow ...       | Palace Gate, London ...                                | On the Face of the Waters.    |
| M.                 | Mrs. H. Ward ...         | Tasmania ...     | Grosvenor Place, London ...                            | Miss Bretherton.              |

From this it will be seen that of the twenty-three lady novelists, fifteen are married and eight are spinsters. Of the fifteen who are married, at least three—of whom two were married at the age of sixteen and one at nineteen—are either separated or divorced from their husbands, while three are widows. Another interesting item is the extent to which the lady novelists of to-day have been subjected to other than insular influences. Mrs. Clifford, Olive Schreiner and Mrs. Humphry Ward were all born in the Colonies. John Oliver Hobbes was born in the United States, and Mrs. Molesworth in Holland. Ouida is half French. Mrs. Steel was trained in India, where Florence Marryat also spent some of her early years. Marie Corelli, Miss Betham Edwards, and Mrs. Macquoid were all more or less subjected to French influences, while Beatrice Harraden has spent some years in California. Mrs. Harrison, Charles Kingsley's daughter, has also been subject more or less to Indian influences, and Sarah Grand spent her married life in Singapore, Hong Kong, and the Far East. It will be seen that not more than eight out of the twenty-three escaped the influence of American, colonial or continental life. Of the modern novelists, Mrs. Meade and Sarah Grand were born in Ireland, and Mrs. Steel is a Scotchwoman. Of their books, several achieved great success at the first

stroke. They had the usual difficulties with publishers. Sarah Grand had to publish "Ideala" herself, and sell it as best she could. Blackwood declined "Ships that Pass in the Night" on the ground that it was too sad ever to be popular, but it jumped off with a great success at once, and it has continued to be a favourite ever since. Miss Braddon published "Lady Audley's Secret" when she was twenty-four, while John Oliver Hobbes was only twenty-two when she wrote "Some Emotions and a Moral." Olive Schreiner must hardly have been more than twenty when she wrote "The Story of an African Farm." Mrs. Humphry Ward, Miss Adeline Sergeant, and Beatrice Harraden all enjoyed the advantages of a university education. Mrs. Hodgson Burnett was too poor to enjoy such a privilege, as, when a child, she could find no paper on which to write her stories excepting old butcher books. In the account which is given of Mrs. Harrison (Lucas Malet), Mrs. Tooley tells us that novels were practically forbidden in the house of

Charles Kingsley. As a child she never saw her father open a novel, and she was not even allowed to read any of Charlotte Yonge's stories until she was twenty years old.

THE TWENTIETH CENTURY NEW TESTAMENT.—Part I. (consisting of the Historical Books) of this translation for the people into modern English, from the original Greek, will be ready by Christmas, 1898. Friends are requested to take notice that the above title will supersede the titles, "Translation of the New Testament into Modern English," and "The New Testament: People's Version." Communications from those interested will be forwarded to the Secretary, REVIEW OF REVIEWS Office, Mowbray House, London, W.C.

MR. A. J. WILSON'S inveterate antipathy to the South African Chartered Company betrays him in the December number of the *Investors' Review* into the humiliation of a pun!—

At last we understand why the Chartered Company was so particular about the spelling of the name of Rhodesia's coming, coming great capital. . . . To show their contempt for the fleeced multitude, they decided to give the chief town of their "new Empire" a punning name. Bulawayo therefore means "Bull-away-oh" and "Bull-away-oh" has been the note of all the speechifying which accompanied the opening of the new railway.

### TENNYSON AT FRESHWATER.

THERE is a notable article in the *Century Magazine* for December, by V. C. Scott O'Connor, entitled "Tennyson and his Friends at Freshwater." It is illustrated with photographs by Mrs. Cameron, portraits by Mr. G. F. Watts, and pictures by Malcolm Fraser. The article contains a mass of information concerning the Tennyson family, and also describes minutely the interior of Lord Tennyson's house at Freshwater.

#### THE POET AND HIS RUSTIC NEIGHBOURS.

For these things, however, I have no room, but I cannot resist the temptation of quoting one or two passages from this charming article:—

The admiration of his rustic neighbours was, it must be confessed, somewhat confused and vague, especially before he became a tangible, understandable lord.

One day, when Tennyson was having his new study built, he overheard an amusing conversation between two of the workmen.

"Have you seen him?" said one.

"Yes," replied the other.

"What sort of a chap is he?"

"Oh, well enough for an 'overner,'" growled the other in reply.

The story is a characteristic one of the old days when the Wight islander was profoundly exclusive, and believed that stout, honest fellows like himself grew only in the Isle of Wight; for no good, in his estimation, could be expected from "over" the sea.

The shepherd at Farringford was a well-known figure in the old days. When he grew old and past work, he was given a pension by Lord Tennyson, and he retired to a little cottage on the estate. One day a niece of the poet's went to sit by him, and she read to him from a volume of Tennyson's poetry. When she had finished reading, he said: "Well, miss, but that was fine! What a head-piece he must have on him, to be sure! You'd never think it, now, to look at him."

"Oh, yes, shepherd," exclaimed the young lady. "Why, I think he has a beautiful, noble face."

"Well, well, miss," retorted the old man, "that may be, but you'd never think it, anyway, to hear him talk!"

#### LADY TENNYSON.

Of Lady Tennyson the country folk were more appreciative:—

She was fruitful in good works, and did all with that inimitable grace and charm which spring only from the heart. Her memory is green in many of the little cottages in Freshwater. An old man in Freshwater once said to me, speaking of her with the tears almost in his eyes: "She was the kindest, most beautiful-speaking woman I have ever met, sir. God bless her!"

#### TENNYSON IN TEARS.

Here is a touching story of a characteristic episode in the poet's life:—

It was Tennyson's custom to rise early, when his household had scarcely begun to stir, and walk alone in the freshness of the morning. So it happened, one day, as he climbed the down slopes at that exquisite hour when the changing hues of dawn play like music over a world awakening to renewed life, that his steps were stayed by an ugly spectacle. Some person during the previous night had set the gorse and heather alight, and in the smoke and rush of sudden flame several of its little inhabitants had been stifled and burned. In the place of what was fair and sheltering the day before there was now a burnt wilderness, rendered pitiful by the presence of a few helpless victims, little birds and charred rabbits. Turning back from this scene of cruelty, the tender-hearted poet walked sadly home as the day was breaking in splendour, and, climbing up to his room, burst into tears. Willingly he took no part in the destruction of life. "His sympathy with

nature led him to mourn over the cutting down of trees, as if they were, like the grove in Dante's 'Inferno,' the abode of his personal friends," and he never would consent to his flowers at Farringford being plucked.

### THE HARD CASE OF WOMEN JOURNALISTS.

IN an article which Janet E. Hogarth contributes to the *Fortnightly Review* on the "Monstrous Regiment of Women," which is endeavouring in a miscellaneous kind of fashion to storm the professions, being driven thereto chiefly by a distaste for teaching and a loathing for the conditions of domestic service, she waxes very eloquent concerning the doleful case of the lady journalist. College girls, she says, have a hankering after journalism, from which she endeavours to cure them by writing as follows:—

If they only knew a little more of the position and prospects of the average woman-journalist, of the desperate struggle to make both ends meet, of the necessity of accepting the most humdrum and distasteful tasks, of the trials of the interviewer, and the endless subterfuges of the society reporter! But they have heard of the lady who swayed South African politics, or they see occasional contributions to the daily papers headed by well-known names. Never for one moment do they suspect what should be proclaimed far and wide, and made matter of common knowledge—that the really successful women-journalists—successful, that is to say, from a masculine, and not a merely feminine standpoint—can be counted on the fingers of one hand. Nor, as far as one can see, is this likely ever to be different. The supposed freedom of a journalist's life, with its possible literary introductions, is at least as attractive to young men as it is to young women; and which sex will in the long run prove best able to withstand the inevitable strain and unwholesome conditions of the journalist's life? If a woman cannot do night work, and regular night work, the prizes of Fleet Street are not for her. I do not say that she may not make a living, but she will have to content herself with a kind of journalism far enough removed from literature—with the chatty article, or the women's papers, with the *Forget-Me-Nots*, the *Home Notes*, the *Nursery Chats*, and the hundred-and-one scrappy periodicals which have so successfully hit off the taste of the rising generation, that they bid fair to reduce England once again to a condition of illiteracy. Indeed, there is a deeper depth still. What shall be said of the journalistic tout, unconnected with even the most ephemeral of newspapers, who lives by pouncing upon little scraps of information, and hawking them round the different newspaper offices, eking out, heaven knows how, the precarious existence doled out to her in shillings and half-crowns by the shrewd business manager. Is that a life which commends itself to an educated woman? No, there is room in the world for a few more women doctors; there will probably in the future be a very considerable demand for women as factory inspectors, inspectors of schools, officers of health, superintendents of cottage homes, matrons of prisons and workhouses, and highly trained philanthropic workers; but for anything except the woman who is content to make the wages of occasional journalism supplement other resources, this London world has no place. And occasional work is not, strictly speaking, professional work in journalism or anywhere else.

Miss Hogarth's paper is one of those which oppress you like a dull headache. There are many writers who always have that effect upon their readers. They see the evil of the world, the overcrowding of the avenues of employment, the miseries of privation and starvation, and they see it all so keenly and express it so strongly, that the sensitive reader is almost driven to feel that the only thing he can do to mend matters is to commit suicide, thereby reducing the myriad million mass of human misery by a single unit. Fortunately the impression passes, otherwise life would not be worth living.

## A FRENCHMAN AMONG SHAKERS.

M. BENTZON enlivens the second November number of the *Revue des Deux Mondes* with an account of a visit which he paid to the Shakers. This singular sect, although its numbers are decreasing, yet makes a fairly brave show in the State of New York.

## SHAKERISM BORN IN FRANCE.

The first indications of "Shaking" appeared in 1689 in the Dauphiné and the Vivarais, accompanying certain prophecies from the mouths of women and children. These fanatics announced that the end of all things was at hand, exhorted men to repent, and spoke of the imminent Kingdom of God, of the new elect, of a new land, and of the nuptials of the Lamb. In spite of persecutions they spread to England, and in 1747 we find a little society in the neighbourhood of Manchester under the direction of James and Jane Wardley. They increased under continued popular ridicule and persecution, and in 1770 they hailed what they considered the second coming of Christ under the form of a woman. She was Ann Lee, daughter of a Manchester blacksmith, who, though herself married, preached celibacy as the only state permitted by God. The Wardleys were quite effaced; Ann had a vision in which the origin of the fall of the human race was revealed to her, and the remedy for it, namely virginity.

## ANN LEE, THE SHAKER PROPHETESS.

More revelations decided her to embark for America in 1774 with eight followers. They encountered extraordinary perils in the old ship in which their poverty obliged them to make the voyage, but they arrived safely and established themselves in Albany. Ann was imprisoned, her denunciations of marriage being little appreciated, and while in gaol she prophesied that the American colonies would be separated from the British Government, and that religious liberty would be established. Ann died in 1785, at the age of about thirty-six. The report had spread that she would never die, but she knew better and made every preparation. James Whittaker succeeded her, but it was under Joseph Meachem, assisted by a most able woman named Lucy Wright, that the community of New Lebanon was founded, from which sprang all the branches of Shakerism which exist at the present day.

## THE SHAKERS TO-DAY.

The Shaker community which M. Bentzon visited is of a more primitive type than the one at a town called Canterbury, for example, where visitors and even newspapers are constantly welcomed, and where the children—adopted, of course—actually study music. M. Bentzon's community is situated in a hilly part of the State of Maine. He describes it as a rustic realisation of the Christian ideal, a commonwealth, small as it is, under a spiritual government. The costume of the sisters is plain and neat, and distinguished by a certain monastic air. A brother named Henry drives to the station to meet the visitors. He is nothing of an ascetic; his countenance bespeaks the extreme of sagacity. The buggy takes M. Bentzon and his conductors through much fertile pasturage, of which the Shakers own some three thousand acres. These lands are cultivated with difficulty owing to the decrease in the Shakers' numbers. This settlement which M. Bentzon describes, called Alfred, consists only of two "families." A spiritual family numbers ordinarily from thirty to eighty souls. The Shakers do not seek to disguise their falling numbers, and are not greatly distressed thereby, except for the hindrance occasioned to their agricultural operations.

## THEIR DOCTRINES.

They do not doubt that "the only true Church, that in which revelation, 'spiritism,' celibacy, communism, oral confession, non-resistance, peace, retreat from the world and miracles are the foundations of the new heavens," will endure eternally. It is hard to give an idea of the order, cleanliness and peace of a Shaker village. It was a favourite saying of Mother Ann, already mentioned:—"Work as if you have a thousand years to live and as if you must die to-morrow"—that is, buckle to with courage at the longest and most difficult tasks; but at the same time make haste to finish them. M. Bentzon is enthusiastic over the charm of the Shaker women. They are so simple, sympathetic, pure, and sweet, that even in old age they have all the freshness of early youth. The venerable Mother Harriet, leader of the Alfred Community, is a relation of the famous Stonewall Jackson, and she has in her the stuff out of which great generals are made. Brother Henry makes a point of being acquainted with all that is written about the order.

## THEIR SETTLEMENT IN MAINE.

M. Bentzon is taken to see the dwelling and sleeping apartments of the community. Everything is plain; the only luxury to be seen is an extreme of cleanliness. They keep poultry, but dogs are not allowed on account, M. Bentzon suggests, of the freedom of canine morals. They are very kind to all animals, but they do not permit themselves to caress them, and they have no pets. In the cemetery the tombs are uniform, and the only decoration allowed is that on the Fourth of June the national colours are placed on all the graves of soldiers. In view of the Shakers' horror of war this seems curiously inconsistent, but it seems that it was impossible to prevent many young Shakers from taking up arms against slavery. Most of those who survived the war rejoined their respective communities, surrendering of course their pensions, which were regarded as the price of blood. Frederick Evans once proved to President Lincoln that his brothers had in this way saved the Treasury more than 500,000 dollars, due to them as pension allowances. The story of Harriet is curious. Her father was an Englishman named Goodwin, who had remained faithful up to the age of forty to a self-imposed vow of celibacy. On a voyage to America, however, he fell ill, and was nursed by a young girl so devotedly that he married her. The first strong emotion of Harriet's life was when one day she heard her father say, "Cursed be the day that I looked at a woman with the mind to marry her!" It is certainly a most fascinating picture of religious calm and unworldliness that M. Bentzon draws for us in his excellent article.

IN *Longman's Magazine*, Dr. Andrew Wilson writes on "Our Double Selves," in which he mentions various cases of double personality, and suggests that they may be explained by referring to the dual nature of the brain. Dr. Wilson thinks that the ordinary normal existence may be dominated and controlled by the left brain, which has evolved right-handedness and has developed speech, while the right-hand brain, which usually takes a back seat, may in the cases under consideration come to the front, and display all the characteristics of a different personality. Mr. Andrew Lang devotes the bulk of his paper, "At the Sign of the Ship," to a very appreciative review of that painstaking volume recently issued by Professor Barrett through the Psychological Research Society, "On the So-called Divining Rod."

### "CORNHILLIANA."

#### A SHEAF OF ANECDOTES AND BON-MOTS.

*Cornhill Magazine* is developing a speciality which, if it is cultivated wisely and well, will make it one of the most popular magazines of the day. It is becoming a mine of good stories in the shape of anecdotes as distinguished from the short story. The December number has several papers which have anecdotes as their plums.

#### THE DUKE'S MOST CHERISHED COMPLIMENT.

In Sir Edmund Du Cane's paper of the reminiscences of a Rifleman in the Peninsula War we have the following anecdote of the Grand Duke:—

"The greatest compliment I have had paid in my life," he said, "was once when our fellows got into a scrape in the north of Spain and had been beaten back in some disorder. I rode up and rallied them and led them back, and they recovered the lost ground. Just as I rode up, one of the men stepped out of the ranks and called out, 'Here comes the — as knows how.'"

#### THE WITTICISMS OF WILKES.

The article on John Wilkes, by W. B. Duffield, contains many good sayings by that witty profligate:—

No man ever lived who could adapt his wit better to his company. Compare his chaff of the Alderman, formerly a bricklayer, who was trying to carve a turbot with a knife—"Use a trowel, brother, use a trowel!"—with his reply to Madame de Pompadour when she asked him, "How far it was safe to go in England against the Royal family?" "That is what I am trying to find out, Madame." There are few more really witty replies recorded than that made to the Prince Regent, who asked him at dinner when he drank to the King's health, "How long have you been so loyal, Wilkes?" "Ever since I knew your Royal Highness." He told Boswell, when he was about to appear as counsel before a Committee of the Commons: "Be as impudent as you can, as merry as you can, and say whatever comes uppermost. Jack Lee is the best heard of any counsel, and he is the most impudent dog, and always abusing us." He was frank about a trick of self-advertisement, which most politicians, often ineffectually, strive to conceal. He once asked permission to deliver a speech as the House was about to adjourn. For "I have sent a copy to the 'Public Advertiser' and how ridiculous should I appear if it were published without being delivered!"

#### I.H.S.

The Rev. Stewart F. L. Bernays contributes "More Humours of Clerical Life." Let us hope that Mr. Bernays has an inexhaustible repertoire. Here are some of his stories:—

A certain vicar, soon after his arrival in the parish, placed a new cloth upon the altar, upon the centre of which was embroidered a large cross. Such strong opposition was raised to this symbol of our Christianity, that the vicar gave way before the storm and had the initials I H S substituted. A parishioner who was not at all in favour of the change, on being asked the meaning of the letters, replied, "Why, don't you know what it means? It means, 'I Hope you're Satisfied.'"

#### "BEHOLD THE BRIDEGROOM COMETH."

A very amusing anecdote is that which Mr. Bernays tells of a curate whom he knew:—

On his return from his wedding tour, he only reached home on Saturday evening, when he found a letter from his vicar asking him to preach the next morning, as he knew he had a sermon, not yet preached in the parish, which would fit in with the Advent course of sermons then being given. The sermon was on the Parable of the Ten Virgins. The curate, who preached written sermons, did not look at this particular one till the next morning, half an hour before service, when to

his horror he found that his text was "Behold the bridegroom cometh," and indeed this was the constant refrain of the sermon. It was too late to change, and so he put the best face he could upon it. The congregation may have forgotten the sermon, but they have not forgotten the text.

#### SOME CLERICAL STORIES.

There is a village in the eastern counties which rejoices in the name of Haw. A parishioner was asked what he thought of a strange preacher who had been holding a service in the village. "Well," he said, "I liked the gentleman, 'is text' was just suited to us folk." "Why, what was his text?" "It were a tex' from the Psalms, 'stand in hawe and sin not'—it sounded so 'omely loike."

The rector once attempted to hold a prayer meeting at which any one, who felt so inclined, might offer his prayer. This, however, was quickly dropped when, on one occasion, during the dangerous illness of an eminent public man, the following prayer was offered, "Spare the life of —, we pray Thee, that he may have time to repent, else we muchly fear he will be numbered among the damned"—a prayer the unctuous pharisaism of which no Christian charity could pass over.

A woman came to me one day to say she wanted her daughter to be confirmed. "Mr. —," she said, "from the chapel over the way, as been a-trying to convert 'er, but I pretty soon told him what I thought 'bout it. I ses to 'im, 'I'll ave my gal confirmed, but I won't 'ave 'er converted, so now you know. I don't b'lieve in conversion.'"

#### THE FAVOURITE COLOURS OF NOTABLE MEN.

The writer of the paper on Clothes, gossips pleasantly about this inexhaustible subject, and says:—

Some men cling to one colour to the day of their death. Mr. Ruskin has in this way clung to light blue. A certain notable philologist is similarly faithful to pink, while the representative English humorist makes black his only wear.

He might have added an allusion to Mr. Morley's invincible preference for a red necktie.

#### The Crutch and Kindness League.

THE Rev. J. Reid Howatt describes in the *Temple Magazine* for December the League which he started two years ago in the *New Age*, and which he has now transferred to the *Temple Magazine*. The members of the Crutch and Kindness League undertake each to do something to brighten the lives of one or more of the six thousand cripple children who are in London under the care of the Ragged School Union. Mr. Howatt, addressing his readers—who in this case are also our readers—says:—

Here is what you can do: you can write a nice letter to one of these cripples once a month, or send an illustrated paper or magazine, or a toy or a scrap-book; no matter how old these may be to you, they will be new, and oh, so delightful to those lonely, patient ones! This is all that the League asks you to do—to write a letter once a month at least to some crippled child whose name and address and other particulars will be given you.

Should any of our readers feel disposed to join the Brigade, and wish to have more particulars, let them write, with a stamped envelope, to Mr. John Kirk, Ragged School Union, 37, Norfolk Street, Strand, W.C.

A COMPREHENSIVE and most interesting account of forestry in India is given by Lt.-Col. F. Bailey in the November number of the *Scottish Geographical Magazine*. He tells how Government was compelled to intervene and protect the forests of India from the destructive habits of the ever-increasing population. He shows how the splendid work of the forestry department has removed grounds for any serious apprehensions at present.

## CHRIST AND MODERN LIFE.

A REMARKABLE paper by Mr. Warner in the Editor's Study of *Harper's Magazine* for November. Mr. Charles Dudley Warner devotes some pages to a very thoughtful discussion of the question as to the relation of the historic Christ to modern life. He says:—

The question of the appearance of Jesus in New York as he appeared in Judea takes two forms. First—What would be His judgment of the city? The question has only one possible answer. Doubtless His condemnation would fall most heavily upon the well-to-do and prosperous who have taken His name and do not His work. Doubtless the grief that He felt over Jerusalem would be little abated over New York. And yet He would find more to approve, more to be hopeful about, in the modern world represented by New York than He found in the world to which He came. Second—How would He be received? Doubtless He would be a hated disturbance to the majority, as His living presence is now where it is felt in its reality. Doubtless He would be despised and persecuted as a fanatic and a disturber by the high and mighty and the hypocrites as by the rabble and the profligates. Doubtless neither the common morality in living nor the business morality would welcome the test of His justice and purity. But He would find more who are living in His spirit, more who would follow Him gladly, than He found at His coming in Judea. He would find more charity and brotherly kindness, a higher standard of life, than He encountered in the society in which He began His mission, than existed in the Rome that crucified St. Peter, or in the Middle Ages that built the magnificent temples in His name.

It has been assumed that the usual propounders of these questions have a sincere concern over the worldliness of modern life. But I have a suspicion that most of them would be the last to welcome what they call primitive Christianity.

After these preliminary observations Mr. Warner proceeds to ask:—

How should a man live the life of Christ in the modern world? By an ascetic withdrawal from it? By a fanatical affectation of methods and manners foreign to it? By an attempt to copy traditions and methods outworn and outgrown? By fantastical performances, and violent, eccentric utterances, which have the air of courting notoriety and martyrdom, not of enduring it for conscience' sake? Perhaps some light may be thrown upon this by a plain recital of a modern instance.

He then tells the story of the Rev. Ed. Venables, whose short history he knew when he was in London a few years ago. Mr. Venables was rector of a big parish and church in Soho. Mr. Warner's description of his life and work, and of his funeral after he had taken another and perhaps more difficult parish in Marylebone, is very touchingly told. Mr. Warner says he never saw such tribute paid to any human being as that which was paid by the poor of Marylebone to their rector. He concludes his little paper by remarking: "I doubt if it ever occurred to them to ask whether it is possible in those days for men to be Christlike in London."

*Temple Bar* for December is an eminently readable number. The story of Thomas Ward, the Yorkshire stable-boy, who rose to be Chief Minister of the Duchy of Parma, and a favourite diplomatist at the Court of Vienna, is well told, even if it be too much to call him, as the writer does, "the Cavour of absolutism." E. Hughes describes with vividness and charm the shortest night of the year as spent in northern Russia in the country by the sea. The "vigil" is pleasant to read and to recall. J. Lawson gives no very alluring account of a trip to Newfoundland from the mainland. A. Manston outlines very agreeably M. Jean Richepin's rural drama of "Le Chemineau," the wayfarer.

## A Glimpse of our Soldiers in Egypt.

In the *Cornhill Magazine* for December there is quoted the following copy of a letter received from a drummer boy who forms a part of our army of occupation in Egypt:

Dear Sir, I will write a few lines to you hoping you are quite well as it leaves me quite well. We have had 2 deaths in two days I play cricket for my Company for the shield or cup I can play a good bat now and boals I enjoy myself every day in cricket. The other night one of the Companies munitied they broke all the winders lamps basins and plates and Every think they could get hold of and stayed in the room with fixed bayonets if the guard was to come and have them in prison then the regiment was ordered out of bed and prade with fixed bayonets and surrendered the hut and kept them in to they surrendered that was 2 a'clock in the morning. The regiment goes to Cario October 4th it is very hot here. One of the men shot a niger boy for throwing stones at the winders and killed him he was let off for I am 5 ft 6 inches now. I always sleep out side the room nearly on the sea beach to cool.

## How to Abate Poverty.

In the *Century Magazine* there is a brief paper by Francis A. Walker on the "Causes of Poverty." Mr. Walker passes in review many of the nostrums which are paraded by those who believe that it is possible to banish poverty from the earth by some magic formula. Dismissing them all, Mr. Walker then sums up his own conclusions as to what can be done and ought to be done:—

We must strain out of the blood of the race more of the taint inherited from a bad and vicious pool before we can eliminate poverty, much more pauperism, from our social life. The scientific treatment which is applied to physical disease must be extended to mental and moral disease, and a wholesome surgery and cautery must be enforced by the whole power of the state for the good of all. Popular education must be made more sensible, practical, and useful. The housewifely arts must be taught to girls in the schools, and there the boys must learn to use hand and eye and brain in a close and vital co-operation and co-ordination. Yet still we shall have to await with patience the slow, sure action of time, the all-healer. The balance of social forces has definitively turned to the side of the less fortunate classes, and the course of events now runs in their favour and no longer against them. Meanwhile, let philanthropy continue its noble work in alleviating the afflictions which cannot be wholly cured, and in binding together rich and poor in ties of sympathy and mutual regard.

My brother in Walworth sends the following appeal: Merry Christmas!—Christmas in the home which lacks fire, food, clothing—Christmas in the home whence the bread-winner has lately been carried, dead—Christmas in the home where the little children only know it as a time of dancing lights and crowded plenty in the shops, but not for them. For them only the frightened cowering by fireless grate, dreading the sound of the drunken father's footsteps. It is to such as these, and many another child, that we want to send the Christmas message of gladness and goodwill. We want to send Christmas fare and fuel and clothing to many a poor home. And we want again, on Boxing Day, to gather all our children to a monster Christmas tree. But 1,000 children have many wants. Toys, books, garments, boots, are all needed. If any one has spare spectacles, we have many old folks who need them. And we badly need a piano for the Children's Hall. Will you help to make "Merry Christmas" amongst our poor folks in Walworth? Everything you send will help to make a good time for those who see very few sunny milestones on life's way. Come and see the children on Boxing Day. In the joy of your own children's Christmas do not forget the many little ones outside. Please send direct to F. HERBERT STREAD (Warden), Robert Browning Settlement, York Street, Walworth, S.E.

## THE FINEST SUNDAY SCHOOL IN THE WORLD.

MISS ELIZABETH L. BANKS has broken out in a new place. Since her adventures as an amateur servant-girl and an advertising American heroine, she has transferred her energies to New York, where she has been employed by both the *Journal* and the *World*. The last place where you would expect to find Miss Banks would be in a Sunday-school, and that is where she figures in an article she contributes to the *Quiver* for December. Miss Banks had been to Washington looking up a Baptist Sunday-school there, and she gives a very interesting account of its methods in this paper in the *Quiver*.

## THE SCHOOL AND ITS HOME.

The Calvary Baptist Sunday-school at Washington appears to be a very flourishing institution, and to deserve the title of:—

The finest Sunday-school in the world, which was recently bestowed upon it by the President of the World's Sunday School Convention. There are two thousand scholars enrolled in its membership; there are five general officers, including the pastor, the superintendent, the secretary, the treasurer, and the librarian. There are eight associate superintendents, nineteen assistants to the different officers, and eighty-eight teachers. This Sunday-school is one of perhaps three or four in the United States which hold their sessions in what is known as a "Sunday-school house"—a house built exclusively for the purpose, and adjoining the church. All the classrooms, halls, and stairways are covered with heavy Brussels carpet; in the winter the place is heated by steam, and every attention is paid to ventilation.

## SOME OF ITS DEPARTMENTS.

Miss Banks takes us through the whole building from room to room, dwelling upon the admirable rooms which combine privacy when class work is going on with opportunity for participation in general service. She describes the kindergarten department, where every Sunday collection is regularly taken from all the little mites under six years of age. There is a cloak-room, with an assistant to give out brass checks just as in a club or hotel. In the basement there is a room provided for storing the bicycles of the scholars:—

There is also, in the basement, an immense room used for a dining-hall at times of the various social gatherings of the Sunday-school, and next to the dining-hall is a kitchen with a gas-stove, and then a pantry, and a china and silver cupboard; for, be it known, every American church and Sunday-school has its summer festivals, when dishes and silver are needed.

## ITS OFFICIALS.

One of the unique features of the school is the fact that it has a salaried superintendent, who has no other vocation than that of looking after the interests of the school, and devotes his whole time and attention to it. Mr. Bristow lays particular stress upon the importance of black-board drawings for the instruction of the older as well as the younger scholars, and a part of his time during the week is devoted to the drawing of such maps and illustrations for the adult department as have a tendency to impress the important points of the lesson.

Another paid officer in the Sunday-school is the missionary—a lady who gives her whole time to visiting and instructing the poor of the parish, and in making arrangements for the reception of such as wish to become scholars.

Another unique feature of the school is what is known as the "Home Department." This department is composed of people who cannot for some reason attend the sessions of the school, but who are willing to spend some time at home studying the weekly lessons. The department is in charge of a special superintendent, who is assisted by twenty-two class visitors. These visit the homes of those who study the lessons, giving them whatever help is needed. Any one willing to devote one half-hour each week to the study of the lesson may become a member of the Home Department, which now numbers two hundred and fifty-six members.

## FRITZ VON UHDE.

## THE GREAT MODERN CHRISTIAN PAINTER.

In the *Century* for December Mr. W. Lewis Fraser pays a high tribute to the art of Fritz von Uhde, the famous Saxon painter, who created so great a sensation some years ago by painting sacred characters in modern costume. Fritz von Uhde was the son of a Lutheran clergyman. In 1867, when nineteen years old, he enlisted in the Saxon Horse Guards, and served through the Franco-German War. When he was twenty-nine he devoted himself to painting, became a follower of Munkacz, but after a time he asserted himself, and began to paint sacred subjects in a novel style which at once commanded attention. When his picture "Suffer the Little Ones" was exhibited in Munich in 1889, a crowd constantly gathered in front of the painting. Mr. Lewis says:—

Friend and foe among the people were pretty well agreed that the artist had told his story well; and the artists, that never had soft, diffused golden sunlight, tremulously vibrant, been better, if so well, rendered—never pearly grays made to float more deliciously in and out amongst the flaxen hair and flesh carnations of baby heads and faces.

The painting showed Jesus of Nazareth seated on an ordinary rush-bottomed chair in a peasant school-house, which he has entered during the religious lesson. One tot, too young to know fear, nestles close to him; another, somewhat older, timorously and hesitatingly takes his proffered hand; the older children hang back, while the teacher urges them to make friends. In the background an old peasant stands, hat to his face, with bowed head, as at a funeral. The strangeness of the picture doubtless had much to do with its effect on the non-professional public. It forced them to think; and, thinking, they saw in it a deeply devotional motive. For them Von Uhde had unmistakably and convincingly made to live again the carpenter's Son, the God-man, the Friend and Comforter of the common people. Some of them, to be sure—and they were many—saw only in the picture the strangeness; they shook their heads. It is as a painter of religious ideas that he has become known so well that he may be characterised with truth as the great modern Christian painter—not a biblical painter, as he is often called. I think the word "biblical" conveys wrong impression. It is true that he has painted biblical scenes, but these fail to convey the same emotion as his religious pictures (by "religious" I mean those pictures which transmute sacred story into modern life). The Christ-story—for this is his theme—he makes as fresh and as living as when first acted: maternity, as in the "Walk to Bethlehem"; death and mourning, as in the "Good Friday Morning"; sympathy, as in the "Last Supper"; birth, as in the "Nativity"; joy, as in the "Annunciation"; benevolence, as in the "Suffer the Little Ones";—the story of the God-man, partaker of flesh and blood, "made like unto his brethren."

Von Uhde is a homilist, and a preacher of good quality besides. His aim has been to separate the divine Founder of Christianity from the smoke of the incense, from priestly tradition and sacerdotal enthronement, and to make him live again as he lived nineteen hundred years ago—the homeless wanderer, the Man of Sorrows. But is this the legitimate function of art? Be that as it may, I write of what Von Uhde is. If you choose to take him from the painter side alone, he is a great painter, a strong influence; for he has carried the banner of "free light," as the Germans term it, into the hide-bound realm of German art, and let the sunshine into the bitumen-tinted studios of Munich.

THE *New England Magazine* for November is chiefly notable for its sketches of the origins of the U.S. navy. Edmund Carpenter tells the story of "Old Ironsides," as the frigate christened *The Constitution*, and launched in 1797, is familiarly called. Robert Grieve describes the career of Esek Hopkins, first admiral of the American navy.

### "ISOLATION" IN EVOLUTION.

THE October *Monist* has a paper by the late Professor Romanes on "Isolation in Organic Evolution." He starts by saying that only another, Rev. J. Gulick, has perceived all that that principle involves:—

To his essays on the subject I attribute a higher value than to any other work in the field of Darwinian thought since the date of Darwin's death. For it is now my matured conviction that a new point of departure has here been taken in the philosophy of Darwinism, and one which opens up new territories for scientific exploration of an endlessly wide and varied character. Indeed, I believe, with Mr. Gulick, that in the principle of Isolation we have a principle so fundamental and so universal, that even the great principle of Natural Selection lies less deep, and pervades a region of smaller extent. Equalled only in its importance by the two basal principles of Heredity and Variation, this principle of Isolation constitutes the third pillar of a tripod on which is reared the whole superstructure of organic evolution.

The Professor goes on to explain:—

By isolation I mean simply the prevention of intercrossing between a separated section of a species or kind and the rest of that species or kind. Whether such a separation be due to geographical barriers, to migration, or to any other state of matters leading to exclusive breeding within the separated group, I shall indifferently employ the term isolation for the purpose of designating what in all cases is the same result—namely, a prevention of intercrossing between A and B, where A is the separated portion and B the rest of the species or kind.

Following Mr. Gulick, he distinguishes two kinds of isolation—discriminate and indiscriminate:—

Indiscriminate isolation he calls Separate Breeding, while discriminate isolation he calls Segregate Breeding. For the sake, however, of securing more descriptive terms, I will coin the words Apogamy and Homogamy. Apogamy, of course, answers to indiscriminate isolation, or separate breeding. Homogamy, on the other hand, answers to discriminate isolation, or segregate breeding: only individuals belonging to the same variety or kind are allowed to propagate. Isolation, then, is a genus, of which Apogamy and Homogamy are species.

The Professor includes under the head of Homogamy, or discriminate isolation, sexual incompatibility or physiological isolation, and natural selection. Natural selection is therefore only one form of one species of the genus isolation and consequently "less fundamental—and also less extensive—than the principle of isolation in general."

Later on the Professor finds himself "for the first and only time throughout the whole course of his treatment of these subjects" in seeming opposition to the views of Darwin. Darwin held that "natural selection is competent to effect polytypic or divergent evolution." Professor Romanes here concludes that "natural selection when acting alone can never induce polytypic evolution, but only monotypic."

In the same magazine Professor Th. Eimer writes on "species-formation, or the segregation of the chain of living organisms into species." He begins by declaring that, "the Darwinian theory of selection furnishes no explanation of the formation of species." He goes on to give the true explanation:—"The origin of species can be traced to three main causes: (1) genepistasis," or cessation of development, "the halting of single forms at definite stages in the path of development whilst others move forward"; (2) halmatogenesis, or saltatory development, "the sudden unsolicited appearance of new characters," or "the sudden origin of new forms"; (3) and of highest importance, kyesamechania, or "the inability of a certain group of individuals to impregnate others than themselves," which Professor Romanes called

"physiological selection." Species, he goes on, "are not originated by natural selection, but already existing species are preserved by natural selection." He accepts Darwin's alternate title, "The origin of species by means of natural selection, or the preservation of favoured races in the struggle for life."

### The City in the School.

A NEW YORK journalist, who wrote the article describing the successful attempt made to teach New York scholars the way in which a city is governed by setting up a miniature city in the school, writes me that the idea is spreading. A correspondent in Chicago tells me that the experiment of holding a vacation school in that city has been extremely successful this year. One feature of this school was to organise the older scholars in what is called a Clean City League:—

Each of the older classes receives systematic instruction in regard to the City Ordinances governing the cleaning of streets, alleys, yards and garbage boxes. The members of the Leagues are asked to observe the condition of the neighbourhood and to bring in formal complaints of all violations of the ordinances. These complaints are sent to the City Hall and receive prompt attention from the authorities.

Every morning all of the teachers and pupils gather in the school hall for opening exercises. They sing a patriotic hymn, salute the American Flag and then repeat the following Civic Creed:—

"God hath made of one blood all nations of men, and we are His children, brothers and sisters all. We are citizens of these United States and we believe our Flag stands for self-sacrifice for the good of all the people. We want, therefore, to be true citizens of our great city, and we will show our love for her by our works.

"Chicago does not ask us to die for her welfare; she asks us to live for her, and so to live and so to act that her government may be pure, her officers honest, and every corner of her territory shall be a place fit to grow the best men and women who shall rule over her."

The children are learning to feel that the sentiment expressed in the patriotic hymn and in the creed must find its practical realisation in such work as that done by the Clean City League.

### In Return for Free Education.

THERE is plenty of good reading in the *United Service Magazine* for December. "Veritas" discusses the Franco-Russian alliance, and asks why was Russia willing? He finds his answer in the supposed intention of Japan to recover her position in Corea the moment Russia is at war with other Powers. Russia, needing a naval ally to cope with or to checkmate Japan, accepts France. Brigade-Surgeon W. Climo suggests as a substitute (!) for conscription, which he regards as eventually inevitable, "that all youths who obtain their education partially or wholly at the public expense—whether State-aided or by local rate—should, if medically fit, pay for this education by going through a course of gymnastic training and military drill, with liability to serve"; and that Militiamen, Yeomen, and Volunteers should be liable to service from twenty to fifty with the promise of an old age pension after sixty or breakdown. Another paper suggests that the needed increase of our Naval Reserve in the mercantile marine should be secured by an extension of the training-ship apprenticeship. The story of Rorke's Drift is re-told from Chard's own lips by "an officer who knew him well." Quite a curiosity of military literature is a libretto, here published, and which was written by the "Iron Duke" himself for a cantata on Pandora and Prometheus!

## THE "NEW HERO" AND HIS PICTURE-BOOKS.

## A TRIBUTE TO ILLUSTRATORS.

It was in the *English Illustrated Magazine* in 1883 that Mr. Theodore Watts-Dunton wrote his delightful article on "The New Hero," in which he discussed the subject of poetry for children. In that article he pointed out that, since the New Hero had emerged from obscurity, artists were vying with the poets and with each other in appealing to his love of real business in art, his matter-of-fact tastes and love of simple directness. But Mr. Watts-Dunton kept to the poetry for his theme; it has been left to Mr. Gleeson White to take up, in the Winter Number of the *Studio*, the question of illustrating the New Hero's rhymes and stories.

While Mrs. E. M. Field has given us a general history of children's books in "The Child and His Book," and Mr. Andrew Tuer has more recently published his valuable "History of the Horn Book," no writer hitherto seems to have attempted to deal thoroughly with the more fascinating question of illustrating children's books. Yet the subject is an all-important one, and it is time that the valuable aid of the artist should be more fully recognised along with the work of the author. In ordinary book reviews, very often, little is made of the artist's work, and his name rarely, if ever, figures in the index as a contributor, but he is generally privileged to sign his work—a privilege seldom accorded to the indexer, it may be added.

Mr. White begins his monograph by observing that "there are some themes that by their very wealth of suggestion appal the most ready writer." And he adds, "The journalist is apt to find it is the perfect theme which proves to be the hardest to treat adequately." However this may be, no subject could well have been more appropriate or more timely at this season. Space fails us to attempt to name merely one-half of the books and artists referred to in the number, and it is a matter for deep regret that no index of authors and books noticed has been included. The list of artists on an advertisement page is quite inadequate. Any quotations which it is possible to make give but a faint idea of the general interest and attraction of the number. Mr. White says:—

Perhaps there is no pleasure the modern "grown-up" person envies the youngsters of the hour as he envies them the shoals of delightful books which publishers prepare for the Christmas tables of lucky children. And when he compares the books of his childhood with the books of the last twenty years, he wishes he could become a child again to enjoy their sweets to the full.

Now nine-tenths of this improvement is due to artist and publisher; although it is obvious that illustrations imply something to illustrate. Years before good picture-books there were good stories, and these supply the text to spur on the artist to his best achievements.

It is mainly a labour of love to infuse pictures intended for childish eyes with qualities that pertain to art. We like to believe that Walter Crane, Caldecott, Kate Greenaway, and the rest, receive ample appreciation from the small people. That they do in some cases is certain; but it is also quite as evident that the veriest daub, if its subject be attractive, is enjoyed no less thoroughly.

It is well to face the plain fact that the most popular illustrated books which please the children are not always those which satisfy the critical adult. As a rule it is the "grown-ups" who buy. In fact, one fancies that the real educational power of the picture-book is upon the elders, and thus, that it

undoubtedly helps to raise the standard of domestic taste in art.

But, on the other hand, what an unprejudiced and wholly spontaneous acclaim awaits the artist who gives his best to the little ones! They do not place his work in portfolios or locked glass cases; they thumb it to death, surely the happiest of all fates for any printed book.

One who makes pictures for children, like one who writes them stories, should have the knack of entertaining them without any appearance of condescension in so doing. As they do not demand fine drawing, so the artist must be careful to offer them very much more than academic accomplishment. Indeed, he (or she) must be in sympathy with childhood, and able to project his vision back to its point of view.

## "LITTLE FOLKS" AND "ST. NICHOLAS."

In this connection it is fitting to refer to two well-known magazines which cater for the tastes of the children. *Little Folks* was started in 1871, and in January, 1875, a new series was begun under the editorship of Mr. Ernest Foster. The magazine is now edited by Mr. S. Hamer, and during the last year or so it has been greatly improved. No more charming magazine for the little ones exists, both as regards letterpress and illustrations.

The American *St. Nicholas*, which is intended for older children than Mr. Hamer's, was founded in 1873, and has been conducted from the beginning by Mrs. Mary Mapes Dodge. Some of the best writers and artists contribute to it, and each number contains, besides stories, poems, etc., one or two articles of sufficient importance to include in the "Annual Index to Periodicals."

## The Ballad of Poverty Row.

THERE is a charming poem, which its author, Helen Gray Cone, calls a ballad—"A Ballad of Poverty Row." It appears in the December *Century*, and whether it be a poem or a ballad, or whatever it may be, there is real good stuff in it. It begins:—

Brave old neighbours in Poverty Row,  
Why should we grudge to dwell with you?  
Pinch of poverty well ye know—  
Doubtful dinner and clouted shoe.  
Grinned the wolf at your doors, and yet  
You sang your songs and you said your say.  
Lashed to labour by devil Debt,  
All were manful, and some were gay.

After referring to the experience of Chaucer and Spenser, it proceeds:—

Worshipful Shakspere of Stratford town,  
Prosperous portly in doublet red,  
What of the days when you first come down  
To London city to earn your bread?  
What of the lodgings where Juliet's face  
Startled your dream with its Southern glow,  
Flooding with splendour the sordid place?  
That was a garret in Poverty Row.

Among other worthies who made a brief sojourn or long abode in Poverty Row, there are mentioned Johnson, Goldsmith, Keats, and Sir Walter Scott, although in the latter case, Sir Walter Scott, although encumbered with debt, can hardly be described as a dweller in Poverty Row. The last verse, however, is admirable:—

Needy comrade, whose evil star,  
Pallid-frowning, decrees you wrong,  
Greatly neighboured, in truth, we are;  
Hold your heart up and sing your song!  
Lift your eyes to the book-shelf where,  
Glorious-gilded, a shining show,  
Every man in his mansion fair,  
Dwell the princes of Poverty Row!

## RUDYARD KIPLING'S LATEST POEM.

*Scribner's Magazine* for December contains a poem by Rudyard Kipling, entitled "The Feet of the Young Men." There is no allusion in this, as might have been expected, to the feet of the young men who carried out Ananias and Sapphira, but only to the feet of the young men who every year fare forth to the uttermost ends of the earth in pursuit of game and adventure. The last stanzas with the chorus will give the reader an idea of the drift of the poem:—

Now the Four-way Lodge is opened—now the Smokes of Council rise—

Pleasant smokes ere yet 'twixt trail and trail they choose—  
Now the girths and ropes are tested: now they pack their last supplies,

Now our young men go to dance before the Trues!  
Who shall meet them at those altars—who shall light them to the shrine,

Velvet-footed who shall guide them to their goal?  
Unto each the voice and vision: unto each his spoor and sign—

Lonely mountain in the northland, misty sweat-bath 'neath the Line—

And for each a man that knows his naked soul!

White or yellow, black or copper, he is waiting, as a lover,

Smoke of funnel, dust of hooves, or beat of train—

Where the high grass hides the horseman or the glaring flats discover—

Where the steamer hails the landing or the surf-boat brings the rover—

Where the rails run out in sand-drift . . . Quick, ah heave the camp-kit over!

For the Red Gods make their medicine again!

And we go—go—go away from here!

On the other side the world we're overdue!

'Sew! the road is clear before you when the old Spring-fret comes o'er you,

And the Red Gods call for you.

MESSRS. RAPHAEL TUCK AND SONS have issued this year an immense number of Christmas and New Year's cards and calendars of all sizes and shapes and prices. Some of them are very attractive, especially those which might easily be mistaken for photo-etchings. They were last year published in larger sizes; this year they are reduced, but they are exceedingly beautiful. Some of the calendars are extremely pleasing and amusing. When Messrs. Tuck's budget comes round every year, it induces an ever fresh feeling of amazement at the range, extent, and ability of the army of artists and artificers to whose labour we owe the most universally appreciated features of Christmastide.

THE pocket-books are not so perishable as almanacks, but they also wear out, and every year we have a fresh supply issued as punctually as the Annuals, although not in such great quantity. I received samples of the books issued by Walker and Co., which are very strongly, neatly and tastefully bound.

THE *University Magazine* for December opens with a somewhat startling paper by Dr. de Villiers on "The Progress and Arrest of Cancer." He maintains that in every case of malignant disease, irremediable by operation, or in which an operation has been performed with a prospect of eventual reappearance, the best mode of checking the disease and of prolonging life will be found in the introduction, as speedily as possible, of the opium or the morphia habit. But is not the cure worse than the disease?

## AN AMERICAN BOY ON HIS TRAVELS.

FROM SOUTHAMPTON TO NEW YORK.

AT the end of last month, a bright, smart American boy sailed in the steerage from Southampton to New York. The boy, who is between sixteen and seventeen years of age, had just completed a somewhat notable tour. Morrison—for that is his name—being ambitious of success in journalism, decided last summer that he would make an European tour for the purpose of qualifying himself for his future career. In money he had only the sum of £7 when he left Chicago for the continent; trip. He worked his way journalistic fashion, getting free

MASTER MORRISON.

passes on the railway to begin with, calling *en route* on the President at the White House, interviewing many of the leading notabilities in New York, and earning as many dollars as he could on his way by retailing his experiences to the newspapers. He worked his passage over to London as a pantry-assistant, and then made his way to the Continent, which he penetrated as far as Switzerland, where he succeeded in interviewing the President of Switzerland. After passing through Germany and Switzerland, he returned through France, where he was chiefly attracted by the tomb of Napoleon. Young Morrison then returned to London, where he had a fairly good time. He succeeded in meeting Mr. Gladstone at Hawarden, and spent a morning on the magistrates' bench, side by side with the Lord Mayor! What with odd jobs here and there, the boy succeeded in earning his board and lodging, and when he returned to America he had very nearly as much money as when he started. His tour was an achievement upon which he has reason to congratulate himself, and his future journalistic career ought to be brilliant.

# THE REVIEWS REVIEWED.

## AMERICA.

I NOTICE elsewhere Dr. Shaw's exposition of the cause which led to the victory of Tammany at the New York election, and also his suggestion as to the adoption of a forward policy by the United States in the West Indies. On the question of Cuba he strongly advocates the adoption of a firm policy in dealing with Spain. The responsibility for the adoption of this policy of intervention has, however, been thrown upon Congress, which was to meet on December 6th. "Current History in International Cartoons" is as usual very copious and very amusing. Mr. Ernest Knauff contributes a paper on "Sir John Gilbert and Illustration in the Victorian Era," which is very copiously illustrated. Mr. Clifton Harby Levy has a paper entitled "How the Bible came down to Us," which is accompanied by facsimiles of the more famous MSS. He concludes his paper by appealing for a new version which shall be comprehensible and free from unnecessary difficulties. Mr. E. V. Smalley writes on the "New Canadian Reciprocity Movement," and Mr. A. D. Anderson surveys the record of the American Republics. Dr. Shaw's review article on New Books is illustrated by portraits of various American novelists, and the survey of the Christmas literature of the United States is exceptionally full, and is copiously illustrated.

## AUSTRALASIA.

THE *Review of Reviews* for Australasia, for October, has just come to hand as we are going to press. It contains as one of its leading articles a review of the Sydney federal convention by the Treasurer of South Australia.

### MR. FITCHETT'S "FIGHTS FOR THE FLAG."

Mr. Fitchett contributes the ninth number of his "Fights for the Flag," in which he tells the story of Lord Anson and the *Centurion*. After describing in his usual spirited fashion the capture of the great Acapulco galleon, Mr. Fitchett says:—

The galleon, of course, was an amazingly rich prize. In its strong-room were 1,313,843 pieces of eight, and more than 35,000 ounces of silver plate, or of virgin silver. Drake's expedition had its profitable commercial side. The British sailor of that period was, in fact, an odd compound of bagman and of buccaneer; and the Golden Hind expedition paid a dividend of £47 for every £1 invested in it. There are some very golden patches of prize money in British naval history. In 1799, for example, the *Ethalion* captured the *Thetis*, with 1,400,000 dols. on board. The *Naiad* and *Triton* captured the *Santa Brigida*, with an equal amount of treasure. Each captain received as his share of the prize money £40,731 18s., each lieutenant £5,091 7s. 3d., and each seaman £182 4s. 9d. Yet, earlier, in 1762, the treasure-ship *Hermione* was captured off Cadiz by the *Acteon*, of 28 guns, and the *Furourite*, of 18 guns. Each captain, in this case, received £65,000 as prize money, each lieutenant £13,000, each petty officer £2,000, and each seaman £500! Anson's galleon, however, shines resplendent in even such golden records as these. Yet, the gold won by the *Centurion* was its least precious gain. The voyage of the great ship added enduring fame to the British flag, and its record remains as the most splendid example of the fortitude and the valour which have built up the British Empire.

### THE LABOUR PARTY AND THE LIBERALS.

In his "History of the Month within the Colonies," Mr. Fitchett calls attention to the suicidal folly of the

Labour Party at the Antipodes. The Labour Party in Australia seems to have declared war to the knife with the Liberals. Mr. Fitchett says:—

The Liberal Party is to be blotted out of existence. Politics must know only two terms, "Conservatives" and "Labour members." Labour will accept no alliances with other parties, and no help from them. An Independent Liberal is, in labour ethics, a more deadly foe than even a convinced and avowed Tory. The Labour Party, too, must be represented by actual members of its own class. A thinker, who is not a workman, even if he accepts the whole labour programme, is a man suspect. In Victoria the seat of Mr. Deakin, a very advanced Liberal, is being attacked by the Labour Party more furiously than that of any merely Conservative politician. The Liberal Party throughout the colonies cannot keep in existence, except at the price of a quarrel with the Labour Party; and in this strait it must either make common cause with Conservatives, or, after the example of the *Age*, call on sensible working men to reject their wilder leaders. The Labour Party, it is clear, is likely to bring upon itself far-spreading defeat throughout the colonies by its policy of counting mere Liberalism a guiltier form of politics than even declared Conservatism.

### RELIGION IN THE VICTORIAN SCHOOLS.

The question of religious education seems to have been very much to the front at the Victorian General Election. Sir George Turner objects to the use of the Irish National Scripture lessons, not on the ground that they contain too much religion, but too little. The Victorian Education Minister objects on the same grounds to the Scripture lessons in the New South Wales State Schools. Mr. Fitchett says:—

The extreme secular position, in a word, is abandoned by all parties in Victoria. Those who most eagerly defend the existing order yet count up with pride the number of times the word "God" survives in the school books; though, on the extreme secular theory, it ought not to be there at all. Sir George Turner offers to take a plebiscite on the whole subject of Scripture teaching in the schools when the popular vote on the Federal Bill is to be taken; but meanwhile the Education Department itself is freely putting a rich stratum of Scripture extracts and Christian hymns in the State School books. Sir George Turner, as a matter of fact, is as strongly in favour of Bible lessons in the schools as the National Scripture Instruction League itself. He differs from it only on the question of method.

### ATROCITIES ON THE AUSTRALIAN ABORIGINES.

An ugly story of cruelty to blacks—a story sure to be read with exasperated horror all over the world—comes from West Australia. Two station-holders, brothers, have been committed for trial on a charge of manslaughter, the alleged manslaughter consisting in literally flogging three blacks, two of them being women, to death. The bodies of the women, examined after death, showed that in one case both shoulder-blades were fractured, in the other that a shoulder-blade and an arm were broken by whip strokes. The same station-holders have been fined £5 for cruelly treating a black, and £20 each for flogging, with equal cruelty, two black girls, aged respectively eight years and twelve years. The fact that the alleged offenders in this case have been fined for the assaults on the living blacks, and are being tried for manslaughter in the case of the blacks who are dead, shows that the authorities are not disposed to tolerate cruelty to aborigines. But there are ugly whispers as to what the blacks have suffered in West Australia; and, on a frontier so wide, and where the administration of justice is so difficult, it can hardly be doubted that many cases of cruelty do occur.

## THE FORTNIGHTLY REVIEW.

THE *Fortnightly Review* for December contains one first-class article upon the French view of the British Empire, and several papers that are well worth reading.

## THE PROBLEM OF SHAKESPEARE'S SONNETS.

Mr. William Archer writes some seventeen or eighteen pages on what he calls the Southampton-Pembroke problem. The young man of the sonnets was, in Mr. Archer's opinion, not Southampton but Pembroke. He is quite sure about this. He says:—

I will try to show that the history of the sonnets no longer ranks among the obscurest of literary problems, but rather among those which we can solve with as near an approach to certainty as circumstantial evidence can, in the nature of things, afford.

Among other arguments which he uses in order to prove his case, he says:—

Southampton was, to all intents and purposes, a man of Shakespeare's own time; Pembroke, to all intents and purposes, belonged to a younger generation. There is the matter in a nutshell. The seven years' difference in age between Pembroke and Southampton is equivalent to the difference between the altogether probable and the all but impossible.

## THE INFLUENCE OF HENRY GEORGE IN ENGLAND.

Mr. J. A. Hobson describes circumstances under which Mr. George made his appearance in England, and explains how it was that he achieved so great a success. Mr. Hobson says:—

The influence of George is not to be measured by the number or zeal of the advocates of a wholesale policy of nationalisation of the land. It is rather to be traced in the energy which, during the last fifteen years, has freely flowed into many channels of land reform. George, like other prophets, co-operated with the "spirit of the age." But after this just allowance has been made, Henry George may be considered to have exercised a more directly powerful formative and educative influence over English radicalism of the last fifteen years than any other man.

## "LORD ROSEBERY'S APOSTASY."

Somebody who does not have the courage to sign his name makes bold to denounce Lord Rosebery as an apostate because of the sensible and courageous fashion in which he spoke at Manchester about Free Trade. This anonymous scribe is very angry. Here are some of the remarks which he addresses to this latest Rosebery apostate:—

Is Lord Rosebery a strong man or a weak man? Is he either a Radical or an Imperialist? Is he a man of set purpose, or a mere political kite swayed by every changing gust of popular feeling? Lord Rosebery started public life with exalted ideas and apparently profound beliefs. Where are those ideas and those beliefs now? If he has not renounced them all, he has at least shifted his ground till it is impossible to understand how much remains. Either he has "a craven fear of being great," or in his attempt to combine Radicalism and Imperialism he has landed himself in hopeless mental chaos and uncertainty. Mr. Chamberlain assures us that Imperial Federation, which used to be considered a fad and a dream, is within measurable distance of realisation, and Lord Rosebery would seem to have become a renegade from the cause in the very hour when its prospects are brightest.

## A FRENCH "DOLL'S-HOUSE."

Some time before Ibsen wrote his "Doll's-House" a Frenchman of the name of Villiers de l'Isle Adam wrote a play called "La Revolte," which, curiously, anticipates the motive of the play in which Hedda Gabler is the heroine. In the Frenchman's play, however, the wife who anticipates the rôle of Hedda Gabler, after departing from her husband, in order to live her own life, discovers

before the sun rises the next morning that it is no use, and she promptly goes back. She explains the motive for her return as follows:—

I could no more concentrate myself in meditation. I had forgotten how to soar above the world, how to shut my ears against the mocking laughter of mankind. It was over with me . . . Oh, God! I see it is too late. One must not stoop even to win freedom. I had given way too much—over-valued the daily bread. The eyes of my youth are gone. Enthusiasm too. Art no longer exalts. Silence does not appease me. That man has drunk up my soul as if it had been water. These four years of drudgery have broken my spirits—nothing can be blotted out. It was boasting to say I wanted to live. I give it up. I have become like those who have never had a glimpse of heaven. That man's perpetual smile has filled my soul with bitterness and gloom. His accounts have crippled my mind. Whether he lives now or dies, it is just the same to me. I must remain what I have become.

## THE PROSPECT OF A CARLIST RISING.

Three writers—the Marquis de Ruvigny, Cranstoun Metcalfe and Leonard Williams—discourse on "The Crisis in Spain." They are all Carlists, and they all believe we are on the eve of a Carlist rising. They set forth lucidly the facts on which Don Carlos bases his claim to the throne, and it must be admitted that they make out a very good case. The Marquis de Ruvigny and Cranstoun Metcalfe say:—

The situation is grave because it seems impossible that a *coup d'état* of this magnitude, even if successful, can be accomplished without bloodshed, and alteration in the dynasty may be regarded with alarm by the Powers, and will certainly be considered most seriously by the United States. Yet we know that such an alteration is to be attempted in the Peninsula before the world is many weeks older, and we therefore do not hesitate, as otherwise we might, to give a summary of the case for Don Carlos as we apprehend it to be. There may be local fighting more or less severe, but, except in the event of intervention by the Powers, war there need not be.

Mr. Leonard Williams, who asks "Can Sagasta save Spain?" evidently thinks that the odds are heavily against it:—

Carlism is ever dangerous in Spain, chiefly by reason of its obvious justice. The Salic Law is a permanent part and parcel of Spanish monarchy, and to suppose that a King like Ferdinand VII., a libertine and scoundrel who never cared a button for his country's welfare, could validly bully the Cortes into gratifying a parent's personal whim, is patently grotesque. The so-called Duke of Madrid is as much Charles VII. of Spain at this moment as our Victoria is legitimate sovereign of Great Britain. Two-thirds of the Spanish people are with him at heart, and in the last Carlist war, if Charles had displayed more valour, tact, and energy in combat, and less licentiousness towards the wives of his most loyal officers, he must, beyond a doubt, have stood upon the winning side. Even as it is, unless the present Administrators of the Boy-King mend their predecessors' conduct towards the nation, there will be bloody fighting once anew in the Peninsula.

## OTHER ARTICLES.

Mr. C. Stein reviews Mrs. Oliphant's book on "Blackwood." Mdlle. Y. Blaze de Bury writes on the French actor "Mounet Sully," and Mr. Nowell Smith, who criticises the poetry of William Morris, declares that it has no backbone, and that the poet, as he himself said, was only an idle singer of an empty day. The Rev. Dr. Moore concludes his essay on "Dante as a Religious Teacher" with the following sentence:—

And the sum and crown of all Dante's religious teaching is the grand truth that the complete merging of the man's will in the will of God is not only the essential condition of inward peace, but also that of intellectual and spiritual enlightenment. "If a man will to do His will he shall know of the doctrine."

## THE NINETEENTH CENTURY.

## ENGLAND AND CONTINENTAL ALLIANCES.

M. FRANCIS DE PRESSENSÉ renews his appeal to England to ally herself definitely with France and Russia. He maintains that the policy of isolation was all very well, when each of the Powers stood on its own feet, and played its own game for its own hand, but we are now in an era of syndicates and Trade Unions, and it is madness to remain isolated any longer.

## THE RESERVES FOR MANNING THE FLEET.

Lord Brassey and Lord Charles Beresford write on this subject, Lord Charles's paper being nominally a criticism upon Lord Brassey's, but he concludes it by propounding under twelve heads his own ideas as to what should be done. He says:—

We require a reserve of at least 70,000 officers and men, because we have to fill up the difference between the limit at which we can put the active service ratings and the number required in actual warfare; and, above and beyond, we must form a reserve to replace losses. It must be a reserve which has served in the fleet, because a reserve should always be the best men. It must not be a reserve of blue-jackets alone, but of engine-room ratings and marines. We must increase the marines, and give them the charge of some of the coaling stations, because these must be under the control of the admiral in command of the station in war time and not under control of a general.

## PROFESSOR HUXLEY AS A TEACHER.

Professor Sir George Mivart, in his paper on "Some Reminiscences of Thomas Henry Huxley," revives many pleasant memories of that redoubtable man of science. I have room for a brief extract:—

For years I attended his lectures, but never once did I hear him make use of his position as teacher to inculcate, or even hint at, his own theological views, or to depreciate or assail what might be supposed to be the religion of his hearers. No one could have behaved more loyally in that respect, and a proof that I thought so is that I subsequently sent my own son to be his pupil at South Kensington, where his experience confirmed what had previously been my own. On one occasion, when I was urging the danger of making unguarded statements to the young and the possibility of impressions being thereby produced quite other than those intended, he replied, "It would be very wrong to do so, and at least tend to make young prigs of them. Children should be brought up in the mythology of their time and country, but as they grow up their questions should be answered frankly."

## APPROVED—BY AN EXALTED PERSONAGE!

Who is Mr. Knowles's exalted personage? I ask the question because Dr. Jorgensen's article, giving the "Danish View of the Slesvig-Holstein Question," is introduced with the following unusual *imprimatur*:—

[The following reply to Professor Max Müller's article in the May number of this Review is published at the desire of an exalted Personage in this country, interested in the Danish side of the question, who considers that Professor Max Müller's views are incorrect and inconsistent with historic truth. The author died before he saw the proofs, which have been submitted to and approved of by the same exalted Personage.—*Ed. Nineteenth Century.*]

It is not necessary to follow Dr. Jorgensen in his polemic with Professor Max Müller, but the following is the only passage which has any bearing upon present day politics. Speaking of the treatment which Denmark received at the hands of Germany, Dr. Jorgensen says:—

It was not only that old legitimacy was overthrown by the total disregard of the Gottorp renunciation of Holstein in favour of King Christian the Ninth, nor that old and continually renewed treaties in favour of the Danish Crown's right to Slesvig were torn asunder, but also the principle of nation-

ality—the sole principle which might with some show of right have been invoked against the arrangement of 1852—was put aside in the most shameful way. More than one-half of Slesvig is to this day inhabited by Danish people, who do not wish anything better than to return to the union with the mother country, whereas the Prussian Government endeavours, in spite of the promise given in Prague, by all possible means to subjugate the Danish element, and to efface its national peculiarities. It is a slap in the face to the whole Scandinavian race, and a derision of the favourite talk in Germany of the solidarity of the German people.

## THE FUTURE OF TAMMANY.

Mr. F. A. McKenzie is not by any means prejudiced or bigotted on the subject of Tammany. He says:—

Judged morally, it certainly promotes much friendship and social intercourse; and many a poor man in New York has found his Tammany membership the greatest help when in trouble. The Tammany "captains" may not be over-scrupulous when it comes to winning an election, but they often enough give time, trouble, and money in helping comrades in distress, quite apart from any prospects of reward in votes.

His view as to the future is not very sanguine:—

Tammany has now the opportunity to redeem its character. If it gives Greater New York an honest government, and performs one-half of the promises of probity and capacity made in its election addresses, much of its past will be forgiven and forgotten by the world at large. But every prospect seems to point to its doing far otherwise. In Greater New York, with its three million people, its enormous patronage and immense revenue, an incapable or dishonest administration will have such power of plunder and wrong-doing as the Western world has never seen before. Even Tammany's worst enemies cannot but hope that for once it will disappoint the fears of its foes and the hopes of many of its baser friends.

## OUR POPULAR ART MUSEUMS.

Sir Charles Robinson contributes a long paper chiefly historical and retrospective on the subject of art collections in England. Without following him into the details of his reminiscences, it may be well to note what he says as to the impoverishment of this country, owing to the continuous exodus of our best pictures abroad:—

The country houses and mansions of the nobility and gentry of this country have latterly yielded up an infinity of admirable works of art to the ubiquitous Israelites who are ever on the watch.

His article concludes with the plea for a *modus vivendi* between South Kensington and the British Museum.

## THE ADVANTAGES OF SETTLEMENTS.

Canon Barnett, in one of his useful papers on the "Ways of Settlements and of Missions," points out that missions are very different from settlements, and the advantages of the settlements which have sprung up all over the world in imitation of Toynbee Hall may be commended to any one who is wondering what he should do by way of benefiting his fellow-men.

In an essay entitled "The New Learning," Mr. Herbert Paul administers a smart dressing to Professor Murray for his history of Greek literature. Mr. Herbert Paul's article is a smart performance in more senses than one.

SPELEOLOGY is a word unfamiliar to the man in the street, and will doubtless have a dangerous fascination for the punster. It simply means, however, the science of caves, and in its British section is the subject of an interesting illustrated paper by the French *savant*, E. A. Martel, in the November number of the *Geographical Journal*. Among the caves M. Martel describes are the Marble Arch (Ireland), Waterfall Cave (Ireland), the Caves of the Derbyshire Peak, and the Yorkshire Caves.

## THE CONTEMPORARY REVIEW.

THE *Contemporary Review* for December opens with another short dialogue on the Liberal policy, which is published anonymously under a pseudonym, "A New Radical." The "New Radical" writes well, and puts his points with much vigour. His theory is that the Liberal Party can only find salvation by adopting a Labour policy; and he takes what he regards as the attack by the employers on trade unions in the Engineers' Strike in order to point his moral.

## THE LIBERALS AND THE LABOUR PARTY.

He goes on to ask a representative of the official Liberals the following questions:—

What in the name of wonder do you suppose your people do want to do? If you brayed your whole Front Bench in a mortar—or any of your other benches, for the matter of that—would you get a single ounce of constructive policy out of them? You are all dumb dogs—that's what you are. You have the leaders you require. So long as you have no ideas and don't want to bring anything to pass, what you require is not leadership but figure-heads. But propose something—anything. Show some sign that you are alive. At present you are a row of mummies solemnly propped up against a wall, and you do nothing with the situation but stick there and grin at it.

## MR. GRANT ALLEN'S BOOK.

Mr. Andrew Lang writes on Mr. Grant Allen's book, "The Evolution of the Idea of God." The essay is hardly as carefully finished as most of Mr. Lang's work. It reads more as if he had simply talked the book over to a stenographer as soon as he had read it through. Here is a sentence in which Mr. Lang disposes summarily of one of Mr. Allen's favourite theories:—

Mr. Allen's theory of the origin of the belief in immortality rests on the hypothesis that cremation belongs to a later stage of culture than corpse-preserving or burying. I have demonstrated that all modes of disposing of corpses co-exist, and have co-existed, in the lowest stage of culture known to us in practice. Therefore we have only guesswork to guide us, when we say that one mode was, everywhere, prior to another mode. And that demolishes Mr. Allen's theory of the three corresponding stages of practice and belief.

## THE LIBERAL CATHOLICS AND WHAT THEY WANT.

A Roman Catholic, discreetly hiding his personality under the *nom de plume* of "Romanus," deploras the action taken by the Pope in issuing his Letter concerning the Bible. "Romanus" says:—

This unfortunate letter is so shocking because it imposes only on the weak and ignorant. Even at Rome they must know that a really vigorous attempt to force educated Catholics to affirm that there are no statements in the Old and New Testaments which are historically untrue, would cause an exodus indeed!

"Romanus" tells us, what is not generally known, that the old Index Expurgatorius did not apply to England. The special mission of Liberal Catholicism, in "Romanus's" opinion, is to accommodate old doctrines to newly-discovered truths.

## WOMEN'S WORK AND WOMEN'S WAGES.

The Women's Industrial Council recently conducted an inquiry into the actual earnings of 400 working women of London who earn money by working at home. Nine-tenths of them belong to sixteen of the different regular small trades. According to the writer of this article, which is anonymous, the inquiry proves that—a considerable proportion of women who avowedly work for supplementary profits earn more per hour, and sometimes at

the same work and same rate, than those who grind for daily bread. If this be so, then the common view that supplementary wage-earning reduces the rate of pay can hardly be supported.

## AN ARTIST ON PHOTOGRAPHERS.

Mr. Joseph Pennell devotes several pages to a pains-taking effort to convince the unhappy photographers that they are not artists, and never can be. He says:—

There is no doubt that many artists and draughtsmen do now depend upon photographs, more or less. Instead of taking a sketch-book, or else along with it, they take a camera. If they take a camera alone, they simply shirk their work and ruin their style. Unless a man can draw with his own unaided hand he is not an artist, he never has been considered one—and he never will be.

## EMIGRATION TO RHODESIA.

"Afrikander," writing upon our position in South Africa, suggests that the Government might do worse than promote emigration to Rhodesia. He says:—

We hear of the decline of farming in this country and the impoverishment of our rural population. Well, here is a vast territory in which agricultural settlers are needed, and in which the soil and climate offer many attractions. We hear also of the congestion of our urban centres in England, and here is a vast country which might well serve as a home for a portion at least of our surplus population. It would be in the interest of the Chartered Company to grant parcels of land on easy terms to such emigrants as the Home Government might assist to settle in Rhodesia.

## THE FIRST RUSSIAN CENSUS.

Dr. E. J. Dillon tells all about how the Russians succeeded in taking that first census on January 18th of this year. No similar enterprise had ever been carried out before. In order to prepare the people for the visit of the census-takers—

over a hundred million leaflets containing the questions to be answered in all the tongues and dialects had to be distributed in good time in every nook and corner of the Empire. These papers weighed, we are told, 1,060 tons.

After the ground had been carefully prepared—

On January 28th, at break of day an army of 150,000 individuals left their homes to count the number of people inhabiting an empire which occupies one-sixth of the globe. The results may be summed up very briefly as follows: The population of the Russian Empire and the Grand Duchy of Finland numbers 129,211,114 souls, of whom

|             |   |
|-------------|---|
| 94,188,750  | Inhabit the 50 Governments of European Russia |
| 9,442,590   | " 10 " " Poland                               |
| 9,723,553   | " 11 " " the Caucasus                         |
| 5,731,732   | " 9 " " Siberia                               |
| 3,415,174   | " 5 " " the Steppe regions                    |
| 4,175,101   | " Provinces of Transcaspia and of Turkestan   |
| 6,413       | " Khiva and Boukhara                          |
| 2,527,801   | " Finland                                     |
| 129,211,114 |   |

There are nineteen cities in Russia, with a population of more than 100,000 souls each, and thirty-five which have from 50,000 to 100,000.

## OTHER ARTICLES.

Lady Jeune writes a pleasantly-worded tribute to the Duchess of Teck. Dr. W. T. Davison, in an article upon "The Spirit of Modern Methodism," takes up the cudgels on behalf of the Methodists, being provoked thereto by the somewhat slighting remark made by an irreverent vicar in the September number of the *Review*. "A British Naturalist" states the American case in favour of protecting the fur seals. Mr. E. H. Parker writes on "China and the Pamirs," and the Countess Martinengo Cesaresco describes the life of the "Peasants of Ancient Greece."

## THE NATIONAL REVIEW.

THE *National Review* is, as usual, weighed down by its sense of the responsibility which attaches to the solitary organ in the English press devoted to the cause of Bimetallism. The editor is, of course, exceedingly wrath about the Wolcott fiasco. He thrusts all the blame upon the Indian Government. He asserts that not "a single member of the British Cabinet expected a hostile reply from India." The reply from Calcutta was as unexpected as it was inept, and "was received with dismay by the British Cabinet."

## THE LORD HIGH JOBBER.

The editor is also disgusted at the jobbery which has characterised Lord Halsbury's exercise of his judicial patronage. He says that a large and increasing number of Conservatives keenly resent the humiliating position in which they find themselves when called upon to defend some utterly indefensible appointment made by their Lord Chancellor. Lord Halsbury, he says, apparently amuses himself by flouting the community from time to time by selecting some wholly unqualified person for a position which the general public regard as almost sacred. "The time has come for the removal of this patronage from the unworthy hands of a political lawyer." Things indeed have come to such a pass that he understands that a strong memorial is to be presented by the Bar to the Prime Minister, urging that in future the selection of judges shall be entrusted to a capable and trustworthy committee. Things must be pretty bad when so revolutionary a proposal can emanate from so conservative a quarter, and be supported by so staunch a partisan as Mr. Maxse.

## THE IRISH LOCAL GOVERNMENT BILL.

Mr. Richard Bagwell, writing on "Rural Administration in Ireland," makes his moan over the approaching disappearance of Grand Juries. He says:—

The Grand Jury Act of 1836 and the several amending measures have worked well, and the best plan will be that which involves least change in the substantive law. Two meetings of the county council annually would amply suffice, with elective bodies in each barony to take the place of the existing presentment sessions. Irish county councils are likely to be extravagant, for the franchise will be democratic, and power will not be in the hands of those who pay most of the rates. It is certain that many large farmers dread the change. Parish councils may be put out of the question in Ireland, for the parish has there no administrative existence. As railway communications are not good, it may be necessary to have two councils in some of the larger counties. The great difficulty is about district councils. All householders are sure to have votes, and there is sure to be no qualification for county councillors. The result will be a spirited popular policy involving the employment of labour at the expense of the minority. Useless works in the nature of outdoor relief are the great danger.

## PRISONERS IN THE WITNESS-BOX.

The Hon. Alfred Lyttelton, M.P., pleads in favour of maintaining the present system by which the prisoners are not allowed to give evidence, and for the following reasons:—

- (1) It is efficient: *i.e.*, it convicts 80 per cent. of prisoners indicted.
- (2) It is humane: *i.e.*, it acquits the innocent. The cases of the conviction of innocent men, if they exist, are not alleged to be other than rare.
- (3) It exhibits the Government in its most impressive function to the poor and the miserable, not as their enemy, but as their friend. For it never tempts the judge to lose his impartial attitude, or engages him in wrathful controversy with the prisoner.

(4) It keeps clearly defined the cardinal principle of the law that the prosecution must establish beyond rational doubt the guilt of the prisoner, and prevents confusion of that question by the investigation of another, *viz.*: Is the prisoner more credible than the prosecutor?

But even Mr. Lyttelton feels that it is a pity to gag the prisoner too completely, and so he makes the following suggestion:—

It seems to me that if a practice which I have known occasionally adopted by careful and open-minded judges were made universal, the opportunity above-mentioned could be amply secured. This practice is for the judge in every case to call the prisoner's attention one by one to the heads of the evidence given against him, inviting him, if he desires to do so, to offer an explanation, there and then, or if he prefers, to make his statement at the end of the case—or, should he wish it, to combine both methods of presenting his defence.

## LIBERTY AS IT WAS IN SPAIN.

Mr. John Foreman, writing on "The State of Spain," draws a terrible picture of the reign of terror which prevailed under the Government of Canovas. He says:—

Expression of public opinion was stifled, except in such formidable institutions as the Republican Union. Small meetings of the middle classes were constantly raided by the police with excessive violence. The obnoxious *Consumos* tax (levied upon commodities) was largely increased, and rented out to a band of ruffians who, through their agents, assumed tyrannical authority over the people, giving rise to open riot in many towns, especially in Madrid itself, where the troops were called out, and charged the indignant mob. On the pretext of anarchism no man's life or property was safe. On the declaration of any low, irresponsible informer the secret police would forcibly enter the premises of any peaceful citizen, arrest him, and torture him. He would then find himself arraigned before a judge indisposed to listen to his defence, and finally purchase his freedom in the form of fees.

## Blackwood.

*Blackwood* is a fairly interesting number. I notice elsewhere an estimate of what the Tractarian Movement has done for the Church of England, which appears in the article on "Dr. Pusey and the Oxford Movement." I also quote briefly from the short article on the "Future of our North West Frontier" in India. Among the other articles may be noted a protest against the recent change in the regulation for the admission of cadets to the navy. The writer on the "Entry and Training of Naval Officers" is a thoroughgoing advocate of the old system of letting the lads in when they are only thirteen, and he puts his points vigorously and well. There is a very readable account of the "Eglinton Tournament," from which it appears that when the men of 1839 endeavoured to assume the armour of their ancestors, they found that the coats of mail would not fit, the moderns having much longer legs than the short-limbed, stocky-built knight of ancient days. The writer who describes the tournament says that it was a great disillusion, for the knights, when swathed and locked in plate armour, lost their individuality, and became as lifeless as a machine. In the charge itself, there was little that was spontaneous or energetic. Everything was awkward, monotonous, and almost ludicrous. The article on the "Story of St. Paul's" concludes with a criticism of Sir William Richmond's decorative scheme. He is designing it on too small a scale, and in too grey a manner.

VALUABLE suggestions for lines of child-study by the teacher are given in the *American Educational Review* for November by G. W. A. Luckey.

## THE NORTH AMERICAN REVIEW.

THE *North American Review* for November contains two articles which are noticed elsewhere; the first, Mr. Nixon's interesting and suggestive paper on "The Commercial Value of the Shipyard," the second, the Hon. Hannis Taylor's review of the Cuban question. With the exception of those articles, there is not much that calls for special notice.

## LIFE OF LORD TENNYSON.

Mr. Gosse, writing upon the Life of Tennyson, praises the biography of the late Poet Laureate, declaring that no one had any conception of the variety and splendour of the material at Lord Tennyson's disposal. He says:—

It is a book practically inexhaustible; no such contribution to the purest literature has been put before the world for years and years. The character and temperament revealed in it are unique, and yet their possessor strikes us not so much by his unlikeness to his fellows as by his elevation above them.

Mr. Gosse does not indulge in many personal reminiscences, but here is one of them:—

The poet told me that before he went up to matriculate at Trinity, his father insisted on hearing him recite by heart the entire four books of the Odes of Horace, an ordeal through which he satisfactorily passed on successive mornings in the rector's study.

Speaking of Tennyson's monetary difficulties in early life, Mr. Gosse says:—

Tennyson lost every penny he had in the world, and at the age of thirty-five, with set habits, a total inability for ordinary work and a highly-strung nervous system, he found himself face to face with absolute indigence. He fell into a condition of acute hypochondria, and in the course of it "his friends despaired of his life." He was placed, for many months of 1843 and '44, in a hydropathic establishment in Cheltenham. As he was slowly recovering, Sir Robert Peel was induced to give him a Crown Pension of £200 a year, and it is hardly too much to say that it is to this intelligent act of royal favour that we owe the existence of a great body of incomparable poetry.

The whole article is written in an excellent spirit and with very keen appreciation.

## WHAT WILL BE THE EFFECT OF KLONDYKE?

Mr. Charles A. Conant, writing upon the effect of the new gold upon prices, arrives at the satisfactory conclusion that Klondyke, even if it be as rich as it is believed, will not affect prices materially. He says:—

The mathematical elements of the problem are: An aggregate gold production within historic times of 9,000,000,000 dols.; a visible supply of gold in use as money of 4,360,000,000 dols.; and a possible annual increase of the supply from 240,000,000 dols. in 1897 to 300,000,000 dols. in future years. Throughout the world exists a capacity for the absorption of the new gold, which will have no perceptible effect upon prices, but will operate, like the extension of railways and canals, to give ease and rapidity to the courses of production and exchange.

Among the causes which will operate to absorb all the gold that may come from the far north-west, he mentions the resolve of Austria and Russia to adopt a gold standard:—

The Empire of Japan decided in the spring to change from the silver to the gold standard. Chili, Peru, and Costa Rica have recently adopted the gold standard and need increased supplies of gold.

In the last four hundred years he thinks the total loss of gold by abrasion did not amount to more than £2,300,000.

## WOMAN'S POLITICAL EVOLUTION.

Mrs. J. Ellen Foster, who signs herself as the President of the Woman's Republican Association of the United States, writes an article which reads somewhat as if it were the report of a speech. She maintains that women are coming more and more into politics in the United States.

In all the Northern, and occasionally in the Southern, States women are acknowledged by political leaders to have been an effective, and, in many instances, a controlling element in late national elections and in many local political contests. In the four States of Wyoming, Colorado, Utah, and Idaho women now vote on all questions as fully as men do, and are equally eligible with men to all offices in the gift of the people. In the State of Kansas women vote at municipal elections; in Iowa tax-paying women vote on questions involving the expenditure of public moneys, in Illinois women vote for Trustees of the State University, and in more than half of the States women vote on the school question. The theory is, women do not vote; the facts are, women do vote on many questions and in many places.

Their influence she thinks will be good if only because they are not so corrupt as their brothers. She says one very remarkable thing of which we take due note:—

In the slums of the great cities the women, as a rule, are the breadwinners; the men live on the labour of the women and children, or contribute little to the family exchequer.

## LEPROSY AND THE HAWAIIAN ANNEXATION.

Dr. Prince A. Morrow contends that one result of the annexation of Hawaii by the United States will be the introduction of leprosy on a large scale into the American Republic. He says:—

In addition to the 1200 or more lepers at Molokai there are probably two or three times as many at large in whom the disease is latent, or in the incubative stage, yet none the less sure to develop. Each of these lepers carries with him the seeds of a deadly contagion, and the warm, moist, more tropical climate of our Southern seaboard seems favourable to the development of leprosy. There is a large number of lepers at Key West. In Louisiana there has been a notable and alarming increase of leprosy within the past few years. In the event of annexation, it would be idle to think of confining leprosy to the islands, or rather excluding it from this country by quarantine measures.

## THE RAILWAY SITUATION IN THE UNITED STATES.

Mr. H. D. Newcomb, writing upon the present railway situation, describes the facts of the case from the point of view of the investor as follows:—

That rates and charges for transportation services are demoralised; that the law has imposed upon railway managers the unnatural burden of maintaining a costly, wasteful, and worse than useless competitive system; that the carrying corporations are allowed to combine neither for the establishment and maintenance of just rates, nor for the prevention of unjust discriminations; that nearly 40,000 miles of railways are in the hands of receivers; that railway securities having a par value of nearly four and one-half millions of dollars receive no return of interest of dividends, and that solvent lines are practically at the mercy of those of their competitors whose bankruptcy has relieved them from the necessity of attempting to earn a return upon at least their bonded indebtedness.

He passes in review various proposed remedies, and sums up his conclusion as follows:—

There must be created, from the multitude of railway corporations, something that is now presumed to exist, and that in many respects does actually exist at present—a railway system.

The Mexican Minister contributes nearly twenty pages of an historical paper on the relations between the United States and the Spanish American Colonies.

## THE FORUM.

## WHY THE GREEKS WERE DEFEATED.

In the *Forum* for November Mr. Frederick Palmer, who went through the recent war as newspaper correspondent, has no difficulty in explaining how it was the Greeks were defeated. He says:—

At no time was there a single strong mind dominating the Greek army. The curse of the generals, of the other officers, and of the soldiers was idleness. Though the officers spoke French well, and had studied abroad, yet in all the years that they had been preparing their regular army of 20,000 men—an enormous force for a country so small as Greece—for the war that they had courted, they had never made a map of their own frontier. The Greek army, organised by a French staff officer on as good lines as Greek politics would allow, was nominally under the direction of ten colonels—who quarrelled with one another—and of a minister-of-war. It was impossible to make any one of the colonels commander-in-chief, on account of the jealousy of the other nine. The blunders of the Turks succeeded only because the blunders of the Greeks were greater and more numerous. After the taking of Larissa, an investigation showed that not more than seventy or eighty Greeks had been killed, and five hundred wounded. Not ten per cent. of the wounds were dangerous. Not until after Domoko, was a bayonet-wound brought into a Greek hospital. The body-wounds of the Greeks were usually in the back.

## YELLOW FEVER AND HOW TO STAMP IT OUT.

Dr. Walter Wyman, writing on the yellow fever epidemic, maintains that yellow fever could easily be stamped out. It is an artificial product that appears to be carefully manufactured in the harbour of Havanna. It used to exist at Vera Cruz, but President Diaz by vigorous sanitary measures completely banished it from that port. It is chronic at Havanna, and is likely to be so until similar steps are taken to rid the harbour of the contingent. The pest could be extirpated if one-hundredth part of the money spent in abortive attempts to suppress the rebellion were used in purifying the harbour. Dr. Wyman says:—

Engineers have repeatedly shown that an artificial outlet to the harbour would permit the waters of the Gulf to wash through and give the city wholesome surroundings. Then, if the sewer-mains were carried out to the sea, the old wooden wharves destroyed, and a few measures of ordinary sanitary science adopted, the city as a breeding-place of pestilence would be a thing of the past.

## THE PROBLEM OF THE MISSISSIPPI.

This problem is how best to get rid of the enormous volume of water which every now and then rushes down the river valley. There are the two schools—one would confine the river between artificial banks, the other would dredge its mouth. Mr. R. S. Taylor argues that the embankment system has been justified by its results. There was a great flood this year, when it seemed as if the whole ocean had been let loose in the Mississippi channel:—

The area overflowed has been officially reported at about 10,667 square miles—a vast territory to be submerged from a single river. But if the destruction was great, the protection was greater. More than 19,000 square miles were not overflowed.

On the other hand, Gustave Dyes is all for dredging.

## THE PUBLIC TAX ON MEN OF LETTERS.

“Arthur Penn,” *nom de plume* of some author who has not the courage to sign his name, complains bitterly in a paper entitled “Letters to a Living Author,” that every Tom, Dick and Harry feels himself justified in writing to men of letters for their opinion upon all manner of subjects, without the slightest regard to the fact that to

answer every such letter is a tax on the working time of the author who is victimised:—

The public arrogates to itself the right to demand from the author for some of its individual members, a portion of the time which the author needs for his own work. When a man is master of his calling, his opinion as an expert is very valuable; and the basis of his charge should be not the time spent on the question submitted, but the knowledge needed to solve it. A labouring man is paid for his time, but a professional man for his skill; and the man of letters has a right to expect the pay of an expert, whenever his advice is sought.

## THE EFFECT OF THE AMERICAN CONSTITUTION.

Mr. J. G. Carlisle begins a series of papers entitled “Dangerous Defects of our Electoral System.” In this he deals with the absurd system of electing the President, not by the direct vote of the people, but by an Electoral College which is created solely for the purpose of registering the vote of the people, but which nevertheless is capable of being turned into a machine for falsifying the result of that vote.

## THE ARENA.

THE principal feature of the November *Arena* consists of three papers by working-men on the American Labour Question. The editor explains that these articles were sent spontaneously and without being asked for. Herbert M. Ramp, “a labourer,” tells “how the labourer feels”; and it is pleasant to find he does not feel so badly as we might have expected. Mr. Ramp pleads for “a more thorough feeling of brotherhood between man and man in all stations of life” as the most hopeful means of solving social problems. Mr. W. Edwards, “a workman,” inquires whether the condition of his class is to move “up or down.” He only asks for the municipalisation or nationalisation of such industries as are now controlled by monopolies. He prefers monopoly by the State to monopoly by irresponsible individuals. It is amusing, he says, “to hear an American talk of the slowness of our British cousins in taking up new ideas, and then notice his righteous indignation at the suggestion of collective ownership.” Mr. W. E. Kearns, “a farm hand,” writes on farm hands, who, he says, form one-third of the wage-earners of the United States, and yet are treated as pariahs by all parties, even by their fellow working-men. They are an “unknown quantity” in the State; and he asks not for specific reforms, but for “a better scheme of political economy and a new social philosophy.” Mr. B. O. Flower urges among practical measures for promoting manhood and preventing crime, public parks and gardens, free popular concerts out of doors in summer, indoors in winter, free lantern lectures, attractive coffee-taverns. These would form, he argues, richly remunerative civic investments. Dr. Ridpath, the editor, discusses the old query—“Is history a science?” and answers in effect, Possibly, but not yet. Mr. J. H. Garnsey insists that the demand for sensational journals has been immensely exaggerated, and quotes the commercial success of a well-conducted Chicago paper as proof of his contention that the people do not want sensationalism of the type which journalists have supposed to be popular.

Two articles on Wagner’s “Die Meistersinger” are timely on account of the recent production of this work in Paris. In the *Ménestrel* M. Julien Tiersot begins a study of the great music-drama, and in the *Revue Encyclopédique* of November 20th, M. P. Forthuny has an article on Hans Sachs.

## THE REVUE DE PARIS.

THE *Revue de Paris* is rather thin this month. The most topical article is one by M. Noblemaire, "In the Country of the Afridis," in the first November number. He visited this wild region in the North-West of India, which is now becoming so painfully familiar to us in the daily newspapers, in March of this year. He begins with a description of Peshawar—not the English cantonment, with its monotonous crowd of Anglo-Indians with their monocles, bungalows, ponies, dog-carts, and tennis costumes, all exactly like those of every other cantonment—but the native city which the lordly Cook does not deign to mention on his programmes. M. Noblemaire relies a good deal on M. James Darmesteter's masterly description of Peshawar in his "Lettres sur l'Inde," but after all the town is only the base of the operations on the North-West frontier, and it is of more immediate interest to follow M. Noblemaire in his subsequent journeyings. He describes with humour the long lines of camels bringing supplies of all sorts from Peshawar to the front. Many of these beasts carry women in their panniers, but the fair ones were carefully screened from curious eyes, and M. Noblemaire's inquisitiveness would have remained unsatisfied had not a camel bolted and revealed two charming girls vainly endeavouring to supplement their scanty toilets. At Jamrud our traveller stops and explains the unsavoury reputation of the Afridis for murder and pillage, and the action of the Government in paying them salaries to guard the Khyber Pass and to abstain from pillaging the caravans. He has a high opinion of the conjuring powers of the Afridi native police. For two minutes only he left a valuable sword-stick in his carriage, and on his return it had mysteriously disappeared. Of course the Afridis knew nothing about it! M. Noblemaire did not go beyond Ali Musjid, a fort which reminded him of Queyras, in the Dauphiné. It is, he thinks, a strategic position of the greatest importance, and would eventually prove a formidable obstacle to the Russians.

In the second November number M. Saurin writes a rather portentously long paper on the peopling of Tunis with Frenchmen. The other colonies of France—Tonkin, the Congo, on the banks of the Niger, French Soudan and Indo-China—are quite unsuited, owing to their tropical climate, for the maintenance of a large French population. But Tunis possesses a healthy climate, the native population is collected mainly along the coast-line, and the interior affords an ideal nursery for a hardy and prolific race of French colonists. M. Saurin points, in answer to the objection that in France itself the population does not perceptibly increase, to the fertility of the race in Canada and Algeria, and he observes triumphantly that Tunis alone of French colonies now pays its way. He declares that 260,000 French people must be brought to settle in Tunis, and shows in detail how they can be planted on the soil to increase and multiply for the glory and benefit of France. It is easy to see in this article the hand and the inspiration of M. René Millet, the able Resident-General of France in Tunis, who has made a special study of the population question, and whose efforts have been unceasingly directed towards the increase of the insignificant French colony in Tunis, only numbering between 26,000 and 27,000, even if we include the army of occupation.

Among other articles may be mentioned M. Deschanel's two papers, of the greatest interest to philologists, on the corruptions of the French language; and M. Durand's study of the measures for the support of agriculture in France, with special reference to the policy of M. Méline.

## THE NOUVELLE REVUE.

MADAME ADAM's periodical grows more and more political and historical.

## THE NIGER AND THE SOUDAN.

Undoubtedly the most important contributions in either of the November numbers are two papers and one letter on the Soudan, and an article by M. Sevin-Desplaces on French interests in the Niger territories.

The papers on the Soudan are respectively by an anonymous officer and by Colonel G. Humbert, formerly a commandant in the French Soudan, and now retired "for the moment," as he says himself—a phrase which no doubt indicates his complete readiness to go anywhere and do anything to checkmate perfidious Albion at a moment's notice. The anonymous officer's article is principally historical, and it is only now interesting from its outspoken expressions of regret for the past blunders of French policy, and for the support which it lends to the view, held by many competent persons in England, that France's colonial ambition and her policy in every part of Africa are based on a lively recollection of the magnificent Indo-French empire of Duplex which was thrown away by the fatuity of Louis XV. Colonel Humbert, whose chance of being employed again will not, we imagine, be increased by his action in contributing a signed article to a popular review, deals in a blunt, soldier-like fashion with the realities of the situation. He says that the Soudan—by which term he means, of course, the French Soudan—is a vast country, almost depopulated, the products of which, though varied, are scarcely remunerative. The moment of disillusion is, he says, at hand. He advises his country to make the best of a bad job in the following manner:—

- (1) Establishing numerous means of communication—roads and railways—and dredging the rivers so as to make them navigable by light draught steamers; (2) increasing the effective strength of the French troops there; (3) destroying Samory as quickly as possible; (4) sending to the Soudan numerous commercial missions to ascertain the true value of its products; (5) encouraging and protecting French traders; and (6) distributing the troops through the country on a better plan.

M. Sevin-Desplaces' article on the Niger is practically valueless. He considers that French influence should be naturally developed from the Middle Niger to Darfour. His competence to write on this difficult subject may be gauged from his dictum: "It is not possible to admit that a foreign privileged company can hold in check a Power like France. It is not tolerable that our energies should be paralysed, or that our capitalists should remain perplexed, because the illegalities of the Niger Company remain unpunished." We may perhaps remind M. Sevin-Desplaces that what a "foreign privileged company" can and cannot do, all depends on what kind of Power it has behind it.

The Prince de Valori gives in a pair of articles a vivid and touching picture of "The Last of the Bourbons," Charles X., the Duc and Duchesse d'Angoulême, and the Comte de Chambord. When a young man the writer often accompanied his father to Venice, where the last King of France and his family were living in exile. He gives a very striking picture of the moribund Court. The most important contribution to history is the Prince de Valori's solemn testimony to the fact that Louis XVI's daughter, the Duchesse d'Angoulême, never attached the slightest credence to the many circumstantial stories of the escape of her brother, Louis XVII., from the Temple. There is little doubt that the legend has retained so much vitality in France on account of Madame d'Angou-

lôme's alleged refusal to believe in the absolute certainty of her brother's death.

The Marquis de Castellane, in an article on the French elections of 1898, expresses the conviction that France is neither Socialist nor Orleanist, but Democratic.

### THE REVUE DES DEUX MONDES.

M. BRUNETIÈRE's great review is quite as edifying and informing as usual this month. We have noticed elsewhere M. Bentzon's interesting account of his visit to the Shaker community of Alfred in the second November number.

#### A FRENCH EDITOR IN THE STATES.

The ordinary globe-trotter's impressions of America we all know by heart, but M. Brunetière is not an ordinary globe-trotter, and his paper on Eastern America, covering New York, Baltimore, and Bryn Mawr, in the first November number of the *Revue des Deux Mondes*, contains matter of interest, as well as a certain distinction of style which characterises the work of this accomplished writer. M. Brunetière, who went last March to deliver some lectures on French literature at Johns Hopkins University, the moment he had passed through the ordeal of the New York custom-house was confronted by the usual reporter who asked the usual silly question, "How do you like America?" to which M. Brunetière drily replied that he would answer when he had found it. He goes out and walks for four hours without satiating his curiosity or wearying his limbs. In Fifth Avenue he sees nothing distinctively American; in the rest of New York it is the singularly cosmopolitan character of the city which strikes him. In the country outside the acres of advertisements of stomachic remedies impress him with the suspicion that the Americans, who are believed to be the most optimistic of peoples, are really the most dyspeptic. American cookery evidently caused agonies to this Frenchman, though he is too polite to denounce it. M. Brunetière's observations on the American Universities are shrewd and to the point. The story of his lecturing at Bryn Mawr is rather amusing. When Miss Carey Thomas, the head of this famous women's college, asked M. Brunetière to lecture to her students, he was terrified at the prospect of addressing an audience of tall and alarming ladies; but Miss Thomas happened to mention that at that moment her students were greatly interested in biology, and then the Frenchman saw his opportunity, and determined to speak to the fair evolutionists on "The Evolution of French Tragedy." M. Brunetière promises to return to his experiences at Bryn Mawr in another article; at present, apparently, he is only able to write a few short but impressive sentences describing the tortures he suffered from having to shake hands violently with two hundred or three hundred people a day for a fortnight.

#### THE DUTCHMAN'S COLONIES.

M. Leclercq has an important article on Java and the Dutch colonial system. Little Holland has retained with extraordinary tenacity for three centuries a colonial empire as large as France, and containing thirty-six millions of inhabitants. It is irritating to reflect that Java, the Queen of the Archipelago, was ours from 1811 to 1816, when we stupidly gave it up out of sheer ignorance of its value, although the great Adam Smith himself expressed the highest opinion of its commercial importance. Needless to say, the Dutch colonies are not allowed the slightest degree of self-government. One Van den Bosch established a system of State monopoly

combined with forced cultivation; but this, though it enormously increased the population of Java, has had its day, and under a new agrarian law, which has now made European colonisation possible, the private enterprise which flourished under the brief English occupation is growing stronger and stronger. The introduction of railways was long resisted in the island, and what really caused them to be allowed was the extreme inadequacy of the old system of transport, under which the inhabitants of one district might be perishing of hunger while those of another district were revelling in as much rice as they could eat.

#### OTHER ARTICLES.

In the second November number M. Lévy writes a long article on the money markets of Germany. He shows that the German banks perform the functions both of the English banks of deposit and of the French financial associations, and have consequently two valuable strings to their bow. The results in the world of trade and finance are such as to alarm the writer, who urges France to make renewed efforts to keep pace with her great rival.

Among other articles in both numbers of the *Revue* which may be mentioned, are: one by the Marquis de Gabriac on Chateaubriand as Minister for Foreign Affairs; an appreciation by M. Rod of M. Arnold Böcklin, a painter of Basle, who recently celebrated his jubilee; a study by M. Valbert of Louise Ulrique, Queen of Sweden, and sister of Frederic the Great; a somewhat technical excursus on realism and idealism in music by M. Bellaigue; and a continuation of M. Lamy's series of papers on Church and State in France.

### THE ITALIAN MAGAZINES.

"The Causes of Latin Effeminacy" are stated by Professor A. Mosso in the *Nuova Antologia* (November 16th) to lie in the modern Italian system of education, and not to be inherent in the race. Italy supplies a purely intellectual education to her young men, whether at school or college; as a result, they are at once precocious, physically feeble, and addicted to vice. It is a fact that among army conscripts the class of university students takes almost the lowest place in regard to chest-development. The Professor recommends shorter hours of study, more exercise, and a scheme of gymnastic training suitable for a hot climate. This somewhat acrimonious discussion has arisen out of Prof. G. Ferrero's recent and very striking book on "Young Europe," which is lengthily reviewed in the same number. Professor Ferrero has drawn conclusions very unfavourable to his own nation from comparisons between the Latin and Teutonic races. The most instructive point in the situation is that the present moral and physical degeneracy of the Italian people is taken for granted on both sides; the discussion merely turns on the probable causes and possible remedies.

The *Civiltà Cattolica* protests energetically against the recent ministerial circulars prohibiting Catholic congresses and meetings being held in churches except under police supervision. The action of the Marquis di Rudini has caused the standing quarrel between Church and State in Italy to enter once more upon an acute stage.

That most instructive of military magazines, the *Rivista di Artiglieria e Genio*, has issued a special supplement for November, entirely devoted to Marconi's wireless telegraphy, from the pen of Dr. A. della Riccia. Illustrated with numerous diagrams, and some 112 pages in length, it is probably the most complete account that has yet appeared in any language.

## THE HUMANITARIAN.

THE first paper in the December number of the *Humanitarian* is devoted to an interview with Mr. Beerholm Tree concerning "Ethics and the Stage." It is rather slight, and does not contain much that is worth quoting, excepting his remark that Ibsenism and Tolstoyism are not the kind of mental pap upon which the American mind has been weaned. Nevertheless, An Enemy of the People made the deepest impression of all Mr. Tree's plays at Chicago, and Mr. Tree himself thinks that Ibsenism is a force which is steadily revolutionising stage methods. Mr. Grant Allen replies to Mr. Auberon Herbert's criticisms in a paper which is little more than an elaborate piece of nonsensical chaff. Mr. Grant Allen himself sums up the whole of his little essay in the concluding sentence, in which he says that "Mr. Herbert calls his Socialism Individualism, and I call my Individualism Socialism." Mr. Grant Allen runs over the names of half-a-dozen leading modern Socialists, and asks whether an aggregate consisting of such men will be distinguished by unprogressiveness, shiftlessness, resourcelessness, feebleness, and a general readiness at once to succumb to any attack either of nature or of any of our fellow-men? Surely, Mr. Grant Allen cannot pretend to ignore the fact that all those whom he mentions are products of individualism. Priscilla E. Moulder writes on the "Inequality of the Sexes," a kind of melancholy feminine lament over a series of facts which make the conventional talk of male chivalry seem so cruel a sarcasm. Lucian Wetherall has a long paper on "Moral Sense as a Social Necessity," which is a rather interesting, although slight attempt to sketch the natural evolution of ethics in many lands and in many civilisations. Mr. J. G. Raupert asks the question "Can Spirits be Photographed?" Mr. W. J. Colville tells a brief story under the title of the "Talking Shadow," which turns upon the phenomenon of the Double. It would be very interesting to know whether Mr. Colville has ever heard of any case exactly analogous to that which he described.

## THE WESTMINSTER REVIEW.

THE *Westminster Review* is one of those periodicals which ought to live, and yet when you examine its contents the marvel is that it continues to exist. There are now and then good papers, sometimes very erudite papers, and the brief notices of books at the end are very carefully done, but anything more hopeless than the way in which the December number, for instance, is put together would be difficult to imagine. It is not that none of the articles are good, but there is an utter lack of timeliness about the whole thing. There is no reason why this number might not have been issued any time this twelve months, while the success of any review depends quite as much upon its being up to date as upon anything else. In the *Westminster* the articles seem to drift in from all quarters, and to be printed without any relation either to each other or to the events of the month near which they are issued. This December number illustrates almost all the defects which prevent the *Westminster* becoming a property. The first place is devoted to an article by Mr. Arthur Withy, which is displayed as if it were some great thing, with a double heading. It is entitled "Hardy Annuals at the Trades Congress," with a sub-head, "Do the Trades Unionists mean Business?" and by way of further emphasis, it is supplied with the familiar motto, "Who would be free themselves must strike the blow." Then after all Mr. Withy has only to propose such a very obvious but hopelessly impossible

thing in the present state of Trade Unionism, as that a general election fund should be raised by a levy of a penny per week on every Trade Unionist in the country. In four years, he calculates, that this sum would amount to nearly £900,000. He might just as well propose to pay off the national debt. After having put forward this suggestion, he propounds a programme for the next general election, which he himself summarises as follows:—

It would be wise, I believe, to narrow the issue of the election to three points:—(1) A good, sound, democratic Budget, including payment of members and election expenses; the abolition of the breakfast-table duties; old age pensions, and the taxation of land values; (2) Adult suffrage; and (3) The second ballot.

These things are not in the air, and a current periodical should have something more practical to put before its readers than this. Mr. E. Platt sets forth what he regards as the truth about the relations between England and India in an earnest and thoughtful article. Then we have another article advocating a new programme, in which Mr. Ewen repeats his plea for banking reform. Mr. Stoddard Dewey reviews Emile Soldi's cosmoglyphic theory as to the secret significance of the signs of primitive art. Then there is another article upon history among the Arabs, and quite a learned essay upon the "Art of Rhetoric." Almost the only article of any actuality at all in the number is that which deals with "Recent Scots Theology," although it must be admitted that there is a review of Mrs. Oliphant's "House of Blackwood." It grieves me to have to say such things about a magazine with such a history, and which has so excellent an object, but what I have said is the plain truth.

## Cassier's Magazine.

I HAVE noticed elsewhere the articles on "The Engineers' Strike" by Colonel Dyer and Mr. E. Taylor. Mr. W. G. Wales publishes part of the paper which he read before the Society of Engineers, describing the discharging and storing of grain at British ports. There is a brief paper by Mr. Millin describing what water power and electricity will accomplish in the city of the future. The whole face of Europe, he thinks, will be changed under the pressure of dear coal and the attraction of cheap water power. The Highlands of the world will be the great centre of its manufactures. There is a brief sketch of Mr. Yarrow, the torpedo boat builder. The rest of the articles are by specialists, and deal strictly with questions of engineering.

## Engineering Magazine.

I HAVE noticed elsewhere the papers by Mr. Hiram Maxim and Mr. J. S. Jeans dealing with the dispute in the engineering trade. The paper on Modern Wharf Improvements describes and illustrates with plans and diagrams the way in which wharves are arranged in Antwerp, Hamburg, Marseilles, and Glasgow. A similar paper deals with English goods stations and yards, illustrated with diagrams of the Midland Railway Goods Station at Somers Town. The paper on "Ore Loading on the American Great Lakes" deals with the related subject. "The American Tall Buildings from an European Point of View," by Mr. S. H. Capper, is illustrated by a series of views of European tall buildings, such as Windsor Castle, Strasburg and Cologne Cathedrals, St. Paul's, and the Colosseum of Rome. The index, which has long been the sheet anchor of the magazine, continues to be kept up to its high level.

## ILLUSTRATED MAGAZINES.

**The Strand.**

THE November *Strand* is as full as usual of all manner of oddities and curiosities. One writer describes Wrecks; another tells us all about the Insect Pests; a third describes the exploits of John Higgins, the champion jumper of the world. Mr. Whitman has a paper on "Fireworks of the Past," and Mr. J. W. Smith writes about "The Amphibious Boat," which is to be found near Copenhagen. It is so constructed as to go equally well on water as on land, which will carry seventy to eighty passengers, and the engine is so constructed as to work a screw when the boat is in the water, or the small wheels on which it runs when she runs ashore on the rails.

**The Canadian Magazine.**

THE November number appears in an extremely attractive make-up. The paper is superb, the illustrations are admirably printed, and the magazine altogether is worthy of the Dominion. The first paper is devoted to "The Maker of the Dominion of Canada," and is written by J. G. Bourinot. It is followed by a paper on "The Premiers of Ontario since Federation," by the Editor of the *Toronto Globe*. Another historical paper, which is of considerable interest, is an account of the Fenian Raid into Canada of June 2, 1866. About 1,000 Irishmen, chiefly ex-soldiers of the Northern army, crossed from Buffalo into Canada for two engagements with a handful of Canadians, and then finally retreated to the land from which they had come, after having lost no fewer than seven men. Mr. Fergus Hume continues the serial, "Hagar of the Pawnshop," and Mr. G. W. Orton describes the difference between Canadian and United States football. Scientifically considered, he says the United States is the better, for it affords greater facilities for development; but from a spectator's and player's standpoint the Canadian must be given the preference. It is much more interesting to watch, as its tackling is much more frequent than in the American game.

**Cassell's Family Magazine.**

THE conductors of *Cassell's Family Magazine* are evidently in no mood to abandon the field in which they have for so long held a leading position, merely because nearly every month brings out a new rival. The December number opens with a series of short stories by Max Pemberton entitled "On a Winter Sea." The new serial is entitled "Spectre Gold; a Romance of Klondyke," by Headon Hill. Mrs. Williamson writes on "Young Married Women in the World of Society." Mr. Fletcher Robinson begins a series entitled "Capitals at Play," by an illustrated account of the amusements of St. Petersburg. His object is to display the lighter side of life in the greater cities, and to set forth the pastimes of all classes indiscriminately. Mr. Robinson, in the course of his paper, tells one significant story. One of the St. Petersburg cabmen was asked the other day why he cheered so heartily for the President of the French Republic. He thought over the subject for some time, and then replied, "I thought it was wise—he seems to be such a friend of the police!" Mr. Alfred T. Story has a gruesome paper on "Fires at Sea." Miss Leily Bingen writes an interesting account of "Women's Clubs in London." "Something New," which has superseded "The Gatherer," is hardly up to its old mark. "The Gatherer" used to be one of the most distinctive features of *Cassell's*, and I should be very sorry to see it discontinued.

**The Temple.**

THE *Temple Magazine* contains a symposium on "Why Young Men do not Marry," in which Miss Friederichs, "Madge" of *Truth*, Silas K. Hocking, and another take part. Like most discussions of this kind, the general conclusion is that men don't marry because they cannot afford it, which is only another way of saying that they do not think the wife is worth her keep. That, of course, is true about a great number of women, but there is great truth in what a friend of mine once ruefully declared—that "all the nicest men were married already!" There is an interview with Mr. Fildes, in which he describes how he painted "The Doctor," and he also expresses his views as to the relation between black and white work and painting. The most interesting remark made by Mr. Fildes is that the Hanging Committee at the Academy is so eager to get good work that when anything really good comes before them, they express their delight with an almost childish glee. Real merit, he declares, has every possible chance nowadays. The rest of the number is chiefly made up of short stories by Mr. Justin McCarthy, Baring Gould, and others. There is a gossip paper describing a visit to Royal Crathie, and a short account of the De Beers Diamond Company.

**The Sunday at Home.**

IN the *Sunday at Home* there is an article on "Women Settlements: their Origin and Work." There is also a somewhat curious sermon by Archdeacon Sinclair, entitled "The One Hundred and Forty and Four Thousand," in which there are some interesting speculations as to the state of the blessed dead.

**The Leisure Hour.**

IN the *Leisure Hour* for December Mr. Frederick Whympster describes "Alaska as I Found It." Mr. Whympster says that the mosquitoes and sand-flies are so bad, that in summer-time they drive the moose, the deer, and the bear out of the forest into the rivers. They become practically amphibious, swimming in mid-channel with their noses continually dipping under water. Possibly, in process of time, the mosquitoes might develop the deer and the bear into genuine amphibians.

**Good Words.**

*Good Words* announces in the programme for next year a serial story by Gilbert Parker, entitled "Root and Branch." Mr. Rees Davies will describe the Yukon valley and its gold-fields. The Rev. John Mackenzie will write a series of articles describing the social religious life and growth of South African cities. There will be a series of popular papers on scientific subjects. Professor Lindsay will describe an autumn trip to Dalmatia, and Mr. Pendleton will write on the ins and outs of the great railway system. In the December number Mrs. Gordon-Cumming has a paper on "The Caves at Covesca."

**The Sunday Magazine.**

THE *Sunday Magazine* for December publishes an article describing a chat with the Rev. Dr. Milburn, Chaplain of the American Senate, under the title of "The Blind Man Eloquent." Dr. Milburn evidently is a believer in Lynch Law, for he declares that Judge Lynch, as a rule, knew very well what he was about, and justice was much less likely to miscarry when he took it in hand than when it was left to judge and jury.

## SOME CHRISTMAS NUMBERS.

---

English Illustrated Magazine.

THE *English Illustrated Magazine* appears in a glaring blue cover with an up-to-date Santa Claus riding a bicycle. The contents as usual are very miscellaneous. There are two or three coloured pictures, but the number is shamefully disfigured by the insets of pages of advertisements in the very centre of the reading matter. Apart from the stories, which are of the usual description, Mr. Edward Legge describes "A Millionaire at Work," in a very slight paper devoted to Mr. Hooley. The paper upon "How the Queen spends Christmas," and another, copiously illustrated, on Ellen Terry, will attract general attention. The most interesting article to me is the paper which describes how the murder of Maria Marten, in Polstead, Sussex, in 1827, was brought to light by her mother's dreams. Her mother, it seems, repeatedly dreamt that she saw her daughter killed, and buried in a red barn, where afterwards the body of the girl was discovered.

---

Harper's Magazine.

THE Christmas number opens with a narrative poem by Lew Wallace, entitled "The Wooing of Malkatoon." With illustrations it occupies more than twenty pages. The second notable feature in the magazine is Mr. R. H. Davis's account of the Queen's Jubilee, which is illustrated by Mr. Woodville. Mr. Davis says there was probably never before such a moment in which so many races of people, of so many castes, and of such different values to this world, sang praises to God at one time and at one place and with one heart as at the Jubilee service in front of St. Paul's. The third feature of the magazine is Mr. Ernest Ingersoll's paper on the eggs of American birds, which is illustrated.

---

The Woman at Home.

THE *Woman at Home* publishes a double number, of which the most important paper, "Some Women Novelists," is noticed elsewhere at length. There is a brief, somewhat pathetic sketch by Ian Maclaren, entitled "A Probationer." "Madge" of *Truth* gossips about "Society in the Diamond Jubilee Year" in a paper the importance of which consists in the fact that it is a convenient vehicle for gossip about dress and for the portraits of various personages who figured conspicuously before the public at the time of the Jubilee. The Duchess of Leeds writes a short story entitled "The Bird Charmer."

---

The Windsor.

THE *Windsor Magazine* gives away with its Christmas number a complete novel, by Grant Allen, which is separately bound, and is issued as a distinct volume. The number contains many articles of varied interest. Max Pemberton begins a new serial story of Cronstadt with a K., while Frederick McKenzie, in a paper copiously illustrated with portraits, deals with the Colonial Prime Ministers under the title of "Masters of the Empire." Mr. Ernest Williams dissects the Christmas plum pudding for the purpose of proving that even in that distinctly English commodity the foreigner has not merely his finger in the pie, but his whole hand in the pudding. Mr. A. H. Girdlestone describes five black and white artists, with illustrations of their work.

Miss Leily Bingen tells how Christmas cards are made. There is the usual mass of short stories by Ian Maclaren, Ethel Turner, Mrs. Meade, and Alfred Slade, the last named being very good.

---

Pall Mall Magazine.

THE chief illustrated feature of the Christmas Number of the *Pall Mall Magazine*, which is published at the usual price, is Frederick White's sketch of Constantinople as "The Queen of Cities." The pictures are bright enough in all conscience. The chief attraction in the number to the general reader will probably be the first instalment of Mr. Anthony Hope's new story, "Rupert of Hentzau." The article devoted to the country seats deals this time with Belvoir Castle. Mr. Anstey gives a somewhat long, too long paper on "Mrs. Sherwood's Notion of a Model Youth."

---

The Century.

THE *Century* opens its Christmas number with a very charming paper on "Merry Christmas in the Tenements," by Jacob A. Riis. It is copiously illustrated and full of good human feeling. Timothy Cole's Old English Master this month is "Gainsborough." Mr. Riley's curious dialect poem "Rubaiyat of Doc Sifers" is finished. Mr. House describes the visit paid by Edmund Booth to London, and there is a very well illustrated paper on the "Wonderful Morning Glories of Japan." I notice the articles upon Fritz von Uhde and Tennyson and his friends at Freshwater elsewhere.

---

Pearson's.

THE tendency to the use of colour in illustration, and very glaring colour at that, is making its way into the regular periodicals. *Pearson's*, for instance, has some pictures which are supposed to be illustrations of Sir Lewis Morris's "Song to Venus," which are chiefly remarkable for the excessive brilliance of the pigments used. What they have to do with Venus is not explained. *Pearson's* also prints part of its illustrations in green and part in brown; and Rudyard Kipling's story, "The Tomb of his Ancestors," is printed partly in blue and partly in brown, while the pictures glare in red, yellow, and green. If we go on at this rate, we shall soon have magazines printed in tartan. Excepting for this typographical eccentricity, *Pearson's* is a very good Christmas number. Rudyard Kipling's contribution is one of his Indian stories. There are some very remarkable illustrations of Niagara in winter. Mr. Wells's story of "The War of the Worlds" is brought to a close. All the Martians, who were invulnerable against dynamite and shell-fire, succumb to the deadly microbe.

---

Lady's Realm.

THE *Lady's Realm* has also a garish coloured cover, but it mercifully confines its letterpress to black and white. Marie Corelli contributes an allegory entitled "The Despised Angel." Sarah Grand has a short story called "The Baby's Tragedy." The indefatigable Mrs. Tooley gives us an illustrated sketch of the Duchess of York. A paper that is nearly all pictures represents the "Prima Donnas of the Present Day." It is notable that none of them are thin. Lady Cork contributes "Recollections of the Duc and Duchesse D'Aumale." Mrs. Haweis describes the "Effigies in Westminster Abbey." Miss Braddon's serial, "In High Places," is a story which apparently is going to deal with the English Civil Wars.

MADAM SARAH GRAND.

# SOME BOOKS OF THE MONTH.

## TWO NOTABLE NOVELS: "THE BETH BOOK" AND "THE SCHOOL FOR SAINTS."

### I.—"THE BETH BOOK."\* By SARAH GRAND.

A NOVEL by the author of "The Heavenly Twins" is something like a challenging javelin hurled into the arena. Sarah Grand takes herself and her vocation far too seriously to regard her stories as anything but opportunities for attacking one or other of the masked demons of the world. She is by nature a knight-errant, and in "The Beth Book" she is riding hard after a foul enchanter who imprisons many fair demoiselles in his doleful dungeon. Yet so keenly sensitive is she to the resentment of the reader against sermons in fiction that she conceals her moral so carefully that many who do not think over what they read will miss it altogether. To those who reflect, however, the lesson is all the plainer because it has not been obtrusively dwelt upon by the author after the fashion of a chorus in a Greek play. Critics, as a rule, write their reviews before they have had time to reflect. The morning papers give us the first thoughts of very hasty readers. Their second thoughts, if they have any, are never made known to the public. Hence, much misconception, some of it quite ludicrous in its whimsicality, prevails as to Sarah Grand's latest work. One idiot seems to imagine it is a tract against vivisection because, as a character touch, a page is devoted to describing the vivisection of a dog; while a passing reference to the C. D. Acts has been magnified until people imagine that Sarah Grand has been republishing Mrs. Butler's "Constitution Violated," or Professor Stuart's "New Abolitionists." "The Beth Book" is none of these things, but something very different. It is a singularly powerful and extraordinarily clever story of the Sacrifice of the Daughter, not, like Iphigenia, to the wrath of the offended gods, but to the whims and prejudices, the weakness and selfishness, of her mother. Beth is the typical victim of the abuse of power on the part of parents—an abuse of power which is none the less of an abuse because it is exercised by an appeal to the self-sacrificing instincts of a generous girl. No doubt there is often wretchedness enough caused by the folly of the inexperienced boy or girl who persists in defying the warnings of parents who have no other desire but their children's welfare; but in those cases Nemesis follows so swiftly that there is no need for the novelist to point the moral. On the other hand, mothers anxious to marry their daughters off are often able to ignore the disastrous consequences of their selfish folly. The girl is settled and done for; the mother has no further responsibility; her daughter is off her hands. This would equally be the case if, instead of marrying her to an unworthy suitor, she poisoned her and laid her to rest in the clay. Unfortunately, society, which awards the gallows for the latter method of disposing of daughters, has prescribed no punishment for the more guilty mothers who get rid of their daughters after the fashion of Mrs. Caldwell. So Sarah Grand has set up her pillory for the punishment of the sacrificial parent and the avenging of the sacrificed daughter. And very cleverly she does it—so cleverly that it is solely by the life-like portrayal of the results of the sacrifice that the reader discerns the real drift of the author.

The method of "The Beth Book" is subtle in its simplicity. We are presented with a charming picture of the growth of a girl's soul. Every year adds to its charm; we follow its development from stage to stage, wondering how this vigorous plant of wayward girlhood will blossom and bud into perfect womanhood. And then, just when the beauty and glory of that consummation should arrive, the mother intervenes, and without even the customary beating of the barbaric tomtoms the human sacrifice takes place. The girl goes, at her mother's bidding, almost unresisting to the altar. No ram caught by the horns in the thicket opportunely intervenes to save the modern sister of Isaac from her doom. She perishes, and the bright, beautiful, wayward girl henceforth lives only behind the corpse-mask, a horrible living sacrifice of torture and degradation prolonged day and night year after year. It is like watching the decay of some one whom we loved in life. We sit round the glass coffin, witness the ravages of the worm, reflect upon the beauty that was, and the glowing life that has fled, and curse the blow that sent the loved one to her untimely home. That is what Sarah Grand wishes us to do, and that is what she has made us do whether we like it or not—made us do it, indeed, so heartily that we are apt to forget the moral in our indignation at the author who has inflicted such a doom upon a creature so bright and promising as Beth.

The impression produced by "The Beth Book" on the reader shows how powerfully Sarah Grand has worked out her cruel plan with ruthless skill.

"Oh, Beth is a darling! We have all fallen in love with Beth." Such was the verdict of an enthusiast when he had read the first three hundred pages of Sarah Grand's new novel. But when he got to the end of the portly volume he had cooled down somewhat in his enthusiasm. "Beth the child, Beth the girl, Beth the young lady—nothing can be more delightful than Beth. But Beth the married woman—hum! that is another matter. I heartily wish the book had ended when Beth left school. Then we could each and all have kept her in our memory as a maiden fancy-free, of whose future we could hope as we pleased. But Mrs. Maclure is an anti-climax. Beth ought to have been either better or worse than the wife of Dr. Dan." No doubt, but that "just shows," as the children say, the hideousness of the sacrifice exacted from Beth by her mother. It may even be argued that, on the whole, Beth was fairly fortunate in her experiences. Not all young ladies who have married cads and cowards, and liars and thieves, and debauchees, get out of the slough of matrimony with so few scars. Nevertheless, the reader experiences a feeling of distinct resentment that his Beth—that bright and brilliant faerie creature who is nevertheless so delightfully and even vulgarly human—should have been doomed to such a fate. Pegasus harnessed to the dung-cart was not a more melancholy object than Mrs. Elizabeth Caldwell Maclure when mated to Dr. Dan, who earns his living by acting as examining surgeon under the C. D. Acts, and divides his leisure between telling his young wife foul tales of the *lupanar*, in vivisection dogs in his own house, and making love to his lady patients. Sarah Grand's reply is, of course, that she loathes Beth's fate

\* "The Beth Book." By Sarah Grand. W. Heinemann. Pp. 527. 6s.

WHERE SARAH GRAND IS LIVING IN THE PYRENEES.

worse than any of us. But this is what comes of sacrificing daughters' lives to their mothers' convenience. She but holds the mirror up to Nature and to fact. Facts are so, and so they must be. Our quarrel must be with Destiny, not with her. Possibly.

It is a very difficult task which Sarah Grand has set herself, to keep up her readers' interest in the heroine, when the essence of the story lies in the fact that after her sacrifice she becomes less interesting, if only because she cannot be as nakedly revealed. The real horror of such a marriage can only be hinted at, and in this book the hints are extremely faint. Hence, while we are exceedingly sorry for Mrs. Maclure, and we pity her very much, our heart does not go out to her as it did to Beth. The love which Beth inspired as she grew up before our eyes does not survive the sacrifice. There may be a hope of joyful resurrection for Beth. But it is by no means sure and certain, for the story ends with the husband still alive, and the knight of her dreams riding to her door. The odds are against Beth, I think; for she is a weak creature for all her self-reliant ways and defiant maxims.

"The Beth Book" set jingling in my ears the familiar rhymes of Poe:—

It was many and many a year ago,  
In a Kingdom by the Sea,  
That a maiden there lived whom you may know  
By the name of Annabel Lee.

I was a child, and she was a child. So it may be said of Beth and all of us, in this Kingdom by the Sea; but, ah me!—

The wind came out of the cloud by night  
Chilling and killing my Annabel Lee.

And chilled and killed she is i'faith, sufficiently chilled and killed to allow a preposterous coxcomb of a drivelling critic to sit up with her from one to four o'clock in the morning while they argue together the *pros* and *cons* of his proposal that she, our once delightful Beth, should break the seventh commandment with him! Alas!—

Her neighbour kinsman came  
And bore her away from me,  
To shut her up in the sepulchre,  
In this Kingdom by the Sea.

The shutting up in the sepulchre was a mild and beneficent doom to the married fate of Mrs. Maclure. But it killed Beth all the same, and only her ghost, chilly and wan and somewhat prim, wanders around.

Sarah Grand may regard this as the best compliment to be paid to her book. For she is a born propagandist with her *motif* and her moral ever before her. And the very irritation and sadness that we feel over the fate of Beth attest how well she has driven the barbed spear home. All the same I don't like barbed spears; and whether with Destiny or with Sarah Grand, I have a distinct quarrel which, I venture to think, all the multitudinous readers of "The Beth Book" will share.

"The Beth Book" is hardly at all a sex novel. It touches, no doubt, here and there on the woman question. But its chief defect is just that absence of that element. Sarah Grand is wroth with the couplet:—

Man's love is of his life a part,  
'Tis woman's whole existence.

And so she has given us a woman's whole existence in which love plays next to no part at all, and sex exists only as an instrument of torture—of abasement to the woman,

of brutalisation to the man. I suppose it is the hollow mockery of such a life when it is offered as a substitute for the natural ideal of dual existence. Beth is like an apple-tree in spring-time. We watch the unfolding of the green leaves, then the rosy buds peep out, and soon the whole tree, clothed in blossom, is "Aflame with God." Such is Beth up to page 300 of her Book. But from thence on to the end, when we seek for fruit we find none. The evolution of a kind of neuter bee out of the female sex may be in store for the human race, but it is not a consummation devoutly to be wished. I own to an interested prejudice in favour of the female woman. Let her be as advanced as she pleases, speak on platforms till she brings the house down with applause, write novels, or study the higher mathematics, but unless love plays a greater part in her existence than it does in Beth's, the Tree of Life will yield for her but Dead Sea fruit, the ashes of which are very bitter.

And why was Beth blighted? "The wind that came out of the cloud by night," which chilled and killed the emotional side of her nature, was her miserable marriage. But why did she marry such a satyr dressed in Bond Street? Not in the least because of any attraction she felt towards him, but simply and solely because her mother, a weak and fatuous imbecile of a woman, was determined to marry her off her hands to the first apparently eligible suitor. If Beth had realised her own womanhood—if she had even a remote glimmering of the realities of marriage—she would have seen her mother dead before she would ever have consented to such a hell of a marriage. But Beth, although not without knowledge of the world, never seems to have had the instinctive sense of sex. Sarah Grand traces its first rudimentary elements; we see it glimmering in the

girl's early sweethearting; but when in the ordinary order of nature it ought to have developed into full-blown womanhood, there comes this wind from out of the cloud, chilling and killing poor Beth, and she never revives. The apple-tree bears no apples. We have a thing of authorship and oratory, excellent in its way, no doubt; but—but that is not the way Beth, dear, darling Beth, ought to have ended.

Having thus delivered my soul and angrily anathematized the author or Destiny for such a cruel evolution, let me make what amends I can by praising, as it richly deserves, the genius which can make us feel so angry about the creature of her imagination. "The Beth Book," in many respects, is a great advance upon "The Heavenly Twins." There is no such rollicking humour in it as abounded in the narrative of the antics of Angelica and her brother. But Beth is an immense advance upon Evadne. She is a kind of Angelica and Evadne rolled into one. The episode of Beth and the Artist at the close of the Book naturally recalls the exquisite idyll of the Boy and the Tenor; but it is more natural, and touches a higher note of self-sacrifice. The tendency to sententious moralization, which led some readers to denounce the author of "The Heavenly Twins" as a prig in petticoats, is kept much more in restraint, and many of her observations on men and things are both witty and acute.

But the charm of the book—the wicked, cruel charm of the book—is in the extraordinarily clear and shameless way in which the reader is compelled to see the growth of a girl's soul. It is like looking at the circulation of blood in a frog's foot under the microscope. The analogy is not inapt. For you see the heart beat, and the blood is cold. And there is something of the element of

CAMBO, BASSES PYRENEES: SARAH GRAND'S WINTER RETREAT.

vivisection about it, almost of sacrilege. When Beth was a tiny girl she was made to bathe with nothing on. "The agony of shame she suffered is indescribable." But it wore off, and soon "she took off her things in the nursery and scampered up and down before them all with nothing on, just to show how little she cared." That is just what Beth is doing all day long in "The Beth Book." She is scampering up and down with nothing on, the naked-souled child, until the spectator himself cries out against such frank revealings. It is as Eve before the Fall, without even the fig-leaf. Of course Beth was a mere child, and there was nothing wrong. But it required some fortitude for Sarah Grand to confront the world with such unbosomings of the innermost sanctities of the soul of a high-strung, nervous and imaginative girl.

It is a curious mixture, this soul of Beth's. For with all her tom-boy ways, her desperate daring and self-reliant resourcefulness, she was timid of soul and cowed and crushed by the blows, moral even more than physical, that were rained upon her by her mother. Mrs. Caldwell is a photograph from life—although let us hope the original was not quite so ready with her fists as Beth's mother. Ladies of good birth surely do not thump their daughters, morning, noon and night. Beth was a girl of exquisite sensitiveness and great pugnacity, with a romantic imagination. She was never mothered, caressed or petted. "She never became familiar with the exquisite language of love, and was long in learning that it is not a thing to be ashamed of and concealed." This lack of affection, combined with severity of censure, broke the back of Beth's inner nature. She seemed to be brave, but she wilted from sheer lack of self-confidence. The earlier chapters of the book—the reminiscences of the childhood of Beth—are the best in the book.

It is perhaps the contrast between the extraordinary minuteness with which Beth the girl is microscopically displayed that makes the reader resent the veil that is of necessity cast over Mrs. Maclure. All through her life Beth was "afflicted with an inability to speak at critical times," and dumb she is about the worst side of her married life. Yet she speaks with marvellous explicitness concerning all her hopes and fears and fancies as a girl. Only when she becomes a bride Beth becomes silent, or chatters upon the mere trivialities of her trial. It was inevitable, no doubt. But after being taken so entirely into the intimate confidence of Beth, from the cradle to the altar, there is a sense of change and of reserve after her marriage, which is estranging and somewhat repelling.

On the wider question of the relations between men and women, not of sex, Sarah Grand is a woman's woman all through. There is something feline about the way she always gets a scratch into unfortunate man. As, for instance, in this passage:—

There are those who maintain that a man can do everything better than a woman can do it. This is certainly true of nagging. When a man nags he shows his thoroughness, his continuity, and that love of sport which is the special pride and attribute of his sex.

But Sarah Grand can give a man a long start and beat him easily at this game. Being myself a mere man, I bear these scratchings meekly, but sometimes even the trampled worm will turn. On such occasions the mere man may be pardoned in chuckling silently—with fear and trembling—when he finds Sarah Grand letting out at the superior sex in this fashion. Ideals is

speaking probably from the fullness of Sarah Grand's own experience:—

Women who work for women must resign themselves to martyrdom. Men will often keep and respect them, but other women, especially the workers with methods of their own, will make their lives a burden to them with pin-pricks of criticism and every petty hindrance they can put in their way . . . As to the bulk of women, those who will benefit by our devotion, they bespatter us with mud, stone us, slander us, calumniate us; and even in the very act of taking advantage of the changes we have brought about, ignore us, slight us, push us under and step upon our bodies, to secure the benefits which our endeavours have made it possible to enjoy. I have worked for women for years—those many years—and could I show you my heart, you would find it covered with scars—the scars of the wounds with which they reward me.

Spiteful cats, indeed, are many women to each other! "The Beth Book" is full of material for thought and discussion. The author has plenty of ideas, and can express them smartly. But why she should have made her Artist such a selfish wretch—excepting, of course, for the accident of his sex—it would be difficult to say. Excepting the good Doctor Galbraith, there is hardly a man in the whole book who is worship-worthy. A selfish, licentious crew they are from first to last. The Artist is not licentious; he is only selfish. But most of the others are both. It may be a pleasant delusion of the male, but he obstinately demurs to the doctrine that wings and breeches never go together. In "The Beth Book" all the angels wear petticoats. But it is not well to look a gift horse in the mouth; and "The Beth Book" is a clever book, with a darling girl as its heroine, and a good moral. But if we do not have a sequel with some promise of a resurrection of the real Beth, I shall not easily forgive Sarah Grand.

## II.—"THE SCHOOL FOR SAINTS."\* BY JOHN OLIVER HOBBS.

This is a clever book, and an ambitious book, and a book people are talking about. But, but—there is something lacking. I don't exactly know what. There is adventure in it and epigram, there is one touch of pathos—real human pathos—and there is plenty of proof of ambition. But although I am attracted by the author's audacity, and compelled to admire her cleverness, "The School for Saints" does not stir me to the depths. It may be my fault. I do not set myself up for a judge. My likings or dislikings may be due to prejudice or ignorance, or blank stupidity. I do not put them forward as any reason why any other reader should not like what I dislike or dislike what I like. But the test of a story is whether it pleases, and if it does not please the reviewer, he has at least the right of any other reader to say so.

I wanted to like the book. I am always delighted to see women trying to do great things. I am deeply interested in the political novel. And I am certainly not in the least repelled by the fervent Romanist propaganda which will make "The School for Saints" a prohibited book in all Evangelical households. Mr. Kensit, good man, will see in "The School for Saints" the latest contrivance of the Jesuits for luring the souls of men into the fold of Antichrist. But we are so weary of hearing of the bad side of the religions to which we do not belong, that it is a welcome change to have the good side displayed by virtue of which we know and understand that these religions belong to us. And John Oliver Hobbes is a very fascinating apostle, a petticoated

\* "The School for Saints." By John Oliver Hobbes. Methuen and Co. 6s.

missionary in *partibus infidelium*, whose pretty pleas for the poetical and pictorial side of Romanism it will do even the Evangelical Alliance no harm to hear. The character of Disraeli, immediately after he had taken his great leap in the dark, is an attractive theme for the ambitious novelist, and the anticipated revival of Carlism in Spain gives a fresh air of actuality to Spanish incidents. But still I laid down the book feeling that it had just failed of greatness.

Still it is a clever book, unmeasurably brighter than Mrs. Humphry Ward's ponderous treatises on religion and politics. It reminds the reader of "John Inglesant," and of "Coningsby." The story is interesting, although it is little more than a thread on which characters are strung. Some of the characters are excellently done. Parflete, for instance, is almost perfect. There are chapters that recall scenes in "Vanity Fair." And yet the net effect disappointed me, and I don't like to be disappointed.

In "The School for Saints"—a somewhat fantastic title—there is one passage that is beautiful and exceedingly touching. I have seldom read anything more exquisite, more tender, or more true than the description of the lad Robert's first passion of love for the beautiful lady whom he imagined to be the incarnation of all the virtues and who was the star at a Parisian concert hall. All that is charming to the last degree, and I feel grateful to John Oliver Hobbes for having interpreted so truthfully and so pathetically the splendour and the anguish of the first boyish passion. "Everybody understands calf love," she makes Henriette remark, but if so, very few have ever done as much justice to the theme as she has done. If she understood other love as well as calf love, she might be the greatest among our women novelists.

The story of "The School for Saints" is, in brief, the story of a high-born young man, half French, half English, nurtured on Amadis de Gaul and the Romances of Chivalry, who begins life as the companion of a crippled son of an ambassador, and after various adventures in English politics and in Carlist wars, finds himself in Parliament as a follower of Mr. Disraeli, and the husband of the daughter of the actress who first touched his boyish heart.

The first great feature of the book are the interviews with Mr. Disraeli—very well managed on the whole, but too much sugar and too little devil in the old man to make the portrait lifelike. Perhaps in the next volume—for there is to be a sequel, covering ten years of the hero's life—we may see Dizzy more as he was in public and less as he was in private life.

The second feature is the description of Prim and of Spain just before the Hohenzollern candidature plunged Europe into war. There is something melodramatic about the scene where the heroine and the old Carlist Countess, her hostess, set fire to a mill in which they propose to burn themselves to death, and are rescued by the hero. But all that Carlist revolutionary business is very well done, and some of the descriptions are admirable.

A novelist who succeeds in utilising the real Disraeli and the real Prim as persons in her romance has done enough for glory. But John Oliver Hobbes has done more than this: she has created a Lady FitzReeves, who is a very real person indeed. It is interesting to find ladies of high degree so frankly making love to eligible suitors who do not return their affection.

It was hardly fair of the author to paint all her Protestant and Anglican characters as either muffs, fanatics, hypocrites, or fools. It weakens the value of her book even as a polemical tract. For even the dullest

reader knows that all the virtues and all the talents are not monopolised by the Roman sect, which, however large it may loom in the Latin countries, is only a minor denomination in English-speaking lands. But the chief fault of the book is the character of the heroine. There has been of late—and wisely—a steady growth in the ages of the heroines of romance. Novelists have begun to recognise that women do not really become interesting, except as children, until they are women, and not mere chits in their teens. There is even in some quarters a frank recognition of the fact that a woman of forty is in nine cases out of ten much more interesting than a girl of twenty. But here is John Oliver Hobbes presenting us with an impossible heroine of fifteen, brought up in a convent, and married to a creature who was never her real husband, who acts, thinks, and talks as if she had been a married woman of five and thirty at the least. The remembrance of her age, or rather of her childhood, perpetually recurs to the mind with an irritating sense of anachronism.

Of the character of Robert, that amalgam of Coningsby and John Inglesant, it is possible to speak more favourably. He has a tendency to priggishness, and Disraeli must have been amused by this secondhand edition of himself, although of course in the book they are great friends. The following passage describing his relations to women embodies John Oliver Hobbes's doctrine of permeation and felicitously explains the way in which some men regard many women:—

Where women were concerned Robert Orange had always been deeply impressionable. Three women, the first as a guardian, the second as a witch, and the third as a mistress, were but the forerunner of a long series of feminine influences similar in kind which fermented while they never ruled his life. It was hard indeed for Robert to find a woman, no matter what her age, or history, or temper, in whom he could not discover some form of attraction—some hallowing goodness. But he had never truly loved in the perfect sense any one of his numerous idols, and he was in this respect as a man convinced in matters of doctrine, yet lacking spiritual fervour. Robert would have faced death willingly for several ladies, such was his intellectual admiration for their graces of character and his passionate appreciation of their excellent beauty, but he had never met one who made him eager to love.

The way of the world is John Oliver Hobbes's School for Saints, and the chief teacher in that school is Love. Of Robert's consuming passion for the girl of sixteen, she says, "Whereas other influences made for restlessness, dissatisfaction, a sort of shame and certainly much folly, this on the contrary brought strength and a sense of the heirship to the peace of God." But even when the marvellous schoolmistress had wrought this magic charm, she still only permeates, she does not control.

The book sparkles with sententious sayings, some of which show a slight straining after effect. For instance, she says of Flaubert: "He has the morals of a sick devil, and the philosophy of a retired dancing-master." Another characteristic saying is this: "When most people speak of the soul they mean the five senses. The real doctrine of immortality is quite forgotten nowadays."

I finish as I began by saying that "The School for Saints" is a clever book which only slightly comes short of being a great book, but there is something lacking. Just that indefinable something which you cannot explain, but which prevents you falling in love with Brigit, Henriette, with all her paint and her lovers, was more real, if only because of the love with which she inspired the romantic boy. Still we owe John Oliver Hobbes a debt of gratitude for the first fifty pages of the book.

### III.—“DEEDS THAT WON THE EMPIRE.”

“**VEDETTE**,” the author of this, one of the few Australian books which have made the tour of the world, is the *nom de plume* of the Rev. W. H. Fitchett, M.A., the Editor of the *Review of Reviews* for Australasia.

#### WHAT WE OWE TO THE KAISER.

But the person who is really responsible for the production of this useful and delightful volume is the Emperor William II. The Kaiser and not the Editor was the *causa causans* of “Deeds that Won the Empire.” It was the German Emperor’s telegram to President Kruger that roused “Vedette” to a sense of the need that there existed for popular education on the subject of the Empire. While the English-speaking world was still vibrating with the echoes of that German challenge, Mr. Fitchett saw that the moment had come when the Australian public was ready to listen with eagerness to the story of the way in which the Empire, then so rudely threatened, had been valiantly built up. Until then the Australian had troubled his head but little about wars past, present, or to come. Safe in his island continent from war’s alarms, a whole generation had grown up without any practical experience of the grim realities of war. A year or two ago a school inspector wrote me that Australian children were reared without any knowledge of fairies, or dragons, or giants, or any of the romance of the Old World nursery. “The Books for the Bairns,” which have circulated by the thousand at the Antipodes, have, I hope, done something to abate that terrible state of spiritual destitution in young Australia. But until the Kaiser telegram, the Australian adult was almost indifferent to the story of the wars in which we won our Empire.

#### HOW THE BOOK FIRST CAME OUT.

Then Mr. Fitchett took up his pen, and began to tell the story of what famous deeds were done by our ancestors on the great fields where heroes met. He disguised his identity at first behind the pseudonym “Vedette,” over which he published his contributions to the columns of the *Melbourne Argus*. Their success was immediate and unprecedented. Every one read the articles as they appeared, and clamoured for more. When they were republished, edition after edition went off rapidly, and the fame of the series made its way over sea to the old Homeland. The *Times* and the *Spectator* vied with each other in their praises, and correspondence began to pour in from all parts, inquiring where the book could be procured. It has now been brought out in a handsome six-shilling illustrated volume by Messrs. Smith, Elder and Co., and will no doubt be one of the most popular gift-books in patriotic households this Christmas.

#### THE ENGLISH EDITION.

“Deeds that Won the Empire” are not quite so unfamiliar to the public at home as they were to the Australians. But there is still an immense amount of ignorance even among the reading public as to the achievements which rendered possible the building of the Empire. The story of Waterloo and the thin red line is tolerably familiar to every one; but the other battles, with the exception of some of those in the Civil War and those which resulted in the famous victories of Marlborough, are little more than names to most of us. Hence Mr. Fitchett’s book will have an ample field of usefulness in the old home of the race. Its author has brilliantly won his spurs in the Colonies. I venture to predict for him a not less distinguished success in the United Kingdom.

#### MR. FITCHETT’S SUCCESS.

In “Deeds that Won the Empire,” Mr. Fitchett has succeeded beyond expectation in striking the happy mean between spread-engling fervour and modest self-restraint. He tells the story of what our soldiers did and dared with patriotic pride, but without any “gas.” His style is crisp, virile, and clear. It is marvellous that a Methodist minister, who has never been on a field of battle, should be able to make the old fights stand out so clearly before the eye of the reader. Clearly, if there be any truth in the theory of reincarnation, the Ego of Mr. Fitchett must, in some previous stage of existence, have seen some service on the tented field.

#### NOT A JINGO BOOK.

Some of the notices which appeared in the press in Australia, although written in a strain of sincere eulogy,

must have made Mr. Fitchett wince. One, for instance, declared that before the “Deeds that Won the Empire” series appeared, no one in Australia had any pride in the Empire, but that since “Vedette’s” papers had been greedily devoured there was nowhere in the world so enthusiastic a set of Jingoos as were to be found in Australia. It was evident that the worthy critic did not know the genesis of the word Jingo. For Jingoism is the caricatured exaggeration of patriotism, invented by the devil for the purpose of bringing one of the most sacred of all emotions into contempt. Jingoos are the blatant braggarts of an Empire, for the maintenance of which they refuse to provide, and the responsibilities of which they ignore. True patriotism is the very antithesis of Jingoism, a foul weed, watered with gin and whisky, which sprang up in the music-halls under Beaconsfield, and the extirpation of which is an object dear to the heart of every honest citizen. But “Deeds that Won the Empire” fosters no Jingoism. It reminds us of deeds, not of boasts, and it recalls the fact that the Empire was not won by music-hall braggadocio, but by

REV. W. H. FITCHETT, M.A.

the readiness of Britons to spend their lives without shrinking in the cause of their country. To purify the soul by these heroic memories of fidelity unto death is not Jingoism. It elevates and idealises the average man to be reminded of his kinship with heroes:—

How nobler shall the sun  
Flame in thy sky, how braver breathe thy air  
That thou bredest children who for thee could dare  
And die as these have done.

We owe a debt indeed to the German Emperor for eliciting this reminder. "Deeds that won the Empire" will help to preserve it intact, a heritage for future generations. So poor Dr. Jameson's raid, after all, may have helped, rather than have hindered, the Imperial interests which he loved not wisely but too well.

#### A BEAD-ROLL OF GREAT "DEEDS."

The "Deeds that Won the Empire" described in this volume are—

The Fight off Cape St. Vincent.

The Heights of Abraham.

The Great Lord Hawke.

The Night Attack on Badajoz.

The Fire-ships in the Basque Roads.

The Man who spoiled Napoleon's "Destiny."

Great Sea-duels.

The Blood-stained Hill of Busaco.

Of Nelson and the Nile.

The Fusileers at Albuera.

The *Shannon* and the *Chesapeake*.

The Great Breach of Ciudad Rodrigo.

How the *Hermione* was Recaptured.

French and English in the Passes.

Famous Cutting-out Expeditions.

Mountain Combats.

The Bloodiest Fight in the Peninsula.

The Battle of the Baltic.  
King-Making Waterloo.

The Night Attack off  
Cadiz.  
Trafalgar.

A tolerably comprehensive sheaf of gallant deeds well selected and well described.

#### THE STORY OF THE "SHANNON" AND THE "CHESAPEAKE."

The volume is illustrated by eleven plans and sixteen portraits. Of the latter I reproduce here the portrait of

Sir Philip Bowes Vere Broke, the Commander of the *Shannon*, when she fought her great combat with the *Chesapeake*. Mr. Fitchett in telling the story of this, the only "Deed" he describes in which English-speaking men fought against each other, takes occasion to put in a timely word in favour of the Anglo-American alliance. He says:—

It was a great fight, the most memorable and dramatic sea

duel in naval history. The combatants were men of the same stock, and fought with equal bravery. Both nations, in fact, may be proud of a fight so frank, so fair, so gallant. The world, we may hope, will never witness another *Shannon* engaged in the fierce wrestle of battle with another *Chesapeake*, for the Union Jack and the Stars and Stripes are knitted together by a bond woven of common blood and speech and political ideals that grows stronger every year.

The fight lasted exactly thirteen minutes. In that time 252 men were killed or wounded. The broadside action lasted six minutes, in which the *Shannon* was struck with 158 shot and the *Chesapeake* with 362. The boarding party which captured the *Chesapeake* consisted of 50 men. The *Chesapeake* had at the time 270 wounded men on board.

#### CAPTAIN BROKE AND HIS CHALLENGE.

Of Broke, the hero of this romantic sea-duel, Mr. Fitchett says:—

His fame will live as long as the British flag flies, yet a more sober and prosaic figure can hardly be imagined. He was not, like Nelson, a quarter-deck Napoleon; he had no gleam of Dundonald's matchless *ruste de guerre*. He was

as deeply religious as Havelock or one of Cromwell's major-generals; he had the frugality of a Scotchman, and the heavy-footed common-sense of a Hollander. He was as nautical as a web-footed bird, and had no more "nerves" than a fish.

Yet he was as chivalrous as the Afridis who recently challenged our men to fight on equal terms. The *Chesapeake* was larger than the *Shannon*, but this was

SIR PHILIP BOWES VERE BROKE.

the way in which Broke challenged her commander to a combat:—

"As the *Chesapeake*," he wrote to Laurence, its captain, "appears now ready for sea, I request that you will do me the favour to meet the *Shannon* with her, ship to ship." He proceeds to explain the exact armament of the *Shannon*, the number of her crew, the interesting circumstance that he is short of provisions and water, and that he has sent away his consort so that the terms of the duel may be fair. "If you will favour me," he says, "with any plan of signals or telegraph, I will warn you should any of my friends be too nigh, while you are in sight, until I can detach them out of the way. Or," he suggests coaxingly, "I would sail under a flag of truce to any place you think safest from our cruisers, hauling it down when fair, to begin hostilities. . . . Choose your terms," he concludes, "but let us meet." Having sent in this amazing letter, this middle-aged, unromantic, but hard-fighting captain climbs at daybreak to his own maintop, and sits there till half-past eleven watching the challenged ship, to see if her foretop-sail is unloosed and she is coming out to fight.

#### MR. FITCHETT'S STYLE.

The book is one which makes the breath come quick and the throat to bulge and the eyes to grow moist. It is a splendid book, a book not unworthy its splendid theme. I have worked with Mr. Fitchett for years, and although I had always known him to be a capital writer, an able editor, and a thoroughly good all-round man, it was not until I read these sketches that I realised that the man was a genius. It is veritable genius that shines in these straightforward stirring stories, genius aflame with inspiration and aglow with a great enthusiasm. The opening page in which he begins the story of the fight off Cape St. Vincent is typical of the whole book:—

On the night of February 13th, 1797, an English fleet of fifteen ships of the line, in close order and in readiness for instant battle, was under easy sail off Cape St. Vincent. It was a moonless night, black with haze, and the great ships moved in silence like gigantic spectres over the sea. Every now and again there came floating from the south-east the dull sound of a far-off gun.

There in a few pregnant lines we have facts, dates, colour and sound—a living picture instinct with imagination. And so it is all through. Mr. Fitchett's pen-pictures are equally vivid when they portray a hero, or when he is describing the crisis of a great battle.

#### A PORTRAIT OF WOLFE.

Here, for instance, is his description of Wolfe, the hero of Quebec:—

His forehead and chin receded; his nose, tip-tilted heavenwards, formed with his other features the point of an obtuse triangle. His hair was fiery red, his shoulders narrow, his legs a pair of attenuated spindle-shanks; he was a chronic invalid. But between his fiery poll and his plebeian and upturned nose, flashed a pair of eyes—keen, piercing, and steady—worthy of Cesar or of Napoleon. In warlike genius he was on land as Nelson was on sea, chivalrous, fiery, intense. A "magnetic" man, with a strange gift of impressing himself on the imagination of his soldiers, and of so penetrating the whole force he commanded with his own spirit that in his hands it became a terrible and almost resistless instrument of war.

But the passages that thrill and glow and burn until we realise how much power and magic lies in the writer's pen, are those in which he enables us to hear the loud thunder of the guns, to see the charging squadron, or to watch with awe the indomitable valour of the beleaguered host.

#### WHAT THIS BOOK WILL ACCOMPLISH.

The good this book will do when it is taken into the lifeblood of the new generation who can calculate? It

should be on the shelves of every school library in the Empire. As Mr. Fitchett says of Waterloo, so we may say of all the narratives in his book:—

A plain tale of British endurance and valour is all that is offered here; and what a head of wood and heart of stone—any man of Anglo-Saxon race must have who can read such a tale without a thrill of generous emotion!

Joanna Baillie, in one of the felicitous quotations prefixed to each of the chapters, expressed the hope with which we lay down this admirable book:—

Oh, who shall lightly say that Fame  
Is nothing but an empty name!  
Whilst in that sound there is a charm  
The nerves to brace, the heart to warm.  
As, thinking of the mighty dead,  
The young from slothful couch will start,  
And vow with lifted hands outspread,  
Like them to act a noble part?

We are glad to hear that a second series is to follow. Mr. Fitchett is now publishing a third series in the *Australasian Review of Reviews* under the title of "Fights for the Flag."

#### Ballads of the Fleet.

MR. RENNELL RODD'S "Ballads of the Fleet" (Arnold, 6s.) is a partial realisation of his projected series of ballads on the great Elizabethan mariners. The present volume contains five ballads, besides some miscellaneous pieces. Many of the ballads are excellent, although some of them are rather too long. In the "Children of the Sea" Mr. Rodd tells of the events and movements which worked together to produce such men as Drake and Hawkins. His ballad of the fight in the haven of San Juan de Luci is one of his best. It is vigorous and full of feeling. He tells of how the Spaniard broke faith, and of the fight that followed, in which the little English ship, the *Jesus*, was sunk "in the midst of a ring of wrecks":—

And Captain John was on all men's lips, and his loss was  
England's gain,  
For his single ship had shattered the myth of the might of  
Spain.

The ballad "The Reprisal" tells of Drake's harrying of Spain in revenge for her breach of faith. "The World Encompassed" is the story of Drake's voyage round the world. It is rather too long, but there are many good passages in it. Mr. Rodd says of Drake in one of his ballads:—

And wherever the wide seas open he will brook no bar nor stay,  
And there's never a wave but English sails shall claim for  
their free highway.

Till the sceptre shall pass of ocean, and the whole of the world  
shall know

That an English life is a sacred thing wherever a keel can go.

In many lines he writes worthily of the men—

Who first dared dream, and dreaming dared—while all was  
yet to do,

To roll the bounds of Empire back beyond the bounds they  
knew;

To bind the winds their bondsmen, and hold the tide their slave,  
And claim for island England dominion of the wave.

THE *Neue Deutsche Rundschau* publishes Dr. Felix Weingartner's address on the Symphony since Beethoven's day in the November number.

A CONCISE and summary account of Queensland, with maps and illustrations, is given by J. P. Thomson, president of the Royal Geographical Society of Australasia, in the *Scottish Geographical Magazine* for November.

# SOME NOTABLE BOOKS OF THE MONTH.

## MISS CLOUGH AND NEWNHAM COLLEGE.

MISS B. A. CLOUGH's biography of her aunt, Miss Anne Jemima Clough, is something more than an account of the life and work of one of the pioneers in the movement for the higher education of women. So closely was Miss Clough connected with this movement, that in order to understand her life-work aright it is necessary to describe the rise and growth of women's education in England. This her niece has done. Her book can be divided into three parts. The first tells of Miss Clough's early life, the second of the education movement, and the third of Miss Clough's work at Cambridge.

### FUSSY, KIND AND SYMPATHETIC.

Miss Clough's early and middle life was one of preparation. She did not find her real vocation until she was fifty. It was only in the last twenty years of her life that she had an opportunity of exercising her peculiar power. When in 1871 Professor Sidgwick asked her to take charge of the house in Regent Street, Cambridge, which afterwards developed into Newnham College, her life became part of the movement with which her name will always be connected. In the chapter on "Life and Work at Newnham College," her niece gives a very charming and vivid picture of the Principal of Newnham. Her success was all the more remarkable for she did not possess the qualities that are likely to attract girls. She was rather confused, inclined to be fussy and nervous, and to interfere too much with the liberty of the students. Yet, when they really learned to know her, she exercised a wonderful power over them. One student writing of her impressions of Miss Clough, sums up her character in the following sentence: "I often think her sayings were like the works of the early painters, all the more effective because the artist has not yet subdued his medium; sheer force of character and feeling had risen over the difficulties." Her spirit never quite mastered her body, and therefore the first impression made on any one who met her was very frequently false. To many of the students she appeared at first to be an old lady overcareful and troubled about many things, and feeling their burden too great. But this feeling did not last. Her kindness was so apparent and real that it won all hearts. She was a mother to the students, and took a deep interest in all their affairs. They felt they could come to her and tell her all the little events and interests of the day, and were sure to find a sympathetic listener and a ready counsellor. She had an almost inexhaustible interest in human beings, but she possessed the power of regarding each human being as an individual and not merely as a member of a class or college. Her niece says:—

She was genuinely and keenly interested in the students' lives and realised their circumstances and feelings vividly, and therefore her active mind was always devising ways in which they could be helped and made happier; and she showed to innumerable people the sort of tender understanding kindness which only a few people can show to more than a few.

### THE PRINCIPLE OF THE HALF-LOAF.

Miss Clough possessed the gift of mental detachment to a great degree. She was always able to see both sides of a question, and while having no doubt as to which side was the right one, she could sympathise with those whom she believed to be mistaken. The following anecdote so well illustrates Miss Clough's method of working for a movement in which she might be keenly interested, that it is worth while quoting:—

Some students were once discussing the half-loaf theory of

compromise, and Miss Clough joined the party. One of them repudiated with scorn taking the half-loaf when she had a right to the whole, and persisted that it was better to starve a little longer till the whole loaf was given. Miss Clough gently pointed out that the student was looking at the question only from her own standpoint, and that she was forgetting her opponents who possessed the loaf. If they saw far enough to be willing to give half a loaf, it was good for them to be allowed to give it, and it was harmful to them to prevent it. Further, if they were encouraged to act up to their present light, this would hasten the day when they could see far enough to give the whole loaf. She added quaintly, with a quiet smile, that it was usually far easier to see that one deserves a whole loaf than that it is one's duty to give it away. It is by acting on this principle of accepting the half-loaf which the enemy is willing to give that the higher education of women has made such rapid progress.

### "I WOULD WORK FOR MY COUNTRY."

Even Miss Clough's failings helped Newnham through the critical period when it was on its trial, for they tended to allay the fears of those who viewed, with dismay, the advent of women in a university so long monopolised by men. One of the chief causes of Miss Clough's success was her ability to make all who came in contact with her feel that their personality was the essential thing, and experience an accidental advantage of the old which was to be placed at the disposal of the young. But the real secret of her power was her possession of the capacity of creating an atmosphere in which the best that there was in each person could develop freely. The spirit which pervaded the life of this pioneer in the education movement is well illustrated by the following passages quoted by her niece. The first was written when she was twenty-one, and the second spoken in her last address to the students. In 1841, on the threshold of life, she wrote:—

I care not for honour or praise if I could really do something to benefit my fellow creatures. If I were a man I would not work for riches, or to leave a wealthy family behind me; I would work for my country and make its people my heirs.

At the end of her long life she said:—

Take the little pleasures of life, watch the sunsets and the clouds, the shadows in the streets and the misty light over our great cities. These bring joy by the way and thankfulness to our Heavenly Father.

## An Encyclopædia of Social Reform.

ONE of the most useful encyclopædias which have been issued for many years is the "Encyclopædia of Social Reform," edited by W. D. P. Bliss, and published by Messrs. Funk and Wagnalls. It is a portly volume of 1,440 pages, and is sold at the very cheap price of 30s. The Encyclopædia is an invaluable book of reference for the social reformer and for all who are interested in social questions. Within its covers is to be found information on all questions which are in any way of social interest. Great pains have been taken in its compilation, and every article has been written or revised by some specialist. The biographical descriptions have been especially carefully written, and the book appears to be both accurate and reliable so far as it is possible to make it so. The Encyclopædia is what it professes to be, a work prepared by specialists for those who are not specialists. One of the most useful features is the list of reference books appended to all the articles upon the more important subjects. The work is the first of the kind, and the editor deserves warm praise for the way in which it has been carried out.

**Ernest Renan.**

MADAME JAMES DARMESTETER has written a charming life of Ernest Renan (Methuen, 6s.). There is a delicate and appreciative touch about her sketch of the great Frenchman which is delightful. Whether she describes his early doubts and struggles or his later success and triumph, it is with equal sympathy and feeling. The young Breton reared in the midst of Celtic romance, the student struggling with his doubts, the gentle man longing for rest, but always drawn by his keen sympathy to take a deep interest in the affairs of this world, all live again in her pages. Her picture of Renan's guardian angel, his sister Henriette, is almost ideal. Her guiding influence and loving care of her young brother is a story of rare devotion and affection, and Madame Darmesteter describes it with tender appreciation. She traces Renan's continual search after the ideal which led him to embrace and discard in turn both Christianity and Socialism. "Imagine a chameleon, progressing unswervingly in one direction, but sometimes blue, sometimes rose, sometimes green in the course of his invariable trajet. Such is Renan." Madame Darmesteter draws a charming picture of the domestic life of the Renans, and gives sufficient account of Renan's public work and writings to enable the casual reader to understand something of the influence he exercised upon his generation. Renan was filled with despair over the horrors of the Franco-German war and the Commune which followed. He was broken-hearted and would gladly have died. To Madame Darmesteter, it seems that had the great Frenchman at that time become a victim to the strife of the ideal with base reality, it then would have been a fitting end to such a life. "In some Paris street full of March sunshine, riddled with shot and shell, behold him mounted on the great barricade of beams and flagstones. With the light of the sacred Mount on his face, he delivers undismayed the message of a free spirit. But hark! a brief explosion, a burst of flame and smoke! Struck at once in heart and head, slain by the splinter of a Prussian obus and by a stone thrown by the people of Paris, the prophet falls. So might have ended Ernest Renan."

**Santa Teresa.**

SANTA TERESA has long been recognised as one of the saints of the Church Universal. Her life and character have influenced and fascinated men and women of the most diverse beliefs and no-beliefs. A saint who can command the enthusiastic admiration of people so different as Father Coleridge, Mrs. Cunningham Graham and M. Huysman, deserves to be widely known and reverently studied. Her latest admirer is the Rev. Dr. Alexander Whyte, of Edinburgh. He recently studied the life of Saint Teresa, and was so much impressed with its beauty and strength that he felt compelled to make the saint better known to the people of Edinburgh. He has therefore published a little volume of eighty-one pages ("Santa Teresa," Oliphant, Anderson and Ferrier), in which he gives an enthusiastic appreciation of the Spanish saint, which serves as an introduction to selected passages from her writings. Dr. Whyte is filled with regret that such a life should have been scoffed at and neglected so long, when it contained so much that is helpful to people of all lands. He is enthusiastic in his

praise of Teresa's "Book of the Foundations." He says:—"This is literature, this is art without the art, this is the literary finish without the labour, and all laid out to the finest of all uses, to tell of the work of God, and tell of the enterprises, providences, of defeats, successes, recompenses connected with it." Of Teresa's "Seven Meditations on the Lord's Prayer," Dr. Whyte writes:—"I have had occasion to read all the best expositions of the Lord's Prayer in our language, and I am bound to say that for originality and striking suggestiveness Teresa's Seven Meditations stand alone."

**The Growth of the British Army.**

At a time when the army is occupying public attention to so large an extent, Lieutenant-Colonel C. Cooper King's story of the British Army is welcome (Methuen, 7s. 6d.). It is an account of the army's growth and development from the earliest times to the present day. From being the army of the people under the Saxons it became the army of the nobles under the rule of the Normans and their successors. But with the death of Warwick, the feudal period came to an end. He was the last soldier in English history who by his own personality could command the obedience of a feudal army. The nobles fought as much for their order as for the king; all succeeding soldiers fought more for the cause than for either. Another advance was the outcome of the great Civil War. Men learned to fight and die for an idea, and to connect this idea with the interests of their country. The personal influence of the leader decreased as the cause which he represented became clearer to men's minds. We owe to the revolt of the American colonies not only the revolution in our ideas of colonial expansion, but also the change which began to be noticeable in the army about that time. "It is not too much to say that the campaigns there had turned men's minds in the direction of the fighting of the future, the value of independent fire action and—a century before it was seriously organised—the value of mounted infantry." English military authorities have never been remarkable for originality, and the army has been mainly a copyist of other people's methods. Whichever nation happened to be the war-lord of Europe for the time being was regarded as the model to be followed, even down to the minutiae of its drill and equipment. "If after the Crimea or the Italian campaign of 1859 we adopted kepi-shaped hats, baggy 'peg-top' trousers, and 'booted overalls' for riding, so when Germany became successful we copied her 'Blucher' boots, flat-topped forage caps, infantry helmet and rank distinctions!" Lieut.-Colonel Cooper King describes the British Army in various parts of the world, and chronicles its achievements in India, the Far East, and North, West and South Africa. The English people have always regarded the army with a jealous eye. It has invariably been reduced to very small proportions whenever the immediate danger has passed. Nevertheless the standing army has steadily increased in numbers. In 200 years the numbers have risen from 3,000 men to nearly 667,000, not including local Colonial troops and the Indian Army. At present our army is made up as follows:—Regular Army, 216,688 (of which 110,000 are on service abroad); Army Reserve, 80,000; Militia Reserve, 30,000; Militia, 75,000; Volunteers, 235,000; Yeomanry, 9,500. No new regiments have been added to the army since 1870, but the numbers have increased by 29,000 men.

**Mr. Crawford's Latest Tale.**

MR. MARION CRAWFORD'S latest novel is a tale of Sicilian life. The mafia of Southern Italy and the brigandage which still flourishes in the Island of Sicily, form the background of "Corleone" (Macmillan, 2 vols., 12s.). The Corleone family, whose adventures Mr. Crawford relates, have the reputation of being the worst blood in Italy. The three brothers, Tebaldo, Francesca, and Ferdinando, certainly live up to their reputation. The eldest brother, at any rate, is about as fine a specimen of a scoundrel as any one could wish to encounter. The brothers belong to a poor branch of an old and rich family. They are reared from their childhood in the heart of Sicily, and imbibe the spirit of the mafia which seems to haunt the very air of the island. More than suspected of being the accomplices of the brigands, one of the brothers is shot in an attempt to kill two Roman noblemen who have bought the old homestead. Tebaldo murders his own brother at the foot of the altar of a village church in a fit of jealousy, and by his ready resource manages to lay the blame of the murder upon the priest to whom he has confessed the crime. This piece of vengeance is all the more complete as the priest belongs to the hated family which has taken possession of the old home. In order to fill the cup of his iniquity, Tebaldo undertakes to lead the band of brigands down to his old home in order that the intruders may be captured and held to ransom, and then betrays the outlaws to the authorities. The plot of the story is complicated by the love story of Vittoria, the supposed sister of the Corleone, and Orsino Saracinesca, a member of one of the best families in Rome, and the hated enemy of the Corleone.

**The Rise of Democracy.**

THE Jubilee Year has afforded an admirable opportunity for summing up the lessons of the nineteenth century. The great need for books giving any general idea of the events and movements of our own times seems likely to be met to a large extent. The Victorian Era Series promises to be one of the most useful and interesting attempts to supply this want. This series is designed to describe the great movements of the last sixty years, and the life-work of men who have left an impress on the age. The volumes are to be issued monthly by Messrs. Blackie and Son under the general editorship of Mr. J. Holland Rose, M.A. The first book of the series is devoted to an account of the Rise of Democracy in England (2s. 6d.) by the editor. Mr. Rose describes briefly but clearly how it was that King Demos came to take possession of his inheritance. Mr. Rose has a good grasp of his subject, and what is of even more importance he is able to carry his readers with him. The sketch is an interesting study of English character. Whatever our faults may be—and at the present time some of our neighbours are taking particular pains to tell us of them—Englishmen as a mass are very practical. They have always preferred to capture existing institutions and use them for the working out of their own regeneration rather than to destroy them should they lie in the path of progress. Mr. Rose rightly enters a protest against the frequent use of the word Democracy as if it were equivalent to the wage-earning classes instead of the people as a whole. He traces the Radical movement through its various phases up to the present day, and concludes with a thoughtful chapter upon Democracy

and Foreign Policy. He is fully alive to the disadvantages under which a democracy labours in the conduct of its foreign affairs. The same methods are not equally good when applied both to Home and Foreign Policy. "If the United Kingdom is to recover its rightful influence in the world it will be not merely by vast armaments, but by the use of different methods in foreign affairs from those which necessarily prevail in our domestic concerns."

**A Handbook of Victorian Literature.**

"VICTORIAN Literature: Sixty Years of Books and Bookmen," by Clement Shorter (John Bowden, 2s. 6d.), is a useful little handbook. Mr. Shorter surveys the whole of the Victorian era, giving particulars about all the writers of distinction who have lived during the last sixty years. The book, however, is something more than a volume of biographical data. Mr. Shorter has written it in the form of a consecutive narrative which makes it both pleasant and easy reading, besides being a handy reference book. A mild note of criticism is noticeable throughout, although Mr. Shorter disclaims any intention of being critical. The authors are grouped under general headings, and in each case a list of the more important works, together with a few biographical details, are given. Thomas Carlyle is the only author who is given extended notice. Mr. Shorter devotes sixteen pages to a summary of his work, and considers him to be the "greatest figure in our modern literature." "Carlyle's enormous personality," he says; and "his capacity for influencing others for good or ill have made him the greatest moral and intellectual force of his age . . . Though every line which he has written should cease to be read, he will be remembered as the greatest of literary figures in an age of great men of letters." Mr. Shorter has succeeded admirably in the very difficult task of making a biographical dictionary both readable and interesting.

**Railway Nationalisation.**

MR. CLEMENT EDWARDS some time ago made a careful and exhaustive study of the question of railway nationalisation. He has embodied the result of his inquiries in a book in Messrs. Methuen's Social Questions of To-day Series (2s. 6d.). Mr. Edwards is a thorough believer in the advantages of State-ownership of the railways. By his carefully compiled facts and figures he makes out a very good case for his contention that State-ownership is more economical and beneficial to the people at large than private ownership. In the first twelve chapters Mr. Edwards gives the case against the present system of working our railways. He maintains that the railway companies have, for all practical purposes, become a monopoly. The State is powerless to control the well organised, alert, and wealthy organisations of the companies. He complains that manifold ownership is wasteful, and that competition has failed to reduce fares and rates. He sets forth the grievances of the traders, agriculturists, passengers, and workmen in detail. In the second part of his book Mr. Edwards gives an account of the working of State-ownership on the Continent and in the Colonies, and replies to the usual objections raised by supporters of the present system. It is a useful little book, packed full of facts and figures, which should be in every one's hands when the question of railway ownership comes into the sphere of practical politics.

## GIFT-BOOKS FOR THE BAIRNS.

## THE BOOK OF KRAB.

CHRISTMAS comes but once a year, and when it comes it brings a welcome gift in the shape of another volume by his Honour, Judge Edward Abbott Parry. Judge Parry began with his "Ka'awampus;" last year we had "Butter-Scotia," and this year we have the first "Book of Krab" (David Nutt, 3s. 6d.). Krab was introduced into the world in "Butter-Scotia," and all those who made his acquaintance then will welcome the new volume. There is occasionally an attempt to force a pun, but, as a whole, the stories are capital, both in design and execution, while for sheer nonsense in verse nothing can beat that of Judge Parry.

## FAIRY BOOKS OLD AND NEW.

The Fairy Books of the season are very attractive. First and foremost comes, of course, Andrew Lang's Pink Fairy Book. Mr. Lang has now brought out the Fairy Books in blue, red, green, and yellow. The Pink Story Book is worthy of its predecessors, and is fully worthy to take its place in the not yet christened "Rainbow Library," of which it forms a part.

Then we have "The Diamond Fairy Book," published by Hutchinson at 6s., containing selections from German, Swedish, French, and Persian stories. It is a handsome volume, copiously illustrated, and most of the fairy stories are new.

The largest fairy book of the season is a translation of Asbjørnsen's Fairy Tales from the Far North. Mr. H. L. Brackstad is the translator. The illustrations are novel, and more vigorous possibly than beautiful, but the artists, who are Norwegians, have succeeded in depicting trolls, and other fanciful creatures in a fashion calculated to excite the youthful imagination. The volume contains 300 large pages, well printed, on good paper. For a good, showy, original gift-book there are few to beat "Fairy Tales from the Far North," published by David Nutt, 6s.

Among the other fairy books must be mentioned "A New Book of the Fairies," by Beatrice Harraden, published by Griffith, Farran, Browne, and Co., at 3s. 6d., which is a revised text of a fairy book she published six years ago. Beatrice Harraden tells us all about the fairies of bread, soot, fire, music, flowers, and pictures. Since this book was first published she has practically gained a new public by her novels, and all those who have read "Ships that Pass in the Night" will do well to obtain this fairy book for their children.

Of illustrated gift-books there is no end, but I must spare a word to praise Helen Atteridge's "Butterfly Ballads," published by John Milne at 3s. 6d. It is illustrated by Gordon Browne, Louis Wain, and others. The ballads are of all sorts, with plenty of nonsense rhymes, so dear to those who are always afraid of improving literature.

Among the new children's books which deserve favourable mention is the first of the Dumpty books issued by Grant Richards, written by E. V. Lucas, whose volume of verses for children has had such a success.

"The Dumpies," by Frank Verbeck and Albert B. Paine (Kegan Paul, 3s. 6d.), is a pictorial tale of a queer little people dwelling in the land of the Low Mountains, called Dumpies. No one knows from whence they came; but whatever abides with the Dumpies "grows shorter and shorter each year." Such is the legend. This quaint little book tells of the arrival of the bear, the 'possum, and the rabbit, and other animals, and the curious adventures that befell them.

## SOME BOYS' BOOKS.

"Ab: a Tale of the Stone Age," by Stanley Waterlow, is a delightful tale of the days when the woolly rhinoceros and the sabre-toothed tiger roamed at large over what now is Britain. Ab was a boy born in a cave, who in his turn became a caveman. Mr. Waterlow writes well, and gives us in a brief compass a graphic picture of life in the bygone ages, when the rough stone implement was giving way to the smooth stone weapon. Although Ab slays his friend in jealous rage, he is none the less a hero and a benefactor. For he invents the bow, and slays the great cave-tiger. "Ab" is a story that makes the scientific discoveries of the Danish kitchen middens comprehensible by any one. Mr. Wells' tales of the Stone Age follow very much the same lines as "Ab."

"The Golden Galleon," by Robert Leighton (crown 8vo., 352 pp., Blackie and Son, 5s.). The chief interest of this story lies in the glimpses it gives of such men as Drake, Raleigh, and Grenville, and of Elizabethan life. The hero is on the *Revenge* during her famous fight against the Spanish fleet, which is excellently described. The book, although not perhaps so good as some of the author's former works, is nevertheless well worth reading.

With Crockett and Bowie, by Kirk Munroe (Blackie and Son, 5s.). A stirring tale, based on fact, of the Texan insurrection and fight for independence. Rex Harden, a Texan lad, is the hero, but his magnificent stallion, Tawny, may be considered to share that honour with him, being possessed of a larger share of intelligence than is granted to many men. The graphic description of the Mexican army, recruited from convicts and the riff-raff of the population, is in striking contrast to that of the determined body of Americans who, more fortunate than "Dr. Jim," finally succeed in "jumping" Texas. It is a good story and full of incident, holding the interest of the reader from beginning to end.

"For the Flag," by Jules Verne, translated by Mrs. Hoey. (Sampson Low). This is a tale of a French inventor Thomas Roch, who constructed a terrible engine of war called the *Roch Fulgurator*. Roch refuses to part with his invention except for a fabulous sum, which the Governments will not pay. Roch goes mad and at last finds himself, jealously guarded, in an American asylum. His abduction therefrom in a submarine boat, together with his keeper, is full of incident. The abductor styles himself Count d'Artigas, but is in reality the leader of a gang of pirates, having their headquarters in a hollow island called Blackcup, which can only be entered by a submarine passage. The final scene in which Roch refuses to fire on the tricolour, preferring to blow up both himself and the pirates, brings the tale to a melodramatic end.

The Lords of the World.—This story of the "Fall of Carthage and Corinth" is the Rev. Alfred Church's latest contribution to our Boys' Library. The scene is laid in the year 146 B.C. "The Lords of the World," of course, are the Romans. The hero of the tale is a young Greek, Cleanor, the son of Lysis, a boy whose parents and sister are sacrificed to Roman vengeance at the very beginning of the story. He throws in his lot with the Carthaginians, and does his best to excite Corinth to revolt against Rome. To those who are familiar with Mr. Church's style, I need say no more to recommend them a story which makes the fall of Carthage the centre of a story of heroism and adventure. It is published by Messrs. Blackie and Son, at 6s.

## CHRISTMAS BOOKS.

ONE of the most charming Christmas gift-books published this year is Miss Mary MacLeod's Stories from the "Fairie Queene" (Gardner, Darton and Co.). Miss MacLeod has rendered Spenser's verse into prose so that it is perfectly possible for children to understand and enjoy the fascinating stories of the "Fairie Queene." For centuries almost this wonderful story book has been closed to all children and many grown-up people because they have not been able to master the long cantos of the six books of Spenser's masterpiece. Mr. Rabbeth, and now Miss MacLeod, have made it possible for all children to dive into this great treasure-house of English poetry, and when the present generation has grown up it is exceedingly probable that we shall witness a great revival in the popularity of this great Elizabethan masterpiece. Miss MacLeod has done her work well, and there will be many children who will thank her for revealing to them the adventures of Una, the Red Cross Knight, Britomart and Sir Artegall. The volume is tastefully illustrated by Mr. A. G. Walker.

The "Story of a Red Deer," by the Hon. J. W. Fortescue (Macmillan, 4s. 6d.), is a charming tale of outdoor life for children. Mr. Fortescue's story reminds one of Jeffrey's "Sir Bevis." There is the same feeling for the animals of the forest and the moor, and the same capacity of making their everyday life full of charm to the reader. But there is no Sir Bevis in Mr. Fortescue's tale. The animals only make the acquaintance of man as an enemy to be feared and avoided. The life of a young red deer on the moors of Devon is delightfully told in simple language until he is a full-grown stag. The end is a tragic one. One day the hounds get upon his track, and, after a long chase, he comes to bay in the middle of a stream, and while defending himself is swept over a waterfall and drowned.

Clark Russell's "Pictures from the Life of Nelson" (Bowden, 6s.) is prettily bound and well illustrated. It is a handsome gift-book for any boy who is interested in the sea and the navy. The fault of naval history is that it has always been written in such a fashion that the reader could hardly be expected to read it except as a duty. What is wanted is a graphic description of events which will hold the reader's attention. Mr. Russell's Pictures will certainly do this. They are full of life and colour, and are fascinating reading. In "Men who have Won the Empire" (Pearson, 7s. 6d.), Mr. George Griffiths has endeavoured to gather material for the writing of the Epic of England. He has hardly done this in his sketches, but he has accomplished a good piece of work in presenting the lives of some of England's great men in a form which is eminently readable. Mr. Griffiths' first sketch is "William the Norman," and his last "Mr. Rhodes." All his "men" are men of action; the lives of other men who have contributed to the building of the Empire he does not tell. The book is illustrated by Stanley L. Wool with many striking pictures. His horses have so much go and energy in them that they appear unreal, and more like demon horses than inhabitants of this world. Another book on somewhat similar lines is Alfred H. Mills' "Fifty-two Stories of the British Army" (5s.). He tells, or has told, the stories of British battles, histories of regiments, and lives of great soldiers in chronological order. They begin with an account of the Battle of Bannockburn, and close with the story of General Gordon. The book is well put together, and is interesting throughout.

Possibly the discovery of the gold reefs at Klondike

may account for so many writers this year having taken gold as the theme of their Christmas stories. Gold ships and gold islands are always fascinating subjects, and convey to the mind the idea of pirates and fights and hairbreadth escapes. The best of these stories is Harry Collingwood's "The Homeward Voyage" (S. P. C. K.). The tendency of the age is towards the specialising of all trades and vocations, and even the traditional mutineer is not exempt from this influence. Mr. Collingwood's villain-hero is a Yankee named Amos P. Smith, who lays his plans for the seizing of the treasure ship *Fiery Cross* with all the care of a modern burglar. It is amusing to see how this very modern pirate regards his business. Every one, he argues, wishes to become rich at a stroke; we lie, and cheat, and steal for that, and float bogus companies, therefore he is justified in turning pirate. It is simply to him a somewhat daring speculation. Although Amos P. Smith looks at the affair in this coldly philosophic fashion, it does not decrease the number of adventures through which he passes. The *Fiery Cross* sails from Australia with two millions of gold in her hold. She is seized by the mutineers, the passengers are left on one desert island, the officers and crew on another, and there are fights and adventures innumerable. Another story which tells of the capture and recapture of a gold ship is Mr. F. M. Holmes' "The Gold Ship" (Low). It is an exciting story of how the *Anne Boleyn* was seized by a mutinous crew, the treasure divided, and the captain sent adrift. By a series of thrilling adventures he and the boy-hero, Joe Carver, regain possession of the ship, killing and wounding most of the mutineers. Dr. Gordon Stables' "The Island of Gold" (Nelson, 3s. 6d.) tells of an island in the Pacific in which is buried a great treasure of gold. The search party discovers the island under the leadership of Captain Halcott, but their ship is wrecked in a storm. They fortify themselves on shore, and have many and terrible fights with as fiendish a tribe of man-eating savages as ever yet has been faced in the South Pacific Ocean. The treasure is still buried in the unknown island as a temptation for future adventurous treasure-seekers.

Mr. G. A. Henty has added two more to his long list of historical tales. He has chosen for his subjects this year Wat Tyler's Rebellion and the Wars of Frederick the Great. "A March on London" (Blackie, 5s.) is a story in Mr. Henty's best style. He has succeeded admirably in interweaving the private adventures of his hero with the political events of the period. Edgar Ormskirk and Albert de Courcy take an active part in all the events in London which preceded the killing of Wat Tyler by the Lord Mayor. When the troubles are over in England, the two young men go to Flanders in the company of a Flemish merchant, Nicholas Van Voorden, whose life they had saved during the rebellion. They are knighted by King Richard before their departure, and take service under Van Artevelde. The two knights see plenty of fighting in Flanders and have many adventures. They are captured at the siege of Ypres, but succeed in making their escape. On their return to England they settle down on their estates, purchased for them by the Flemish merchant as a reward for having saved his life and that of his wife and daughter. The hero of "With Frederick the Great" (6s.) is a Scotchman named Fergus Drummond. He joins the Prussian army and becomes *aide-de-camp* to his relative Marshal Keith. Events crowded each other so thickly at that period that the personal adventures of Drummond do not have so much attention as Mr.

Henty usually devotes to his heroes. Mr. Henty follows the fortunes of Frederick the Great very closely, and Fergus, who is soon promoted for his bravery, is present at most of the battles of that eventful time.

Mrs. Everett-Green, another well-known writer of historical tales, has chosen the times of Simon de Montfort for the scene of her story, "A Clerk of Oxford" (Nelson, 5s.). It is a very good story, well told, and full of interest. The times were troublous, and the Clerk participated in them to the full, as the hero of a boys' story should do. Oxford in those days was by no means a quiet university town, and Mrs. Everett-Green gives a vivid picture of the feuds between students and townsmen. The hero shares De Montfort's triumph at Lewes and defeat at Evesham. Mrs. Everett-Green's other Christmas book, "Tom Tufton's Travels" (Nelson, 3s. 6d.), is of a different character. Tom Tufton is the only son of Squire Tufton, of Gablehurst, who on his dying bed bids his son go and see the world. This, as it turns out, was rather unfortunate advice for his son Tom, though not for the reader of his adventures. Tom promptly starts for London, where he makes the acquaintance of Lord Claud. This gentleman enjoys a great reputation in the metropolis, but is in reality a highwayman. Tom and Lord Claud are sent by the Duke of Marlborough to Italy with secret dispatches. Tom is only rescued from torture and death in the pass of the Grand St. Bernard by the interposition of the monks. On his return to England he is involved in a daring highway robbery with Lord Claud, and in consequence is obliged to take to the road. Here the tale ends, leaving us in hopes of another volume which will relate the adventures of Tom Tufton the Highwayman. "Paris at Bay," by Herbert Haynes (Blackie, 5s.), is a spirited story of the Franco-German War. The hero, an Englishman, is present at Sedan, the siege of Paris, and the Commune. It is a thrilling story, for Mr. Haynes, not content with historic events, has invented dangers and adventures for his heroes in abundance. Mr. Haynes's second Christmas book, "An Emperor's Doom" (Nelson, 5s.), is hardly as good. It tells the tragic story of the fate of the Emperor Maximilian in Mexico.

A story of a more exciting nature is Reginald Horsley's "Hunted Through Fiji" (Chambers, 3s. 6d.). What with convicts and cannibals his heroes have an exceedingly exciting time of it. They are captured by escaped convicts from Botany Bay in the second chapter, and only escape from them to fall into the hands of the Fijian cannibals. The nature of the tale can be gathered from the following sentences:—"Eli muttered one furious word. 'Bale all!' he shouted. 'Let her drift in. Bale! Bale for your lives!'" "Rub-a-dub! Rub-a-dub-dub! Rub-a-dub! A scream of horror broke from Terry. From all directions the islanders were crowding to the beach, brandishing clubs and spears and filling the air with horrid yells." Manville Fenn has long established his reputation as a writer of books for boys. His "Frank and Saxon" (S.P.C.K., 5s.) contains all the necessary ingredients which go to make up a good boys' book. It is a tale of two boys, one French, the other English, in the days of good Queen Bess. Queen Bess has not much to do with the tale. The first half of the story is devoted to adventures with robbers in England; the second to the troubles of the Huguenots in France. The boys, although they kill a good number of ruffians, do not take the delight in that occupation which is characteristic of so many boy-book story heroes. Jules Verne is another favourite. His story of the adventures of "Clovis Dardentor" (Sampson

Low) in the North of Africa is sure of a warm welcome. The incidents are of the author's well-known type.

Mr. Louis Tracy, in his "American Emperor" (Pearson), has brought the American millionaire into close contact with the French people with startling results. Jerome K. Vansittart is a multi-millionaire with immense energy and resolution. He forms a company for the reclaiming of the Sahara, and finally ends by being proclaimed Emperor of the French. As he is about to be crowned he abdicates in favour of Prince Henri of Navarre, for Vansittart is nothing if not dramatic.

A boy's book which deals with recent events is Mr. A. Lee Knight's "Under the White Ensign; or, For Queen and Empire" (Jarrold, 5s.). It is a well told story of the recent Benin Naval Expedition, and is illustrated by John B. Greene.

There are two good public school stories among this year's Christmas books. Andrew Hane's "Exiled from School" (Black) is based on a mystery. Two boys are going to two different schools in the town of Sandport. One does not wish to go to school at all, the other does not wish to go to the school to which he is being sent. The first boy runs away to sea, and the second assumes his name and goes to his school. The complications which arise make a good story. A more orthodox school story is Mr. K. M. and R. Eady's "The Boys of Huntingley" (A. Melrose).

"Poppy," by Mrs. Isla Sitwell (Nelson), is a tale based on a false accusation of theft, which leads Christopher Linwood to leave his home. He first goes to London, where he falls in with a gang of sharpers, but finally emigrates to Australia. Poppy, the girl with whom he had played and quarrelled as a boy, persists in her belief in his innocence. Her message to him is not delivered, and he is unaware of her continued trust in his honesty. Poppy, years afterwards, is the means of finding the lost money, which had been mislaid in an old chest. But when Christopher returns, on his old uncle's death, he is married to a girl he had met in Australia. Poppy Dean meets her death in rescuing the woman who, by not delivering her message to Christopher, had driven them apart. The tale is told with a good deal of force and feeling. "Wild Kitty," by L. T. Meade (Chambers, 5s.), is a brightly-written tale of the escapades of a wild Irish girl in an English school. Kitty Malone is impulsive and wilful, and the experiment of making her into a polished lady is a decided failure. The conclusion arrived at by her father is that Kitty is too wild for England and had better stay in her own land. Mr. Alfred Miles has compiled a volume of "Fifty-Two Stories of Duty and Daring for Girls" (Hutchinson, 5s.), selected from the pages of many writers. The stories are classified under headings such as "Home and School," "Girlhood and Youth," etc. The volume is full of varied and interesting reading.

Messrs. Smith, Elder's new edition of Mrs. Browning's poems (7s. 6d.) makes a handsome volume. It is uniform with the two volumes of Robert Browning's poems, and contains the whole of Mrs. Browning's poems arranged in chronological order. Mrs. Browning's essays on the Greek Christian poets and the English poets are printed at the end of the volume. The type is good, and the volume makes a very good gift-book.

"The Bears' Kingdom," by Eva C. Rogers (Sunday School Union), is a good fairy tale. It is simply but well told. Miss Giberne's "A Modern Puck" (Jarrold, 5s.) is more ambitious. The dogs, cats, ants, bees and spiders both talk and think as human beings, and Puck reveals the fairyland of earth to a little girl named Chrissie.

"SATAN'S INVISIBLE WORLD DISPLAYED"—Drawings by V. Gribayedoff

# "SATAN'S INVISIBLE WORLD DISPLAYED."

## SUMMARY OF MR. STEAD'S NEW BOOK.

**M**R. STEAD'S Christmas book is a companion volume to his "If Christ Came to Chicago," but instead of Chicago it deals with New York.

It is divided into three parts. The first, "Liberty Enlightening the World," describes the high hopes with which Liberals in the Old World contemplated the triumph of Liberty and Democracy in the United States of America.

### WHY "SATAN'S INVISIBLE WORLD"?

The title is borrowed from Hopkins' treatise on Witch-finding, as being on the whole the most appropriate description of the state of abysmal abomination into which the government of New York had sunk before the great revolt of 1894 broke the power of Tammany—for a season—and placed in office a Reform Government charged to cleanse the Augean stable. The old witch-finder had no story to tell so horrible or so incredible as that which Mr. Stead has drawn up from the sworn evidence of witnesses exposed to public cross-examination before a State Commission in the City of New York.

### THE LEXOW SEARCHLIGHT.

After a chapter describing the growth of great cities in the United States, Mr. Stead tells the story of "St. Tammany and the Devil." In a third chapter he brings the narrative down to the appointment of the Lexow Committee in 1894, by the Senate of New York, the report of whose investigation into the working of the Police Department provided the material for the Second Part, which is entitled "Satan's Invisible Kingdom." It is upon this immense body of evidence taken on oath, under cross-examination in public audience, that Mr. Stead has based this volume. "Satan's Invisible World" is thus displayed, not by a stranger or a casual observer, or an amateur investigator. The story reads more like a description of an Indian province terrorized by a band of Thugs than a statement of how New York was governed.

### DESPAIRING DEMOCRACY.

For democracy in the English sense of the word there is no longer any struggle in the City of New York. The ablest and the most hopeful Americans have given it up as a bad job, so far at least as city government is concerned. The Charter of Greater New York is the direct outcome, the natural fruit of the bitter experience of Tammany rule. Once more, to quote the familiar saying, "Sin when it hath conceived bringeth forth death," and the sin revealed by the Lexow Committee has brought forth a deadly harvest in the Charter of Greater New York. Deadly, that is, inasmuch as it is fatal to the principle of vesting the government of the people in the elected representatives of the people in public council assembled. For the central principle of the Charter of New York is the substitution of the authority of a Tsar-Mayor for what has hitherto been regarded as the natural authority of an elected council.

### THE TSAR-MAYOR.

The parallel which instinctively occurs to the mind of the observer is one of somewhat evil omen for the future

of the American Commonwealth. The Roman Republic evolved the Empire very much in the same way that the Tsar Mayoralty of Greater New York has been evolved from the institutions which preceded it. The Roman Empire was not based upon a *plébiscite* of the citizens, but equally with the New York Mayoralty it ignored the principle of hereditary right. Mr. De Witt, Chairman of the Committee, who drafted the Charter for Greater New York, put the matter succinctly when he wrote: "I am for a Tsar-Mayor, with a short term, and a free right to go again to the people." The new reform seems to be at variance, not only with the universally accepted English idea, which may, of course, be ignored, but equally with the Jeffersonian theory of the fundamental principle of Local Government. It may be necessary to fight fire with fire, and to cast out the Boss by the Tsar-Mayor, but old-fashioned Liberals may be pardoned if they feel that it is a very dangerous game to cast out the Devil by the aid of Beelzebub, the Prince of Devils.

### HAMSTRUNG CÆSARISM.

The Charter of Greater New York seems to have written on its face thoroughgoing distrust of the people. The aspect of the Charter is black with despair. It is far worse as an expression of democratic despair than the Brooklyn Charter, for the Brooklyn Charter at least trusted the Tsar-Mayor, whereas the New York Charter shrinks even from doing that. For, after giving the Mayor supreme responsibility, and electing him for a term of four years, these astonishing charter-makers carefully provide that he shall only have a right to remove the commissioners, whom he has been allowed to appoint, during the first six months of his term of office. It is this limitation which shows how thoroughly the modern American distrusts his governing men. Faith in an elective council has perished utterly; but faith in a Tsar-Mayor might have shown the survival of some faith in the elective principle. But the stipulation carefully made in the Charter that the Mayor's right to remove the heads of department whom he has nominated shall cease six months after his election, is the most astounding illustration yet afforded of the deep-rooted distrust which the American of to-day has in all elected men. For here we have a democracy in such depths of despair that it first emasculates its elective assembly, and then hamstring its Cæsar.

### WHY NOT RE-ESTABLISH THE INQUISITION?

The third part of the book, entitled "Hamstrung Cæsarism as a Remedy," brings the narrative down to the election of the Tammany candidate to the Mayoralty of Greater New York. Mr. Stead is inclined to be hopeful as to the future, but he suggests that as Americans have got rid of their prejudices, they might do well to supplement their Tsar by the Inquisition. A Lexow Committee sitting constantly, with judicial inquisitorial powers, might possibly exercise some check upon corruption. The book is copiously illustrated with portraits of leading New Yorkers, by Gribayedoff, and views of the city and its approaches.

## LEARNING LANGUAGE BY LETTER-WRITING.

**M.** FINOT, of the *Revue des Revues*, writes in a recent number:—"International Correspondence has now an assured future. Looked upon at first with doubt, every day brings new adherents and wider fields of application. Treated in the beginning as a pastime, it is on the way almost to influence our customs."

The number of English scholars for whom correspondents have been found now exceeds 1,700, which, with the 500 adult correspondents who have also been "introduced," makes a grand total of 4,400 people, united perhaps by but very slender links, yet together forming a chain of which M. Mieille may well be proud.

A schoolmaster, writing to a correspondent, says:—"I do not intend my boys to join until success is certain; half-a-dozen letters and then a cessation is more likely to decrease than to increase the *entente cordiale*." But why assume that six letters are the limit of a boy's perseverance? We can only judge from schoolmasters' letters, of course, but from those, five boys only appear to have dropped writing, and of girls two are named.

Here is a nice letter from a little English girl:—

Dear Mr. Stead,—Mother said I might write and tell you how much I like the correspondence. My little friend writes such quaint pretty letters, and makes very few mistakes. She ends up so sweetly by saying, I give you a good shake of the hand. She corrects all my mistakes, and I am sure their name is legion, and then as in a letter I had from her the other day, says, "Encore un bon baiser, ma petite Nettie," although I am older than she is. She told me all about her holidays; she was at Aix-les-Bains while President Faure was there. Eight of our girls are now in correspondence with French girls and more are eagerly waiting.

I have not space to quote further from this letter or from others which lie beside me, notably some charming letters written by French scholars. These must wait until the new year, and then I hope also to give details of a means of sustaining interest which has occurred to me, but which must first be submitted to our French friends for their approval. Schoolmasters please note.

It can readily be imagined that the secretarial work is great. The correspondence having extended so widely, it has become quite impossible to acknowledge letters, or answer inquiries very fully, but I am so often asked—How is an application to be made? What are the rules of correspondence?—that I will summarise the methods and rules:—

For the Scholars' Correspondence:—Teachers should send me a list containing the name and age of each pupil desiring to correspond. A similar list of French pupils is sent me from the *Revue Universitaire*. The names are then carefully paired, each scholar from any one school having a correspondent assigned him from a different place in France. The paired list is sent to Paris on the 1st of the month, published there the 15th, and letters may be expected in England the fourth week, thus if lists do not reach me before the 1st of each month a delay of nearly two months must occur. It is not possible to send French names to English schools, and for this reason: some of the French boys waiting for correspondents applied last March or April; many of them have passed on to other schools in the interim, but by arrangement the English "pair" of any such boy is arranged for by the director of the French Lycée or College, *supposing his name is printed in the Revue*. Girls are often privately arranged for.

Boys or girls who apply on their own account must have the consent of parent or teacher before their names can be registered. No fees are necessary for scholars. Each English correspondent must correct his or her friends' faulty English, and *vice versa*.

The usual rule of interchange is this:—The French boy writes a French letter the fourth week of the month, correcting in that letter the bad French of his correspondent. The English boy writes in English the first week, and corrects his friend's bad English. The second week comes an English letter from France; the third week of the month a French letter goes to France. The letters in own language are intended as models, and are as necessary as the practice letters, besides being a pleasant vehicle for friendliness. Boys wishing for German correspondents must give their school address.

There are two points of difference between the scholars' and adult scheme. As regards the latter, no responsibility can be taken as to character, etc., and the simple procedure for a first introduction between school-boys and schoolgirls (who have the common interest of school life) is impossible for adults, who need to have age, tastes and occupation taken into account. They must therefore mention these three facts in applying, to be used as a guide in pairing; a girl of seventeen, for instance, would have few interests in common with a woman of forty, a shoemaker with a University student. A fee of 1s. should be sent to cover the necessary expenditure for stamps, etc. But no date can be fixed for such introduction, which may be earlier or later according to circumstances. It would save trouble and disappointment if friends would announce by post card the receipt of the first letter from abroad.

I am always in need of help, so I beg those of our English-speaking folk who get letters from foreign parts to tell their correspondents how glad I should be of more applications from France, Germany, Spain, or Italy, especially from ladies. Our foreign friends are not asked to send a fee, of course. If each foreign correspondent sent in the name of another how speedily the scheme would spread!

Will friends have patience with unavoidable delays, and excuse the little mistakes which sometimes happen? At first, names of adults were simply sent to Paris, as are those of the scholars; the result is that, such names not having been printed, I have no means of knowing whether the senders ever received letters! Applications for two languages should be written on a separate slip of paper, otherwise one may be overlooked.

The principal of a college in Canada asks us to procure Greek correspondents. Can any friend help?

The lads in French training schools beg for lady correspondents, but no young ladies are put in communication with French lads except their parents send permission.

Male English-speaking correspondents are desired by—A Portuguese officer, a French engineer, a French wine-merchant, an optician, a priest, and several Italian and German gentlemen.

Two German gentlemen and a lady desire French correspondents: will Frenchmen in England notice?

An Italian engineer desires English correspondent.

—A French gentleman desires to correspond on criminology with prison doctor or prison chaplain.

## SOME GOOD RESOLUTIONS FOR THE NEW YEAR.

**A**T the end of the year it is natural and fitting that we should cast a glance over the things which might have been done in the Old Year, in order that we may resolve to carry them out in the New Year.

First and foremost there is the question whether we have helped anybody or have been willing to help anybody. Those who have no helper are a very numerous class, and there are few who, if we will but think over them, will be found in the circle of our own friends and acquaintances. It is not only individuals who need to be helped, but communities and societies.

Every one can do something, however small it may be, and no inquiry is more searching than to ask what worse off would any one be if I were to disappear totally from the surface of this planet? It is no use wringing our hands over the past. The new year brings new opportunities and a new life. What are we going to do in 1898, for (1) the children, (2) the sick, (3) the poor, (4) the aged, (5) the lonely? If we say we have none of any of these five classes to look after among our own relations and friends, there is the workhouse. We can at any time find samples of all five classes there.

Why not make a vow this Christmastide not to let next year pass without paying at least one visit to your local workhouse? One visit to see for yourself your poor neighbours will do more good than reading any number of books. Call to see the master or the matron. They will as a rule be only too glad to see any one who takes an interest in their work. Ask if the children have toys and picture-books and games, if the adults have got enough to read, if the bedridden have sufficient visitors. Then there is the decoration of the walls of the wards, which in some workhouses is much neglected, and the employment of the old people under the Brabazon scheme.

All this can be done, and ought to be done, in every workhouse in the land. But there is special need for doing it in Ireland. Miss O'Reilly's recent articles in the *Westminster Gazette* and the *Sunday Times* remind us once more how far Ireland is behind England and Scotland in the provision which it makes for its poor, and especially for its sick poor.

Should any reader shrink from visiting the workhouse or undertaking any personal duty in relation to its inmates, there is one very simple suggestion which I venture to commend to his or her attention. That is the utilisation of the Christmas card. Most of us receive in greater or smaller number the budget of Christmas and New Year's cards, which are looked at with interest when they arrive, allowed to remain about for a week, and then disappear into the recess of drawers, from which they often never emerge. If you wish to do anything and do not want to do much, why not make a collection of old Christmas cards received by yourself and your friends, and send them in to the master of your workhouse for distribution among the inmates?

Then there are the children—our own children in the first place, and after them the children of the State, to whom we stand in some way in *loco parentis*. How many of the children of the poor in our neighbourhood, in the workhouse or out of it, have even so much as heard a fairy tale in their lives or possess a picture book as their very own? "Books for the Bairns" are cheap—stories and pictures galore can be bought at 7s. 6d. per 100, carriage free. But if each reader only resolved to give one penny book away to some poor child this

Christmas, what a ray of light would be shed upon thousand of little faces!

That is only one way in which the children can be helped. One of the best ways is to teach them to help others. Could we not each of us do something to promote in our own neighbourhood the spread of all these Children's Leagues and associations which do such good work? There is the Band of Hope for temperance, the Ministering Children's League of Lady Meath's, the Dicky Bird Society of Uncle Toby of the *Newcastle Weekly Chronicle*, and the newly-started Sunbeam League of Cardiff. Why can we not have a Sunbeam League in every Sunday-school? The object of this "Children's Effort for Children" is thus stated by its promoters:—

To enlist the interest of children of all classes in the work of the Cardiff Infirmary, especially the children's ward, by enrolling all children willing to pledge themselves to help the sick and afflicted.

By subscriptions to be made twice a year of children's pence. In Sunday schools about June 20th; in day schools the first week in December, and other means that the committee may suggest.

Opportunities will be given for the girls to make clothes and dress dolls, and for boys to make toys, etc., which may be sold.

The proceeds to endow a bed in the children's ward, to be called "The Sunbeam Commemoration Cot."

It may not be necessary to endow a bed in every district. But the pledge to help the sick and afflicted, the making of dolls and clothes by the girls and making toys by the boys—these things might surely be attempted in every parish in the land.

The old system of tract distribution has largely died out. There are many thousand sons and daughters of those who used to distribute tracts, who no longer find the religious tract correspond to their idea of the reading that ought to be circulated. Why should not these good people set on foot a Reading for the People Society, and revive the machinery of tract distribution for the purpose of lending a good book—and plenty can be had for a penny—at every house in a district, calling for it and changing it every week? A dozen penny books will keep a dozen homes going with good reading for three months.

There are many other works of mercy and of grace that wait to be accomplished. Is there a library in our Elementary School? Is there a reading-room in our parish? Have the youth places for play? Is there a sick visiting society? Has anything been done to see to it that the stranger within our gates is decently housed? The state of lodging-houses for women in London is one of the scandals of the city, and like unto it is the lack of adequate provision for honest registries for servants. But that is to venture upon a large field.

The great thing to be borne in mind by all of us who take to thinking upon what we might do to make the world brighter and happier in the New Year, is first of all to put ourselves in imagination in the place of all those whom we know who are worse off than ourselves, and then ask what we can do to mend matters. If we think over things a little, we shall probably find that we can do a great deal without impoverishing ourselves. The amount of idle capital invested in books that have been read, magazines that are stored away, lanterns and slides that are not exhibited, represents sheer wicked waste.

Would it not be a good resolve to begin the New Year by sending these Missionaries of Intelligence about our Father's business?

## A Rosary for Christmastide.

CHRISTMAS is the most appropriate season in the year for submitting a suggestion which, if universally acted upon, would undoubtedly contribute permanently to the joy of the world.

Unlike many suggestions which are made at Christmas, this proposal will not cost a red cent. It can be adopted by every one, old or young, and yet no one can deny that if it were carried into effect it would do a great deal of good and bring no harm with it.

The suggestion is simply this. That each and every one of us should, at this Christmas time, try to compile a list of those with whom we have been in relation, friendly or otherwise, since we came into the world. Such a list would serve the purpose of a Rosary, every name in which would represent a bead, and be a reminder of services too apt to be forgotten. Duties are usually neglected from sheer lack of thought, and if each of us had close to our hand a list of those of our fellows with whom we have shared more or less closely the experiences of life, we might run over the Companions of our Rosary as a Catholic priest goes through his Office, whenever we were disengaged. Even if we never recalled the long list of those companions of the past save when we compiled the roll-call of the Rosary, we should be richer and happier and better for the experience.

Of course, for practical purposes it is impossible for any one who has lived a life which has brought them in contact with many people to have a Rosary long enough to provide a bead for each person with whom he has had relations. But while the greater Rosary or list of human beings to whom we are linked by some tie of love and service should be compiled by each of us, and looked at occasionally, say, on birthdays and New Years' days, the more practical suggestion is to compile from the greater Rosary a small circle of those with whom our life is more intimately united. These, whether they may be seven or a dozen or a score, could be associated with a Rosary and gone over in loving thought every morning.

In a little book which I have edited and which Mr. Grant Richards of Henrietta Street has published, I venture to explain the origin of the suggestion which reached me by a somewhat unusual vehicle from a dear friend who wrote me last year, saying:—

"What I want you to do, if you find an opportunity, is to modernise the Rosary. I don't think you can do better than to have the list prepared (1) of persons and (2) of causes, to whom and to which you are in some relation. Go through them all *seriatim* every morning before you begin your daily work, thinking What can I do for this? What ought I to do? And when you finish jot down for your guidance any suggestion that may have occurred to you. The exercise will be most helpful.

Daily you should ask yourself, My enemies, what good have I done them? For an enemy is the man with whom you have failed. It may not be your fault, but if he is your enemy, you have failed; for it is failure when any fail to realise One is your Father, and all ye are brethren. Whom you dislike, that is an enemy—a failure. Have you done anything to make him a success? You may do nothing. But have you thought kindly of him, pitying his blindness and his shortcomings, longing to see him better? Sometimes it is best kindness to punish; but as you punish, love. And remember that punishment without love is not of God. Have, then, a list, long or short, of the people you dislike, and run over them lovingly.

Then your friends, and those to whom you are related. Your success depends upon individualising. Take each in turn. What have you done for him, for her, since yesterday? What have you left undone?

In short, evil is the want of thought. Think—a loving thought is a prayer! You have not time to pray? Then make time to think of those you love. Without thinking on to people you lose vital connection with them. To all men and women you know you owe some duty, however slight. It may be a smile, it may be a word, it may be a letter, it may be praise, it may be blame; and there is more love needed to blame rightly than to praise. But whatever it is, it is due from you to each of these. Have you paid your dues?

Such a list as my friend proposes, if kept constantly at hand and regularly conned before the day's work begins, would serve the purpose of a modernised Rosary. The mere compiling of a list of Companions of the Rosary is useful, even if it is never used as my friend suggested. But if her advice be carried out and the long list of those who have mingled their lives with ours be scanned however hurriedly, before the morning meal, who can estimate the means of grace which thereby would be opened up to mankind?

For, "What is the cause of most of the sadness of the world? Not poverty of this world's wealth, but poverty of loving thought."

And to all the Companions of the Rosary I commend this message concerning our duties to our friends:—"If you can do nothing else, think of them lovingly; for the loving thought of a friend is an Angel of God sent to carry a benediction to the soul."

# A SUGGESTION FOR THE SEASON: SIMPLE BUT PRACTICAL.

## 1.—FOR THE REUNION OF OLD FRIENDS.

In the article on the preceding page I venture to urge each of my readers to make out a list of those persons who have entered more or less into his or her life, and to think kindly this Christmastide of those friends of long ago. But if this advice is acted upon many a reader who may feel desirous of reviving the memories of the old time will yet experience some difficulty in reopening communications with old friends.

Here I think I can help, and at the same time help the REVIEW OF REVIEWS, which never prospers so much as when it is fulfilling its original mission of linking together in friendship those who might otherwise have become indifferent or hostile.

If any reader will tear out this page (which is not numbered, so that its removal will not interfere with the binding), fill in the form below and send it on to me, with 2½d. for postage, I shall be delighted to forward a free copy of this issue of the REVIEW OF REVIEWS, with the compliments of the season, in the name of sender, with a note calling attention to this accompanying article.

### FORM A.]

*Please forward a copy of this REVIEW with the compliments of*

Please  
write  
distinctly.

To, Name \_\_\_\_\_

Address \_\_\_\_\_

*for which I enclose 2½d. for the postage.*

## 2.—TO READERS WHO WISH TO HELP OTHERS.

There are many ministers, school teachers, and persons engaged in philanthropic work who cannot afford to subscribe to a monthly magazine, and many friends in remote countries who have no opportunity of purchasing it. Those of our readers who can not only buy their own REVIEW but who would not miss the 8s. 6d. which would insure the delivery, post free, of the REVIEW OF REVIEWS for the next twelve months to any address within the Postal Union, may thank me for the suggestion that few Christmas remembrances would be more appreciated than the order to forward it during the ensuing year. Ever since the REVIEW was started I have forwarded every month a thousand free copies for missionaries in the foreign field, and no part of the circulation affords me more satisfaction than the copies sent out by this means. I invite those of my well-to-do readers to share in this pleasure, by filling in this order:—

### FORM B.]

*Please forward the REVIEW OF REVIEWS every month for one year with the compliments of*

Please  
write  
distinctly.

To, Name \_\_\_\_\_

Address \_\_\_\_\_

*Postal Order for 8s. 6d. enclosed herewith.*

## 3.—TO READERS WHO WISH TO HELP ME.

If any reader who has derived advantage from the REVIEW OF REVIEWS would like to do me the favour of recommending it to any friend who may not at present subscribe, may I ask him or her to be good enough to fill in the address of the friend in the accompanying form and forward it to me, when I will at once forward a sample copy, post free.

### FORM C.]

*Please forward, with my recommendation, a copy of the REVIEW OF REVIEWS to*

Please  
write  
distinctly.

## READING FOR THE WINTER SEASON.

THE winter season is approaching, and people will have more time to devote to reading in the long winter evenings than they have had during the summer months. It may be well, therefore, to call our readers' attention to the Circulating Library which was started in connection with the REVIEW some two years ago. Some fifty books are sent out to any group of persons or institution subscribing to the Library, packed in a strongly-made box. This box of books is charged quarterly or half-yearly as may suit the convenience of the centre. By this system it is possible for any institution or number of persons to obtain a constantly changing supply of literature at a very small cost. For thirty shillings a quarter about two hundred books per annum are supplied. A cheaper series of boxes is also supplied. At present three series of boxes are issued. One contains from forty-five to fifty volumes—poetry, history, travels, fiction and illustrated magazines.

Address: THE REVIEW OF REVIEWS Circulating Library, Mowbray House, Norfolk Street, London, W.C.

# HISTORY OF THE MONTH IN CARICATURE.

From the Cape Times, Cape Town.]

From the Weekly Freeman.]

[June 12, 1897.]

JUBILATION AND DESOLATION.  
Two Records.

From the Westminster Budget.]

[June 12, 1897.]

RULE BRITANNIA!

SHADE OF QUEEN ELIZABETH: "The England I dreamt of is your Realm to-day."

From the *Bulletin*, Sydney.]

AFTER THE DIAMOND JUBILEE.

From *Der Nebelspalter*, Zürich.]

BOTH: "Oh, how difficult it is to pay when the purse is empty."

THAT FIGHTING KANGAROO.

"While Great Britain was confronted by the present threatening outlook, Lord Brassey desired, on behalf of the mother country, to thank these colonies for sending the troops home, and for sending them amid such signal manifestations of public feeling."—*The Governor at Castlemaine*.  
THE BRITISH LION: "Now, attack me if you dare."

Invented by F. Treway specially for the *Figaro*, Paris.

From the *Weekly Freeman*.]

[June 19, 1897.

"WILL HE LET IT GO?"

SARISBURY: "That's a good dog; give it up; I was always your friend."

From *Jugend*, Munich.]

Oom Paul sits comfortably and safe from bombs with his Dutch cousin, although shortly before at the opening of the Volksraad he had said: "I cannot say that the sky is free from clouds, but trusting in the justice of our cause I look confidently into the future."

From *Pan.*]

## LIGHT-GIVING POINTS.

"It would have been a heartfelt joy could I have met you with the frank assurance that the political horizon had a clear and unclouded aspect. However, I must admit with gratitude that there are many light-giving points to be discerned."—*President Kruger's speech at the opening of the Volksraad.*

From the *Westminster Budget.*]

## THE ANGEL OF PEACE.

"I want Peace."

From the *Melbourne Punch.*]

The British Lion as Sir W. Harcourt would have him.

From the *Westminster Gazette.*]

"MASTER CHAMBERLAIN: "It's lucky for you, my boy, it didn't come to a fight. Just look at my muscles."

From the *South African Star*.]

From *Inter-Ocean*, Chicago.]

AS OTHERS SEE US.

JOHN BULL: "You wouldn't have had to work, you know; I merely wanted you for appearance's sake."

UNCLE SAM: "I'm sorry, John, but I have to be very careful of appearances."

From *Moonshine*.]

[June 12, 1897.

THE STING OF THE WHIP.

THE MERRITMAN: "Hi, Harris! Stop it, I say. You hurt, you know."

From *Judge*, New York.]

QUITE RIGHT.

UNCLE SAM: "Yes, Johnny, it may be a pretty good thing, but before we come down to this arbitration business in dead earnest you might just as well stop pointing those guns of yours at me."

From the Westminster Budget.]

[June 18, 1897.]

# SOME SUGGESTED COSTUMES.

The Duchess of Devonshire is going to give a great fancy-dress ball at Devonshire House in honour of the Diamond Jubilee. Our artist suggests some costumes for political personages which might be thought suitable to the occasion.

We direct special attention to the following remarkable statements.

I was deaf twelve years, could scarcely hear public speaking, conversation, or a watch close to my ears, suffered greatly from catarrh, sore throat, hoarseness, short breath, and owing to impaired voice performed my duties as lay reader with great difficulty. Began using Aerial Medication in March, '97; in three days it was like being in a new world, could hear again; in two months could deliver my addresses and sing with ease and comfort, my health and hearing was quite restored and continues good.—**GEO. SEDGWICK, 15, Little Lane, Redf rd. Notts.**

Had catarrh since childhood, was deaf twenty-five years in right ear and ten in left, could hear watch very close to right ear, not at all in left, was rapidly growing worse. Found great improvement after three months' use of Aerial Medication. Have used the treatment six months: headaches and discharge entirely gone, sleep and eat well, breathing good, can walk long distances with ease and pleasure, and my hearing is fully restored.—**Miss M. H. WATKINS, 35, Kaye Street, Shipley Fields, Bradford, Yorks.**

We have reliable assurance that the above statements are genuine and that Dr. Moore is a reputable physician.—**Ed. Christian Index.**

**MEDICINES FOR THREE MONTHS' TREATMENT FREE!**

To further introduce Aerial Medication, and prove beyond doubt that it will cure deafness, catarrh, throat and lung diseases, I will, for a short time, send medicines for three months' treatment free. Consultations by appointment only. For symptom-form and particulars, address **J. H. MOORE, M.D. (U.S.A.), Dept. R.I., Bloomsbury, London, W.C.**

#### EUROPE AS IT REALLY IS.

The Master is the Tsar driving the three-horse monster waggon, to which are harnessed the Kaiser, Félix Faure, and Emperor Francis Joseph, near whom the Czechs and Germans give one another brotherly beatings; Humbert, with the Pope in his pocket, implores the mercy of the Master; whilst Spain, with Portugal on its back and its feet in the Cuban inkpot, suppresses the Anarchists, but not without trouble. Queen Victoria reads from the Times the latest news from India.

## WARNER'S

### For Men.

No remedy has ever equalled Warner's Safe Cure in curing every form of liver and kidney complaint. If you are troubled in this way, and are experiencing such symptoms as biliousness, headaches, backaches, nervousness, dizziness, constipation, and tired feelings, it will give you speedy relief. Remember that Warner's Safe Cure is not an untried remedy or an experiment, but a scientific preparation prescribed and recommended by eminent physicians all over the world. Thousands have testified to its wonderful curative effects. It is the best remedy in existence for any man who needs fresh life, energy, and health.

ALL CHEMISTS AND MEDICINE VENDORS.

### For Women.

Not only the best but the only remedy which can always be relied upon. That is the verdict of every woman who has ever tried Warner's Safe Cure. There is no better remedy for women who suffer from distressing weaknesses.

It acts like a charm in overcoming aches, pains, and bearing down sensations. It restores the colour of health to pale cheeks, gives brightness to dull eyes, and takes away that sallow, unhealthy complexion. No woman who values her health and strength should be without the great safe cure.

# HISTORY OF THE MONTH IN CARICATURE.

From the Westminster Gazette.] [Nov. 3, 1897.

## THE SEVEN STAGES.

Mr. Chamberlain, Lord Rector of Glasgow University, gives his Rectorial address, on "Patriotism."

From the Westminster Gazette.]

[November 5, 1897.

## A "MISTAKEN ROAD."

(Scene from the Patriot-Pilgrim's Progress.)

Mr. Chamberlain said at Glasgow that he has sometimes sought to extend "the greatness of the Empire" along "mistaken roads." Our artist shows one such, for, as Lord Rosebery said on Monday, Manchester is the Mecca of all good Free Traders.

From Judy.]

[November 24, 1897.

GHOST OF BEACONSFIELD: "Try more Toryism and less Gladstonianism. Resume the old policy."

From Fun.]

[October 26, 1897.

## NOT EQUAL TO BEARING STRAITS.

BROTHER JONATHAN (astonished): "I guess you two had better scoot, as he won't stand in with you."

From *Moonshine*.]

[October 9, 1897.

THE AMEER OF AFGHANISTAN.

From the *Hindi Punch*, Bombay.]

THE "WHITE" ELEPHANT.

MR. PUNCH: "You must get rid of him once for all! He's so expensive, and such a useless burden too! My Lady Hind can't afford to keep him any longer!"

From *July*.]

[September 22, 1897.

CAPITALIST: "I cannot contend with cheap labour abroad."

GERMAN EMPLOYER: "Don't mind working long hours so long as we can undersell English manufacturers."

From the *New York Journal*.]

UNCLE SAM AND THE TRUSTS.

"Fesky things, how thick and hungry they are!"

DANGER AHEAD.

Tammany likely to get a puncture on Henry George's single track.

THE COVER OF MAURICE LEUDET'S NEW BOOK  
"GUILLAUME II. INTIME."

FROM THE CAMP OF THE ARMIES OF HEAVEN.

SATAN: "At last I know what the knot means that I made in my tail: I wanted to fetch the Old Fritz, for 'he who is no brave Christian is no brave man, and no brave Prussian soldier either, and can under no circumstances fulfil the duty required of a soldier in the Prussian army.' Nay, perhaps, I may succeed, on a final revision, in recovering lost ground, and in freeing the armies of heaven from the bad Christians and bad soldiers."

[The above cartoon is interesting, it being the cause of the suppression of the whole edition of *Kladderadatsch*, because of its allusion to the German Emperor's speech.—ED.]

From *Der Nebelspalter*, Zürich.]

THE REVIVAL OF THE DREYFUS CASE.

FRANCE (to Scheurer-Kestner): "We have got one (Dreyfus), whether innocent or guilty matters not; let him remain quietly in the cage (Devil's Island), at any rate until we have done away with the Espionage Laws against our better friends (the soldiers)."

From the *Westminster Gazette*.]

[October 26, 1897.

NAILING THE STANDARD TO THE MAST.

DISGUSTED (BIMETALLIC) MARINERS: "It's very awkward for us, but we're bound to let him do it."

From *Judge*, New York.]
